Army	33,643	$302,459
Navy	2,766	24,017
Marine Corps	89	665
Air Force	26,820	262,376
Total	63,318	589,517

Nonprior Service Personnel

Senator ELLENDER. It will be noted that of the planned end-strength of 972,094 Reserve and Guard personnel engaged in the various paid drill programs, 720,760 are nonprior service personnel. These are individuals who have enlisted in one of the National Guard or Reserve Forces for a period of 6 years and who must under the provisions of the law perform an initial period of active duty for training of not less than 4 months. After their enlistment in one of the Guard or Reserve Forces, these individuals are no longer subject to induction into the Armed Forces through the Selective Service System. Of course this has been a very popular program since the beginning of the war in Southeast Asia, as many young men would prefer to enlist in one of the Guard and Reserve Forces for a period of 6 years with a certainty of only 4 to 6 months active duty. I will include in the record at this point section 511 (d) of title 10 of the United States Code which authorizes this program.

(The information follows:)

"§ 511. Reserve components: terms

* * * * *

"(d) Under regulations to be prescribed by the Secretary of Defense, or the Secretary of the Treasury with respect to the Coast Guard when it is not operating as a service in the Navy, a non-prior-service person who is under twenty-six years of age, who is qualified for induction for active duty in an armed force, and who is not under orders to report for induction into an armed force under section 451–473 of title 50, appendix, may be enlisted in the Army National Guard or the Air National Guard, or as a Reserve for service in the Army Reserve, Naval Reserve, Air Force Reserve, Marine Corps Reserve, or Coast Guard Reserve, for a term

of six years. Each person enlisted under this subsection shall perform an initial period of active duty for training of not less than four months and shall, subject to section 269(e)(4) of this title, serve the rest of his period of enlistment as a member of the Ready Reserve. As amended Sept. 3, 1963, Pub. L. 88–110, § 3, 77 Stat. 135."

Senator ELLENDER. During fiscal year 1971 it is estimated that the National Guard and Reserve components will take in 97,750 new "6-months" trainees under the provision of the Reserve enlistment program. I will include in the record a tabulation giving the planned end strengths for fiscal year 1971, the nonprior service personnel strengths, and the number of new nonprior service enlistments planned for the National Guard and Reserve Components for fiscal year 1971.

HISTORY OF GUARD AND RESERVE FORCES STRENGTHS

Senator ELLENDER. We have been maintaining a "paid status" Guard and Reserve Force of approximately 1 million men since the end of fiscal year 1957. I will include in the record at this point a tabulation giving the total Guard and Reserve Forces personnel from June 30, 1947 through January 31, 1970. I will also include in the record at this point a tabulation giving the number of Guard and Reserve Forces in "drill pay status" for the period from June 30, 1946 through December 31, 1969.

(The tabulations follow:)

DEPARTMENT OF DEFENSE RESERVE COMPONENT PERSONNEL IN PAID STATUS, JUNE 30, 1947, TO DATE

Pay group	Total in paid status (all)	Paid drill training: Total (A, B, C, F)	Paid drill training: Drill pay status (A, B, C)	Paid drill training: Undergoing active duty basic training [1] (F)	Paid active duty training only [2] (D, E)

Note: Fiscal year 1971—End strength and nonprior service enlistments from fiscal year 1971 apportionment request; nonprior service strength is estimated.

USE OF GUARD AND RESERVE FORCES

Senator ELLENDER. It has always been my understanding that we maintain the large Guard and Reserve Forces to augment our Active Duty Forces when there was a need to do so, and the use of these forces prior to the buildup for the current conflict in Southeast Asia followed this basic concept.

Korean conflict

During the Korean conflict July 1, 1950, through July 26, 1953—938,379 reservists and National Guard personnel were called to active duty, I will include in the record at this point a tabulation setting out the number of units and personnel of the various Reserve components involved in this callup.

RESERVE MOBILIZATION
KOREAN CONFLICT (JULY 1, 1950 TO JULY 26, 1953)

Reserve component	Number of units	Number of individuals
Army National Guard	[2] 1,457	139,000
Army Reserve	[3] 969	244,300
Navy Reserve	[4] 42	274,563
U.S. Marine Corps Reserve	([5])	98,229
Air National Guard	[6] 20	46,413
Air Force Reserve	[7] 25	135,874
Department of Defense total	2,513	938,379

[1] Bulk of unit callups occurred during period July 1950 to June 1951; however, selected units were mobilized throughout the period.
[2] Includes 8 infantry divisions, 3 regimental combat teams, and 714 company-size units.
[3] Company-size units.
[4] Squadrons.
[5] Entire organized Marine Corps Reserve used as individual augmentees.
[6] 13 fighter-bomber, 5 fighter-interceptor, and 2 tactical reconnaissance wings.
[7] 20 troop carrier and 5 light bomb wings.

BERLIN CRISIS

Senator ELLENDER. During the Berlin crisis—October 1, 1961, through August 31, 1962—147,849 reservists and National Guard personnel were called to active duty, I will include in the record at this point a tabulation setting out the number of units and personnel of the various Reserve components involved in this callup.

(The tabulation follows:)

RESERVE MOBILIZATION

BERLIN CRISIS (OCT. 1, 1961 TO AUG. 31, 1962)

Reserve component	Number of units	Number of individuals
Army National Guard	[1] 106	67,424
Army Reserve	[2] 437	45,830
Navy Reserve	[3] 58	8,020
U.S. Marine Corps Reserve		
Air National Guard	[4] 32	23,388
Air Force Reserve	[5] 5	3,187
Department of Defense total	638	147,849

[1] Includes 2 infantry divisions and 104 nondivisional units.
[2] Co/Det-size units.
[3] 40 DD/DE surface and 18 air patrol ASW units augmented the active fleet.
[4] 32 flying and other support units (squadrons).
[5] Air Force Reserve troop-carrier units.

Cuban crisis

Senator ELLENDER. During the Cuban missile crisis in October and November of 1962 eight troop carrier wings of the Air Force Reserve were called to active duty. These units included 14,025 Reservists.

Vietnam war

At the end of fiscal year 1965 our active military forces had a total strength of 2,635,142 which included the following: Army, 968,313; Navy, 671,009; Marine Corps, 190,187; and Air Force, 823,633.

During fiscal year 1966 we started increasing the strength of our Active Duty Forces to meet the requirements of the war in South Vietnam. At the end of fiscal year 1968 these forces peaked-out at a total strength of 3,547,429—an increase of 912,287 over the fiscal year end strength. The fiscal 1968 end strength included the following: Army, 1,570,186; Navy, 765,232; Marine Corps, 307,252; and Air Force 904,759.

I will include in the record at this point a tabulation setting out the active duty end strengths for fiscal years 1964 through 1969 and the estimates for fiscal years 1970 and 1971.

(The tabulation follows:)

ACTIVE DUTY FORCES—END STRENGTHS, FISCAL YEARS 1964-71

	Fiscal year—							
	1964	1965	1966	1967	1968	1969	1970 (estimate)	1971 (estimate)
Army	972,445	968,313	1,119,046	1,442,422	1,570,186	1,511,946	1,363,210	1,239,582
Navy	667,163	671,009	744,469	751,394	765,232	775,644	693,705	643,840
Marine Corps	189,751	190,187	261,687	285,269	307,252	309,771	294,105	241,185
Air Force	855,802	823,633	886,350	897,426	904,759	862,062	809,627	783,520
Total	2,685,161	2,635,142	3,091,552	3,376,511	3,547,429	3,459,423	3,160,647	2,908,127

Senator ELLENDER. During fiscal years 1966, 1967, and 1968 we maintained Guard and Reserve Forces in "paid drill status" totaling about 900,000, so we had trained men available in the Guard and Reserve Forces to augment the Active Forces. It should be remembered that a large portion of these individuals were nonprior service personnel who were not subject to the draft. Even though we were required to increase the strength of our Active Duty Forces by 912,287 men only 36,972 National Guard and Reserve personnel were called to active duty. I will include in the record at this point a tabulation setting out the units and personnel involved in the callups of January 26, 1968, and May 13, 1968.

(The tabulation follows:)

VIETNAM WAR—RESERVE PERSONNEL ORDERED TO ACTIVE DUTY INVOLUNTARILY

Reserve component	Jan. 26, 1968, actual strength	Number of units	May 13, 1968 actual strength	Number of units	Total ordered to active duty	Total number of units
Army National Guard			12,234	34	12,234	34
Army Reserve			5,181	42	5,181	2
Naval Reserve	593	6	995	2	1,588	8
Air National Guard	9,340	14	1,333	3	10,673	7
Air Reserve	4,868	8	736	6	5,604	4
Total	14,801	28	20,479	87	35,280	115
Individual Ready Reservists (Army only)					1,692	
Total involuntarily ordered to active duty					36,972	

Draft calls

Senator ELLENDER. As indicated in this tabulation the Guard and Reserve Forces were not used to provide the additional men required in the Active Forces for the conflict in Vietnam, except for the 36,972 men involved in the two limited callups. However, let us look at the draft calls during fiscal years 1966, 1967, and 1968. During fiscal year 1965, the year prior to the build-up of the Active Forces, draft calls totaled 102,000. During fiscal year 1966 draft calls increased to 334,500; during fiscal year 1967 they totaled 288,900; and during fiscal year 1968 they reached 343,300. The record is clear: The increase in the Active Duty Forces for the war in Vietnam was accomplished by increased draft calls and the normal desire to enlist during a period of high-draft calls in order to obtain the choice of service.

ANNUAL STRENGTH AUTHORIZATIONS

I am aware of the fact that the title III of the pending Department of Defense Procurement and Research Authorization bill (H.R. 17123) provides for programed average strengths of not less than : 400,000 for the Army National Guard, 260,000 for the Army Reserve; 129,000 for the Naval Reserve, 47,715 for the Marine Corps Reserve, 87,878 for the Air National Guard, and 57,921 for the Air Force Reserve. These are the strengths on which the budget for fiscal year 1971 is based However, I think the failure to use the Guard and Reserve Forces to meet the increased requirement for Active Duty Forces for the war in Southeast Asia imposes upon this committee, the Congress, and the executive branch the responsibility to review the need for these large Guard and Reserve Forces to determine if we should continue to spend $2.5 billion annually for the support of these forces.

NATIONAL GUARD STATE MISSIONS

I want to make my position absolutely clear with respect to the need for an adequate National Guard to meet the requirements of each of the States. I know of no other organization that could take over the various State missions performed by the National Guard, and I would be the last person in the world to propose any reductions that would reduce the Guard's capability to perform these varied State missions. During calendar year 1969 the National Guard was called on more than 150 times to respond to the urgent needs of the various States. These needs range from three men called upon during a blizzard at Pender, Nebr., in January of 1969 to over 5,000 men involved in relief and cleanup activities following Hurricane Camille in August and September of 1969. I will make this matter clear in my presentation to the committee with respect to the $2.5 billion requested for Guard and Reserve Forces.

Mr. ELLENDER. Mr. President, this announced change in policy with respect to future buildups of the active duty military forces does not answer all of the questions with respect to the need of $2.5 billion annually for the support of the National Guard and Reserve forces. Why do we need to assign over 31,000 active duty military personnel at a cost of over $204 million to support these forces? Without the pressure of high draft calls can we obtain competent personnel to maintain the large strengths authorized by the Congress? Can these forces obtain the degree of readiness that is required for the "total force concept" that Secretary Laird envisions? Is it possible to reduce the strength of the National Guard forces without diminishing the capability of these forces to meet their important State missions? In these days of tight Defense budgets can we allocate $2.5 billion—and under the announced policy, the cost will be much more—to the support of these forces? These are questions that the Secretary of Defense, the Secretaries of the Army, Navy, and Air Force, the Committee on Armed Services and Appropriations of the Congress, and the Congress as a whole are going to have to consider in depth in order to devise a National Guard and a Reserve force that meet the military and State requirements that we can afford to maintain.

PROPOSED CEASE-FIRE IN VIETNAM

Mr. SCOTT. Mr. President, on behalf of the Senator from Washington (Mr. JACKSON) and myself, I ask unanimous consent to place in the RECORD the bipartisan letter which we sent to President Nixon on September 1, 1970, urging him to offer at the Paris negotiations a comprehensive proposal for an internationally supervised standstill, ceasefire in Vietnam. Nineteen Senators signed the letter.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

U.S. SENATE,
Washington, D.C., September 1, 1970.

The PRESIDENT,
The White House,
Washington, D.C.

DEAR MR. PRESIDENT: We are encouraged by your appointment of Ambassador David K. E. Bruce to lead the U.S. delegation at Paris, and believe that this presents a new opportunity to move forward the Vietnam peace negotiations.

We wish to commend to your attention a course of action that has not yet been tried, but which we believe could move us toward a just and responsible peace.

We believe the United States should take a new political initiative by offering at Paris a comprehensive proposal for an internationally supervised standstill cease-fire throughout Vietnam.

The cease-fire proposal should spell out details regarding:

a) International peacekeeping machinery required to oversee the cease-fire, the protection of minorities against terrorism and political reprisals, and the withdrawal of all outside military forces within a specified period following the effective date of the cease-fire;

b) The conduct of prompt free elections supervised by a mixed electoral commission in which the Government of Vietnam, the National Liberation Front, and the broad middle spectrum of religious and political forces are fairly represented, with all sides agreeing to accept the results of the elections;

c) Safeguards to assure freedom of speech, assembly and the press to all the people of South Vietnam;

d) Release of all prisoners of war and political prisoners by both sides;

e) Economic and medical relief and assistance to bind the wounds of war and to provide for social and economic reconstruction in South and North Vietnam.

We believe that a proposal at this time for an overall cease-fire by all parties throughout Vietnam could present a new context for the Paris negotiations, give fresh and added meaning to our previous proposals, and create a new impetus for the other side to respond.

Since all participants in the Paris talks, including Hanoi and the National Liberation Front, have proposed elections as the basis of a final solution, a chief point of contention between the two sides is who shall conduct these elections. Clearly, fair elections with all groups free to compete in the political process cannot take place as long as the fighting continues.

It therefore seems apparent that a cease-fire is necessary before a political solution can be achieved. Indeed, negotiating a cease-fire may be a more achievable goal, since it is a more limited one than negotiating a total political solution prior to cessation of fighting. At the same time, working out the on-the-ground arrangements for a cease-fire could lead to compromises on some of the more difficult political problems.

While we are undertaking to turn the burden of the war over to the South Vietnamese, at the same time we should make this effort to achieve a cease-fire and an end to all the killing in South Vietnam, and not simply an end to American involvement in it.

Because of its possibilities for moving toward a compromise solution, this proposal may gain the interest of the other side in at least pursuing private talks, and thus aid in breaking the impasse in the negotiations. In Vietnam it would gain support among the people by reassuring them that we are intent on achieving peace and a fair settlement.

The cease-fire proposal would rally the support of moral leadership throughout this country and the world, and help to unify the vast majority of Americans who want to see the war ended in a way that assures the best chance for a durable peace. Thus it would serve to draw Americans together in a common and constructive approach toward ending this tragic and divisive conflict.

We believe that there is much to gain by making this proposal the next order of business at the Paris talks, and we hope you will give it your most serious consideration.

Should you share our interest in considering this proposal, we would be pleased to meet and discuss it with you further at your earliest convenience.

Sincerely yours,

HENRY M. JACKSON, HUGH SCOTT, BIRCH BAYH, ALAN BIBLE, ROBERT J. DOLE, BARRY GOLDWATER, JACOB K. JAVITS, WARREN G. MAGNUSON, MIKE MANSFIELD, THOMAS J. MCINTYRE, CHARLES H. PERCY, WINSTON PROUTY, JENNINGS RANDOLPH, ABRAHAM RIBICOFF, RICHARD S. SCHWEIKER, TED STEVENS, STUART SYMINGTON, RALPH YARBOROUGH, MILTON R. YOUNG.

RETIREMENT OF REAR ADM. ODALE D. WATERS, JR.

Mr. PELL. Mr. President, Rear Adm. Odale D. Waters, Jr., who has served as Oceanographer of the Navy for the past 5 years, announced recently his intention to retire. Admiral Waters will be relieved as Oceanographer of the Navy on September 23 by Rear Adm. W. W. Behrens, Jr.

Mr. President, Admiral Waters has served with great distinction as Oceanographer of the Navy. As one who has a deep interest in our national oceanographic program, both civil and military, I know of the many contributions he has made to the advancement of our national program.

To a very large extent, Admiral Waters was personally responsible for the development of a unified and comprehensive oceanographic effort within the Navy. It was under Admiral Waters that the status of the Oceanographer of the Navy was augmented by establishment of an Office of the Oceanographer of the Navy, reporting directly to the Chief of Naval Operations and to the Secretary of the Navy.

For 5 years, Admiral Waters has been responsible for the largest, most comprehensive oceanologic program in the country. With the increased sophistication of Naval operations, both on the surface and beneath the sea, the programs of the Office of the Oceanographer, including basic and applied research, ocean engineering and fleet support, have assumed increasing importance, and under the direction of Admiral Waters, these new challenges have been met with outstanding success.

At the same time, Admiral Waters has recognized the importance of the development of a strong civil oceanographic program in this country. His cooperation with the administrators of civil oceanographic programs, with university and private industrial ocean programs, has won him the respect and admiration of the entire marine community in the United States.

Mr. President, I salute Admiral Waters for a job well done, and I extend to him my personal wishes for success in whatever tasks he may undertake in the future. I also extend my congratulations and best wishes to his successor, Rear Admiral Behrens.

I ask unanimous consent that the biographies of Rear Admiral Waters and Rear Admiral Behrens be printed in the RECORD.

There being no objection, the biographies were ordered to be printed in the RECORD, as follows:

REAR ADM. ODALE D. WATERS, JR., U.S. NAVY

Odale Dabney Waters, Jr., was born in Manassas, Virginia, on July 13, 1910, son of the late Mr. and Mrs. O. D. Waters. He attended the Swavely School and Strayer Business College, Washington, D.C., prior to entering the U.S. Naval Academy, Annapolis, Maryland, on July 9, 1928. As a Midshipman he was a member of the Track Team, was Managing Editor of the "Lucky Bag," and was Battalion Commander his First Class year. Graduating with distinction, ninth in the Class of 1932, he was commissioned Ensign on June 2, 1932, and subsequently advanced in rank to that of Rear Admiral, to date from October 1, 1960.

After graduation from the Naval Academy in June 1932, he was assigned to the USS AUGUSTA (CA–31) in which he had junior officer duties in Gunnery and Fire Control while that cruiser was employed as Flagship of the Commander in Chief, Asiatic Fleet, during the period July 1932 until May 1936. He then returned to the United States, and in September 1936 joined the USS DOWNES (DD–375) as Torpedo Officer. Detached in June 1938, he was a student in Ordnance Engineering at the Naval Postgraduate School, Annapolis, until October 1940, after which he served for six months as Assistant Naval Attache at the American Embassy, London, England, also serving as Technical Observer in mine recovery operations. This resulted in his establishing the first U.S. Navy Mine Disposal School, after his return to the United States in 1941. In June of that year he became Officer-in-Charge of that school, and operated it for the training of personnel until January 1943, during the early period of the war.

Admiral Waters is authorized to wear the Navy's Explosive Ordnance Disposal Insignia badge for his qualifications in this field.

Ordered next to the USS MEMPHIS (CL–13), he served aboard a year. From February 1944 until October of that year he served as Fleet Gunnery Officer and Assistant Chief of Staff to Commander FOURTH Fleet, and for five months thereafter was Assistant Operations Officer and War Plans Officer on the Staff of the Commander in Chief of U.S. Atlantic Fleet. He was awarded a Bronze Star Medal, "For meritorious service as Gunnery, Training, War Plans Officer and Assistant Chief of Staff to Commander Fourth Fleet from March 18 to November 15, 1944, and as Assistant Operations Officer and Officer-in-Charge of War Plans on the Staff of Commander in Chief, United States Atlantic Fleet, from November 15, 1944, to April 27, 1945 . . . Commander Waters contributed materially to the success of the anti-submarine campaign in the South Atlantic by his persistent prosecutions of the training program of the FOURTH Fleet. After keen analysis and studies of past operations and of current and probable future situations, he prepared operational plans which contributed to the success of the Atlantic Fleet in the prosecution of the war . . ."

In June 1945 he assumed command of the USS LAFFEY (DD–724), and after the close of hostilities of World War II in August 1945, remained in that command until October 1946, participating in "Operation CROSS-

ROADS," the Atom Bomb Tests at Bikini in the Pacific during the summer of 1946. In November of that year he reported to the Naval Ordnance Laboratory, Washington, D.C., for duty as Senior Technical Officer and Mine Development Project Officer. There he was also engaged in the design of atomic weapons. Detached in January 1950, he spent five months as a student at the Armed Forces Staff College, Norfolk, Virginia, completing the course in July 1950.

He served as Ordnance and Gunnery Officer on the Staff of Commander Operational Development Force, from July 1950 until May 1952, after which he commanded the USS GLYNN (APA–239) until July 1953, spending three months in Sub-Arctic waters. During the three years to follow he served on the Staff of the Supreme Allied Commander, Atlantic, concerned with Strategic Applications and Policy. In September 1956 he assumed command of Destroyer Squadron TWO, which operated in the Middle East during the Suez Canal incident, as a unit of the Middle East Force.

He assumed the duties of Commander, U.S. Naval Weapons Station (formerly U.S. Naval Mine Depot), Yorktown, Virginia, on December 31, 1957. In July 1960 his selection for the rank of Rear Admiral was approved by the President of the United States, and in December of that year he reported as Commander Destroyer Flotilla ONE. From March 5, 1962 until February 1964 he served as Inspector General and Assistant Chief of the Bureau of Naval Weapons for Administration, Navy Department, then became Commander Naval Base, Los Angeles, California. In May 1965 he was designated Oceanographer of the Navy, Office of the Chief of Naval Operations, and Commander Naval Oceanographic Office, Suitland, Maryland.

Recognizing the increasing importance of oceanography the Secretary of the Navy, seconded by the Chief of Naval Operations, took vigorous action in mid 1966 to establish a new structure of command which would serve to pull together the management of the entire Navy Oceanographic Program. An Office of the Oceanographer of the Navy was established in August 1966 under Rear Admiral Waters. As head of this Office, Admiral Waters reports directly to the Chief of Naval Operations for operational purposes and to the Secretary of the Navy for policy guidance. The Oceanographer has full responsibility for all the Navy's oceanographic programs including basic and applied research, Ocean Engineering and Fleet support.

In addition to the Bronze Star Medal, Rear Admiral Waters has the American Defense Service Medal with star; the American Campaign Medal; European-African-Middle Eastern Campaign Medal; Asiatic-Pacific Campaign Medal; World War II Victory Medal. As Oceanographer of the Navy, he was awarded in 1968 the highest honor the Public Relations Society of America can bestow: a Silver Anvil for Institutional Programs in the government or military category. In 1969, he received the Navy League's Parsons Award which is awarded annually to a Navy or Marine Corps officer or enlisted man or civilian who has made the most outstanding contribution in any field of science which has furthered the development and progress of the Navy or Marine Corps.

Rear Admiral Waters was married in 1936 to Miss Lucile Elizabeth McGehee of Washington, D.C. They have four daughters, Martha Lane (now Mrs. George Philipps), Carol Weir (now Mrs. Robert Waldron), Lucile Dabney and Ann Elizabeth. Rear Admiral Waters resides at 8620 W. Blvd. Drive, Waynewood, Alexandria, Virginia 22308.

REAR ADM. WILLIAM W. BEHRENS, JR., U.S. NAVY

William Wohlsen Behrens, Jr., was born in Newport, Rhode Island, son of Mrs. W. W. Behrens, Sr., and the late Rear Admiral Behrens, USN. Following graduation from Friends Select School, Philadelphia, Pennsylvania, and Rutherford Preparatory School in Long Beach, California, he entered the U.S. Naval Academy on Presidential Appointment in June 1940. He was graduated and commissioned Ensign on June 9, 1943 (Class of 1944), and in May 1967 was selected for Rear Admiral to date from August 1, 1968.

After commissioning, he attended Submarine School, New London, Connecticut. In January 1944, he reported on board USS *Sandlance* for her first submarine war patrol, which resulted in an award of the Presidential Unit Citation for the sinking of several enemy ships including a Japanese cruiser. Because of *Sandlance's* extensive depth charge damage during this patrol, he was shortly transferred to USS *Picuda*. While serving in this ship, he participated in the assaults on the Philippine Islands, Luzon operation, and the assault and occupation of Okinawa Gunto. For outstanding service while attached to *Picuda*, he was awarded the Silver Star Medal and the Bronze Star Medal with Combat "V". The citations follow in part:

Silver Star Medal "For conspicuous gallantry and intrepidity, attached to the USS *Picuda*, during her third war patrol against enemy forces in the forward Pacific War Areas from July 23 to October 3, 1944. Skillfully supervising and coordinating communication throughout the ship, (he) rendered invaluable service to his commanding officer and contributed materially to the sinking of five enemy freighters and to the damaging of a 10,000-ton, Japanese transport . . ."

Bronze Star Medal: "For heroic service while attached to the USS *Picuda*, during her fourth war patrol in Japanese-controlled waters in the East China Sea Area from October 27 to December 2, 1944. Demonstrating sound judgment and skill in the coordination of important tactical information, (he) rendered valuable service to his commanding officer in conducting attacks which resulted in the sinking of more than 30,000 tons of enemy shipping and in the damaging of 10,000 additional tons . . ."

He also has the Ribbons for and facsimiles of the Presidential Unit Citation awarded USS *Sandlance* and the Navy Unit Commendation awarded USS *Picuda*.

After six World War II submarine patrols and service as Executive Officer of USS *Picuda*, he was in June 1946 transferred to USS *Quillback*. From September 1948 until March 1950 he served as Executive Officer of the early Guppy II submarine USS *Clamagore*. After a tour as Anti-Submarine Warfare and Sonar Instructor at the Fleet Sonar School, Key West, Florida, he joined USS *Odax* in August 1952 as Executive Officer. A year later, Lieutenant Behrens assumed command of USS *Balao;* and from August 1954 until August 1955 he commanded USS *Harder*, a new post-war fast attack submarine.

As Head of the Engineering Department, U.S. Submarine School, New London, Connecticut, he next organized and served as Director of the first Nuclear Power School in the Navy until March 1957, when he became Special Advisor on Submarine Matters to the Chief of Naval Reactors Branch, Atomic Energy Commission, Washington, D.C. In January 1958, he reported for fitting out duty aboard USS *Skipjack*, the fourth of the Navy's new nuclear powered ships and the first of the high speed, whale-shaped attack submarines. He put into commission and assumed command of *Skipjack* on April 15, 1959. In January 1961 he was awarded the Legion of Merit with citation as follows:

"For exceptionally meritorious conduct in the performance of outstanding service in 1960 as Commanding Officer of the USS *Skipjack* (SS(N)585). Exercising sound judgment, keen foresight, and forceful leadership, Commander Behrens contributed in large measure to the successful completion of a complex and highly important mission which was of great value to the United States."

He is entitled to the Ribbon for and a facsimile of the Navy Unit Commendation award USS *Skipjack* for outstanding services during the period May to June 1960.

In December 1960, he was assigned to duty in connection with fitting out USS *Ethan Allen* (SSB(N)608), and assumed duty as Commanding Officer at her commissioning, August 9, 1961. *Ethan Allen* was the first of the new nuclear submarines designed from the keel up for the Polaris mission and she fired the live nuclear war head missile in Pacific Ocean tests. After Polaris patrols, Commander Behrens was a student at the National War College, Washington, D.C., from August 1963 to June 1964. He received the degree of Master of Arts in International Affairs from George Washington University. He next headed the NATO Nuclear Planning Section, Strategic Plans Division (OP–60), Office of the Chief of Naval Operations. In that capacity, for meritorious service from August 10, 1964 to January 21, 1966, he was awarded the Navy Commendation Medal. The citation states in part:

"Captain Behrens exercised dynamic and highly imaginative leadership in guiding the responses of the U.S. Navy in the development of the many detailed planning studies conducted to identify naval responsibilities in the formation of NATO nuclear force requirements. Further, he had primary responsibility for coordinating all aspects of the Mixed-Manning Demonstration participated in by seven NATO nations aboard USS *Claude V. Ricketts* (DDG–5). Repeatedly displaying outstanding diplomacy and tact in his coordination with representatives of the participating NATO governments, he contributed markedly to this important international endeavor to which the U.S. Navy had direct commitments. By remaining sensitive to the national interest and the political requirements of his tasks, yet recognizing the military responsibilities of the Navy he consistently directed constructive efforts toward common goals . . ."

He is also entitled to the Ribbon for, and a facsimile of, the Navy Unit Commendation awarded the USS *Claude V. Ricketts*.

Assigned in January 1966 to the Office of the Secretary of Defense, Washington, D.C., he was selected for assignment as a Member of the Policy Planning Council, Department of State. For this service, he was awarded the Joint Service Commendation Medal. On December 1, 1967 he assumed command of the U.S. Seventh Fleet Amphibious Force Amphibious Group One. He was awarded a Gold Star in lieu of the Second Legion of Merit with Combat "V". The citation follows in part:

Gold Star in lieu of the Second Legion of Merit: "For exceptionally meritorious service from December 1967 to April 1968 as Commander Amphibious Force, U.S. Seventh Fleet. During this period of United States involvement in combat operations in support of the Republic of Vietnam, Rear Admiral Behrens was in command of all naval amphibious operations in Southeast Asia. He astutely directed the planning and organization of five successful amphibious assault landings, continually utilizing the Navy and Marine Forces under his command to optimum advantage. Under his able direction, the longest amphibious operation of the Vietnam conflict was successfully completed during the critical periods of the northeast monsoon and the enemy TET offensive. The success of amphibious landings and the successful resupply of forces ashore were due largely to Rear Admiral Behrens' astute

planning, ingenuity, and leadership qualities. The accomplishment of the myriad of tasks under the stress of constant enemy attack and extremely difficult operating conditions demonstrated his great dedication and assiduous attention to duty . . ."

For combat operations on January 12, 1969 to February 14, 1969 during the largest amphibious operation of the Vietnam conflict, during which Rear Admiral Behrens was in direct command, he was awarded the Bronze Star Medal (First Oak Leaf Cluster) by the famous American Division, U.S. Army.

Upon detachment as Commander Amphibious Force, U.S. Seventh Fleet on July 1, 1969, Rear Admiral Behrens was awarded a Gold Star in lieu of the Third Legion of Merit with Combat "V", for his exceptionally meritorious service in directing amphibious operations in Southeast Asia during the period January through July 1969. In July 1969, he assumed the position as Director, Politico-Military Policy Division (OP-61), Office of the Chief of Naval Operations, Navy Department.

In addition to the Silver Star Medal, Legion of Merit with two Gold Stars and Combat "V", Bronze Star Medal with "V" and first Oak Leaf Cluster, Combat Action Ribbon, Joint Service Commendation Medal, the Navy Commendation Medal, Presidential Unit Citation Ribbon, the Navy Unit Commendation Ribbon with two stars, the Meritorious Unit Commendation with two stars, Rear Admiral Behrens has the American Defense Service Medal with star, Asiatic-Pacific Campaign Medal with one silver and four bronze stars (nine engagements), American Campaign Medal, World War II Victory Medal, National Defense Service Medal with bronze star, the Vietnam Service Medal with three stars, Philippine Liberation Ribbon, the Submarine Combat Insignia and the Polaris Patrol Insignia. He also has the National Order of Vietnam and the Vietnam Gallantry Cross with Palm.

He is married to the former Betty Ann Taylor of Tampa, Florida, and they have four children, Elizabeth Hunt Behrens, William W. Behrens, III, Charles Conrad Behrens, and Susan Taylor Behrens.

CULEBRA BOMBING MUST STOP

Mr. SMITH of Illinois. Mr. President, I ask unanimous consent that certain remarks I intended to place in the RECORD last week be printed at this point in the RECORD.

I also ask unanimous consent that an article bearing on this subject, written by Mr. Carleton Kent, and published in the Chicago Sun-Times of September 3, 1970, be printed in the RECORD.

There being no objection, the items were ordered to be printed in the RECORD, as follows:

STOP CULEBRA BOMBING

(Statement by Senator RALPH TYLER SMITH of Illinois)

I wish to state briefly, but very strongly, my views on the bombing by the United States Navy of the Caribbean Island of Culebra. This tiny island is the home of some 700 United States citizens. It is also the target for World War II bombing and target practice by our naval forces. Reports from too many independent sources to be unreliable prove that this bombing is both dangerous and unnecessary—dangerous to the physical health and commercial well-being of the inhabitants and unnecessary to the requirements of a modern navy in the nuclear age.

As a United States Navy veteran myself, and as one who commanded a gunboat during World War II, I am well aware of the need to keep both ships and crew in fighting readiness, but it is neither necessary nor desirable to practice with outmoded weapons on United States citizens to keep in battle trim.

Mr. President, I believe in calling a spade a spade: The Navy's continued insistance on using Culebra as a target for bombs and shells in the face of the rafts of clear and convincing evidence that it is dangerous and unnecessary is not only an affront to reason: It is a total disregard for the welfare of hundreds of American citizens whose home this island has always been.

This stupid policy must cease.

PUERTO RICO GETS SMITH'S AID PROTESTING NAVY TARGET AREA

(By Carleton Kent)

WASHINGTON.—Sen. Ralph T. Smith (R-Ill.) called on the Navy Wednesday to stop its "stupid policy" of using the tiny Puerto Rican island of Culebra as a bombing and shelling target.

"As a U.S. Navy veteran myself, and as one who commanded a gunboat during World War II, I am well aware of the need to keep both ships and crew in fighting readiness, but it is neither necessary nor desirable to practice with outmoded weapons on United States citizens to keep in battle trim," Smith said.

"I believe in calling a spade a spade: The navy's continued insistance on using Culebra as a target for bombs and shells in the face of the rafts of clear and convincing evidence that it is dangerous and unnecessary is not only an affront to reason.

"It is a total disregard for the welfare of hundreds of American citizens whose home this island has always been. This stupid policy must cease."

MAYOR PRAISES SMITH

Smith drew prompt praise from Mayor Ramon Feliciano, whose constituency is 726 inhabitants of the 7-by-2-mile island, and from two young Washington lawyers who are representing the Culebran municipality on a no-fee, for-the-good-of-the-public basis.

"The Culebrans, as Puerto Ricans are American citizens without a vote in Congress, and they must depend on the courage and political disinterestedness of men like Sen. Smith to represent their legitimate aspirations," Feliciano said.

Attorney Thomas C. Jones, Jr., whose parents live in Geneva, Ill., told a press conference that Smith's statement was the strongest of more than 30 made on behalf of the Culebrans by senators.

Jones and Richard Copaken have been representing Feliciano since May. They are from former Sec. of State Dean Acheson's law firm of Covington & Burling.

DEVELOPMENT RUMOR DENIED

Feliciano said he came to Washington to consult with friendly senators; to recruit others to his cause of persuading the Navy to abandon the island; and to assure Navy officials there was no truth to the rumor, which he said came from Navy personnel, that speculators wishing to develop the island's open spaces as a resort were behind the Culebran protests.

He said that although Navy Sec. John H. Chafee refused to meet with him, Assistant Navy Sec. Frank Sanders and Joseph A. Grimes, Jr. of Chafee's office had conferred with him earlier Wednesday and had assured him "no high Navy official believes there is any substance to any allegation to the effect that land speculators are behind the protests of the Culebrans."

Asked if he approved of a new recommendation by an adviser to Gov. Luis A. Ferre of Puerto Rico that the Navy phase out its target operations on Culebra in five years, Feliciano said, "No, that's too long. One or two years . . ."

MAYOR ISN'T OPTIMISTIC

Asked if he thought the Navy would yield and leave the island, he said slowly: "I think the Navy will fight up to the end."

But Jones and Copaken thought there was promise in a move by Sen. Henry M. Jackson (D-Wash.) of the Senate Armed Services Committee to see if some compromise was acceptable to the Navy Department.

Feliciano denied there was substance to recent Navy charges that Culebrans have around the municipal pier.

"I haven't seen one Culebran doing that," he said. "I don't believe it. Maybe once in a while a fisherman uses a piece of Navy iron for an anchor on his boat . . . maybe people outside . . . maybe Navy people . . ."

MIGRANT FARMWORKER CHILDREN AND THE DRUG "RITALIN"

Mr. MONDALE. Mr. President, an article published in the Miami Herald of August 7, 1970, calls public attention to the proposal of a Broward County, Fla., doctor to use the controversial drug Ritalin on migrant children.

In view of the unknown qualities of this drug, it is particularly disturbing to learn that it is the children of migrant and seasonal farmworkers who are the recommended guinea pigs upon whom the drug will be used. The full implications of the needs and use of the drug are set forth in the Florida newspaper article, and in a feature story and editorial in the Washington Post, which I would also like to bring to the attention of the Senate.

Especially disturbing is that certain preconditions for the use of this drug cannot possibly be met when experimenting with the migrant farmworker population. Proper administration to children requires careful and accurate diagnosis of possible behavioral disorders. In view of the desperate lack of funds for fundamental preventive health care for farmworkers, it is difficult to imagine where sufficient funds for adequate, thorough or correct diagnosis will come, and even if funds are available, serious question of health care priorities is voiced. Additionally, the drugs should be administered under careful control and in the presence and guidance of a physician. Yet, by definition, the migrant is mobile, and often lives in remote locations, thus eliminating the reasonable possibility of sustained continuous medical treatment.

As chairman of the Subcommittee on Migratory Labor I have today called upon the various Federal Government units that administer migrant programs, and whose funds are proposed to be used, to respond to the following inquiries.

Are federally funded programs involved in the use of behavior modification drugs such a Ritalin, and if so, is the use of these drugs fully approved by your unit?

What assurance do you have that these drugs are necessary for migrant children?

What guarantees do you have that these drugs will not do any physical or mental harm to any of these children?

And finally, in view of the mobility, impoverishment and history of exploitation of so many migrant and seasonal farmworkers, and the possibility that

parents have only limited opportunities or channels to protest the use of these drugs, what protections for the individual rights of the parents and children involved has your unit recommended?

Let me emphasize that I am not interested in blindly standing in the way of medical progress. But let us not use the kids of the Nation's most powerless persons as guinea pigs in the name of progress.

Mr. President, I ask unanimous consent that the Miami Herald article, a Washington Post editorial of July 3, 1970, and a Washington Post feature article by Robert Maynard, published August 23, 1970, be printed in the RECORD.

There being no objection, the items were ordered to be printed in the RECORD, as follows:

[From the Miami Herald, Aug. 7, 1970]

MIGRANT TOT DRUG EXPERIMENT PROPOSED BY BROWARD DOCTOR

(By Louise Montgomery)

FORT LAUDERDALE.—Public health officials in Broward county are considering an experimental study using a controversial drug to control the behavior of a group of 3- and 4-year-old children of farm laborers.

The study, which must be approved by the State Board of Health, would employ ritalin, a drug described by its manufacturer as "a mild stimulant and anti-depressant, which brightens mood and improves performance."

The subjects of the experiment would be chosen at random from among 900 farm labor children referred by a federal aid program to the Broward County Health Department's Migrant Clinic in Pompano Beach for treatment of behavior disorders.

The study was proposed by Dr. Sonja S. Harrold-Lessne, a private physician who operates a baby clinic for the Health Department.

Dr. Paul Hughes, Health Department director, said Ritalin "looks like a magic drug," to many pediatricians. He said it is "useful with children who are unmanageable and can't concentrate."

Dr. Hughes said Dr. Harrold-Lessne submitted the proposal for his review about two months ago and asked him to submit it to the State Board of Health for approval.

The use of Ritalin and similar drugs has aroused a furor that reached the halls of Congress, with some opponents arguing that it is an improper and dangerous practice to introduce children to drugs.

Rep. Cornelius E. Gallagher (D., N.J.) ordered an investigation of Ritalin use in Omaha, Neb., schools and charged that drugs were being used to "deaden" energy of hyperactive children instead of converting it to creative channels.

The U.S. Food and Drug Administration also is investigating use of Ritalin and other "behavior modification" drugs. Gallagher said the drugs are classed by the government as "dangerous substances."

Dr. Harrold-Lessne proposed using the drug on Broward migrant children to determine its long-range effects on behavior, learning abilities and school adjustment. The study would involve giving Ritalin to about 100 children for one year, with follow-up studies for four more years.

For the experiment, Dr. Harrold-Lessne proposed defining "behavior disorder" as "any disorder of behavior that the teacher or parent deems dangerous to the child's own well-being as well as to that of his classmates; disruptive to normal routine; lethargic or dull to the extent that the child seems unable to participate in classroom activities."

A control group will be set up during the study.

Each child given the drug will be paired with another child of the same sex, age, ethnic group and intelligence range who will be given a placebo or sugar pill.

Dr. Harrold-Lessne said Dr. Hughes was "very interested" in the proposal, but he would have to go through the state and regional U.S. public health service offices in Atlanta "to make sure we weren't encroaching on anyone's rights."

However, she said she is trying to get private financing through a foundation for the experiment because the project got "all wrapped up in bureaucratic nonsense."

"This project has to be done," she said, "whether I do it or someone else does it."

Dr. Harrold-Lessne said she anticipates no trouble getting some sort of a grant for the project, and she is talking with a local firm, Educational Associates Inc., about having them administer the program.

Dr. Jesse Arnold, director of the Maternity and Infant Care project administered by the Health Department, is listed in the proposal as the medical coordinator. He said he acted as a consultant to Dr. Harrold-Lessne and had not discussed the project with her in about a month.

Dr. Arnold said Ritalin has been given by pediatricians "just like aspirin for a headache if we saw a kid who needed it to settle down."

Although Dr. Harrold-Lessne objected to Ritalin's being called a "mind-expanding" drug, another local doctor said that that is an appropriate term for it as it helps one part of the brain to expand and concentrate.

The doctor, who asked that his name not be published, questioned the advisability of administering the drug to groups of children, particularly since full control over migrant children would be impossible. He also said the drug sometimes produces results opposite those anticipated.

Dr. Harrold-Lessne maintains that the benefits of Ritalin are well known, although in her proposal she said no long-term studies on the effect of the drug have been undertaken.

The manufacturer of Ritalin, Ciba Pharmaceutical Co., warns in a descriptive leaflet of several possible side effects.

"Nervousness and insomnia are the most common . . ."

Other side effects may include, the leaflet says: Nausea, dizziness, palpitation, headache, drowsiness and skin rash.

"Overt psychotic behavior and psychic dependence in emotionally unstable persons have occurred rarely," it adds.

Precautions suggested by the manufacturer say patients with "an element of agitation" may react adversely.

Dr. Harrold-Lessne proposed giving the medication to the children in steadily increasing doses "until therapeutic effect, maximum dosage or adverse reactions are seen.

"A child will be withdrawn from the study only if serious adverse effects are noted," she said.

[From the Washington Post, July 3, 1970]

DRUGS AND CHILDREN

Reporter Robert C. Maynard's recent account in this newspaper of the administration of "behavior modification" drugs to supposedly overactive and unmanageable children in the Omaha, Nebraska, public schools raised some nightmare visions. Somewhere between 3000 and 6000 elementary children in Omaha, Mr. Maynard reported, "were walking around with potentially dangerous drugs in their pockets and lunch pails." And he quoted a retiring assistant superintendent of the school system as saying. "They were trading pills on the school grounds. One kid would say, 'Here, you try my yellow one and I'll try your pink one.' "

The pills inovlved are amphetamine-type drugs—those most widely used are patented drugs called Ritalin and Dexedrine—which are known to act as stimulants when taken by adults but which, paradoxically, have a quite contrary, tranquilizing effect when taken by children. Competent, careful medical researchers have found these drugs to be extremely effective in treating children afflicted with hyperactivity growing out of some physiological defect in the inhibitory portion of the brain. This defect makes a child restless, incapable of any sustained attention—and intolerably disruptive to classmates. Dexedrine, which has been used successfully since the 1930s for children suffering from this physical disorder, and Ritalin, a more recent and less tested substance, have helped such children to enlarge their attention span and to develop motivation for study. They have operated, in short, as psychic energizers, giving troubled children a start which, after a year or two of this medication enables them often to go forward quite normally on their own.

These drugs are by no means without side effects however; and their effects are by no means fully known. While it is believed that they have no addictive consequences for children, it is not certain that they may not lead to some sort of psychic dependence which in turn could lead to a resort to more dangerous drugs as a solution of life's problems. In any case, proper administration of any drugs depends in the first instance upon correct, careful diagnosis. There are many overly active children whose difficulties grow out of environmental rather than physical handicaps or out of boredom when the school curriculum has no relevance to their life experience. Far too frequently behavior problems in children are the fault of incompetent or indifferent teachers; and far too frequently such teachers try to discard children by designating them as unteachable and relegating them to a basic track or to a drug that quenches their curiosity and calms their restlessness.

A second imperative condition for the administration of drugs is that they should be dispensed only by a competent physician and consumed in his presence or under some other careful control. The idea of letting children have pills in quantity so that they can swap with one another or overdose themselves in hair-raising. The "behavior modification" drugs undoubtedly have uses. But evidently they are also subject to dangerous abuse. The medical profession ought to act to keep them under stringent control.

[From the Washington Post, Aug. 23, 1970]

CAN DRUGS HELP A "WILD" CHILD?

(By Robert C. Maynard)

Of 30 children in any American grade school classroom, the statistics say, as many as three may be "hyperactive," a word that can describe a whirlwind of a child.

In the language of that world where medicine meets education, such children—no fewer than 1.7 million and probably no more than 3 million—have minimal brain dysfunction, functional behavior problems, learning disorders or behavior disorders. Sometimes they are called neurologically handicapped.

They are the focus of considerable national attention now because of the approach to their problem that is most common today. Their behavior is "modified" by the use of stimulant medications that have themselves been the source of controversy over drug abuse.

"Speed kills," the television and magazine advertisements warn. Sustained adult usage of "speed"—amphetamines—can lead to dependency, and dependency may lead to a state known as "freaking out on speed," a hordendous trauma. (This condition, how-

ever, has not been found in children under treatment; the dosage is very small.)

Billions of amphetamine pills, also known as "uppers," are sold illicitly each year. Willing to throw out the baby with the bath water, several medical authorities have urged Congress to make amphetamines illegal if they cannot be better controlled.

THE OMAHA PROGRAM

Among the physicians alarmed at that suggestion are those scores of doctors, principally in the specialties of pediatrics, child psychiatry and pediatric neurology, who believe—and present evidence—that amphetamines are a safe and effective treatment for learning and behavior disorders in children below the age of puberty.

Taking place in private physicians' offices and medical clinics, this form of treatment received little attention until a community controversy in Omaha brought it into the national spotlight. The Omaha program was described in the Washington Post of June 29.

Omaha physicians and school officials estimated the number of children involved in drug therapy there at 3,000 to 6,000 in the city public school population of 62,000. The same Omaha spokesmen have since withdrawn that estimate, explaining that the number was intended to indicate a potential—the number of children with behavior problems—and not the actual number of children on behavior drugs in Omaha.

The Omaha program has provoked nationwide controversy. Rep. Cornelius Gallagher (D-N.J.), appalled at the idea of "modifying" children's behavior, has scheduled hearings next month, but respected physicians have also spoken up, many of them insisting that the use of amphetamines is such a tried and true method of handling these problems in children that they are surprised at all the fuss.

"There's nothing new about it," said Dr. C. Keith Conners of Massachusetts General Hospital. "It was discovered by Dr. Charles Bradley in East Providence, R.I., back in 1937. Since the 1950s, there has been a great deal of research going on in this field."

AIMED AT OBESITY

Dr. Bradley was looking for a way to cut down the weight of disturbed children. He hit upon a method, amphetamines, that was not to become a popular means of weight-reducing for another generation.

More important than weight, however, Dr. Bradley observed that the children on amphetamines were calmer. He documented what was later to become known as the "paradoxical effect." A drug that stimulates adults seems to do the reverse in children.

Dr. Barbara Fish, a child psychiatrist and an associate professor at the New York University School of Medicine, is among those who doubt there is a "paradoxical effect." In fact, Dr. Fish said, "the child is being stimulated, too. He is just being stimulated in a different way. The portion of his brain that controls his inhibitory functions is being stimulated. Instead of running around the classroom, he sits down. Instead of his attention wandering every which way, he concentrates on what is before him."

Although she has been observing children under treatment with amphetamines for nearly 20 years, Dr. Fish feels that she still does not know as much as she would like to about how amphetamines and other drugs function in the brain.

Dr. Daniel X. Freedmann, the noted University of Chicago psychiatrist, is another of those authorities in the growing field of psychopharmacology who feel that much remains to be known about mind-affecting drugs in children. After serving recently on a National Academy of Sciences panel of experts passing on the effectiveness of such drugs in children, Dr. Freedman said he felt that at least three years and possibly five years may pass before anyone can say for certain just how useful such drugs are, and for whom.

"The problem," he said, "is that we don't know what the diagnostic population really is—don't know how to predict which children will really benefit from these drugs and which will not."

A MEDICAL CONTROVERSY

Whether there is an organic illness called "minimal brain dysfunction" or whether the majority of hyperactive children are emotionally distressed is still a matter of controversy between neurologically oriented physicians and psychiatrically oriented physicians.

Dr. J. Gordon Millichap, a Chicago neurologist who teaches pediatric neurology at the Northwestern University School of Medicine, says that "emotional problems are secondary; they are a rarity." He finds neurological disorders in a majority of the 20 new cases of hyperactivity he sees each week. He also finds that a majority respond to drug treatment.

Dr. Millichap, like many other physicians treating children with drugs, prefers Ritalin—methylphenidate hydrochloride—produced by the CIBA Pharmaceutical Co. Dexidrene, generically known as dextroamphetamine, marketed by Smith Kline & French, is also popular.

Dr. Millichap's belief that the problems of the hyperactive child are basically organic is not shared by many child psychiatrists. Bellevue's Dr. Fish said: "There are too many doctors who believe that all you have to do is pop a pill into a kid. It makes the child feel better and function better, but it is just a tool that may buy you time while you work with the child."

The disagreements do not end with the cause of the problem; there are differences about what kind of problems yield to solutions with the aid of drugs.

Dr. Sidney Adler of Anaheim, Calif., is a pediatrician who specializes in the problems of children with learning disorders. He is treating 2,000 children—"from kindergarten to college," he said—with behavior modification drugs.

"We are flying by the seat of our pants," Dr. Adler said in a transcontinental telephone conversation. "There is a lot we don't know. We gain experience as we go along."

Among Dr. Adler's discoveries over the past 15 years is that behavior problems and learning problems are so linked that drugs can be employed effectively against what he describes as the "learning lag." Children with grade averages of C and D have been "pulled up to B and sometimes even A" after a period on one drug or another prescribed by Dr. Adler.

"This is an educational problem that has been dumped into the lap of medicine," Dr. Adler said. "These kids with behavior or learning problems are failures. As you know, failure only breeds more failure and frustration. That's why a lot of these kids who have these problems and don't get treated wind up getting into trouble later."

BEGAN WITH SCHOOL

Mrs. Robert O'Betz of Torrance, Calif., is the mother of a 15-year-old son with a behavior problem who was treated successfully. "We didn't know there was anything wrong until he got to school," Mrs. O'Betz said.

"He was a lovely child and we enjoyed him, but when he got to school, he couldn't handle it. He became frustrated at first, and soon actually nasty."

The O'Betzes, like thousands of other parents, had to face the difficult question of whether to give their son drugs.

"Many parents worry," said Dr. Fish, "'Is this going to make my child a drug addict?' I have rarely heard of these drugs doing that, because they don't make children feel the same reaction of being high that adults can feel. Actually, amphetamines in these dosages for children are really very mild drugs."

Mrs. O'Betz, for all of her misgivings about drugs, is pleased with the result. Not all parents are. "It was like giving our child water," a Toronto father said. "The drugs didn't do a thing."

Some doctors have the same experience with most of their child patients. "Drugs," said Dr. Bruce D. Freeman of the University of British Columbia at Vancouver, "have only been helpful to me 10 per cent of the time."

Dr. Freeman believes in exhaustive investigation. He is likely to drop into the classroom of a new patient "just to see what goes on in the child's world." He also makes the home visits, almost unheard of in psychiatry, for the same purpose, to see the child in his natural setting.

Dr. Freeman feels that drugs are most helpful in the hands of those physicians who believe in them.

"The placebo effect is well known in medicine," he said. "I think the charisma of the man using any technique is going to influence the outcome."

This wide variance of opinion and experience is one of the reasons that Dr. Daniel X. Freedman and his National Academy of Sciences panel would only go as far as to agree to label such drugs as Ritalin and Dexidrene "probably effective" for child treatment.

"There is something there," Dr. Freedman said, "but it's hard to tell yet just what it is. It is clear the drugs help some children, but which children, which class of children, which kinds of problems—all of that remains to be known."

Mrs. O'Betz, the mother of the hyperactive boy, said: "Many, many parents don't want their children on drugs, but we have no choice. I sometimes feel that the schools are pushing the kids too hard to conform to a norm."

Her concern is shared by so many parents that associations for children with learning disorders and behavior problems have sprung up in 32 states. Mrs. O'Betz is an official of the California Association for Neurologically Handicapped Children, which sends out hundreds of pieces of literature a week, including descriptions of drug-free management of hyperkinesis.

But sometimes drugs are the only solution parents see. To illustrate the point, Mrs. O'Betz tells the story of a neighbor boy, Tommy:

"He's a very good Little League pitcher—when he isn't clowning. But sometimes in the game he will hide the ball under his shirt and do all kinds of embarrassing antics. After Tommy got pills and calmed down, he did fine."

That dramatic effect has been described by other parents, such as the wife of a Washington physician who feels that problem children should be identified sooner so they can benefit from the peace that drugs bring.

"It was fantastic to see in our daughter," she said. "Within 15 minutes you could see the change. She was at peace."

She reported, as many parents have, that her daughter had trouble sleeping at night. Among the side effects of stimulant drugs are sleeplessness, loss of appetite (which is why people use amphetamines to reduce their weight) and agitation.

A DWINDLING EFFECT

Dr. Millichap said he is greatly concerned that the public concern over addiction—he feels it is groundless—might lead to curtailment of the research in hyperactivity. But he has noticed that the drug's effectiveness as a learning and behavioral aid diminishes over time, making it necessary to increase the dosage from as little as 10 milligrams to as much as 60 milligrams a day.

Of a score of physicians and other authorities who discussed the drug treatment with a reporter, Drs. Adler and Fish, whose practices are research and clinical, have been able to keep children on the drugs for the longest periods—six years in some cases. They are convinced that there are no long-range effects to be concerned about.

Dr. Conners of Massachusetts General said he has gone back over some of Dr. Bradley's patients who are now in their 30s and 40s. "We found nothing alarming or unusual about them" Dr. Conners reported. "They had no greater addiction or alcoholism problems than would be found in the general population."

Despite those scientific reassurances, wary eyes from Capitol Hill are looking at "behavior modification." In addition to Rep. Gallagher's alarm, there is a warning from a staff member of a Senate subcommittee that has been monitoring the drug industry since the Kefauver hearings in 1962.

"I remember several years ago," he said, "when the question arose of labeling amphetamines as useful in treating obesity. We invited the American Medical Association up here and asked them to assure us that this was a wise indicated use of these drugs. They assured us it was.

"So we went along with the drug companies and the 'fat doctors.' Need I tell you that now our mental institutions are filled with women suffering from self-induced paranoia from taking those pills to lose weight?"

And Dr. Sidney Berman of Washington, president of the American Academy of Child Psychiatry, said the other day:

"There is no way to be too careful when you are talking about drugs and children. They ought to be approached very cautiously and used with all of the judiciousness at a doctor's command. Anything that smacks of mass use of drugs in children must be viewed with some concern."

A HOPEFUL VIEW

So the pendulum of opinion swings between those who feel they are witnessing a medical advance and those who warn of medical mistakes. Dr. Fish feels that the new tool, used carefully, will prove itself in time. She trusts the verdict of the evidence thus far and says of the future:

"I would hope that people will overcome their fears about these drugs because, judiciously used, they can be of great help . . . I would hope to see a time when this tool, or any useful tool, when parents would come knocking on the door, asking, 'Why can't this be used to help my child?' "

MISSION TO MEXICO

Mr. DOLE. Mr. President, President Nixon's recent visit to Mexico is an excellent example of the good will that can be fostered through personal diplomacy between two national leaders.

I ask unanimous consent that editorials from the New York Times, Salt Lake Tribune, Albuquerque Journal, Seattle Post Intelligencer, and San Francisco Chronicle be printed in the RECORD.

There being no objection, the editorials were ordered to be printed in the RECORD, as follows:

[From the New York Times, Aug. 25, 1970]

USEFUL MISSION TO MEXICO

If all Presidential trips abroad could accomplish as much in short order as Mr. Nixon's 28-hour visit to Mexico, the case for personal diplomacy at the highest level would be unanswerable. Actually, the ground had been laboratory prepared for the agreement designed to resolve remaining boundary disputes between the United States and Mexico and to set up machinery for heading off such quarrels in the future.

The basic climate had been created through earlier resolution of the century-old dispute over the Chamizal area on the Rio Grande between El Paso, Texas, and Ciudad Juarez. Negotiations for the Chamizal Convention were launched by Presidents Kennedy and Lopez Mateos in 1962 and brought to fruition by Presidents Johnson and Diaz Ordaz in 1967.

These bits of recent history are recalled not to diminish the accomplishment of Presidents Nixon and Diaz Ordaz at Puerto Vallarta, but to point up the invaluable continuity that has been built up for amicable relations between the two countries in recent years. That continuity was endangered last year when Washington embarked on "Operation Intercept," a drive to halt the flow of marijuana and narcotics from Mexico.

Fortunately, the Administration soon abandoned this ham-handed venture and the two Governments agreed to replace it with "Operation Cooperation," under which Mexico promised to intensify its efforts to curb production and export of narcotics. In the improved climate, Attorney General John Mitchell accompanied Mr. Nixon to Puerto Vallarta and agreed on new measures of cooperation against the drug traffic.

Finally, Mr. Nixon has made what Mr. Diaz Ordaz calls a "constructive" proposal for improving the agreement involving distribution of the waters of the lower Colorado river. If a new agreement satisfactory to both sides can be reached by the time the old one expires in November, Mr. Nixon will have even more cause to be pleased with his personal diplomacy south of the Rio Grande.

[From the Salt Lake Tribune, Aug. 22, 1970]

GOOD NEIGHBORS MEET

Since there are no major issues plaguing the United States and Mexico, President Nixon's trip south of the border to visit President Diaz Ordaz was basically a good will expedition. But there were a few minor issues which a personal exchange of views by the two Presidents could easily help resolve.

Agreement on one of these—the problem created by the wandering Rio Grande—was quickly achieved. The river frequently shifts its course and every time that happens, the border changes, too, causing arguments over the ownership of land. Methods for handling this problem will now be submitted to the U.S. Senate and the Mexican Congress in the form of a treaty requiring ratification.

An even more important problem, on which both nations were already in agreement, arises from the fact that Mexico is the largest single source of marijuana smuggled into the U.S. as well as an important way station for heroin and cocaine produced elsewhere. A year ago, the U.S. instituted tight controls along the border, slowing down travel and distressing Mexicans who feared a loss of tourist trade. Since then, "operation cooperation" has gone into effect, with the U.S. supplying Mexico with $1 million worth of helicopters and light planes equipped with sensor devices for improved surveillance and weed killers for destroying marijuana crops. The U.S. is now urging Mexico to take stronger action to arrest and prosecute large operators.

The meeting between President Nixon and President Diaz Ordaz at Puerto Vallarta was a gala affair, complete with mariachi bands, cheering school children, streamers and confetti. And since it took place in a fairly small town, it was also a sort of counterpart to Mr. Nixon's travels "out into the country" at home. That is an excellent way of promoting good will.

Whenever an American president goes abroad, some great diplomatic triumph is often expected to occur. That certainly didn't happen at Puerto Vallarta. A good neighbor simply called on a good friend. Yet the longrun effects could be significant. Successful diplomacy involves more than striped pants and protocol.

[From the Albuquerque Journal, Aug. 23, 1970]

NIXON'S VISIT TO MEXICO

In recent years the often embittered relations between the United States and Mexico have steadily improved.

The agenda for talks between President Nixon and President Gustavo Diaz Ordaz during a 24-hour visit Thursday to the Pacific resort of Puerto Vallarta reflected this historically wary relationship. Topping the list was Mexican irritation at American attempts to stem the flow of narcotics from south of the border. The salinity of the Colorado River and problems resulting from the meanderings of the Rio Grande also were at issue.

Nixon expressed the concern of organized labor in the U.S. about factories set up along the border to process parts for electronic equipment and clothing later sold in this country as American-made.

These are hardly issues to make headlines; indeed they attest to the increasingly friendly relations between the two nations.

[From the Seattle Post Intelligencer, Aug. 5, 1970]

GOOD NEIGHBORS

Sometimes it seems as though there is nothing but bad news—and for the most part this is true. Day after day the news columns and broadcasts are filled with crises, disasters, crimes and portents of more gloom to come.

But not always. A really refreshing, bright bit of sunshine broke through late last week in the reports telling of President Nixon's colorful and highly productive visit to Mexico.

For two days the President and his wife were swept up in a fiesta whirl of warmest welcome. Everywhere they went they were hailed by Mariachi bands, throngs of cheering natives and officials whose handshakes were as sincere as their smiles.

It was a remarkable demonstration of friendship and good will. And it could have had no more fitting climax than the joint announcement by Mr. Nixon and Mexican President Gustav Diaz Ordaz of a formula for settling future border disputes.

For over 100 years the shifting Rio Grande River had made such disputes inevitable. Yet in only 28 hours of friendly talk the two chief executives were able to agree that henceforth the center of the river, no matter how it may twist, will be the dividing line.

It seems like the simplest kind of common sense and mutual compromise. Yet consider how rare such common sense and compromise are in the tense world of present-day diplomacy.

Our nation is fortunate indeed in sharing unarmed borders with its friendly neighbors to the north and south. So long as good will is cultivated by all concerned, there is no reason why every difference of opinion cannot continue to be solved in the spirit of amity which prevailed at Puerto Vallarta.

[From the San Francisco Chronicle, Aug. 24, 1970]

AGREEMENT IN PUERTO VALLARTA

The Nixon-Diaz Ordaz agreement on the boundary between their two countries is a sensible one that leaves the decision to nature and the Rio Grande.

Whithersoever the Rio Grande flows, the boundary will go right down the center of the river, shifting as the stream bed shifts. This

means that future questions about the boundary are to be determined by observation of the actual course of nature and not by composing the claims of quarreling Texans and Mexicans.

Boundary disputes have caused hard feelings between this country and Mexico over most of the years since 1884, when the border was first surveyed. That survey established the center of the Rio Grande as the boundary, but made no provision to settle disputes arising when the river changed course, as it has frequently done. In addition to providing that future sovereignty will flow with the stream, the agreement of Puerto Vallarta disposes of all territory presently under dispute, Mexico receiving three quarters of it and the United States one quarter.

The next steps are to submit the agreement to the Senates of the United States and Mexico for ratification as a treaty. Confident of approval, the two Presidents have pronounced that it will be one of the most significant Mexican-U.S. agreements of this century. If it succeeds in satisfying the jealous riparians of both countries, it will be all of that.

OCEANS

Mr. MONDALE. Mr. President, the Senator from Wisconsin (Mr. NELSON), who speaks to the environmental conscience of the Nation, is, once again, ahead of his time. He is warning that if we do not hasten to act, the oceans themselves will become poliuted, lifeless, clogged with wastes.

With the Santa Barbara oil spill and other dramatic evidence of environmental problems in the sea and along our populous coastlines, the Nation is beginning to awaken to the threat to this fragile, vital environment.

In an article in the August/September issue of National Wildlife magazine, Senator NELSON spells out the ocean environment threat in concise, dramatic, no-nonsense terms, and he calls for new national and international policies to assure that we do not wreak the same destruction in the sea as we have on the land.

Mr. President, it is hoped that the tragic future for the marine environment, of which this article warns, will never come to pass, but that we will take action now.

I ask unanimous consent that Senator NELSON'S excellent article, entitled, "We're Making a Cesspool of the Sea," be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

WE'RE MAKING A CESSPOOL OF THE SEA

(By GAYLORD NELSON)

In the Atlantic Ocean, about 7000 feet off the sunshine and salt-spray wonderland of Miami Beach, there is a man-made phenomenon known as the "Rose Bowl". Mockingly named for its unpleasant fragrance, the "bowl" is a large, bubbling splotch of ugly brown sprawling over those famous blue-green waves.

The "bowl" is caused by raw, untreated sewage piped into the Atlantic from the fabulous hotels and other Miami Beach facilities and from three other nearby communities. The wind and the tide have to be just right, however, to wash the wastes and debris back in from the sea and onto the beaches. And for those who can stand the stench, fishing around the "bowl" is excellent.

Ordered ten years ago by Florida's health department to treat its sewage, Miami Beach is now taking its first step—extending the discharge pipe one mile further out to sea in hopes the wastes will be picked up by the offshore Gulf Stream and carried away to the mid-Atlantic. But scientists question whether this will do any good. Dr. Durbin Tabb, marine biologist at the University of Miami says that because of prevailing winds, extending the pipe means the sewage is just going to be blown back in-shore on somebody else's beach.

With a southeast Florida megalopolis of 10 million people predicted in 20 years, Dr. Tabb and other scientists believe the "Rose Bowl" is one more ominous sign that big trouble lies ahead for that supposedly limitless resource on which the booming Florida economy is built, the sea and the beaches.

Fishermen, professional divers and marine scientists whose lives are entwined with the sea, report similar situations all along America's coastlines.

Filter cigarette butts, bandages and bubblegum have been found in stomachs of fish caught near New York city's sewage sludge dumping ground 8 to 10 miles out in the Atlantic.

NIGHTMARISH BEACH SCENES

Some northern New Jersey beaches near the Atlantic shipping lane into New York Harbor have been turned into a nightmarish scene of tar from oil slicks, plastic bottles, broken dolls, even dead animals thrown into garbage somewhere.

People are sometimes driven from their waterfront homes in Galveston Bay in Texas near the Gulf of Mexico by the stench from thousands of decaying fish killed by pollution.

In the Panacea, Florida, area on the Gulf Coast, one of the state's last national frontiers, crab fishermen are coming in with only a tenth of their catch of five years ago, while real estate and land developers fill in and destroy hundreds of acres of fertile marsh areas, the Army Corps of Engineers is planning to cut new waterways, and industry pours poisonous wastes down once wild rivers into the Gulf.

Batches of mackerel caught in Pacific Ocean waters off central California last year contained so much DDT that they were impounded by federal health officials as unfit for human consumption, while in the sea off a southern coast, scientists have found miles-long slicks containing pesticide levels 10,000 times higher than surrounding waters.

"If only I could get the majority of Americans under the surface of the sea to witness what's going on," says Dr. Rimmon C. Fay, a collector of marine specimens who has been diving in the Pacific off Los Angeles for years. When he turns over rocks now in that undersea wasteland caused by sewage and industrial pollution, he finds "it's foul and putrid underneath".

Throughout history we've believed that at the sea's edge man's power to destroy stopped and nature's invincibility began. In her 1951 book *The Sea Around Us*, even Rachel Carson saw the oceans as one last haven, safe forever. How could it be otherwise, when the oceans are so vast the continents are just islands in their midst, so deep a Mount Everest could be lost beneath their surface, so powerful their waves have tossed a 2600-ton breakwater around like a cork? How does one pollute the volume of the sea, 350 million cubic miles? How does one poison an environment so rich it harbors 200,000 species of life?

Yet last year Stanford University ecologist Paul Ehrlich projected the end of all important life in the sea by 1979, and the probable end of the human species shortly thereafter, in a grim scenario based on current trends. I've talked to Dr. Ehrlich and other ecologists since, and there is no disagreement among them that the oceans are on the way to destruction. The only issue is when. Some scientists say that it will take perhaps 50 years at the present rate.

The vulnerability of the marine environment becomes dramatically clear when we realize that even though the oceans blanket three-fourths of the earth, their productivity is mostly limited to the rich waters over the continental shelves, narrow bands of undersea lands extending from our coastlines. Eighty percent of the world's saltwater fish catch is taken from these shallow coastal waters that make up only a tiny fraction of the total sea area. In addition, almost 70 percent of all usable fish and shellfish spend a crucial part of their lives in the estuaries—the coastal bays, wetlands and river mouths—that are 20 times more fertile than the open sea, seven times more productive than a wheatfield.

Cut the chain of life in the coastal marshes and bays, destroy the myriad bottom organisms and pollute the waters above the continental shelves, and inevitably we will eliminate the great ocean fisheries that are vital in feeding an exploding world population.

Pollution or overfishing, and sometimes both, have gouged fisheries around the world. Several bottom fish species off the Pacific Northwest have been virtually exhausted by Russian fleets with factory ships that take the bounty home all canned and labeled. The once-mammoth sardine fishery off California is now gone. The croaker, a popular food fish, has virtually disappeared from much of its native East Coast waters. Off New York, fish are becoming afflicted with a strange disease that rots away fins and tails, and in dirty Pacific waters off Southern California, fish are being found with high rates of deformities and disease.

THE HIGH PRICE OF PROGRESS

Today our accelerated exploitation of the marine environment in the name of "progress" at any price is aimed directly at the continental shelf and its coastal resources, the tiny Achilles Heel of the sea. In our greedy rush to create more land, vital United States coastal wetlands are being dredged and filled for highways, industry, bridges, waterfront homes—to the tune of almost 900 square miles in 20 years. In spite of scientists' warnings, this continues at an accelerating pace from Galveston to Chesapeake Bay. Meanwhile, our remaining estuaries are fed 30 billion gallons of sewage and industrial wastes every day, poisoning fish, choking out oyster and clam beds, and rendering the bays and wetlands unfit for almost any use.

While the vise tightens on the critical inshore areas that lace our coastlines, the pressure builds on the ocean itself. More and more, the continental shelf waters and beyond are a tempting dumping ground for our garbage, especially for those cities and industries looking for a new way to ease the burden of the national cleanup push on inland waters.

In 1968 alone, 37 million tons of solid wastes were dumped in ocean waters off the United States. The wastes—taken out to sea by barge and ship—include garbage and trash, waste oil, dredging spoils, industrial acids, caustics, cleaners, sludges and waste liquor, airplane parts, junked automobiles, spoiled food, and even radioactive materials. During his papyrus boat trip in the Atlantic last year, author-explorer Thor Heyerdahl sighted plastic bottles, squeeze tubes, oil and other trash that had somehow been swept on the currents to mid-ocean.

One big new proposal calls for piping the concentrated wastes of up to 50 industries in the Delaware River Valley more than 80 miles out to sea. But Dr. Howard Sanders of the Woods Hole Oceanographic Institute in Massachusetts says wastes could wreak even more havoc on low tolerance life in the ancient.

almost unvarying environment of the deep sea than in a little stream in our backyard.

LOOSE DUMPING REGULATIONS

Regulations on ocean dumping and other activities are so loose now that it amounts to every-man-for-himself on the high seas. A chief regulator, the United States Army Corps of Engineers, recently confirmed that it didn't even know how many ocean-dumping permits it has issued. And "letters of permission" handed out by the Corps for dumping more than three miles off our coasts are, the agency admits, "really an acknowledgment that anyone can do anything they please when outside our jurisdiction."

As yet, no one really knows who has what rights and responsibilities in the ocean environment, and state, federal and international jurisdictions remain in their historically chaotic tangle. The origin of national sovereignty over the first three miles of sea bed was the range of a cannon shot in the 17th Century.

Perhaps more than any other problem, the dramatic, sudden oil-well blowouts in the sea and the oil tanker breakups have begun to awaken us to the total inadequacy of our present ocean policies. The list of places where oil has blackened beaches, killed untold thousands of birds, and posed lingering threats to marine animal and plant life already includes many of the great recreational areas of this nation and the world: Florida, the Gulf Coast, New England, New Jersey, Puerto Rico, Southern California, southern England.

What famous coastline will be next? According to a report last year by the President's Panel on Oil Spills, we can expect a Santa Barbara-scale disaster every year by 1980 if present trends continue. Yet in a shocking invitation for trouble, we will be drilling 3,000 to 5,000 new undersea oil wells worldwide each year by 1980, even as the experts confirm we do not possess the technology to contain the oil from ocean disasters. And oil-carrying tankers are being built to monumental scales, cutting transportation costs but increasing the risks of gigantic spills.

How many more oil spills like the one in the Santa Barbara Channel and the break-up of *Torrey Canyon* off England will it take before all nations realize the human race is now so populous and generates so much waste that we can no longer treat the environment as if it were created for our limitless plunder?

Radioactivity from nuclear fallout can be found in any 50-gallon sample of water taken anywhere in the sea. Investigators of a massive die-off of sea birds off Britain last year found unusually high counts of toxic industrial chemicals used in making paints and plastics. Because of the use of toxic, persistent pesticides worldwide, species of sea birds such as the brown pelican have been pushed to the brink of extinction over large portions of their ranges, and there is evidence these poisons can attack phytoplankton, a food fundamental in the chain of ocean life.

Ironically, while we continue the gruesome process of polluting the sea, we are laying big new hopes on ocean space for everything from floating jetports to housing developments. The conclusion is unavoidable. If tough, intelligent action is not taken now, we will make the same wreckage of the oceans as we have of the land and of our sprawling, decaying cities. There will be more reckless exploitation, user conflicts, gigantic oil spills and other environmental disasters, and the ultimate destruction of marine life.

And the greatest losers of all will be the people of America and the world—the hundreds of millions of people to whom the coastlines and the sea mean recreation, or a home, or a livelihood, or peace and inspiration, or—because of the food provided for whole nations by the great fisheries—survival itself. Destroy this vital frontier, and in effect we will be slamming the door on, our last chance for a livable world and for a decent future for generations to come.

STEPS TO SURVIVAL

The day is already tragically late, but there is still reason to hope. As astronaut Neil Armstrong expressed, "We citizens of earth, who can solve the problems of leaving earth, can also solve the problems of staying on it." But make no mistake, it is going to be a tremendous task. Turning back the massive assault on the sea and meeting our other staggering environmental problems will mean dramatic modifications in our present policies and priorities, including, at the very least, the following three steps:

1. We must end, by 1975, all dumping of wastes into the sea, the Great Lakes and the coastal areas of our rivers and bays, except for liquid wastes treated at least to levels equal to the natural quality of the ocean waters.

Rather than using the sea as a last-ditch catchall for our wastes, our only rational choice now is to put our sophisticated technology to work finding ways to recycle our wastes back into the economy as useful new products. As Dr. Athelstan Spilhaus, president of the American Association for the Advancement of Science, said, "We are running out of an 'away' to throw things away."

2. We must prohibit any new activity—from building offshore jetports to the drilling of additional oil wells—until we set tough, new controls to avoid the chaos and destruction in the sea that is everywhere apparent on the land.

And for once the public must be fully informed and consulted at every step in decisions on whether cities are built off our coasts, whether a new sea horizon is created with the paraphernalia of marine industry, whether huge new supertankers whose wrecks could smear whole coastlines with oil will be allowed.

We should never have permitted oil drilling anywhere under the sea until we understood and could control the dangers. Stricter enforcement of regulations for offshore oil wells is not a sufficient answer. Now, the only logical course is to halt all drilling in ecologically sensitive areas—such as the Santa Barbara Channel—and to prohibit new drilling anywhere, until there is convincing evidence it will not harm the marine environment, and until we have the technology to contain oil spills. Until we know more, all our untapped oil and mineral deposits under federal jurisdiction in the sea should be held unexploited in a National Marine Resources Trust, which should be established immediately.

3. We must halt the reckless dredging and filling of priceless wetlands and the carving up of ocean front in the name of "progress".

Faced with a coastal environment crisis, Maryland, Massachusetts and the San Francisco Bay area, among others, have taken first steps toward outlawing the "right to destroy" that has in effect been claimed by private interest lobbies, and set new standards to protect remaining wetlands.

Curtailing these long-standing practices is not easy. But the framework for these desperately needed new national standards could—and should—be taken in this session of Congress. The Marine Environment and Pollution Control Act which I introduced earlier this year would do this. Under its provisions, the Secretary of the Interior would take on major new responsibilities to protect that part of the ocean environment under his jurisdiction, at the same time setting a model which the states could well follow in their own parts of the seabed. This kind of legislation would be only a beginning in saving our oceans.

These "environmental quality" policies will be adopted only when the majority of Americans demand them in a sustained political action drive at every level of this society. There will be action in the public interest only when the land developers, the oil interests, Congress and local governments know the public means business. Citizens must take a stand now for their friend, the sea. They must use every device within the political process to see that it is protected.

Finally, all nations must together establish an International Policy on the Sea that sacrifices narrow self-interests for the protection of this vast domain that is a common heritage of all mankind. It is a challenge that will test our intelligence as a species, but a task of highest priority for the future of the human species. We must acknowledge our interdependence with all of nature, including the sea, rejecting the prevailing philosophy of Western civilization that man can dominate the planet while ignoring the works and forces of nature. For as Thoreau said: "What is the use of a house if you haven't got a tolerable planet to put it on?"

MILLIONS DONATED TO FIGHT MUSCULAR DYSTROPHY

Mr. GRIFFIN. Mr. President, Americans all across the land this week demonstrated anew that generosity is one of the hallmarks of a great people.

It is reported that the annual Jerry Lewis Labor Day telethon for the Muscular Dystrophy Associations of America brought a record of nearly $5.1 million in pledged contributions.

The program, featuring the well-known entertainer Jerry Lewis and numerous other celebrities, was carried by 65 television stations and lasted for 20 hours.

The telethon began at 9:30 p.m. Sunday and ran continuously until 5:30 p.m. Monday.

It is particularly gratifying to this Senator to know that Detroit Station WKBD–TV, Channel 50, was part of that network.

WKBD–TV's participation in the telethon meant more than $265,000 in pledged contributions to fight muscular dystrophy. The station reported receiving more pledges from more than 42,000 people.

Furthermore, I understand that the total amount raised by the Detroit station made the Metropolitan Detroit region the second largest fund raising region in the Nation.

Mr. President, I wish to commend all the broadcasters who participated in this important campaign, and in particular I wish to pay tribute to station WKBD–TV, its performers, its management and staff personnel who gave so unselfishly of their time and talent for this worthy cause.

ENVIRONMENTAL AGENDA

Mr. MONDALE. Mr. President, last January 19, the first day of the second session of the 91st Congress, the Senator from Wisconsin (Mr. NELSON) delivered a Magna Carta speech on the Senate floor proposing an environmental agenda for the Nation in this decade.

Not content to merely make speeches about it, he went on to introduce 20 measures to implement the environmental agenda, staking out for Congress the tough, uncompromising positions that must be taken if we are to put a halt to the nationwide and worldwide assault on man's environment.

It is a legislative package of truly broad scope, reflecting the insight and dedication of a man who clearly recognizes the complex challenges facing America as the Nation moves into the last third of the 20th century. In the 8 months since that speech, 10 of the 20 Nelson environmental agenda measures have either been enacted, their provisions incorporated into other legislation, or hearings held—dramatic evidence of an awakening national environmental conscience and a tribute to the Wisconsin Senator, who has done so much to awaken that conscience.

In an excellent article recently, the Christian Science Monitor, which does a thorough job of covering environmental issues, makes reference to the progress of Senator NELSON'S environmental agenda. I ask unanimous consent that it be printed in the RECORD at the end of these remarks.

Further, I think it worth while to point out the specific environmental achievements of the Senator from Wisconsin thus far in this Congress. He has been a leader in the fight for a clean automobile, for action to stop the pollution of the Great Lakes and the oceans; for protection of Everglades National Park; in the effort to eliminate DDT, control other hard pesticides, and stop environmental warfare with herbicides in Vietnam; and in the effort to stop the social and environmental disruption by our massive highway system.

And Senator NELSON was the originator of the National Earth Day idea—proposing it in a September 20, 1969, speech before the Washington State Environmental Council—and was instrumental in bringing it to reality in teachins, conferences, and in seminars last April 22 involving 2,500 colleges and universities, 10,000 high schools and grade schools and an additional 2,000 communities.

Action resulting from Senator NELSON'S environmental agenda includes the following:

Senate subcommittee inclusion of provisions of three Nelson amendments to end pollution from the automobile by 1975;

Congressional action to guarantee from a competing Corps of Engineers project the water supply crucial to the survival of Everglades National Park;

An amendment to the Water Quality Improvement Act, now signed into law, which will lead to the establishment of State-by-State standards to halt pesticide pollution of our lakes and rivers and will improve the means of nonchemical pest control;

Senate passage and House consideration of the Apostle Islands National Lakeshore, proposed by Senator NELSON;

Senate passage and probably congressional enactment of Nelson legislation to add three Lake Michigan islands to the national wilderness system;

Senate committee hearings on a Nelson bill which sets forth a new Federal program to cut massive erosion along our streams, rivers and highways;

Senate hearings and probable congressional enactment of Nelson legislation, the Environmental Quality Education Act, to vastly upgrade national efforts to educate students at all levels regarding the environment and its problems;

Senate committee hearings on the Marine Environment and Pollution Control Act introduced by Senator NELSON which would stop cities, industries, and others from dumping solid wastes into the Great Lakes and the sea and would institute comprehensive environmental management plans for our ocean resources;

Senate committee hearings on Senator NELSON'S Detergent Pollution Control Act which would ban phosphorus in detergents by June 30, 1972, and set national pollution control standards on all detergent ingredients;

Inclusion in a Senate-passed bill now in Senate-House conference of several provisions in Nelson legislation designed to establish economic penalties on "throwaway" packaging and require return, reuse, and recycling of such consumer containers;

Senate committee hearings on the future of the highway aid program, at which Senator NELSON testified on his proposal to make highway trust fund moneys available for mass transit systems in our Nation's congested cities;

Senate committee hearings and probable committee action on a Nelson bill to assure opportunities for employment and training to the unemployed in needed public services such as health service jobs, family planning, transportation, public safety, education, pollution, rural development, and conservation and beautification.

Federal-State requirements to end the pollution of Lake Superior by an iron ore processing company and other sources, the result of a pollution control conference called at Senator NELSON'S urging, and continued cleanup action by a similar Lake Michigan conference also called at Senator NELSON'S suggestion.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

CONGRESS TOYS WITH NIXON LEGISLATION

(By Peter C. Stuart)

WASHINGTON.—"It is now or never," President Nixon declared in February when handing Congress his environmental program.

Today, nearly six months later, his program is quietly drifting from "now" toward "never."

None of the President's seven major bills has been enacted into law. The House of Representatives has passed two—cracking down on air polluters and broadening research on waste disposal. The Senate has adopted none.

The House hasn't even held committee hearings—the very first legislative step—on four of the bills, including all three clean-water measures. The Senate has held no hearings on one bill (to acquire more parklands).

One bill in each house (the waste bill in the Senate and the parks bill in the House) has awaited floor action longer than a month.

IMPATIENCE GROWING

The snail's pace of the Nixon environmental program is arousing impatience within the administration. So far it hasn't boiled into public—but it may.

Persons keeping tabs on the presidential package, inside and outside the administration, lay the sluggishness to two factors:

The bills themselves are truly major. "The Nixon bills," conceded an aide of one leading environmental Democrat in the Senate, "are broad-gauged, setting whole new directions."

Thus they require longer for Congress to scrutinize—and also loom as bolder targets for critics.

"Sometimes the overall view gets lost in nit-picking," an administration source complained.

"Shorter steps often come easier. About the same time the President submitted his program, Sen. Gaylord A. Nelson (D) of Wisconsin introduced his own package of 20 briefer, more-specific environmental bills. Today fully 10 of them either have been enacted, their concepts incorporated into other legislation, or hearings completed.

Environmental politics. Most of the Nixon bills in the Senate (six out of seven) wound up in the pollution subcommittee chaired by Sen. Edmund S. Muskie (D) of Maine—the President's chief rival for environmental leadership and a likely challenger for the White House in 1972.

"It isn't that Muskie is mistreating the President's bills," explained one Capitol Hill environmentalist. "But both men have written bills covering the same areas. In most cases, in fact, Muskie has proposed and the President has responded."

Senator Muskie's involvement may account for the differing approaches of the Senate and the House.

HOUSE MORE PASSIVE

The House seems content to ratify Mr. Nixon's recommendations, or even weaken them, as when watering down his clean-air provisions on fuels and additives.

But the Senate, in committee at least, is inclined to outdo the President. A tougher waste-disposal bill emerged last month from committee, soon to be followed by air and water pollution measures also expected to outstrip the President's.

Both the White House and congressional critics stoutly deny partisanship. "The environment is no place for open political warfare," an administration spokesman said. But it's there, unavoidably.

So is lobbying. "There's a lot of lobbying going on," one of the executive legislative liaisons admitted, in a massive understatement. The clean-air bill alone has mobilized two of the most powerful lobbies in town—the automobile and petroleum industries.

With so many intangibles at work, few close to the Nixon program will predict how much of it is likely to survive the hectic closing months of the congressional session. Administration sources are uniformly pessimistic—except for one important consideration.

"This," said one, speaking of environmental protection, "is not a good issue for Congress to leave undealt with in an election year."

DAIRY IMPORT PROTEST TO TARIFF COMMISSION

Mr. MOSS. Mr. President, the U.S. dairy industry has been seriously hurt in the past years by a tide of ingeniously designed foreign products which have

come into this country as "dairy equivalents."

Technically, they are not dairy products, but in actuality they are—although they are so designed and constituted that they can be imported outside of the dairy quotas.

I recently protested these technical evasions to the U.S. Tariff Commission. I ask unanimous consent that my statement be printed in the RECORD.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

DAIRY IMPORT PROTEST TO TARIFF COMMISSION

Until 1966 dairy imports had been maintained at modest levels. In that year foreign exporters began their successful efforts to design products which technically were outside of dairy quotas but which closely resembled products under quota. These were new products—ones which had not been known in the trade to that time, bearing such unique names as Junex.

Sensing these technical evasions President Johnson directed the Tariff Commission to investigate these products in 1967. Following this investigation and report President Johnson on June 20 imposed quotas on the products which had accounted for 95 per cent of the import increase during the preceding year and a half. At that time he said "On a basis of these new quotas, annual imports will be approximately one billion pounds of milk equivalent." The emphasis is mine; it is done to show an intended policy of level of dairy imports.

Unfortunately President Johnson had not reckoned with the ingenuity of foreign exporters to the United States. New evasions were found and further investigations were required by your commission in 1968. By that time dairy imports were running closer to two billion pounds of milk equivalent than the anticipated one billion pound figure of President Johnson. A further Presidential proclamation was issued on January 6, 1969.

Again, ingenious ways of evading the quotas were found. Cheeses which were intended to sell under 47 cents a pound were priced through various means (kickbacks, dehydrating, etc.) over that figure. Ice cream mix was called ice cream. Swiss cheese from New Zealand was called Monterey.

As a result, once again a President, this time President Nixon, had to call on the Tariff Commission for further investigation, abetted by a call for an investigation of other products by the Ways and Means Committee.

As a result we find that there have had to be three investigations by the Tariff Commission called by Presidential proclamation since 1967. Hardly were the results of the previous two announced than new evasions occurred. Is there any reason to assume that the same will not occur after the commission makes its recommendations following these hearings?

What I am really leading up to with this background is not the suggestion that either President Johnson or President Nixon have not proceeded in good faith in dairy imports or that the Tariff Commission has failed to perform its duties within the framework prescribed for it. Rather it is to suggest that our entire system of quotas on dairy products—handling them commodity by commodity—is wrong. Recent history shows that this approach simply is not doing what was intended. If it was, then the Tariff Commission would not again be having hearings now, so soon after their previous actions.

It is recognized that the Tariff Commission is limited in what it can recommend as an immediate practical remedy. It, for example, can only recommend on those products for which the hearings have been called. Obviously it must also recommend within the framework of present law. But I would like to urge them in the views which are expressed by the Commission members subsequent to this hearing to go beyond that. I would urge them to give us long-term recommendations on how national objectives of approximately one billion pounds of milk equivalent, stated by agricultural spokesmen of both the last Democratic and the present Republican administration, can best be achieved without the continuous patchwork of having to hold new hearings to counter the newly thought-up evasions every year or two.

Speaking as one United States Senator I would welcome the views of the members of the Tariff Commission in this respect.

MESSAGE FROM THE PRESIDENT

Messages in writing from the President of the United States submitting nominations were communicated to the Senate by Mr. Leonard, one of his secretaries.

EXECUTIVE MESSAGES REFERRED

As in executive session, the Presiding Officer (Mr. GRAVEL) laid before the Senate messages from the President of the United States submitting sundry nominations, which were referred to the appropriate committees.

(For nominations received today, see the end of Senate proceedings.)

CONCLUSION OF MORNING BUSINESS

The ACTING PRESIDENT pro tempore. Is there further morning business? If not, morning business is concluded.

DIRECT POPULAR ELECTION OF THE PRESIDENT AND THE VICE PRESIDENT

Mr. BAYH. Mr. President, I ask unanimous consent that the Senate proceed to the consideration of the unfinished business.

The ACTING PRESIDENT pro tempore. The bill will be stated by title.

The assistant legislative clerk read as follows: A joint resolution (S.J. Res. 1) proposing an amendment to the Constitution of the United States relating to the election of the President and the Vice President.

The ACTING PRESIDENT pro tempore. Without objection, the Senate will proceed to the consideration of the joint resolution.

Mr. BAKER. Mr. President, yesterday I indicated that I would have further and additional remarks on the pending bill, to explain and amplify my reasons for supporting it.

I believe the most fundamental of those reasons, and the most fundamental of all American rights, is the right to equality.

The ACTING PRESIDENT pro tempore. The Senate will be in order. The Senator from Tennessee may proceed.

Mr. BAKER. Equality is the first of the self-evident rights set out by Thomas Jefferson in the Declaration of Independence. The ideal inscribed in stone above the entrance to the Supreme Court of the United States is "Equal Justice Under Law".

Strict equality is an ideal and, therefore, unachievable. At times in our sprawling history it has even been the policy of governments explicitly to deny equality. But steadily through the progress of our history as a people we have sought and confronted and tried to eliminate all bars to equality.

In the landmark case of Baker against Carr, which was first brought in my native State of Tennessee, the Supreme Court established decisively the principal that one man is entitled to one vote, no more, no less.

The pending issue in the Senate today is no more complex than this: does two-thirds of the membership of this body believe that the principle of complete equality should be extended to each citizen of this country in the election of the President and the Vice President of the United States.

There are those who argue that it is too complicated, too risky, too uncertain to extend equal voting rights to all franchised Americans. I cannot agree. It is true that the proposed constitutional amendment is not foolproof and that it raises important questions of implementation. But the Congress can—by statute—resolve these matters after ratification of the amendment. The paramount issue, the single issue that cannot be sacrificed on the altar of any expedient or technicality, is the fundamental right of every citizen to cast a vote that has no more weight nor no less weight than that of any other citizen.

The electoral college may well have served a purpose in sprawling, uneducated, postcolonial America. But all of that has changed. Geography should not elect Presidents; States should not elect Presidents; people should elect Presidents.

There are those who argue that the big city States will lose in influence if the electoral college is abolished. It has been pointed out that under a direct election system a man could be elected President without winning a single vote in 39 States. Others argue that, on the contrary, it is the smaller States that will lose if the direct election system is adopted. Neither case is readily demonstrable, and such arguments pale in significance when compared with the basic issue of equality.

One of the most undesirable aspects of the existing electoral vote system is the so-called unit rule, under which the winner takes all. A presidential candidate who wins a plurality in any State wins all of the electoral votes of that State.

Mr. CURTIS. Mr. President, will the distinguished Senator yield for a question?

Mr. BAKER. I am happy to yield to my distinguished colleague from Nebraska.

Mr. CURTIS. On the subject of equality of individuals' voting rights, would the distinguished Senator tell us, in con-

nection with the election of what officials did that case arise?

Mr. BAKER. The Baker against Carr case, as the distinguished Senator from Nebraska knows, was filed by a group of citizens against the Secretary of State of the State of Tennessee, alleging that there was a malapportionment of the representation in the State legislature of my State.

The point of the matter in these remarks, however, is that Baker against Carr has become a landmark decision, an innovative decision of the highest tribunal in this country establishing the basic principle of equality. It is not directly applicable, obviously, to the electoral college, because the provision for the electoral college is imbedded in the Constitution itself, and Baker against Carr was a holding to the effect that the Constitution itself required that there be equality of representation and that there be equality of the right to vote.

Mr. CURTIS. Did the element enter into it that the plaintiffs in the suit maintained that the constitution of the Soverign State of Tennessee was not being adhered to?

Mr. BAKER. There were arguments pro and con in Baker against Carr at the three-judge level and then through the appellate stages in the several briefs and the amicus curiae briefs filed in the course of the proceedings, to the effect that the basic nature of federalism required that the State be permitted to apportion one or both of the houses of its legislature on some basis other than population, and that the constitution of Tennessee so provided.

The court, in effect, at least by inference, held that notwithstanding any provision of the Tennessee constitution, there could not be an abrogation of the guarantee of equal representation by the Federal Constitution.

Mr. CURTIS. I am interested in the distinguished Senator's attitude toward the election of U.S. Senators. It is quite apparent that a voter in the State of Wyoming or Alaska has a greater proportionate voice in selecting U.S. Senators than one in the State of California. My question is this: Would the Senator carry his argument for equality of voting power, if that is the proper term, to the selection of U.S. Senators?

Mr. BAKER. My answer is "yes" to the distinguished Senator from Nebraska, but I think not for the purpose he intends, if he will permit me to expand and elaborate a little further.

Mr. CURTIS. I will be happy to have the Senator do so.

Mr. BAKER. I believe that the Senate of the United States and the election of the Members of this body is the personification of one-man, one-vote under the constitutional mandate of the United States of America. I made that remark when I was engaged in debate with the distinguished senior Senator from North Carolina when we were debating a one-man, one-vote issue in a proposed constitutional amendment by the late Senator Dirksen to overturn the effect of Baker against Carr. The distinguished senior Senator from North Carolina energetically disagreed, pointing out, as I think the Senator from Nebraska points out, that the vote of one citizen in Wyoming counts for a great deal more in electing one Member of this body than does, say, the vote of one citizen and one voter of California, New York, or Tennessee. That is quite true. But bear in mind that the Constitution provides for two Members of the Senate of the United States from each State, that every citizen of that State votes for both of those Senators, and that every citizen's vote counts for precisely as much as every other citizen's in that State. The fact that it does not count as much as it does in New York or in California is not in derogation of the validity of one-man, one-vote, as it applies to the Senate of the United States but, rather, the design for federalism built into the Constitution itself.

Many say that the Senate of the United States and the electoral college are the only two institutionalized elements of national federalism remaining in the United States. I disagree. Clearly, the Senate represents the fruits of the great compromise that led to the ratification of the Constitution of the United States. The compromise was in the form of a bicameral legislative department, with the House of Representatives representing all the citizens of this country on a direct, equal basis and the Senate of the United States representing them on a direct State federation basis.

The electoral college was designed and created, if we examine the notes and commentary on the deliberations of the constitutional convention, almost as an afterthought, long after the so-called great compromise was effected. The electoral college, in my humble judgment, does not represent a testimony to the great compromise; because when we examine it carefully, we find that not only did it come long after—and, in my view, as an afterthought, almost—but also, it provided for election of the President by the House of Representatives, and the House of Representatives is the one-man, one-vote body in the great compromise.

If we examine the rationale of the electoral college and the deliberations that led to it, we find that the electoral college was to serve, in effect, as a nominating committee to select distinguished and qualified citizens of this country who would be nominated to be President, five of whom would be submitted to the House of Representatives, and from that list the House of Representatives, its membership elector on a strict one-man, one-vote basis, would choose the President of the United States.

I believe that there is ample justification now for transferring the one-man, one-vote relationship away from the vicarious function of the House of Representatives directly to the people, especially, as I said yesterday, in this age of instantaneous communications through the electronic media and almost instantaneous transportation by airplane and otherwise.

The very nature of federalism has changed. We are closer to being a Nation-State than we ever have been. But the fact that I would propose to transfer this one-man, one-vote function of electing the President from the vicarious function of the House of Representatives directly to the people in no way implies that I would destroy the symbol of federalism which is the Senate of the United States.

Mr. CURTIS. So the Senator is for this doctrine, the absolute equality of voting power for every citizen, having that implemented into everything except the election of U.S. Senators. Is that correct?

Mr. BAKER. No. I believe, as a matter of fact, as I said earlier in these remarks, that the Senate of the United States and the process by which we now elect Senators of the United States is the embodiment and personification of absolute perfection of one-man, one-vote. Taking the basic requirement for federalism—that is, that each State have two representatives in this body—we then proceed to this question: Does each citizen of that State have the same voting power as every other citizen? The answer is: "Yes." Every citizen in Tennessee, more than a million of them, who voted in the election of 1966, in which I was engaged, had precisely the same voting power as every other citizen, regardless of their geographical location in my State, the color of their skin, their age, or anything else. So long as they were permitted to vote, they had absolute equality of that vote. But, unfortunately, that is not the case in the election of the President of the United States.

Mr. CURTIS. What was the total vote in the State of Tennessee?

Mr. BAKER. We had approximately a million votes.

Mr. CURTIS. We have approximately one-half million in my State, so everybody who goes to the polls has one-half millionth of the authority to name a U.S. Senator in the State of Nebraska. In the State of Tennessee, it is cut in half. Each voter has one-millionth of the voting power. Is that equal?

Mr. BAKER. Of course, it is equal. It is equal because each State is entitled to two Senators, and every vote in Nebraska counts the same as every other vote. That is not the same as the election to the House of Representatives, where, until recently, in Nebraska and Tennessee and in every other State of the Union, single member districts were not of the same size and there was a vast disparity in the effectiveness of a single vote of a Member of the House of Representatives. But we are comparing apples and oranges when we compare the House and the Senate in this respect, in the examination of one man, one vote.

I feel, as does the Senator from Nebraska, that this Republic has flourished and has prospered and has endured in large part because we have adhered to the Federal system, which is the product of the great compromise. I do not propose to destroy that compromise. That is

why I insist that the Senate and the House be selected on a different basis—both, however, selected on the basis of equality of the vote. I do suggest, however, that there is gross inequality in the selection of the President because of the electoral system which originally was conceived to be, in effect, a nominating committee, and the function of electing the President was to be performed by the House of Representatives, which theoretically, was to be chosen on a one-man, one-vote basis. I want now to transfer that vicarious function of the House of Representatives to the people. I believe that we can safely do so, and it does not have a thing on earth to do with continuing, nurturing, and protecting the symbol of federalism which is embedded in the Senate of the United States.

Mr. CURTIS. I contend, however, that the federalism is part and parcel of our electing of a President.

Mr. BAKER. And I agree.

Mr. CURTIS. And it will no longer be so if this measure prevails. The same forces that are today arguing for the passage of this proposal, if they are to be consistent, will have to carry that so-called reform into the election of U.S. Senators. The mere fact that some textbook writer has said that the procedure provided in the Constitution for the election of a President was sort of an afterthought does not make it so.

As a lawyer, the Senator knows that it is an established principle that words are intended to mean what they say, exactly what they say. One need not go back to resurrect something else, although sometimes it is helpful.

The fact remains that they provided for the selection of a President just as they provided for Congress a blend between equal voting power of the States and voting power based upon the number of people involved. I do not think it was an accident. I think that the manner of deciding a contest as well as binding the electors or doing away with the electors and using the electoral vote can be modernized to meet our present situation.

Does not the Senator agree that to destroy the basic fabric that provides that the vote shall be counted similar to the way the Senate is constituted and the way the House is constituted is a mistake?

Mr. BAKER. No; as a matter of fact, I feel that direct election is essential, if we are to meet the challenge that will confront the country in the years just ahead, because the President and the Vice President, as the Senator from Nebraska knows, are the only two elected officials who are not elected by popular vote. They are the only two who are not elected by equality of vote at the Federal level, if the mandate of the Supreme Court is to be carried out.

Mr. CURTIS. We were never elected that way. We were elected by the States, because there are two pillars, one the Senate, which gives recognition to the States; the other, the House, recognizing the States as having Representatives chosen proportionally by the people. They are the two pillars of federalism. The Senator from Tennessee wants to tear down one; I say that the other will follow.

Mr. BAKER. The President of the United States is, in my judgment, the President of all the people, not the President of 50 States. The President, throughout the fabric of the Constitution, the minutes, and the commentary on the convention leading to the framing of the Constitution itself, and in the body of the statute law, is reflected to be the chief magistrate of the people of the United States of America, the people of this country.

Mr. CURTIS. No, no; the States. He is the President of the United States.

Mr. BAKER. It seems to me that there is no conscionable basis on which one can say that in the selection of the highest elected officer, the highest officer in the United States, the people of one State should have an advantage over the people of another State. If equality of representation is not stated to be the fundamental purpose of democratic government, then there is something about the nature of federalism which I believe we should examine a little further, because federalism, in the view of the junior Senator from Tennessee, does not represent discrimination by favoring one group over another.

Federalism as a generic term does not imply an advantage by one group over another. Federalism means a group of 50 States united for their mutual self-interest and for the creation and functioning of a central government. That is federalism, and that element of federalism is protected, nourished, and perpetuated by the daily functions of the U.S. Senate. It does not require that the voters of New York City have a greater voice in selecting the President than the voters of Omaha, Nebr. That is precisely the case now, according to the arguments of some.

I come from a Southern State. I come from a fairly small State. Scholars and observers argue effectively that Tennessee has an advantage in the electoral college system and also that Tennessee has a disadvantage under the electoral college system. My reply to both of those arguments is, if it is clear there is an advantage or a disadvantage, that is proof positive that the electoral college system should be abolished, because Tennessee should not have one whit more or one whit less influence than any other region or section of the country.

If we do not start with the basic premise of equality in the selection of a President, in the selection of the House of Representatives, and in the selection of the Senate—which we do now have and have always had in the Senate—then we end up with a premise that does not, in my view, constitute a part of federalism. That is inequality. There is no relationship between federalism and discrimination.

Mr. CURTIS. My learned friend has been most generous in yielding to me, so at this point I will ask him just one more question. He stated he would transfer the functions of the House of Representatives to the people themselves. I take it he could only be referring to deciding a contest for President because that is the only place the House gets into it.

My question is simple: When would the Senator hold that runoff election?

Mr. BAKER. Whenever the Senate and the House of Representatives decided it should be held.

Mr. CURTIS. Well, I do not think that is a responsive answer. The Senator is proposing a plan for machinery to elect a President of the United States. In considering that plan, we not only have a right but a duty to inquire as to how it would work out. I do not believe it is responsive to the question for anyone to say that Congress will decide it later, because they may decide and change their minds many times. But it is incumbent upon the proponents of this amendment to give us an idea of their estimate, after their proposal is adopted and implemented, as to how long it will take to carry it out, in case we have to have a contest.

Mr. BAKER. My reply to that may not be judged responsive and, if that is so, it is unfortunately but necessarily so. My reply to that is that Senate Joint Resolution 1, which is the pending business, which is the proposed amendment to the Constitution to provide for the direct election of the President, which is the piece of legislation that my distinguished colleague from Nebraska and I are discussing now, provides for the direct election of the President and would abolish the electoral college. It is intentionally silent on the implementing features of that plan. Congress can clearly and Congress can obviously provide for the time to conduct a runoff if a runoff is held. That is in the best traditions of representative government. We should imbed in the permanency of the Constitution the requirement for the direct election of the President, but we should not fix in concrete a statutory requirement as to when a runoff election should be held, or how.

Mr. CURTIS. I believe my distinguished friend from Tennessee fails to understand that I am not suggesting we amend his proposal and put in a specific date. I am merely saying that no one can properly weigh the Senator's proposition, which clearly calls for a runoff election, unless some idea is brought into it as to the timing of it and how it would work.

Mr. BAKER. Might I ask my friend from Nebraska to suggest a time? He has the same vote that I have in this body. If the resolution is silent on it, and if it is adopted, he will have the same force and freedom to suggest that I will.

Mr. CURTIS. I am not proposing that we have a runoff election in this space age. I believe that would be an act like Rip Van Winkle.

Mr. BAKER. Let me ask the Senator if he would support the direct popular election of the President if there were no runoff provision.

Mr. CURTIS. I could forget direct election a lot easier.

Mr. BAKER. Would the Senator support it?

Mr. CURTIS. No. I would not, because it violates the very federalism the distinguished Senator has talked about.

Mr. BAKER. Is the Senator really concerned about whether——

Mr. CURTIS. Very much so—very much so——

Mr. BAKER. We have a runoff election for President?

Mr. CURTIS. Very much so. This resolution may pass. It may pass. It may be ratified. I believe that what the Senator has in it for a runoff is a very great error. I criticize no one. But I hope the proposal will frankly discuss the mechanics and the timing of carrying out a runoff, and how, so that we do not buy a pig in a poke. I have a good hunch why it is not being discussed.

Mr. BAKER. Well, if I can reply to that, I can say that it is not being discussed by me because I do not presume to tell the Senate or Congress how they should implement it. I do not intend to try to impose my ideas on the amendment, at this time, before the Senate has decided on the principle.

Did I correctly understand the Senator from Nebraska yesterday to say, at the opening of his colloquy with the Senator from Indiana, that he would agree to almost anything before he would agree to the popular vote?

Mr. CURTIS. Yes.

Mr. BAKER. Well, would the Senator from Nebraska tell me what he would agree to——

Mr. CURTIS. All right——

Mr. BAKER. In order to make the popular vote acceptable?

Mr. CURTIS. In order to make the popular vote acceptable?

Mr. BAKER. Yes.

Mr. CURTIS. No. I am against the popular vote.

Mr. BAKER. There is no way, then, that the popular vote for President could be made acceptable to the Senator from Nebraska?

Mr. CURTIS. My opinion is this: That one of the problems raised and discussed everywhere following the last election concerned the threat of Governor Wallace, which involved two things; one, the possible assertion by an elector of the right to vote contrary to the way the people in his State voted. That can be corrected. We can still keep the electoral counting system. The other point was, what about the mechanics for making a decision in a contested election? The Constitution now provides that each State shall have one vote, which gives Alaska and New York the same vote in deciding a contest. I do not think, in this day and age, that can be defended.

Mr. BAKER. Why not, if I may ask the Senator from Nebraska?

Mr. CURTIS. Because it is unfair.

Mr. BAKER. Because it is discriminatory?

Mr. CURTIS. No, no——

Mr. BAKER. It gives less than one-man, one-vote in the selection of a President, then?

Mr. CURTIS. That less than one-man, one-vote statement, and "discriminatory"—they are just catch words.

Mr. BAKER. Not on the basis——

Mr. CURTIS. Let me finish, please. The Senator asked me what I would support. I would support meeting the two problems uppermost in the minds of the American people. I do not think that the erroneous philosophy, in my opinion—and I condemn no one—that would destroy federalism and change the basic way of counting the vote is at all necessary to meet those two problems.

Mr. BAKER. Mr. President, the Senator from Nebraska thinks that the selection of a President in the case of a tie by the House of Representatives on the basis of 50 votes—that is, one vote for each State—could not be defended, which is what I understood him to say a moment ago. Is the reason it cannot be defended because it gives an unconscionable advantage to one State over another in the selection of the President?

Mr. CURTIS. No. It does not blend the two components of the selection of a President. I would suggest that Congress meet in joint session and each Senator and each Representative have one vote. That would carry out the basic principle of federalism.

Mr. BAKER. And it would dilute the inequality, the unconscionable advantage.

Mr. CURTIS. I do not think it is an unconscionable advantage any more than one could argue that "*x*" number of people could elect 50 Senators to control the Senate.

Mr. BAKER. Mr. President, would the Senator agree, regardless of whether we call it an unconscionable advantage or a better blending of federalism, that one vote per Member of the House and Senate in joint session is a better way to select a President in the event of a tie?

Mr. CURTIS. Yes. I think it conforms to the concept of electing a President.

Mr. BAKER. Would the Senator agree that that diminishes the relative advantages of small States over large States?

Mr. CURTIS. Yes.

Mr. BAKER. Would the Senator agree further that if we pursue that logic, the only way we provide equality for every voter, as distinguished from every State, is to provide for direct election of the President, as Senate Joint Resolution 1 would do?

Mr. CURTIS. No.

Mr. BAKER. How else might it be done?

Mr. CURTIS. Mr. President, in the first place I do not agree that that is a sound premise. We cannot accept that and hang on to federalism. Furthermore, we are asked not to vote on theories and not according to the Gallup poll. It is fine to read the Gallup poll. But I think we should read the amendment. It is a prescription for chaos.

Mr. BAKER. Mr. President, in my own State of Tennessee for many years the voters were ignored by the National Democratic Party because they were in the bag. At the same time, the voters in Tennessee were ignored by the National Republican Party because they were a lost cause.

The same has been true in other States and regions of the Nation, often with the positions of the national parties reversed.

In his book, "The People's President," Neal R. Peirce writes that Lawrence F. O'Brien recalled that:

> In the final week of the 1960 campaign, Kennedy and his managers decided to cancel a planned overnight tour of Indiana because they had decided that Nixon would carry the State and its electoral votes anyway.

Mr. Peirce quotes O'Brien as saying that, "We might have gone through with" the Indiana trip if there had been a direct popular election.

Mr. President, I believe that one-party control of any State or region of this country is demonstrably bad. I believe that it promotes the attitude of the national parties toward the South or Southeast to which I have just alluded—that is, one taking it for granted and the other writing it off as hopeless.

I think the competition of two broad-based national parties is part of the fabric of the success of the self-governing experiment of the United States of America. Two broad-based national parties, each able to—indeed, anxious to—accommodate a wide variety of viewpoints, ideas, and ideologies and to meld them together into a single voice of the majority on any given election day perform an invaluable function in the self-governing process.

I think that any region, any State, or for that matter any congressional district, county, or township that is dominated by one party for very long is deprived of some of the advantages of this keen, broad-based, two-party competition. I think it is in the essence of democratic government that we are required by the very nature of the two-party system to have a decent respect for the differing opinions of our compatriots and to come together to form an effective voice of public unison on election day.

It is interesting to me that in examining the deliberations of the Constitutional Convention, while our Founding Fathers in their considerable wisdom created this tripartite form of government with partial and overlapping jurisdiction between the legislative, executive, and judiciary, and while they spelled out in considerable detail the relationship of these bodies, they made no reference to how the people of the United States would communicate with that Government that was designed for them.

There is no reference at all in the Constitution, in the amendments to it, or the Declaration of Independence—or, for that matter, in the body of statute law—of a requirement for a national party of any type—Republican, Democratic, American or otherwise. There certainly is no requirement for two-party competition, much less two broad-based national parties, each embracing conservatives and liberals, and bringing them together with attenuating and moderating force so that they provide an effective governmental instrumentality.

Mr. BAYH. Mr. President, will the Senator yield?

Mr. BAKER. I yield.

Mr. BAYH. Mr. President, I think the Senator from Tennessee has eloquently expressed the goals for which we are striving in this effort to change the Presidential election system.

The whole matter of equality, which I hope to debate and pursue in a little more detail when the Senator from Nebraska returns to the Chamber, has been an indispensable ingredient to any fair, meaningful electoral process.

In the 20th century, a direct popular vote is the only means by which this can be obtained.

The present system has an effect on the two-party system, as the Senator from Tennessee and I both observed yesterday. The best way to strengthen the two-party system, and not to allow it to proliferate, is to see that each party worker at the precinct level, where the foundation of the party structure is built, knows that all the votes in his precinct will count.

That is a point that the Senator from Tennessee has made and indeed I salute him for it. But more recently he has touched on another point that I think it is important to stress.

I do not suppose there was ever a more wise or more far-sighted band of souls than those that met in Philadelphia to draft the Constitution. They had great wisdom. The fact that our Nation stands today is testimony of that wisdom. But that wisdom was not infinite.

Perhaps the best example of the small chink in this otherwise strong armor was their conception of the election of the President.

The distinguished Senator from Nebraska and others who beat on their chests and call on the memory of our founding fathers to sustain the electoral college position today ignore what the distinguished Senator from Tennessee pointed out, that the system will not work today the way our founding fathers anticipated that it would.

They did not anticipate that there would be parties. As a result, almost before the ink was dry on the original ratification of the Constitution, we needed the 12th amendment which made an important change in the way we elect a President, as the Senator from Tennessee knows.

Also, as he pointed out repeatedly, the original election was not supposed to be an election at all, but a means by which electors could be chosen to nominate. It was supposed to be an election for the choice of convention delegates.

Mr. BAKER. If I may interrupt the Senator at that point, I think that is precisely correct. That is the closest our Founding Fathers came to providing for an election system. They provided for electors for the Presidency, to be elected by the House of Representatives.

I said yesterday that while we are dealing with one aspect of electoral reform now, and that is the abolition of the electoral college and providing for the direct election of the President, I feel we must soon come to the requirement that we fine tune the rest of the electoral system. I believe the national election system by both the Democratic Party and the Republican Party should be changed by Federal statute so that there is the election of delegates to those conventions by popular vote. That has no bearing on the direct election of the President, but I say it only to emphasize my agreement with the Senator and not to elicit support for my proposal. As the Senator knows, I have introduced legislation on this point, along with legislation on transient voting and the 18-year-old vote. But if we are to meet the challenge, we must fine tune the election process so that this representative democracy of ours does resonate accurately and fully against the demands, desires, and dissents of all the people we govern.

Mr. BAYH. I share the concern of the Senator from Tennessee. If the Senator will yield further, I know of no better area where we in this body at this particular moment in history can, by our deeds and votes, as well as our voices, show that our system does have the ability to be responsive.

I can think of no more basic and fundamental change than that suggested by the Senator from Tennessee. The whole area of the electoral process is ground zero as far as our democracy is concerned.

I think we have to give far more attention than we are giving to the modernization of the electoral process. A good first step, which the Senator from Tennessee is pursuing this morning is to see that the people of this country have equal power to say who will be the most powerful official in this land and in the world. They do not have that equality of power under the present archaic and antiquated process.

Mr. BAKER. The Senator from Indiana, in his typically fine way, has pinpointed the difficulty with our present system and the necessity for reform. I agree with him that it is urgently necessary that we take this step today. The other steps I outlined might be postponed. They might even be changed, or modified, or not adopted at all. I believe representative democracy would still be responsive enough in the foreseeable future to accomplish our purposes. But I have some real fear about the future of the responsiveness of our democratic institution if we do not do our utmost to provide absolute equality of opportunity for every citizen in the selection of the President and Vice President. Whether the occupant of the White House is Republican or Democrat, we in the Senate, to a greater or lesser degree, depending on which side of the aisle we reside on and the side of the aisle with which the President is identified, are concerned about the increasing concentration of power in the President and the executive bureaucracy.

I thought at one time we might early take steps to diminish the growth and proliferation of the executive authority and the bureaucratic autonomy. I believe it is nearly autonomous now. But I have decided we have to do it in a little different way. We will have to control the bureaucracy by making sure the President is responsible in a maximum way to the people themselves.

It was said to me by a friend in Tennessee recently, a friend who is not engaged in politics, and judging from his statement probably never will be, that he thought the bureaucracy in Washington was nameless, faceless, controlled by no one, least of all the President and Congress; that it was autonomous and its purpose was self-perpetuation. He said if he were President he would abolish every position below GS–16 and start over like Andrew Jackson. Mr. President, you cannot do that and I do not propose that. But one of the fundamental problems in the Central Government of the United States is that it tends to grow so large and unwieldy that it becomes increasingly brittle and less responsive, and that, lacking a better approach to it, the way to provide against its encroachment on freedom and to bring it under control and conform it to serve its function is to provide that the head of the bureaucracy, the head of the pyramid, the President of the United States, is keenly attuned to the times and the people. You do that by providing maximum equality in representation.

Throughout this debate I intend to reiterate that there are two fundamental things involved in the direct election of the President. One is the nature of federalism, as pointed out by the distinguished junior Senator from Nebraska, and the other is equality. It is my contention that the nature of federalism does not require the electoral college but that equality does require its abolition.

Mr. BAYH. Mr. President, the Senator from Nebraska has returned to the Chamber. If the Senator from Tennessee will yield I would like to comment on a point raised in the colloquy between the Senator from Nebraska and the Senator from Tennessee.

Mr. BAKER. I yield.

Mr. BAYH. We, in this body, of course, are governed by rules of the Senate as well as by our own consciences and normally by a certain amount of—perhaps I should say an abnormal amount—patience and tolerance of one another. I am sure that throughout this debate, in the finest tradition of the Senate, each Member will try to pursue what he, in his own heart, thinks is right.

The Senator from Nebraska opposes direct election of the President as strongly as the Senator from Indiana supports it.

But I think we ought to look at some of the emphasis of the Senator from Nebraska, and I certainly intend to remind the Senate of this periodically. If he wants us to leave the major thrust of the reform, equality of influence at the ballot box; if he wants us to pass over the fact that the people of this country do not vote now for the President and Vice President, and that we need to eliminate the wall of independent electors who can disregard the will of their constituents which has been erected between elected officials and the people; or if he wants to disregard the fact that the present system has in the past denied the presidency to the person getting the most votes in the election, it is the right of the Senator from Nebraska to do that. But if we are going to leave these three basic things and go back to a discussion of the runoff provision, then let us at least remember what the Senator from Nebraska said yesterday. He said that he would do almost anything to keep direct election from passing.

Mr. CURTIS. Will the Senator point

out those words, that I would "do almost anything"?

Mr. BAYH. I was standing here when he said them and I heard them. I repeated them and asked whether the Senator would "bring the country to its knees"? The Senator said, "Of course not."

I am not being critical of the Senator from Nebraska. He is within his right. I am sure he would not want to depart from the decorum and normally accepted procedure. But I must say, in my judgment, that the Senator from Nebraska is trying to lead the Senate astray and to divert its attention from the most important point by getting it tied up on something that is almost insignificant.

I would like to buttress that opinion by pointing out, as I did yesterday, that the language in Senate Joint Resolution 1 is not foreign to the Constitution. This is not something we have dreamed up to try to interject now. I say, with all respect to my colleague from Nebraska, that if he will look at section 4 of article I of the present Constitution, he will find the following language:

> The time, places and manner of holding elections for Senators and Representatives, shall be prescribed in each State by the legislature thereof; but the Congress may at any time by law make or alter such regulations . . .

This shows that under the present Constitution the Congress has flexibility to move in and make regulations if necessary. I see no reason why we should not reasonably anticipate and expect the same flexibility in the election of the President.

Mr. CURTIS. Mr. President, will the Senator yield?

Mr. BAYH. I know the Senator from Nebraska does not share that view, but I must say I do not feel the runoff provision, which troubles the Senator from Nebraska, is nearly as important as three or four other items which I just mentioned.

Mr. CURTIS. Mr. President, will the Senator yield?

Mr. BAYH. I yield.

Mr. CURTIS. The Senator's answers are evasive. The words just read in section 4 of course are found in the present Constitution. I find no fault with them. But in section 3 there is a new departure, a provision for two elections in certain situations. And it is not irrelevant to raise the question, When would the second election occur?

I am not suggesting that the Senator write it in here. I am suggesting that that is pertinent information that the Senate and the country are entitled to know in deciding whether or not section 3 is a proposal that ought to be adopted or rejected.

Mr. BAYH. The Senator from Indiana discussed this whole point with the Senator from Nebraska yesterday. In the event that perhaps the Senator from Nebraska did not hear what the Senator from Indiana said, the idea that the runoff provision is something new, as the Senator from Nebraska seems to suggest, that it is foreign to our electoral process, it seems to me, if I may say with all respect, is dead wrong.

Mr. CURTIS. The runoff is used——

Mr. BAYH. Let me finish, please. Let me point out that the runoff is used in Alabama, Arkansas, Florida, and Georgia, among others. As I said yesterday, I think Congress, after adoption of the amendment, needs to study their experiences. We need to call on our colleagues from Alabama, which requires 4 weeks between the two elections, from Arkansas, which requires 2 weeks, from Florida, which requires 3 weeks, from Georgia, which requires 2 weeks, from Louisiana, which requires 6 weeks, from Mississippi, which requires 3 weeks, from North Carolina, which requires 4 weeks, from Oklahoma, which requires a similar period, from Rhode Island, which requires 4 weeks, from South Carolina, which requires 2 weeks, from Texas, which requires 4 weeks, and on our colleagues from Virginia, which requires 5 weeks.

I think those runoffs are "in the ball park," if I may say so. They involve a reasonable length of time. I am not wedded to any particular time. My judgment would be that 2 or 3 weeks would be sufficient, just as I said in response to the question raised yesterday by the Senator from Nebraska.

Mr. CURTIS. Mr. President, will the Senator yield?

Mr. BAYH. I yield.

Mr. CURTIS. I know a long list of States that use runoffs in their nominating process. Would the distinguished Senator from Indiana read into the RECORD the States that use runoff in those elections?

Mr. BAYH. I do not know of any State that does, but I think if it works in the nominating process, and it does, then it can work in the final election. It works in other countries. Are we so sterile and devoid of inventiveness and foresight that our people cannot devise some sort of mechanical scheme that gives the people some right to choose their President?

Mr. CURTIS. They have all through the years.

Mr. BAYH. Oh, no; no citizen has ever voted for the President.

Mr. CURTIS. Oh, yes.

Mr. BAYH. Can the Senator point out one example where the people have voted for the President and Vice President?

Mr. CURTIS. They do right along in Nebraska.

Mr. BAYH. I beg to dispute the statement of the Senator from Nebraska.

Mr. CURTIS. The Senator asked me a question. They go to the polls, are handed a ballot, and vote for the President. The names of the electors do not appear. That is done in accordance with the Constitution. It is done in many States.

Mr. BAKER. I thank my colleagues for this colloquy. I have another question to address to the Senator from Nebraska, but before I do so, I would like to say I, too, am not certain about the runoff provision. I would prefer to have none. However, I think, as a practical matter, this resolution having passed the House of Representatives overwhelmingly and coming to the Senate as a substitute for the Senate measure, as it does, the possibility that it might be adopted by the Senate and sent to the President without conference is a strong consideration.

But my question to the Senator from Nebraska is, Is that really the matter that concerns him and puts him in opposition to direct election of the President?

Mr. CURTIS. It is one. I have a basic conviction that to cease electing the President by counting the votes on the basis of the States would be a departure from federalism. I have a further deep feeling that, if I am overruled, and we do depart from our present system of counting the votes and go to a direct election, the provisions written in the joint resolution for a runoff are filled with dangers.

I agree with that very distinguished writer, Dr. Theodore White, who describes this proposal as an invitation to chaos. I cannot imagine holding an election that takes a few weeks to certify the results from the States, and takes awhile longer to send those results to Washington, and then we have a situation that requires a runoff, and the candidates and parties are entitled to some notice, ballots have to be printed, proclamations have to go out in the State for the elections, and finally the election is held, and then they can be counted. In this fast-moving space age, I do not think that is a wise course for our country.

While I think that provision is full of dangers, that is only part of my objections to it. I think the basic thrust of the amendment destroys the federal system.

Mr. BAKER. If we eliminate the provision for runoff, the Senator from Nebraska would still not be for the amendment?

Mr. CURTIS. Oh, no, because it is a departure from federalism.

Mr. BAYH. Mr. President, I would like the RECORD to be corrected, and ask unanimous consent that it be corrected, to show that I answered the question of the Senator from Nebraska about runoff too hastily. There are, indeed, four States that have runoff provisions in the final election.

So runoffs are not foreign to our electoral process in this country, either at the primary or the final level. And I would also go one step further, and say that, although the Senator from Nebraska feels that the citizens of Nebraska vote for President, the fact of the matter is that they do not. They vote for electors. When we accepted Dr. Bailey's vote right here on this floor in January of 1969, we, in essence, said that any of those electors of Nebraska can ignore totally and completely what the constituents of Nebraska suggest they do. The electors can vote for someone else, who may not even have been a candidate in the first place. That has, in fact, happened. The people of North Carolina——

Mr. CURTIS. Mr. President, will the Senator yield?

Mr. BAYH. I think the Senator from Nebraska had mentioned this, but let me just ask him, as a distinguished and illustrious member of the opposition party, the Grand Old Party, how would he feel if he were a Republican voter in North Carolina—or in Nebraska, as far as that is concerned, and the only way he could

vote for the present occupant of the White House, President Nixon, was to go in and vote for the Republican electors. The only way those electors could be chosen was to be chosen by the Republican Party. Yet all of those who voted for Richard Milhous Nixon in the Second Congressional District of North Carolina in 1968 saw the man they chose vote for George Wallace. How can the Senator say that the people of the Second District of North Carolina, or the people of Nebraska, actually vote for the President?

Mr. CURTIS. My distinguished friend is citing one problem that could be easily met by an amendment to do away with the right of an elector to vote contrary to the way his constituents vote. That can be done. We could also deal with the other problems involved. I do not believe that it would be wise, in meeting those problems, about which there is no debate, to depart to a procedure such as this.

We cannot have direct election and allow one State to set qualifications for voters that are different than those in another State. We cannot have the States be in charge of voter registration, if it is a national election, because they no longer vote as States. We are moving away from local government, and that is where liberty is.

Mr. BAKER. Mr. President, may I ask the Senator from Nebraska if it is true that while he contends that we might take care of all of the defects in the electoral college system, as I understood him to say——

Mr. CURTIS. That is correct.

Mr. BAKER. Is it not really true that we could take care of all of them but one, and that is to make sure that every man's vote counts the same?

Mr. CURTIS. That is not a defect.

Mr. BAKER. It is to me.

Mr. CURTIS. But the Senator would not vote against protecting his seat in the Senate. The Senator said, "Oh, no, let us not go that far." But yet a tiny minority of the voters in the United States can elect 51 Senators, and the Senate is an entity just as the Presidency is an entity.

So I say it will not be long; if this nefarious, ill-conceived, unsound, ridiculous proposal should ever find its way into our Constitution, do not worry, the time will come when four or five States will each have a fifth of a Senator, instead of two.

Mr. BAKER. I do not believe that would happen. Of course, my crystal ball is no brighter, no clearer, and no less cracked than that of the Senator from Nebraska; but I believe the principles of federalism are also embodied in this branch of the Government, and besides that, I will take my chances.

Mr. CURTIS. Of course, the Senator from Tennessee is above average in intelligence and flexibility, and he can defend having one rule of fairness for the election of the President and another for the election of Senators. But he will not always be so certain.

Mr. BAYH. Mr. President, it is interesting to the Senator from Indiana that our friend from Nebraska suggests that if we go to the direct popular vote, there is something dramatically wrong about letting the States have as much control as is possible over the registration and other matters that we discussed in some detail yesterday. But the Senator ignores the fact that they do that now. They do it in choosing all of us here as Senators; and they do it now since the electors who go in to vote for President are the product of the electorate in each State. They are chosen and qualified by State law. I think we could do that for the President.

Mr. CURTIS. Mr. President, will the Senator yield at that point?

Mr. BAYH. With the deference of the Senator from Tennessee, I yield.

Mr. CURTIS. The vote is counted within the State, so that when the States decide what the qualifications are for voters, how they shall register, and how the votes shall be counted, they are deciding how to do something where the votes are tabulated and the winner declared within the State. No State would permit subdivisions to determine the qualifications of voters in a statewide election, because that would give rise to the opportunities for an area with certain particular leanings to either restrict or enlarge its number of voters. I say it is just as ridiculous to suggest that we could have a national tote board to determine who is President, and count the votes nationally, and let subdivisions of the Nation determine the qualifications of voters, as they would in the States for elections within the States.

Mr. BAKER. I thank my friend from Nebraska for those comments, which cast the Senator from Nebraska in the role of seeking to destroy federalism and deprive the States of their rights to determine the qualifications of their electors as they wish, and puts us in the position of wanting to see the United States in the position of a homogeneous——

Mr. CURTIS. Mr. President, I ask the Senator to yield at that point, because he is putting the Senator from Nebraska in a false light.

Mr. BAKER. I shall be glad to yield to the Senator in a moment.

As the Senator from Nebraska knows, this proposal for the abolition of the electoral college is entirely silent on how the individual citizen voters will be required to vote, on what day, or in what manner. It is implicit in Senate Joint Resolution 1, as now written, that Congress may make additional provisions to carry out its purposes. So far as I am concerned, I would assume it would be better to let each of the 50 States decide how they want to qualify their citizens to vote, how they want to canvass those votes within their States, and how they want to certify the result to the U.S. Government, the same as they certified my election returns and those of the Senator from Nebraska. But clearly, the Senator from Nebraska sees it in a different light.

Looking at his crystal ball, he proposes, instead, that we have "a national tote board"—I believe I quote him correctly—and he relegates the sovereign States in this federation to subdivisions of the Nation. He talks about an adding machine tape, and what he describes, as far as I am concerned, is a great national election rather than a certification of the results from the 50 States. Under Senate Joint Resolution 1, the Senator's view and mine can both be submitted to the Senate. His would represent the abolition of federalism, and mine would represent the perpetuation. Is that a proper role for the Senator from Nebraska to take?

Mr. CURTIS. I have not taken any such role.

Mr. BAKER. I believe the Senator has.

Mr. CURTIS. No. I said if we adopt this procedure, these things will follow. At no time have I ever said that the States should not go on determining the qualifications of voters. I have made no such proposal at all.

Mr. BAKER. Did the Senator say he thought if we passed this, we would have to have a national registration of voters?

Mr. CURTIS. I think we will.

Mr. BAKER. Does not the Senator imply that the States cannot do it? I do not believe that, but is not that the Senator's view?

Mr. CURTIS. I think we would be making such a vast change in our Government that we would destroy many things that mean a great deal to the States.

Mr. BAKER. With all due deference to the Senator from Nebraska——

Mr. CURTIS. The fact that I likened, not what I propose, but I likened the results of what the Senator proposes to a situation within the States, where they might permit subdivisions to determine the qualifications of voters is applicable; because what is proposed here—and I do not think anyone denies it—is that we take all the votes cast all over the United States, add them up somewhere nationally, and determine who wins. I wish the Senator could explain to me how that could be done fairly, without having the same rules applied in every State. That is my point. I do not want to destroy any of these things. I think the Senator's proposal would.

Mr. BAKER. Mr. President, with all due deference to the Senator from Nebraska, I suggest that it is not Senate Joint Resolution 1 that creates the specter of the destruction of federalism but, rather, his glimpse and preview of what he would do by statute to implement the provisions of Senate Joint Resolution 1 if he were left to his choice. There is no provision in Senate Joint Resolution 1 for any national tote board. It would be just as appropriate, and the Senator from Tennessee would prefer, that each of the 50 States prescribe its own method for the qualification of voters of each State, provide its own method for the counting, tabulation, and certification of votes, and that each of the 50 States, therefore, retain its indentifiable, efficient indexes of federalism.

If we were to adopt a different plan by statute, after the ratification of Senate Joint Resolution 1, as suggested, as I understand, by the distinguished Senator from Nebraska, then we would be in trouble. I would oppose the provisions that the Senator from Nebraska now claims he is concerned with, and I hope he would, too.

Mr. CURTIS. I have not suggested those things. I have not said that I would support them. I pointed them out as dangers that would follow if this constitutional amendment is adopted.

Mr. BAKER. I wonder whether the Senator would agree that it is probably within the scope and authority of Congress now, since the Voting Rights Act of 1970 was adopted, to provide for uniform standards for voters around the country.

Mr. CURTIS. As to what—age?

Mr. BAKER. As to anything.

Mr. CURTIS. I voted against the provision for 18-year-olds to vote on the basis that I did not think so. We will have to wait to see what the Court says.

Mr. BAKER. The Senator from Tennessee has long favored and sponsored a constitutional amendment to provide for the right to vote for 18-year-olds, and I voted for that bill with the hope that the judiciary would decide whether or not, under the equal protection clause of the Constitution, Congress had that authority. If the Court upholds it, then I think the fear that the Senator expresses already exists, and it is a fear of ourselves; because if we have that authority, we can do now what the Senator concerns himself with in regard to Senate Joint Resolution 1.

Mr. President, I thank the Senator from Nebraska and the Senator from Indiana for their most useful and most enlightened colloquy in this adversary debate on the desirability of the passage of this resolution.

As a relatively junior Member of this body, I am bold enough to volunteer that I think some of the best work in this Chamber is done when energetic debate precedes the final disposition of a measure, and there is no more energetic debater than the distinguished junior Senator from Nebraska.

Before we began our colloquy, I was speaking of the—to me—odious consequences of one-party domination of any region or section of the Nation. I had expressed considerable affection, respect, and admiration for the genesis of the American two-party system which exists nowhere else in the world in this format—not two broad-based national parties as distinguished from specialized parties, such as conservative or liberal, labor or something else. But two broad-based national parties exist in this format nowhere else in the world. I think it has served the United States extraordinarily well. But I think that this examination of the fundamentals of this fourth department of government, which is the way I characterize our two broad-based national parties, is appropriate to another development of our times, another political development, and that is the so-called Southern strategy.

Mr. President, it comes as no surprise to my colleagues in this body and not many voters in Tennessee when I say that I am an ardent Republican and that I do, indeed, hope that the Republican Party, for a change, has a Southern strategy—not a strategy just for the South, but a strategy that, for a change, includes the South. I hope the Democratic Party does, too. I hope the Democratic Party does not take the South for granted and that the Republican Party does not ignore it.

I hope that the mistakes of one-party domination of the last 50 years—indeed, in many States since the Civil War, the last 100 years—will not be repeated in the 1970's and the 1980's. So I hope that both our parties do have a strategy that includes the South, because the South, as the East, the North, and the West, must be a part of the mainstream of the political life of this Republic if we are to govern effectively.

I think that the abolition of the electoral college and the direct election of the President will do much to preserve our two-party system throughout the Nation and to guard against the recurrence of one-party domination in any part of the Nation.

I believe that one-party control of any State in any region of the country where it is found is directly attributable to the electoral vote system. I believe that the institution of the direct popular election of the President and Vice President will lead to the end of one-party control wherever it is found.

There has been much talk recently of a so-called southern strategy being pursued by the national Republican Party. Let me say again that I hope the Republican Party strategy does include the South and the Southeast as a part of this Nation in its general planning, just as I hope the Democratic Party does, too.

It is no secret that the Democratic Party has had the South "locked up" for years. I hope that both of the two great national parties will develop strategies that include all regions of the country; because, like it or not, this country is becoming homogenized so far as its people are concerned. Southerners are less Southern, northerners are less Northern, and easterners and westerners are less discernibly different. The country is becoming more the same, and I think it is good, but it produces the necessity for change; it is time now to fine-tune the electoral process, and the first step is the abolition of the electoral college.

At the bottom of the domination by one party or the other of a particular region is the understanding that the winner takes all under the present system and that it is not important to one party or the other that they compete in a presidential election for the 10 percent, 20 percent, or 30 percent of the votes they may gain in Louisiana or Alabama, on the one hand, or in Nebraska, Maine, or Vermont, on the other hand. It would be important that we have the direct popular election of the President, and every citizen not only would have the same strength to vote, but also, every citizen would have the same dignity and the same standing in importance in relation to his peers and equals, numbering almost 200 million in this country.

Mr. President, the proposal now before the Senate is not a technical legislative issue. What is at issue is the idea of equality. I am from a relatively small State. I am from a relatively southern State. But I do not believe that the vote of a citizen of my great State should count for less than the vote of a citizen of the State of Montana. I do not believe that the vote of a citizen of my State should be counted more than the vote of a citizen of the State of Illinois or California.

The great federal compromise made in Philadelphia in 1787 was not the devising of the electoral college. The great compromise that guarantees the federal natures of our system was the decision to fashion a bicameral legislature. It is the fact that each State of the Union, regardless of its population, is entitled to two Senators that guarantees the continuing federal nature of our National Government, not the electoral college. The Presidency belongs to all the people, and to none more than any other.

Mr. President, the time is at hand when we must examine the necessities for the more efficient governing of this Nation. I think that in these times, in this nuclear age, in this time of swift communication and transportation, in the language of Lady Barbara Ward in her excellent book "Spaceship Earth," the "have nots" of the world are rapidly finding out how much the "haves" really have, and that there is not likely to be a single president, or a single king, a single chancellor, prime minister, or dictator who has the answers to all the problems that will confront civilization in this nuclear age—in this age of technological and scientific revolution.

Only the people, in their collective genius, are likely to find the answers that will be durable and workable, that will preserve us from mutual destruction and annihilation.

If that be the case, if only the people, in their collective genius, can identify the problems and formulate the solutions to the problems of today and tomorrow, then it is urgently important that we continually monitor this business of self-government, of representative government, because the people must be heard. The engine of government which was designed for them by our forefathers must respond, not adequately but well, to that full range of desires, demands, and dissents which represent the business of self-government.

Mr. ALLEN. Mr. President, will the Senator from Tennessee yield?

Mr. BAKER. I yield.

Mr. ALLEN. I have been listening with a great deal of interest to the learned and eloquent discussion by the distinguished senior Senator from Tennessee of the resolution under consideration. It was interesting to hear him say that he had some misgivings about the runoff provision contained in the resolution. It is noted, too, that two other cosponsors of the resolution, the distinguished Senator from Maryland (Mr. TYDINGS) and the distinguished Senator from Michigan (Mr. GRIFFIN), speak most critically of the 40-percent requirement.

Therefore, I am wondering and would like to ask the Senator from Tennessee whether he feels it is wise to make the runoff provision a part of the basic, fundamental law of the land, the Constitution of the United States. Would it not be possible merely to provide in the amendment that Congress have authority by law to provide for the direct election of the President, and is it necessary to provide the runoff provision in the amendment?

Mr. BAKER. I thank my colleague from Alabama. I may have been misunderstood in my expressed concern about

this. Although I stated earlier that I would prefer to have no runoff. My concern is actually with the 40-percent trigger of the runoff. I have some feeling that we should have a 50.1-percent requirement.

Mr. ALLEN. Requirement for what?

Mr. BAKER. For election.

Mr. ALLEN. In other words——

Mr. BAKER. That there should be a runoff, unless one of the candidates receives 50.1 percent. Thus, I am not concerned with the concept of the runoff embedded in the constitutional requirement as provided in Senate Joint Resolution 1. I am somewhat concerned with the 40-percent requirement. While the distinguished Senator from Indiana on yesterday pointed out that in the entire history of the Republic, only one President has been elected with less than 40 percent, that being Abraham Lincoln with 39.7 percent, I believe, there is still the possibility that we could elect a 40-percent President.

We are doing what I freely admit is radical surgery on the electoral process—that is, we would be doing it—with the enactment of Senate Joint Resolution 1. We do not do this sort of thing very often. This is the first time since the Constitution was drafted that there has been a serious prospect of changing this provision in this manner.

So, while we are at it, I believe, personally, that I would have preferred to go the whole mile and provide that there be a runoff unless there was 50.1 percent of the popular vote for a particular candidate. But I am persuaded that, under the circumstances, with such an overwhelming vote by the other body in favor of this resolution, in this manner, with the concern that it might totally eliminate certain third party efforts of candidates, that the 40-percent provision, in some views, is more desirable and at least in my view is acceptable. Thus, on that basis I came to terms with my own concern, while I do now freely confess that I would prefer to see a runoff, unless a candidate received 50.1 percent of the vote or more.

Mr. ALLEN. The Senator is concerned that there be no amendment of a basic nature to the resolution under consideration?

Mr. BAKER. Yes. I think the time is so important that we should adopt this resolution in this fashion with special reference to the overwhelming vote in the House of Representatives for the resolution in this form.

Mr. ALLEN. But the point the junior Senator from Alabama is seeking to make is, would it not be possible merely to provide in one sentence that Congress should have the authority by law to provide for the direct election of the President, and could not then legislation be agreed on at a later date that would possibly meet the views of the Senator from Tennessee?

Mr. BAKER. The point is very well taken. I do not dispute the attractiveness of the proposal of the Senator from Alabama. But I do not support it. I believe that we must pass this resolution in its present form and do so now in order to prevent going through the 1972 election with the same old system. But the Senator is entirely right, the arguments made by the Senator from Nebraska about the qualification of voters, about the time for the runoff, and the other provisions, that the States might set, if Congress does not, might very well apply to the percentage figures if a runoff is held at all. All I can do is express my personal preference. It is the personal preference of the junior Senator from Tennessee that Senate Joint Resolution 1 be passed in its present form without amendment.

Mr. ALLEN. The Senator stated that his preference would be that there be a runoff unless a candidate received more than 50.1 percent of the vote. That, then, would make a runoff much more likely and almost inevitable, would it not?

Mr. BAKER. I think it is not likely that it would be inevitable. I think it is certainly possible that runoffs would be more frequent. Once again, as the Senator from Indiana stated, we would not have had one runoff, save possibly one, and that was in the case of the first Lincoln election, when Lincoln's name was not on the ballot in 10 States.

Mr. ALLEN. Quite a number of winning candidates do not receive 50 percent of the votes.

Mr. BAKER. It is certain that if the requirement were 50.1 percent, there would have been runoffs. The junior Senator from Tennessee has no fear of runoffs. I do not think the runoff provision is a valid criticism of Senate Joint Resolution 1. I do not think there is anything in the electoral process of the United States that is inimical to a runoff vote that requires a candidate to receive 50 percent of the vote in order to be certified as President of the United States.

Mr. ALLEN. The Senator from Tennessee, then, does not share the fear of a runoff that is expressed by the Senator from Michigan (Mr. GRIFFIN) and the Senator from Maryland (Mr. TYDINGS), as set forth in the last two paragraphs on page 16 of the report of the Committee on the Judiciary?

Mr. BAKER. The Senator from Alabama is correct. As a matter of fact, my concern, I suppose, would be diametrically opposite to the concern expressed by the Senator from Maryland and the Senator from Michigan.

Mr. ALLEN. In other words, the Senator from Tennessee likes the provision for a runoff?

Mr. BAKER. It would be my personal preference—I do not serve on the Committee on the Judiciary, and I do not intend to offer an amendment—it would be my personal preference to have a runoff unless a candidate received more than 50.1 percent. That is not the form of the provision as passed by the House, and it is not the form as reported by the Senate Committee on the Judiciary. However, I am at ease with the provision in its present form, and I shall support it.

Mr. ALLEN. If the Senator from Tennessee would kindly permit the junior Senator from Alabama to do so, for the purpose of the RECORD, I should like to read the fear expressed by the two distinguished Senators, who are themselves cosponsors of the joint resolution, in which they say:

> On the other hand, under the 40-percent plurality required for direct election, a minor party or a combination of minor parties need only approach 20 percent of the popular vote in order to reach a strong bargaining position. The prospect of two minor party candidates, one regional and one ideological, amassing 20 percent of the vote is quite realistic in the near future of American politics.
>
> In view of this attractive political framework, the direct election plan, as embodied in Senate Joint Resolution 1, opens the door to public political bargaining with the most far-reaching consequences. Concessions wrung from major party candidates either before or after the first election would be made in a heated atmosphere conducive to the creation of public distrust. Given the fact that bargaining before the runoff election would take place under conditions of division and disappointment, cynical political moves might in themselves lead to a crisis of respect and legitimacy in the selection of the President. Undoubtedly, the aura of legitimacy would be all the more in doubt where the runner-up in the initial contest wins the runoff by wooing third-party support. In such a case, the question of legitimacy is sharpened even further if the turnout in the second election is substantially lower than in the first election.

The Senator from Tennessee does not share those fears?

Mr. BAKER. Mr. President, let me answer the Senator from Alabama a little more in detail than in a categorical reply.

I have great admiration for the junior Senator from Alabama. He has quickly shown his ability and quickness of mind and intellect in the debate on the floor. The point he puts is fundamental and important. I choose to answer it a little obliquely, and I think he will understand why when I finish.

The junior Senator from Tennessee has strong admiration for and dedication to the concept of two broad-based national parties, as he stated earlier, but the junior Senator from Tennessee does not believe that we have any right to legislate—from a practical standpoint—out of existence any effort of a third party.

Third parties now, in the past, or in the future will proliferate and exist and prosper or fail in my view in direct relationship to the effectiveness of the job that the two national political parties do in seeking out and determining the views of the people and translating them into effective policies for government.

Therefore, I feel it is important in designing an amendment to the Constitution or an implementing statute or any other provision that we accomplish two things—that we try our best, as I tend to put it, to fine tune the electoral process so that the people have absolute freedom and equality in expressing their viewpoints no matter how far out or traditional they might be, with absolute equality.

Then, I have the hope that the two national parties will be so stimulated by this equality of opportunity throughout the country—the South, North, East, and West—that they will be in effect forced to go out and understand what the people are concerned about.

My direct answer now, after that little

excursion, is that I do not share the concern that small parties or a third party might have undue influence by reason of the runoff provision and that that influence might be heightened in the runoff. I think if that is so that it is testimony in favor of the two national parties.

I do feel that the possibility would be lessened with the direct popular election of a President and would be far less destructive than the continuation of the electoral college system.

I also feel it is likely that the two national parties are going to become far more vigorous, far more responsible, and far more important in the business of self-government if they are out to compete for every vote, wherever it is, than they are under the winner-take-all system which undergirds the electoral system.

Mr. BAYH. Mr. President, will the Senator yield to permit me to continue this discussion with the Senator from Alabama?

Mr. BAKER. I yield.

Mr. BAYH. Mr. President, I appreciate the fact that the Senator from Alabama brought up this particular aspect of the runoff question.

I would like to recite a bit of history which I am sure is already familiar to the distinguished Senator from Alabama, not to be historical, but to put in proper perspective and better define the size of the obstacle before us.

Having been the principal author of the 25th amendment and as chairman of the Constitutional Amendments Subcommittee, I was right in the midst of the battle on that amendment. I think it is fair to say that it did not involve the degree of controversy that this matter involves.

We can go back to the death of President Harrison and to the time when President Garfield lay helpless for 81 days and could not do more than sign one document. We can go back to the time when President McKinley could not perform the duties of the President.

There was introduced in the Senate and in the House of Representatives at least one, and perhaps several different plans designed to deal with the problems of the President's inability to act. Each time the measure failed because we could not develop a consensus that would have the support of two-thirds of each House.

Passage only came when we were able to get the proper give and the take. Senator said he would give a little on his pet proposal, and another Senator said he would give a little on his pet proposal.

Without the tolerance and help of many Senators, we would not have been successful on the 25th amendment. I am sure that some Senators would have preferred a change or two in the final language of the 25th amendment.

However, it was because we were able to move toward the center and give up our personal preferences here and there that we were able to have the 25th amendment, which provides a course of action in the event of presidential disability.

I make this point to show that unless we realize the necessity of some give and take here, we will end up with the same problem in 1972 that we had in 1968. We will run the risk of malfunction again as we did on the three occasions when the President was elected with fewer votes than his opponent had.

With this thought in mind, the runoff is a matter of some concern to me. It is not of such concern that I do not believe it is the best proposal that has been presented. I realize that this is a tough vote and that we are close to the margin of the two-thirds required. No one is certain how some of his colleagues will vote. I have been tempted to accept a change, if I thought that giving up a sentence or two would pick up the necessary two or three additional votes.

But looking at it hard and fast, the Senator from Indiana has determined in his own mind that despite the weaknesses of the runoff, there are fewer weaknesses with the runoff than with the other proposals. The credibility of the final outcome and the acceptance by the greatest number of citizens in his State has persuaded the Senator from Indiana that the runoff is preferable to the alternatives. The Senator from Alabama has pointed out it is possible for a third party to get 20 percent. It should be pointed out that is the minimum required to prevent a winner if all other votes were evenly divided. I do not anticipate a runoff election with a great deal of relish. I think that everyone who has given support to the runoff provision would prefer to have a vote final, with one election.

But what happens if we get below 40 percent? Then, is the President presented with sufficient credentials so that he can govern efficiently? If he gets below 40 percent, perhaps his credibility is eroded and perhaps we should broaden that base. As the Senator from Tennessee said, who would have guessed that the minority party 2 years ago would be the party of the man who is now sitting in the White House?

Mr. BAKER. Who would have guessed in 1860 that a minority would soon become the dominant party?

Mr. BAYH. Exactly.

Mr. BAKER. As the Senator from Indiana said, we do our best to fine tune the system, but we do not leave out of the system the free choice of the small party to become a big party; and if two parties fail, another may emerge.

Mr. BAYH. Mr. President, will the Senator yield?

Mr. BAKER. I yield.

Mr. BAYH. I appreciate the Senator's tolerance. Does the Senator from Alabama wish to proceed?

Mr. ALLEN. I shall have a question or two after the Senator has completed his remarks.

Mr. BAYH. I do not wish to be so lengthy but I want to point out that unless each of us is willing to give and take a little, we will end up with no improvement in the present system, just as we were unable to get a consensus prior to the enactment of the 25th amendment.

The best way to broaden the base of support for the President if it gets below 40 percent, is to go back to the people and say, "Everyone has a second crack." Then the majority can say, "That man who is sending my son into battle, or who is enforcing pollution laws, or proposing highways has the support of the majority of the people." That is why I am convinced that the runoff is the best choice.

The Senator from Alabama struck a familiar chord and it is one which the Senator from Indiana is willing to consider. Given the runoff as the best proposal, I suppose it is fair to say none of us knows for certain how it is going to act. We might want to give ourselves the opportunity to change that if it malfunctions at some future date. This is the same type of proposal we used in one of the contingencies of the 25th amendment.

Would the Senator from Alabama feel inclined to support the direct election proposal if we could deal effectively this way with the runoff?

Mr. ALLEN. No. The Senator from Alabama would not support it. The Senator from Alabama was trying to find out why the resolution was drafted in these terms and the question the Senator from Alabama asked—I believe while the Senator from Indiana was out of the Chamber—was why does this resolution seek to put into the basic and fundamental law of the Nation, the Constitution of the United States, a portion of the procedure and leave out other important items of the procedure; and put in highly controversial items?

The Senator from Alabama asked the question, Would it not have been possible merely in one sentence to have said Congress shall be authorized to provide by law for the direct election of the President and Vice President of the United States, leaving to the Congress the decision of these matters that are very much in controversy at this time? Why go half way and spell out a portion of the controversial items and leave other controversial items unanswered? Why not go all the way or none of the way?

Mr. BAYH. Mr. President, with the permission of our distinguished colleague, I would like to continue the colloquy. Before doing so, I would like to express one word of appreciation to the Senator from Tennessee for the contribution he has made in his usual, eloquent manner, going into the intricacies of the problem involved. I think his support and explanation of the reason for his support will be of great help in the final consummation of this effort. I also would like to express my personal gratitude to the Senator from Tennessee.

The Senator from Alabama, I think, raises a very legitimate question as to why we should put part of the mechanism for a popular election into the bedrock law, the Constitution, thus making it more difficult to change, and not go all the way by putting in every dot, every comma, and every word of what I suppose may be called a national election code, as the senior Senator from Nebraska refers to it.

I think there is a great deal of similarity in dealing with presidential power, whether it is electing a President or deposing a President for disability, as provided in the 25th amendment. We asked ourselves those same questions when we

were dealing with the 25th amendment. Should we just authorize Congress to do certain things, particularly in relation to filling a vice-presidential vacancy, because such a person was just one heartbeat away from the presidency, or should we put it in the bedrock law of the land?

We decided at that time that the basic structure and framework should be put in the bedrock law of the land so that, given a close election, Congress would not be tempted to tamper with that formula and alter the result. For example, in a close election it is conceivable that future generations of representatives in this body—certainly not any here today, but perhaps future generations—would be tempted to go to a district plan that might reach a definite result, instead of going to a runoff with its uncertain result. Or, if we had a district plan, and permitted Congress the authority to change it by Congress, Congress could quickly reconvene, change it by statute, and have a different outcome.

Mr. ALLEN. Does the Senator mean after the election?

Mr. BAYH. After the election.

Mr. ALLEN. I think the Senator is drawing upon his fanciful imagination to come up with any such supposition as that.

Mr. BAYH. I am not. I ask the Senator from Alabama to search the depth of his memory, which is at least as good as the memory of the Senator from Indiana. In 1960 the State Legislature of Louisiana tried to change the outcome, knowing the way their electors were going to go.

I think we need to have as close to a final result as we can get and give to Congress the necessary authority. Of course, the Senator from Alabama is dealing with less than a final return on the first election. Suppose we had a 40-percent requirement and we had a 40-percent result. Then I do not think there will be any tampering at all. But suppose someone received less than 40 percent and Congress had power by law to establish an alternative procedure. I think, based on political tradition, the different party members would look at the formulas based on which might put their man in the White House. I do not think we want that to happen.

Mr. ALLEN. Why not put it all in the Constitution, then, and not stop half way?

Mr. BAYH. As far as the means of registration, qualifications, the infinite details of times and places are concerned, those decisions are made, and must by nature be made, prior to the election.

The votes are totaled, and once the votes are totaled I am not concerned about the qualifications of the voters who cast that vote, but I am concerned that we not give Congress the power to change the formula by which the vote, once cast, can be manipulated to reach a different conclusion.

Mr. ALLEN. I do not see the dangers at this point which the distinguished Senator from Indiana does.

Mr. BAYH. I would like to think that Congress would not resort to a purely political count such as we found in the election of 1876. That was a political count. Perhaps I do not know how it would have been done any better, but I do not think that was a shining moment in our history. I think we are inviting the possibility of another 1876 to the degree that we do not establish a final formula for deciding the outcome.

Mr. ALLEN. Why not spell the whole thing out in a constitutional provision? We have plenty of time. As the junior Senator from Alabama reads the joint resolution, it would have to be submitted by the Congress and ratified by three-fourths of the States by April 15 of next year in order for it to apply in the 1972 election. Since that is almost humanly impossible, it would seem that the first election that could be conducted according to the provisions of the suggested amendment would be the election of 1976.

So does not that fact give the distinguished Senator from Indiana and the cosponsors of the proposed constitutional amendment ample time to decide on the questions that have been raised by both distinguished Senators from Nebraska, having to do with to whom shall these votes be certified, who has the right to make the final certification, is there going to be a national election law, how shall contests to conducted, shall they be conducted at the State level or at the national level?

All those questions need to be answered at some time, and it occurs to the junior Senator from Alabama that if those questions are not answered at the time the amendment is submitted to the States, there will be so many hidden dangers in this procedure that it is going to make it very, very difficult indeed to obtain ratification by the requisite three-fourths of the State legislatures.

So there is plenty of time. Why not work on these matters at the next Congress and come up with a final, well-refined version, upon which the Senator can get two-thirds of the Members of both Houses of Congress to agree? What is the hurry?

Mr. BAYH. I do not share the feeling of the Senator from Alabama that we cannot get the necessary three-fourths of the legislatures to approve something so important. I must admit he is accurate in describing it as a monumental task, but I submit that the task is of such significant size that we should exert every effort toward accomplishing it.

This is not a measure which has been treated lightly, as I am sure my distinguished friend and colleague from Alabama realizes. In the past, these questions have been discussed by our colleagues in the House of Representatives, as well as heretofore in the Senate. The House passed this measure by a 339-to-70 vote. We have been laboring at this for a number of years. We have volumes of hearings dealing with these very questions.

I think it is incumbent upon us not to interchange a disagreement with the answers and suggestions that have been proposed with the fact that no answer has been forthcoming. I personally feel that the fact that we have used language from the Constitution as it now exists bodes well for the future of this present amendment.

I call the attention of my distinguished colleague to section 4 of article I of the Constitution, in which it says the times and places and manners of holding elections for Senators and Representatives shall be prescribed in each State by the legislature thereof, but that Congress may at any time by law make or alter such regulations.

I think the same thing is true as to the presidential electors. Some flexibility has been provided, and the primary responsibility has been given to the States.

I personally would rather see this responsibility accepted by the States. In the event they do not accept it, then I would like to see us have a stopgap, a safety valve, to permit Congress to go in and provide uniformity in these areas.

Mr. ALLEN. It occurs to me that the constitutional provision having to do with the election of Representatives and Senators is a regulation that would be applicable in the respective States, and that application would be insulated and contained within the particular States.

But are we going to have a national tabulating board, where all of the returns will be submitted to it, or is it going to be a composite of the returns in the 50 States? Who decides what is the vote in a particular State? Is that decided at the State level, or is it decided at the national level?

Mr. BAYH. As the Senator from Alabama knows, voting laws are not foreign to this body. We just got through enacting one. I think it is generally accepted, and it is the opinion of the Senator from Indiana, that following the ratification of this particular amendment, Congress would pass a statute in relation to these election prescribing what items of law should be national and what should be left to the States.

Mr. ALLEN. Yes, but should not that decision be made prior to sending this amendment out to the States? It is just like a comet; it stays out there for 7 years, as a comet stays out for 70. This amendment is out there, cutting off all possible electoral reform of a different nature. As long as it is out making its 7-year round among the States, we are not going to have any other type of electoral reform. Even though Congress, in its wisdom, should decide that this runoff provision that will be imbedded in the basic law of the land, according to the amendment of the Senator from Indiana, is not wise, and might want to go a different route, we would have this procedure set up in the proposed constitutional amendment, with half of the other questions still unanswered.

Mr. HRUSKA. Mr. President, will the Senator yield?

Mr. BAYH. I should like first to respond to the Senator from Alabama.

I think perhaps we would be putting the cart before the horse if we come up with a statute suggesting how a constitutional amendment should be administered before the constitutional amendment is even passed by Congress, let alone ratified by the States.

I think now is the time to explore the matter, and to get a general idea whether it can work. The Senator from Indiana is convinced that it can work. Richard Scammon and others who have studied the matter in some detail are convinced that it can and will work. The Senator from Alabama suggests we should have a statute to govern the administration of a constitutional amendment that is not even a constitutional amendment yet. I think that is going too far.

Mr. ALLEN. The Senator from Alabama did not suggest a statute. He suggested putting it all in the constitutional amendment, so that the legislatures of the States would know what they are voting on. As it is now, they have only half an idea.

Mr. BAYH. That is the point. As I have pointed out, many parts of the Constitution now have such flexibility. I think it is appropriate. It is not, in my judgment, submitting us to any foreseeable dangers. Instead it lets Congress, after this proposal becomes a part of the Constitution, make a judgment, calling on the experience of Senators such as the Senator from Alabama, who has a runoff in his State, to see how it should be implemented. I would leave to the States a maximum amount of authority, unless that authority is abused, at which time the Congress would provide for uniformity.

Let me suggest that if the Supreme Court ratifies and upholds the 1970 Voting Rights Act, the age problem and the residency problem, which were anticipated when we first introduced Senate Joint Resolution 1 several years ago, will now be moot questions. That issue will have been taken out of our hands, and will be uniform. Literacy tests, too, have been made uniform.

Mr. ALLEN. That might not be uniform. I assume the Senator is talking about the 18 year olds. But, as the distinguished Senator from Nebraska (Mr. CURTIS) pointed out yesterday, the States could go beyond that; that if the insurance age requirement were followed, it would provide that a person would be entitled to vote if his birthday was nearest to being 18 years of age, and that if New York were to put in such a law, it would be to the disadvantage of States that did not have the law, because it would open the polls to tens of thousands of additional people in that State.

Mr. BAYH. That is certainly possible, if the Senator from Alabama is correct. But I suggest that if the Supreme Court upholds the 1970 Voting Rights Act, saying that Congress has the authority to establish a uniform voting age of 18, Congress could make that a mandate and prohibit any State from lowering it to 17 for the election of the President.

Mr. ALLEN. But they have not.

Mr. BAYH. Mr. President, I find myself in the rather interesting position in comparison with my friend from Alabama, of arguing for States rights, and he is apparently opposing States rights. I must remark that I have seen other debates when apparently the shoe was on the other foot for both of us.

Mr. ALLEN. No, contrary to what the Senator from Indiana says, the Senator from Alabama is asking that he advise the States what they are voting on so they can protect their rights. The Senator from Alabama is not abandoning his time-honored defense of States rights.

Mr. BAYH. I am glad that the Senator from Alabama made the RECORD clear there, because I am sure he is not, and I hope he will not abandon his position. I think we have here a unique opportunity to meld together, in the finest tradition of our country, the rights and powers of States with the rights and powers of the Federal Government, by leaving certain of these determinations to the States. Unless the States are arbitrary in the use of those powers, the regulations established by the States will stand. For example, if some State, to use the wild hypothetical example I used in responding to our friend the senior Senator from Nebraska, lowered the voting age to 12, or some ridiculous thing like that, Congress would have the power to come back and say, "We are going to prevent that from happening."

I think we have the right amount of power on both levels here. I am sorry that my friend from Alabama does not concur.

Mr. HRUSKA. Mr. President, will the Senator yield?

Mr. BAYH. I yield.

Mr. HRUSKA. The suggestion made by the Senator from Alabama that the matter of a central or national vote-counting agency be resolved now is of great interest. I believe the State legislatures would like to know, either that we in our constitutional amendment will disavow any interest in getting Federal precinct inspectors and supervisors, State counters, and then a centralizing of the State counting in Washington, D.C., or that we will put that in the amendment and assert that right in these national elections. Then they will know what they are voting on.

As it is, as the witnesses testified last April—particularly Mr. White and Professor Bickel—there is no provision in that regard. Yet they see it following, as day follows night, that there must necessarily be, under the system authorized by Senate Joint Resolution 1, a national central counting bureau. If that is true, it seems to me that we ought to say so. We ought to say so, so that the States will know what further rights they are surrendering. They are already surrendering a good deal of the prerogatives of the States as we have known them since the beginning of the Republic.

One of the points made in the debate—and it will be made again and again—is that the resolution will tend to destroy the two-party system and encourage splinter parties. That is not the basis upon which the States have been operating up until now. It will tend to undermine the Federal system by removing the States as States from the electoral process. That is our contention. It is based upon the idea that there must inevitably be the assertion of Federal power in the voting process all the way from registration and voting through counting from the precinct level on up to the national level.

The State legislatures could vote more intelligently upon this amendment if they knew in advance, spelled out in the amendment, that a central national counting and election supervisory bureau will be created and that Congress has the power, duty, and the responsibility to implementing it. Then the major procedural steps can be set out in the resolution and the incidental decisions such as how big a commission, where it will reside, who will appoint it, whether it will be a part of the executive department, or whether it will be an arm of Congress can be enacted by simple statute.

What becomes of the separation of powers? That is another doctrine that is in great danger of destruction in this process of trying to amend the electoral college system.

The Senator from Alabama seems to me to have an idea that is very worthy and meritorious. I do believe that if this matter is going to be presented in any form to the State legislatures, they ought to know what they are buying.

Mr. BAYH. Would the Senator from Nebraska care to offer such an amendment to this resolution, establishing a nationwide vote-counting structure? The Senator from Indiana will vote against it. But if that is what the Senator from Nebraska feels he ought to have in here, then I think he should offer such an amendment. I see nothing in the language, as I said to the distinguished junior Senator from Nebraska yesterday, that suggests such a national body.

To be sure, men like Professor Bickel may have inferred that this would be like the day following the night, or vice versa. But I must say that it is interesting for the Senator from Indiana to see the Senator from Nebraska accept part of what Alexander Bickel says and deny other parts of what he says. It is the same as yesterday, when he was relying on Teddy White and Richard Goodwin to support part of his theory; but then, when men like Bickel, White, and Goodwin suggested that the large States have the clout under the present system, the Senator from Nebraska said no, the small States have the clout under the present system. He does not believe that Bickel, Goodwin, and White have any credentials when we are arguing that part of the case.

Mr. HRUSKA. This Senator is willing to accept the totality of the testimony and conclusions of Professor Bickel and Mr. White. There is a distinction in the presentation of all these witnesses. Certain facts are indulged in. They declare and assert certain opinions based upon those facts. We should not, in this Chamber, in any logical, rational debate, differ as to facts. We can differ on the conclusions drawn from those facts.

Professor Bickel and Mr. White are not in disagreement on this. They say that the amendment is no good, and they do not want it, and they advise strongly against it. I wholeheartedly concur.

Mr. BAYH. With all respect to the Senator from Nebraska, I think that if

he reads the testimony of Mr. White, Mr. Goodwin, and Mr. Bickel, he will find that they agree with him on the conclusions, not the facts.

The Senator from Nebraska made a compassionate, eloquent plea in support of the rural areas and talked to the Senator from Indiana as a farmer about the plight of the farmers of this country. The Senator from Nebraska suggested that we should not accept the direct popular vote and should keep the electoral college system as it is now because the small States have the advantage. But Bickel, Goodwin, and White say that the large States have the advantage. It is for this reason that they want to keep the present system and that they reach the conclusion that direct election is bad.

Mr. HRUSKA. But, at page 19 of the hearings of last April, there is printed a chart which shows that there would be a 29.7 loss of voting strength by the Midland States of North Dakota, South Dakota, Nebraska, Kansas, Montana, Wyoming, and Colorado. Their voting strength would be decreased, regardless of any conclusion to the contrary asserted by any witness that the strength would be lost by the metropolitan areas.

The same is true with reference to the Southwest States of New Mexico, Arizona, Utah, and Nevada. They will lose 37 percent of their voting strength as a group.

Mr. BAYH. The Senator from Nebraska should point out that he was previously quoting Bickel, White, and Goodwin and that now, coincidentally, when he refers to the small-State argument, he is quoting a document which he introduced into the RECORD himself.

Mr. HRUSKA. That is correct.

Mr. BAYH. The fact is that the three men he is relying on in connection with the national-vote count disagree with him 180 percent, so far as the figures are concerned that he introduced in the RECORD.

Mr. HRUSKA. The Senator from Indiana should not impeach this document on the basis of the man who puts it in the record, because that does not make any difference. That document, that chart, is based upon the official population and voting strength of the States. It comes from official sources. Is there any doubt in the Senator's mind about the mathematical calculation of these charts? They have not been challenged heretofore.

Mr. BAYH. The Senator from Indiana would be the last one to impeach the credibility of a document introduced by the Senator from Nebraska. In fact, so far as the Senator from Indiana is concerned, that would enhance its credibility.

But the fact is that this document is only half of a document. It takes the number of electors and divides them into the population and comes out with some rather interesting fundamental arithmetic.

But it ignores chapter 2 of that document, which must also be included—namely, the unit rule. It is the unit rule that causes men like Bickel, Goodwin, and White to suggest that the conclusions the Senator from Nebraska reaches from the document he put in the record are wrong.

Mr. HRUSKA. The fact is that all three witnesses—Professor Bickel, Mr. White, and Mr. Goodwin—argue not that the large-State power will diminish. That is not what they have argued. Their argument is that there will be a shift of power from the center cities to the suburbs. But they also point out that under the electoral college the smaller States have extra weight added to their votes. That is what they have been arguing. That is the thrust of their argument. The large States will still have the greater power. I think an analysis of their testimony will show that to be an accurate summary of their testimony. The large States will still have the greater power, but if the electoral college is abolished they will obtain an inordinate increase in power.

Mr. BAYH. I think that if the distinguished Senator from Nebraska will read carefully the statements of the three men, he will find that the analysis of the Senator from Indiana is accurate.

This goes back to the fundamental fault in this large State-small State argument. Distinguished men such as the Senator from Nebraska are saying that the small States have the advantage. Equally distinguished men, such as Goodwin, White, and Bickel, argue that the large States have the advantage.

We can look back in history and say this or that election resulted in so and so, and we can figure it out with a slide rule, that perhaps voters in one State or another, large or small, will have an advantage. But the question that the Senator from Indiana has proposed time and again is, Why should any State have an advantage? Why should not we all have the same opportunity to decide who will be President of the United States? Bickel, White, and Goodwin, I respectfully suggest, feel that if we change the system, we are penalizing the large States who, they feel, now have an advantage. I do not see how the hypothesis presented by the Senator from Nebraska holds water. What difference does it make if the population shifts from the center to the suburbs? The population is still contained in the State.

Mr. HRUSKA. I would most respectfully say to the Senator from Indiana that I have read the record carefully and I have had it verified by competent members of my staff, and the testimony of the three witnesses is that it is the large cities that will lose power in favor of the suburbs of those large States—not loss of power by those States.

But I would like to answer the question suggested, or comment on the question posed by the Senator from Indiana, why should any State have an advantage? Because that is the federal system. Look around us. Why does one State here have an advantage over another State? Because that is part of our federal system. That is the way the electoral college was fashioned. That is the way it has been from 1789, not 1804 or 1824. From 1789, it has been required to assign to each State an electoral vote consisting of a certain number of Members for the House of Representatives, and two Senate Members. That is why they should have an advantage—it carries into the voting for President the same federal system which is the basis for the Senate. Every time the question will be raised as to the unfairness of the disadvantage in some States, the Senator from Indiana and all who argue like him will be hard put to it to defend the existence of this body. He has stated that no State in this Chamber has an advantage over another State. Why is it, then, that California, the most populous State in the Nation with 20 million persons, has only two Senators, yet my State of Nebraska, with 1,400,000 persons, also has two Senators? How can the Senator answer that, if he argues that there should be no advantage in the electoral college system? There is no answer to that.

Mr. BAYH. If the Senator will permit me to say so, the Senator goes back to 1789 to suggest——

Mr. HRUSKA. That is exactly right.

Mr. BAYH (continuing). That the electoral college is operating now as Founding Fathers sugested it would operate in 1789. Does the Senator from Nebraska feel that it should operate as Madison, Hamilton, and Monroe and some of the Founding Fathers thought it should operate?

Mr. HRUSKA. No. It is not operating exactly in that fashion. The 12th amendment made minor changes.

Mr. BAYH. That is exactly right.

Mr. HRUSKA. But there is one feature that has been unchanged from its inception, and that is that each State has the total of its votes in the House and Senate to determine whether a President is elected. That was initially fashioned so that the small States would not be lost in the mill, so that they would have some reasonable weight given their interests so that the big States would not be able to overwhelm them completely by reason of their massive size.

How foretelling they were, and how wise they were in their foretelling, because now we have eight or 10 metropolitan centers—I forget what the percentage of the population is—with the overwhelming bulk of the population. Many of the other States are sparsely settled and, under the circumstances proposed by this resolution, those sparsely settled areas of the country would be completely inundated by pressures from the metropolitan centers. That is why there is a difference between the voting strength of one State over another—not disproportionately, not predominantly, but by a little, so that those similarly situated would find it possible to make their voices heard.

Mr. President, I ask unanimous consent to have printed in the RECORD tables which will be found on pages 19 and 20 of the April 15 hearings before the Judiciary Committee.

There being no objection, the tables was ordered to be printed in the RECORD, as follows:

IMPACT OF DIRECT ELECTION ON VOTING STRENGTH OF MIDLAND, SOUTHWESTERN, AND SOUTHERN STATES

State	1968 estimated population	1968 electoral vote: Number of electors	1968 electoral vote: Percent of all electors	1968 direct vote: Number of votes cast	1968 direct vote: Percent of all popular votes	Voting strength lost in percent
Midlands:						
North Dakota	627,000	4	0.74	248,000	0.34	
South Dakota	656,000	4	.74	281,000	.38	
Nebraska	1,439,000	5	.93	537,000	.73	
Kansas	2,293,000	7	1.30	873,000	1.19	
Montana	693,000	4	.74	274,000	.37

Texas	10,977,000	25	4.65	3,079,000	4.21	
Total	49,666,000	128	23.79	14,786,000	20.23	15.0

IF PRESIDENTS ARE ELECTED BY POPULAR VOTE: EFFECT ON STATES

15 STATES WOULD GAIN POLITICAL POWER

State	Percent of electoral votes	Percent of popular votes cast in 1968	Difference (percent)	Percent of change
New York	7.99	9.49	1.50	+18.77
California	7.43	9.89	2.46	+33.10
Pennsylvania	5.39	6.47	1.08	+20.03
Illinois	4.83	6.30	1.47	+30.43
Ohio	4.83	5.40	.57	+11.80
Michigan	3.90	4.51	0.61	+15.64
New Jersey	3.16	3.92	.76	+24.05
Florida	2.60	2.98	.38	+14.61
Massachusetts	2.60	3.18	.58	+22.30
Indiana	2.42	2.90	.48	+19.83
Montana	2.23	2.47	.24	+10.76
Wisconsin	2.23	2.31	.08	+3.58
Minnesota	1.86	2.17	.31	+16.66
Washington	1.67	1.78	.11	+6.58
Connecticut	1.49	1.71	.22	+14.76

34 STATES AND THE DISTRICT OF COLUMBIA WOULD LOSE POLITICAL POWER

Texas	4.65	4.20	0.45	−9.67
North Carolina	2.42	2.16	.26	−10.74
Virginia	2.23	1.85	.38	−17.04
Georgia	2.23	1.70	.53	−23.76
Tennessee	2.04	1.70	.34	−16.66
Maryland	1.86	1.68	.18	−9.67
Louisiana	1.86	1.50	.36	−19.35
Alabama	1.86	1.42	.44	−23.65
Iowa	1.67	1.59	.08	−4.79
Kentucky	1.67	1.44	.23	−13.77
Oklahoma	1.49	1.29	.20	−13.42
South Carolina	1.49	.91	.58	−38.92
Kansas	1.30	1.19	.11	−8.46
West Virginia	1.30	1.03	0.27	−20.76
Mississippi	1.30	.89	.41	−31.53
Colorado	1.12	1.10	.02	−1.78
Arkansas	1.12	.83	.29	−25.89
Nebraska	.93	.73	.20	−21.50
Arizona	.93	.66	.27	−29.03
Utah	.74	.58	.16	−21.62
Maine	.74	.54	.20	−27.02
Rhode Island	.74	.52	.22	−29.72
New Mexico	.74	.45	.29	−39.18
New Hampshire	.74	.40	.34	−45.94
Idaho	.74	.40	.34	−45.94
South Dakota	.74	.38	.36	−48.64
Montana	.74	.37	.37	−50.00
North Dakota	.74	.34	.40	−54.05
Hawaii	.74	.32	.42	−56.75
Delaware	.56	.29	.27	−48.21
District of Columbia	.56	.23	.33	−58.92
Vermont	.56	.22	.34	−60.71
Nevada	.56	.21	.35	−62.50
Wyoming	.56	.17	.49	−69.64
Alaska	.56	.11	.45	−80.35

1 STATE WOULD HAVE NO CHANGE

Oregon	1.12	1.12

Source: Testimony before the House Judiciary Committee, May 16, 1969.

Mr. BAYH. Mr. President, if I might suggest, I must say, as dispassionately as I know how, that it does not make good logic for the Senator from Nebraska, as one Member of this body, to suggest that the reason for keeping the present system was due to the wisdom of our Founding Fathers, who established it in 1789. Before the ink was dry on the document, they found they were in error, and the 12th amendment was necessary. They did not anticipate the development of political parties. With the advent of political parties and the unit rule, the mathematical formulas that the Senator from Nebraska continues to rely upon to sustain the advantage of the small States went right out the window. Today, under the present electoral system, despite the contention and the mathematical formulas to the contrary, we can elect a President if we carry the slimmest margin in 11 States—11 big States today. This hardly speaks well for the advantage of the small States. The small States do not have an advantage. If one can win New York, Pennsylvania, California, Michigan, Ohio, and Illinois, and the others of the 11 large States under the 1970 census figures, he will be elected President, even if he carries each State by only one vote. That is the way the system works. That is the reason men like Bickel, White, and Goodwin do not want to change the system. They are liberally oriented, and they want the liberals in the large cities to continue to have the advantage; yet the Senator from Nebraska continues to rely on these men of liberal persuasion who feel that the large States have an advantage, to support his contention that the system should not change.

Mr. ALLEN. Mr. President, will the Senator from Indiana yield?

Mr. BAYH. May I finish first, please. I think my comment relates to the national vote count issue raised by the Senator from Nebraska and the Senator from Alabama. I must say that I find myself 180 percent away in assessing the small State-large State advantage. But I think the question of a national vote count should be resolved. I personally do not feel that we should have provisions in the Constitution providing for a limitation with a national bureaucracy going in and governing each precinct. There should not be language to that effect. I do not feel, as day follows night, that this will follow, because my friend Bickel thinks it does. I do not agree.

Mr. HRUSKA. There are many others besides Bickel.

Mr. BAYH. Pardon me?

Mr. HRUSKA. There are many others besides Bickel.

Mr. BAYH. I am sure there are probably a few others.

Mr. HRUSKA. Besides the realities of the situation.

Mr. BAYH. I do not think the realities of the situation are such. I am not familiar with the way the votes are tabulated in the States of Nebraska or Alabama or, indeed, in 47 of the other States. I am familiar with the way the votes are tabulated in Indiana, where we do not have a State election official standing at each precinct in every county in the State.

Mr. HRUSKA. We have.

Mr. BAYH. We do not in Indiana.

Mr. HRUSKA. We have two, one for each major party.

Mr. BAYH. We do not have them in Indiana. The votes are tabulated in most States by county officials. They are counted and sent to the State and there they are compiled and the State's total is arrived at. If this can happen in Indiana, then I suggest, if it happens there, it can happen in other States where they do not have appointed officials of the Governor to look into each ballot box as it is counted. So that I cannot see how it can happen on a national level. The votes are counted and certified at the State level, then sent to Washington where they are counted. It does not really make much difference to me where they are counted. They can be counted in the House of Representatives in general as the electoral votes now are tabulated, or we can establish by law to have an official do the final tabulating. We could give it to the General Services Administration or to the Director of the Census. I do not think that is important. It is a matter of running an adding machine. I think it can be handled very well. I think that this debate, this type of discussion, is good. If there is any question raised at a later date, I hope that some judge will look at what the Senator

from Indiana as the principal sponsor of this amendment had to say. He does not believe there should be a national bureaucracy set up to go into each precinct of the country.

As the Senator has heard me say, I think direct popular vote is the best way to guarantee an honest count. The direct popular vote is the only method which gives each party a reason to get the extra votes. If they get those votes, they will be counted in the national total. That does not happen now.

It was pointed out earlier today that it was suggested in a book that in 1960 the Democrats would never carry Indiana. I never had anyone suggest that to me. They decided to write off Indiana. It would not make any difference if they were going to lose by 265,000 or by 265 votes. All the Indiana votes would go to Mr. Nixon.

I am sure that the Republicans made the same assessment. They brought Mr. Nixon in at high noon one day and that was the last we saw of him. That was because they knew they were going to carry the State.

If we know that each vote will count, we will have a Democratic and Republican precinct man sitting at each polling place to make sure that vote is honest.

Mr. HRUSKA. Mr. President, let us get back to the 1789 Constitution. I find nothing repugnant in standing up for the principle and arrangement adopted then with reference to the electoral college and with reference to the Senate of the United States. I do not think that age is necessarily something that should be used against either of those matters.

The same system with reference to the assignment of electoral votes in each State is in operation now as was in operation in 1789. That part has not been changed one iota by the 12th amendment.

There has been a change in that the votes of the electors have to be cast for the President and Vice President together and not for the President separately and the Vice President separately.

That is what the amendment of 1804 was all about. But the assignment of a certain number of electoral votes to each State is now as it has been since 1789 pursuant to the same formula that was contained in the original Constitution as ratified. There was nothing thrown out the window. That is still the law. That is still how we find the assignment made today. I think that ought to be made perfectly clear.

I still say that anyone who contends for the scrapping of the electoral college and the scrapping of the votes would almost by necessity be unable to defend against a challenge made in the Senate Chamber for the proposition of two Senators for each State. I do not see how any other arrangement or conclusion can be reached.

If there is unfairness now with reference to the electoral college, there is at least equal unfairness by reason of the fact that the most populous States have the same number of Senators as the least populous States.

Mr. BAYH. Mr. President, the Senator is accurate in suggesting that the tabulation of votes by States as originally prescribed by our Founding Fathers is still followed today.

Mr. HRUSKA. Not the tabulation, but the assignment of the number of electoral votes. That is correct, and I stand by that statement.

Mr. BAYH. And the tabulation of those votes precedes the assignment of the electors. What has changed, and the Senator cannot deny it, is that our Founding Fathers did not anticipate the development of political parties. They did not anticipate the unit rule.

Read what Hamilton said. He was considering each of these men as red-blooded, intellectual patriots who were smarter than the average individual citizen. He was considering that they would have independent judgment. With the advent of the unit rule, where was the mathematical advantage to the large or small States which the Senator describes?

If I might, for the sake of the record, read what Alexander Bickel had to say on page 50:

> But the practice for nearly a century and a half has been to cast the electoral vote of each State by the unit rule. Under these conditions, the malapportionment in favor of the small States is for the most part only apparent, not in fact real. This is so because even a small popular majority or plurality in a State gains for a candidate that State's entire electoral vote, which, in turn, means that to carry New York, or Illinois, or California, or Texas by 50,000 or even 5,000 popular votes is to win a much larger block of electoral votes than could be won by getting large popular majorities in any number of small States.
>
> The system is, therefore, in effect malapportioned in favor of the large industrial States, . . .

Mr. HRUSKA. States, but not cities. That is the point he made.

Mr. BAYH. I would say that we do not have electoral votes cast by cities or suburbs. They are cast by States.

Mr. HRUSKA. The States have the power. But the point he was making was that the central cities themselves will lose significance.

Mr. BAYH. How can they possibly lose significance? There is not a suburb or a city that chooses an elector. States choose the electors by a statewide popular vote count.

Mr. HRUSKA. The Senator misses the point in the tabulation of the votes and the assignment of electoral votes to States by getting into a discussion of parties and the unit rule, and so on.

I did not contend that. I said this, with full confidence—and this is the fact—that the original Constitution devised a formula for the assignment to each State of the number of votes it would cast for the election of a President.

That formula still persists today. It is very simple. Add the number of Congressmen and two Senators for each State, and that is the number.

It is the destruction of that formula to which the Senator from Nebraska objects and strenuously objects.

Mr. BAYH. Mr. President, I sympathize with the Senator's desire to see that the formula is maintained in the same manner. What I am trying to suggest to my distinguished friend, the Senator from Nebraska, is that if he believes that the present system is supported by citizens throughout the vast heartland of the Mississippi Valley from which he comes and that it gives them a larger share of representation than they are really entitled to under the electoral college system, he is woefully wrong. And the man on whom he relies to sustain his case, Alexander Bickel, says so.

Mr. HRUSKA. Mr. President, the Senator from Nebraska does not bottom his case on Professor Bickel's argument, nor on that of Mr. White, nor on that of Mr. Goodwin, although in the main they agree with me on this.

The Senator from Nebraska relies on the fundamental proposition that when the electoral college, as such, is abolished, we will have changed our form of government. We will reach a point where we will impair to the point of uselessness the major political parties as we know them now. That change will result in the destruction of States as States in the electoral process of presidential elections.

Those are the things—and there are others—on which the Senator from Nebraska bases his case, not upon Mr. Bickel or Mr. White, or the others. I do not think there is any question that that will be the fact, because if the electoral system is abolished, the role the States play in the selection of the President will be ended.

The electoral system can be modified without forsaking the basic formula provided in the original document. It can be modified by proportional voting; it can be modified by a district plan; it can be modified by a joint session of Congress, with each Member of Congress having one vote for the present House vote with each State having one vote. And it can be modified by depriving the elector of his discretionary power as to whom he might vote for when the college meets. But the important thing is that the electoral system be based upon the proposition that the smaller States shall have the same protection from the overbearing and overwhelming strength of the large, populated States as they presently have in the Senate of the United States.

It is the elimination of such protection to which the Senator from Nebraska vigorously objects. He will resist that change as vigorously as he is able.

Mr. BAYH. I do not wish to imply that I am demeaning or underestimating the intelligence of the Senator from Nebraska. He is a worthy adversary. I am merely trying, as best I can, to persuade him to lend his talents and his persuasiveness to the other side of this question, in which I am seeking, as vigorously as I can, to involve him. I certainly do not believe that he bases his case on one person or individual. I am sure that his final persuasion will be that of ROMAN HRUSKA, not based on the views of anyone who may have testified.

What I am attempting to suggest to the distinguished Senator from Nebraska is that it is just a bit inconsistent to rely on the expertise of men like Bickel, White, and Goodwin, who say that the electoral college should not be changed.

and then to disagree with one of their basic concepts as to why the college should not be changed.

Bickel, White, and Goodwin believe that the electoral college should not be changed because it will give an advantage to the election of liberal elements around the large States, and the large States, then, will have an advantage under the unit rule. The Senator from Nebraska disagrees with that. I merely point it out.

I just cannot see how the two-party systems will be destroyed by moving to a national popular vote. I have done a considerable amount of reading on the subject. I invite any Senator who may desire to pursue the subject further to read the 65-page document compiled, after an extensive, 10-months' study, by the American Bar Association, in which the association cites the dozen or so principal works of outstanding political scientists.

Not one of them felt that the electoral college was in any way indispensable or even a primary factor in the development of the two-party system.

If we are to suggest that the direct popular vote for President would destroy the two-party system in America we might as well suggest that the two-party system has already been destroyed in States which elect their Governors, Senators, Representatives, mayors, aldermen, township trustees, and school board members by direct popular vote. The two party system is ingrained in the basic foundation of our political system. It is not going to disappear. It has not been weakened at the State level.

One of the reasons most people agree in connection with the two-party system is that the more you proliferate one of the parties the better chance you give the other side for winning.

These political scientists—and anyone who cares to read the bar association study can verify this—suggest that one of the major reasons we have had a two-party system is the election of candidates from single-member districts. We elect a Governor from a State, we elect a township trustee from a township, or a school board member from a school board member district. We do not apportion the power as some of our friends in foreign nations do. Thus, we have had a strong two-party system.

I suggest that, if anything, we are going to strengthen the two-party system by direct popular vote. I will not repeat what I said a moment ago but let the RECORD show I believe it will be better for the two-party system because under that system we know every vote will count and now it does not.

Mr. HRUSKA. Mr. President, will the Senator yield?

Mr. BAYH. I yield.

Mr. HRUSKA. Mr. President, I ask unanimous consent to have printed in the RECORD at this point the material in the minority views commencing at page 30 under the heading "Direct Election Would Destroy the Party System" and continuing over to page 33 to the conclusion of the first full paragraph on that page. I do that rather than to read it into the RECORD or to suggest that the conclusion of the Senator from Indiana is wrong, because I think it will save time and serve my purpose very well.

There being no objection, the excerpt was ordered to be printed in the RECORD, as follows:

DIRECT ELECTION WOULD DESTROY THE PARTY SYSTEM

It is generally agreed that our two-party system has been an indispensable aid in carrying out the dual purpose of American politics: majority rule with minority rights. It is also generally agreed that in a multi-party system either or both of these goals would be frustrated. Given the extent and variety of interests which compose this land, the maintenance of a two-party system is a remarkable feat. Indeed, the striking fact about American party politics is not that we have had a number of third-party movements, but that we have not had more of them. All third-party movements in U.S. history, taken together, account for only 5 percent of the total vote cast in presidential elections.

The two-party system, however, is not a product of chance. Public opinion in this great and diversified land has no inherent tendency to divide itself into two, and only two, major political groupings. The ultimate causes of two-party politics are to be found in the requirements of the presidential election system under which parties have operated for nearly a century and a half. In the words of Prof. Richard McCormick, perhaps our foremost authority on the formation of parties in the 1820's and 1830's, "In broad terms, it was the contest for the Presidency that shaped this party system and defined its essential purpose." From the very moment of their inception, the major parties as we now know them had as their central organizing purpose the capturing of the Presidency. In order to carry out that goal, the parties had to contend with three constitutional requirements:

(1) The Constitution established a single office to be held by a single man. That is, it established winner-take-all on the national level.

(2) It required a majority of electoral votes for victory.

(3) It distributed a fixed number of electoral votes to each State.

In addition to these, there was a fourth requirement, which was a product of State law: the custom within each State of awarding electoral votes according to the unit rule.

These four requirements—a unitary Presidency; the necessity of carrying a majority of electoral votes; the distribution of electoral votes according to States; and the awarding of electoral votes within the States on the basis of winner-take-all—are chiefly responsible for the most important distinctive features of the American party system:

(1) We have only *two* major parties. Third party movements have been sporadic and, on the whole, ineffectual.

(2) The major parties, often called "national" are in fact coalitions of 50 State parties; the State parties, in turn, are coalitions of county and local party organizations.

(3) Both major parties include a wide range of interests and a broad spectrum of opinion.

Let us now consider briefly how these features are related to the requirements of the present electoral system.

THE NEED FOR BROADLY BASED PARTIES

Because a majority of electoral votes is required for victory, a party seeking the Presidency must expand its base of support beyond a narrow geographical region. And because electoral votes are apportioned according to the Federal principle, a party must campaign in all or most of the States. The States, thus, are the decisive political battlegrounds. The States, of course, are free to award their electoral votes as they see fit. All States, except one however, follow the practice of awarding electoral votes by the unit rule, winner-take-all; and they have followed the practice without notable exception for 150 years. Whatever else may be said about the custom, pro or con, it cannot be denied that winner-take-all has had a great impact on the character and structure of our political parties. Because of winner-take-all, a party is under a strong inducement to extend its platform as widely as possible within each State; it must expand its base of support to carry a popular plurality. Since both major parties face the same requirement, both must campaign in most of the same places before most of the same voters. Both must be hospitable to a wide range of minority interests which might otherwise be excluded from electoral competition. Every minority, in turn, is under an inducement to moderate its views to make them compatible to *both* major parties, at the risk of having to form a separate party.

Winner-take-all, in short, encourages both parties to include everyone and to exclude no one. Both, of course, have traditional bases of support which remain loyal over a considerable period of time; but with rare exceptions, these are seldom sufficient to provide the margin of victory. In most States most of the time, neither party can afford to alienate any sizable interest group; both are forced to seek the support of those who are not traditionally wedded to either party. Since both parties face the same requirements in all States, an electoral majority, when it does emerge, is both geographically dispersed and ideologically moderate. The victorious party is therefore capable of governing. The electoral college, in sum, produces truly competitive, State-based, moderate political parties.

Why, it will be asked, are there only two such parties? The answer is that the same inducements which produce broadly based, competitive, moderate national parties also operate to confine third parties to a narrow regional base. In order to compete with any hope of success outside a regional base, a third party must be able to outpoll the major parties in States where the major parties are strongest—a highly unlikely occurrence. The same difficulty is presented even within the regional base of the third party, for the major parties, or at least one of them, may be found competing there also.

DIRECT ELECTION WOULD ENCOURAGE SPLINTER PARTIES

Under direct election, most of the incentives toward moderate, broadly based, two-party competition are removed. It is true that a sizable popular plurality—40 percent—would be required for victory. But that, without more, is insufficient to sustain two-party competition of the kind we have known. Under direct election, it is not the distribution of the vote which matters, but only its size. Votes would be sought without regard to the States which happened to contain them. Interest groups would face no necessity to moderate their views or to compromise with other groups within their resident States. Candidates, in turn, would face no necessity to present a broadly based platform within each State. Indeed, there would be little necessity for a candidate to campaign in most, or even many, States. He would be encouraged to build a numerically sizable following without regard to its character. Since the same strategy would be followed by many others at the same time, there would be tendency toward a multiplicity of single-interest splinter parties, each uncompromisingly attached to a particular candidate. Only a few might realistically expect to win; but all would hope, at the very least, to maximize their bargaining position by accumulating as many popular votes as they could, if for

no other reason than to prevent someone else from winning.

As Mr. Richard Goodwin told the Judiciary Committee:

"To see that this is more than a theoretical possibility let us look at the experience of New York. That State is as close to a minature nation, in terms of diversity of population and interests, as any in the Union. It is as large as some countries. New York now has four parties. The two smaller parties—liberals and conservatives—cannot carry a single city or borough, but within a States that does not matter. Popular vote is everything in statewide contests. The result is that both minor parties are important, and can make a decisive difference in a close race. They behave on a State scale, exactly as we speculate that minor parties might act on the national scale: offering endorsements, making deals, and running their own candidate. For their members a separate party has proved the surest route to real power. If we move to direct election, there is no reason whatsoever why the same will not be true at the national level. In fact, operating just in New York both the liberal and conservative parties receive more votes than the total margin of national victory in two of our last three presidential elections."

The proponents of direct election may reply that the 40 percent requirement would mitigate against the multiplication of parties. It must be noted, first, that proponents of direct election originally favored a 51 percent requirement. That was reduced to 40 percent precisely because they doubted whether anyone could get 51 percent under direct election. That concession, however, may prove fatal to the proponents of direct election, because it confirms one of our worst fears, namely, that direct election will undermine the two-party system.

Moreover, we cannot but think it somewhat disingenuous to condemn the electoral college for being "undemocratic" while at the same time embracing a 40 percent requirement under direct election. For that figure, turned upside down, says that the man who is not the choice of 60 percent of the electorate shall be President. To this, proponents of direct election like to reply that under the present system, Presidents have been elected with less than a simple majority of the popular vote even while winning a majority of the electoral vote. What this argument fails to recognize is the essential difference between the size of a plurality and the manner of its composition. A 43 percent vote under direct election, for example (assuming it could be acquired), represents a very different kind of popular plurality from a 43 percent popular vote under the electoral college. The popular vote under the electoral college, even when it is less than a simple majority, is always widely dispersed geographically and ideologically and is distributed, moreover, throughout all the States. Thus, even when the winning percentage is less than a popular majority, it is still possible for the electoral vote majority winner to govern. Under the direct election scheme, which is indifferent to the way in which majorities are formed or where they are located, there is no guarantee that a winner will actually be able to govern.

The direct election proposal makes no provision whatsoever for any pre-election machinery capable of putting together a 40 percent coalition, or of insuring that the coalition will be truly representative of the Nation as a whole. The proponents of direct election assume that all else in the political process will go on pretty much as-is, that the negotiation, compromise, and coalition now undertaken by the two major parties within the States will be performed in the same way. No argument is made, no facts are listed, to indicate how or why this would be the case. We are asked to take it on faith that everything will continue in the accustomed manner. Needless to say, we have strong reservations about that prospect.

Mr. HRUSKA. I understand that the Senator's conviction is firm and that he is sincere in it. I give him every credit for it.

However, the fact is there are many political scientists who are in profound disagreement with the American Bar Association—and hallowed be its name; I have been paying dues to it for many years—and the views of the Senator from Indiana. I think my remarks have demonstrated that.

Mr. BAYH. Mr. President, I do not want to put words into the mouth of my distinguished colleague from Nebraska. He is able to do a better job of that himself.

I suggest there are a number of political scientists who disagree with the conclusion of the Senator from Indiana that we should have a direct popular vote. I must say I think there is a difference between the conclusion one reaches and the facts people use to sustain the conclusion.

I do not know of a number of political scientists who feel this is going to bring the downfall of our two-party system. There may be a few, but certainly most of them feel the two-party system is on strong ground. But if the electoral college is the only thing that perpetuates our two-party system we are in trouble.

Mr. HRUSKA. It may be so, but Alexander Heard, chancellor of Vanderbilt University, Richard McCormick, and Harry Jaffa, students and scholars of renown, have concluded that direct popular election will result in the destruction of the major political parties. There are others but these names will suffice to illustrate the outstanding men and scholars in this field who have reached that conclusion.

It was not the general conclusion of the Senator from Indiana to which the Senator from Nebraska referred. It was his conclusion that the major parties would not be impaired or destroyed. It was that conclusion with which I said many political scientists are in disagreement, and the record will so show.

Mr. BAYH. I must admit to the Senator that the Senator from Indiana at one time in the study, as we have been studying this for 4 or 5 years, had cause to reflect on what will be the future of the two-party system.

Mr. HRUSKA. Mr. President, we have been studying this matter for more than 4 or 5 years. This Senator testified for the first time on this question 10 years ago. It was a problem of immediate concern which was 10 years old at that time. I think it is significant that in spite of pressure, constant efforts, and many attempts, no action has been taken.

I recall well when the Committee on the Judiciary within a year or two after I became a member, reported a bill to the Senate and that bill provided there would be a combination of the proportional plan and the district plan and each State could choose whichever it wanted. Nothing came of it because the Senate did not think that recommendation was sufficiently meritorious to put on the calendar. That tells a story in itself. There have been those attempts and efforts and hard tries, and nothing has come of them. Why? Because there is not sufficient uniform thinking on the subject among those who make the decision to go forward with the proposition.

Mr. BAYH. We shall see whether that is the ultimate result of this effort or not. I sincerely hope it is not the case. I would like to point to rather substantial evidence that indicates that the American people have had enough and they are tired of playing American roulette every 4 years with this antiquated and archaic system.

I do not know how long the Senator from Nebraska has been studying this question. I know it has been far longer than the Senator from Indiana. It was a decade or so after we became a nation that the first amendment was introduced for direct election, so we are rank amateurs as far as bringing this matter before a national forum is concerned.

The facts are that the House of Representatives, by a vote of 339 to 70, has passed this proposal. Today we have grassroot support across the country the likes of which we have never had before, including bar associations, chambers of commerce, the AFL–CIO, the League of Women Voters, who have studied the matter with great particularity. Of course, their judgment is not immune from mistakes, but I think it speaks somewhat of the temper of the times in which we live. This wide spectrum of support has been evident across the country. When people are asked whether they should have the right to vote directly for the President, 80 percent of them respond in the affirmative. When 80 percent of the people respond in the affirmative, I have faith that we are not irresponsible to say that they should have the opportunity to vote as they desire.

I am glad to yield either to the Senator from Alabama or the Senator from Nebraska. The Senator from Alabama has been patient. I do not want to cut the Senator from Nebraska off in the middle of his colloquy.

Mr. HRUSKA. I wanted to suggest that no number, however large or small, of statements relating to the electoral college as ancient, antiquated, dangerous, and no good, makes it so. It is a good system. It has steered this country for more than a century and three-quarters happily and well and in a stable manner.

There are two respects in which it can be improved so that all the goblins and devils and semidevils that we see around us at election time can be removed. We can deprive the electors of their discretionary power and we can have a joint session of Congress to determine the election when there is not a sufficient majority, with each Member of the Congress having a vote to determine who will be the President.

Those two changes are the only ones that can be leveled against the electoral college system that have any real merit at all.

Every argument made in favor of abolishing the electoral college assignment of votes to each State and putting

direct election in its place can also be asserted against the composition of the Senate. And I do not believe that this body is ancient, antiquated, dangerous, and no good. I think it is a good system. I think it is the backbone of the strength of this Nation and its government. That strength and that stability also are partaken of by the electoral system in electing the President.

Mr. BAYH. I think I would be somewhat remiss if I did not suggest that there is a significant body of thought that disagrees diametrically with the conclusion of the Senator from Nebraska.

Mr. HRUSKA. And I will say so. I said every argument advanced to prove that the present electoral college system method of assigning votes to each State can be advanced to abolish the present composition of the Senate.

Mr. BAYH. Only if one suggests that the electoral college was and now is part and parcel of the federal system. The Senator from Indiana is not willing to make that a part of his argument at all. I think it is absolutely erroneous. The Senator from Indiana does not believe that the electoral college is important to the federal system. The U.S. Senate is one of the two pillars of the federal system. And the Senator from Indiana will fight, as long as he is here or has any influence anywhere else or as a citizen on the street, to protect that role of the Senate. But I suggest that the electoral college as it now operates has been distorted.

It is interesting for the Senator from Indiana to hear the Senator from Nebraska suggest the vitality and importance of the electoral college system and the wisdom of our Founding Fathers when the original purpose of the electoral college was to give to those electors complete freedom, as I think the Senator from Nebraska will agree.

Mr. HRUSKA. That is right.

Mr. BAYH. If it is so good for them to have complete freedom, why does the Senator from Nebraska suggest that the way to improve it is to take that freedom away?

Mr. HRUSKA. The Senator distorts what I said.

Mr. BAYH. I am repeating what the Senator said.

Mr. HRUSKA. The Senator from Nebraska would take the essence of the electoral college system today, the device, the formula, assigning to each State a certain number of votes to be cast in determining who shall be President of this country. It is that essence that the Senator from Nebraska would like to preserve. The Senator from Nebraska does not believe that the electors should have discretion to vote for whomever they want.

Mr. BAYH. Yet that is what the Founding Fathers desired.

Mr. HRUSKA. Yes; and the Senator from Nebraska does not believe they should have separate elections for President and separate elections for Vice President when the electors gather to cast their votes. That also has been cast aside.

I plead for the maintenance of the formula for assigned voting strength to each State. The original fashion in which those votes were cast is not of the essence, and I would plead strongly for the elimination of the person of the elector himself and replace him with an automatic casting of the number of votes from each State, either by district or by State, of the number of votes cast for the President.

I do not see by what process of reasoning the Senator from Indiana can say that the Senator from Nebraska wants preserved intact and unchanged what was in the original document of the Constitution. There has been no intimation of that. I think the record should show that fact, and perhaps some concession by the Senator from Indiana that that is the fact.

Mr. BAYH. The Senator from Indiana would not want to distort the views of the Senator from Nebraska, but I must say that the assessment made by the Senator from Indiana was correct in light of what the Senator said. I think the record will show that in a short period of time this inconsistency did show itself. I have been inconsistent in my own behalf. I am glad I can agree with the Senator from Nebraska that we should do away with the electors. I think it is a step in the right direction. It is a small step when we need a leap—

Mr. HRUSKA. On that we can agree.

Mr. BAYH. If I have been wrong in interpreting the statement of the Senator from Nebraska, I apologize. He knows enough of our relationship to know that I would not want to impugn his motives or misinterpret what he has said.

Mr. HRUSKA. I appreciate that, but I repeat that what the Senator from Nebraska has argued for from the original document of the Constitution is the essence of the electoral college system; to wit, the assignment to each State of a certain proportion of the voting strength that is used to elect a President. That is the central part of the whole thing, and it is the item and characteristic that impart to our Republic that federal character which has meant so much to it and which is the mainstay of the body in which both the Senator from Indiana and the Senator from Nebraska have the privilege to serve.

Mr. BAYH. I think the Senator from Indiana was trying to point out that it is a bit inconsistent to constantly invoke the infinite wisdom of our Founding Fathers as to the apportionment of votes under the electoral college system, and then to imply that they did not have infinite wisdom as far as the rest of it is concerned.

Mr. HRUSKA. Then does the Senator from Indiana believe that the entire Constitution should be destroyed? Because if you follow his logic and reasoning to its conclusion, the Senator from Indiana would have to disavow the entire Constitution. That I would not subscribe to.

Mr. BAYH. The Senator from Indiana has not been invoking the wisdom of our Founding Fathers. I agree that they were probably the smartest group of men who ever got together under one roof, but they themselves recognized that in this particular area they were found wanting.

For some of them were still serving in Congress when they passed a constitutional amendment to undo a part of the electoral system they had established.

Mr. HRUSKA. But not the part which conferred upon each State a certain number of votes in accordance with a well-devised formula for the purpose of electing the President. They did not touch that, and no Congress since then has touched that, Mr. President; and it is my hope that we will not do so at this time.

Mr. BAYH. It is the hope of the Senator from Indiana, with equal fervor, that this Congress will.

Certainly my friend from Nebraska has nothing but the finest of motives and intentions, but despite the good intentions of the proponents of the district plan, the proportional plan, or the automatic plan, all of those plans fail to strike at some of the basic shortcomings of the present system.

Only the direct popular vote permits the people of this country to vote personally for their President and Vice President. Only the direct popular vote guarantees that everyone's vote counts the same, and only the direct popular vote—and this is the most important of all—guarantees that the man who is elected President is the man who gets the most votes.

I think to suggest that we would accept less than these three important criteria is to be less than forthright in the fulfillment of our duty.

The PRESIDING OFFICER. What is the will of the Senate?

Mr. HRUSKA. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The legislative clerk proceeded to call the roll.

Mr. THURMOND. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

MESSAGE FROM THE HOUSE

A message from the House of Representatives, by Mr. Berry, one of its reading clerks, returned to the Senate, in compliance with its request, the bill (H.R. 16968) to provide for the adjustment of the Government contribution with respect to the health benefits coverage of Federal employees and annuitants, and for other purposes.

The message announced that the House had disagreed to the amendments of the Senate to the bill (H.R. 16900) making appropriations for the Treasury and Post Office Departments, the Executive Office of the President, and certain independent agencies, for the fiscal year ending June 30, 1971, and for other purposes; agreed to the conference asked by the Senate on the disagreeing votes of the two Houses thereon, and that Mr. STEED, Mr. PASSMAN, Mr. ADDABBO, Mr. COHELAN, Mr. MAHON, Mr. ROBISON, Mr. CONTE, Mr. EDWARDS of Alabama, and

Mr. Bow were appointed managers on the part of the House at the conference.

The message also announced that the House had disagreed to the amendments of the Senate to the bill (H.R. 17575) making appropriations for the Departments of State, Justice, and Commerce, the judiciary, and related agencies for the fiscal year ending June 30, 1971, and for other purposes; agreed to the conference asked by the Senate on the disagreeing votes of the two Houses thereon, and that Mr. ROONEY of New York, Mr. SIKES, Mr. SLACK, Mr. SMITH of Iowa, Mr. FLYNT, Mr. MAHON, Mr. BOW, Mr. CEDERBERG, and Mr. ANDREWS of North Dakota were appointed managers on the part of the House at the conference.

DIRECT POPULAR ELECTION OF THE PRESIDENT AND THE VICE PRESIDENT

The Senate continued with the consideration of the joint resolution (S.J. Res. 1) proposing an amendment to the Constitution of the United States relating to the election of the President and the Vice President.

DESTRUCTION OF THE FEDERAL SYSTEM

Mr. THURMOND. Mr. President, most proposals for electoral system change are perfecting amendments of one sort or another, designed to cure abuses and deficiencies in the electoral college system. However, if the provisions of Senate Joint Resolution 1 are incorporated into the Constitution, a profound alteration of the federal system will take place, with indeterminable effects throughout our political machinery. Therefore, Senate Joint Resolution 1 must be considered not as reform, but as the alternative to reform, that is, as a radical reconstruction of our constitutional theory.

Historically, the Constitution is often viewed as a response to an 18th century situation. However, the reason why the Constitution has survived for nearly 200 years is that it was more fundamentally a response to the eternal problems of balancing political power. Many people agree that the formula of 1789 can be improved so that we can move toward the goal of a "more perfect union." But the radical surgery proposed by Senate Joint Resolution 1 may cut more deeply than it heals.

As the noted proponent of political change, Mr. Richard Goodwin, noted in the course of the hearings before the Senate Judiciary Committee:

> If we were starting a new country we might well do things differently. In fact, the idea of an electoral college would probably never occur to us. But that is not our privilege. We are trying to continue and improve a system of government which has lasted longer than any other in the history of the world. Times change of course and so must we. I myself believe we need radical changes in our social and economic policies. But when it comes to modifying the structure itself, the process by which change comes, then we can only afford to act when we are certain of improvement. The theoretical and remote chance of what at worst would be a rather minor malfunction does not warrant a change which might have large and unforeseen consequences. And once made, of course, there is no return. (Pp. 167–168.)

The historical incidents of the politics of compromise at the Philadelphia Convention have receded into the textbooks, but they have left behind a legacy of political wisdom in the structure of our institutions. The Constitution is an attempt at finding means other than mere population as the basis of distributing political power. The division of powers between State and Federal governments and the separation of powers within the Federal Government were designed to preserve communities within which the citizen could fully participate to the extent that he was qualified. It provides a delicate balance of competing interests, promoting coalition and compromise.

However, the key compromise was hammered out on the question of the federal system itself. The Senate and the House of Representatives are testimony to this compromise, with two Senators representing every State and the House apportioned according to population. This is not simply a compromise between large and small States on representation. It is a compromise on the nature of the Union, as indicated by the lively controversy as to whether it should be a great, consolidated central government, or whether the States should retain status over their own affairs. The Senate, with equal representation, is a body representing the sovereign interests of the States—a concept which was clearer in the original method of choosing Senators by State legislatures. The House, with proportional representation, is a body representing the interests of the people.

This basic point was underscored in the statement of J. Harvie Williams to the Senate Judiciary Committee:

> The more perfect Union formed by our limited Constitution of representative government, and the sources of its power are Federal and national. It is the *Federal* Union of sovereign people equally represented in the Senate and the *national* Union of sovereign people equally represented in the House of Representatives. Each is superimposed on the other in both the legislative and executive branches of the government; and are separated from each other at the roots of their power—the States and the People. This, I submit, is our original and unique contribution to the art of politics and statecraft.

The electoral college system is based upon this same compromise. The problem of balance between large and small States, and the relation of States to the Federal Government is solved in the same way—namely, the electoral votes shall equal the whole number of Senators and Representatives. In this way, the legislative compromise embodied in Senate and House is translated into terms of Executive power. In short, the legislative and Executive power is divided throughout the Nation according to the same principle of compromise. Senate Joint Resolution 1 would destroy this parallel system for the selection of the Executive.

The Federal principle allows for a subtle and complicated relation both between large and small States, and between the States themselves and the Federal power. It also provides a rich source for local variations and new responses to the problems of the time. Our present system is not a simplistic rendering of the Constitution; it is an organic growth which has many surprising developments and relationships. It has a potential for satisfying the claims of both majority and minorities, as Yale Law Prof. Alexander M. Bickel pointed out in his testimony before the Senate Judiciary Committee:

> The seeming paradox, embodied in the Electoral College, of a system which offers the possibility of disproportionate influence both to cohesive groups in the large States and to the small States—this paradox should not seem strange in this chamber, for it is embodied also in the Senate itself. The at-large popular election of Senators means that in the big industrial States cohesive groups can have disproportionate influence in the elections of Senators, just as under the Electoral College system, they can have disproportionate influence in the election of the President. For this reason, the Senate has in recent years had a more urban and liberal orientation than the House. Yet at the same time, of sources, the Senate is the place of disproportionate influence for the small States, being malapportioned in their favor in far greater measure than the Electoral College.

Senate Joint Resolution 1 would reduce this complex system of democracy to a simple head count. The federal principle would play no part in the selection of an Executive who is even now far more powerful than envisioned by the Constitution. Senate Joint Resolution 1 would swing the present imbalance even further out of line. It was to this point that the journalist and political observer Theodore White testified before the Senate Judiciary Committee:

> It changes the nature of our Presidential campaigns. Our Presidential campaigns right now are balanced in each party to bring a compromise, to eliminate the extremes of both sides, and create a man who has at least the gift of unifying his party and thereafter the nation.
>
> Once you go to the plebiscite form of vote you get the more romantic, the more eloquent and the more extreme politicians, plus their hacks and TV agents polarizing the nation rather than bringing it together. It is that fundamental erosion of the U.S.A. that horrified me . . . (p. 110–111).

It is clear, then, that Senate Joint Resolution 1 would not reform our electoral system's shortcomings but rather would substitute an entirely new system, of unpredictable merit, for the federal principle which is the cornerstone of our Constitution.

Theodore White, Prof. Alexander Bickel, and other witnesses before the committee have thus become alarmed over the direct election plan's sharp break with the past. By altering one element of our checks-and-balances system, we will most certainly disrupt the rest of the system in ways that are perhaps impossible to foresee.

However, some effects of the direct election plan, unforeseen by its sponsors, are very easy to predict. Mr. White pointed out that such traditional voting blocs as the Negro vote and the Jewish vote would be overwhelmed if all votes were cast into a national pool. Such vot-

ing blocs traditionally carry an influence out of proportion to their size. Many liberals have become alarmed that this disproportionate influence would be destroyed by the direct election proposal.

At the same time, the direct election proposal would also destroy the legitimate representation of regionalism that is inherent in the present Constitution. The Federal principle would be utterly destroyed, not only as it relates to the highest office in the land but also as it relates to the vast power of the executive branch. Our Government is not based upon mere numbers but upon the feeling of community which the voters have in each State.

As it happens, I am the only Member of the Senate who has personal experience with the power of regionalism in the electoral college. In 1948, when I ran as the presidential candidate of the Democratic States' Rights Party, I captured 39 electoral votes. The intention of this race was to deny a majority both to Truman and to Dewey, and thus bring into play the House of Representatives as planned by the framers of the Constitution.

This plan failed only by a few votes. If the States' Rights candidates had carried two more States, or if the Republicans had not lost two of the three they were scheduled to carry, the election would have gone to the House.

However, the strength of the electoral college system was demonstrated by the fact that I won these 39 electoral votes with a popular vote of 1,176,125. Henry Wallace, an ideological candidate in the same election, had a popular vote of 1,157,326, but won no electoral votes. His votes were scattered around the country.

Regionalism is a healthy development in a nation, since it gives citizens a feeling of community and involvement. On the other hand, ideological candidates lead to divisiveness and factionalism, as demonstrated by the governments of France and Italy. Reform of the electoral college, therefore, should strengthen the States, and lessen the chances for ideological factionalism.

The chief fault in the electoral college today is the widespread adoption of the unit system, or winner-take-all method of assigning votes in each State. The unit system is not part of the U.S. Constitution, but has gradually been adopted by the States. It maximizes the strength of the large States, and also gives rise to the importance of bloc voting in large population centers. A few thousand votes in a large city can win a whole State.

I have long worked for electoral college reform. The plan which I have supported over the years would keep the electoral college, but break up the unit system. Each voter would vote for two electors at large, and one elector in his evenly apportioned district, in the same way as he now votes for two Senators and one Congressman. This is the so-called district plan.

The district plan meets the criteria for fair and just electoral reform. It eliminates the disproportionate effect of bloc voting, but strengthens the role of the States in national politics.

The direct election plan is full of unfortunate results. It undermines the federal system which has served us so well since 1789. It increases the likelihood of corruption and attempts to swing elections. It fails to provide any mechanism for such important questions as qualifying a candidate, certifying elections, or handling recounts.

There is also the danger that the direct election plan will never be ratified by the States, thus thwarting the reforms outlined above. One-third of the States will lose power under the plan. There are 99 houses of the State legislatures—Nebraska is unicameral. If only 13 of those 99 houses failed to ratify, the project would fail. I believe it is far better to get on with a genuine reform than attempt radical surgery.

Mr. President, an article entitled "The Most Deeply Radical Amendment," by Columnist James J. Kilpatrick, was published in the Washington Star of September 8, 1970. I now wish to present this article to the Senate. It reads:

The United States Senate launches itself this week into one of the most fateful debates in American constitutional history. By the end of this month—by early October at the latest—the Senate will have voted up or down a resolution proposing the direct national election of Presidents.

"I think a case can be made," Yale's Prof. Charles Black has said, "for the proposition that direct election, if it passes, will be the most deeply radical amendment which has ever entered the Constitution of the United States."

That assessment is shared by many others, both lawyers and non-lawyers, who see in the direct election proposal a fundamental alteration in the structure of American federalism. Yet the resolution has passed the House already; it reportedly commands strong popular support; and the action to be taken by the Senate has this unrecognized meaning: If the Senate approves, and the resolution goes out to the States for ratification, any further effort at electoral reform would be effectively blocked for seven years. That is the period allowed by the resolution in which three-fourths of the states must ratify or fail to ratify.

Consider, for a moment, the changes that would occur in the whole business of nomination and qualification for the ballot. Under existing law, political parties hold national conventions and nominate their presidential and vice presidential candidates. Then state parties, acting under state law, undertake to get those tickets listed on state ballots.

It is at this point that the machinery of federalism begins its delicate braking action. Major parties ordinarily have no trouble in getting their candidates on the ballot in every state. The petition process makes it more difficult for third parties. George Wallace, it will be recalled, had a terrible time in 1968 before he could get his American Independent Party qualified. When Strom Thurmond ran in 1948, he made it to the ballot in 15 states only.

The machinery of state-by-state qualification, coupled with electoral voting by states, has worked to inhibit the power of third parties. Only four times in this century has a minority party won electoral votes. The Socialists, Progressives, Prohibitionists, Constitutionalists and others have sputtered ineffectively within their state compartments. And because each of the two major parties has been compelled to make a broad appeal, the United States has benefited from political stability and prudent compromise.

Under the pending resolution, this machinery would be junked. No matter what its sponsors say, the direct election amendment would require (and its language so permits) that ballots be uniform throughout the United States. Nothing else would make sense. An entire new system would have to be created by which any group calling itself a political party filed the names of its candidates with a Federal Board of Elections. We could reasonably expect a Black Peoples party, a Peace party, a Revolutionary party, a Young Americans party. I am myself a Whig, and might run. In a nation so large and so passionately diverse, a dozen "parties" surely would bid for a footnote in history.

Then what? State lines no longer would matter. We are now thinking of cumulative votes, across the nation as a whole. It requires no great work of the imagination to conceive that such an aggregation of States Righters, New Leftists, Anti-Fluoridationists, and Ban-the-Bombers could drain enough votes to prevent either of the major parties from winning 40 percent of the total.

In 1968, even with the machinery of federalism working, it was Nixon 43.5 percent; Humphrey 42.8; and Wallace 13.5, with two-tenths split among Gene McCarthy, Eldridge Cleaver, a Communist named Mitchell, the Prohibitionist Munn, and others. Given a similar situation, under the pending amendment, a run-off would be held between the top two—probably the first week in December—amidst wild cries of "deal" and "sell-out."

Is this what we want? Is this prospect of chaos truly better than the "obsolete" but functioning system that now exists? The questions are squarely before the Senate now.

Mr. President, Mr. Kilpatrick is one of the ablest columnists in this country. He has written a number of fine articles on this subject. I invite the attention of the Senate to other articles that this able writer has provided the public on this topic.

Mr. President, Thomas A. Lane writes a column that is of vital interest to the American public. This column is entitled "Public Affairs."

In an article on September 18, 1968, he discusses this subject under the heading "U.S. Must Retain Electoral College."

It reads as follows:

The campaign for electoral reform is based upon misinformation and misrepresentation. Advocates of centralized power would take another giant step in breaking down the Constitution.

They allege that democracy requires direct popular election of the President. That is a contention without merit. The Chief Executive of Great Britain is elected by Parliament, not by the people. In Germany, neither the President nor the Chancellor is elected by the people. In France, the President is elected by popular vote but the Premier is not. In India, neither the President nor the Prime Minister is elected by popular vote. In the general pattern of democratic government, the people elect representatives who elect the heads of government.

The Electoral College adapts this parliamentary system to the different pattern of American government. It numbers electors in the combined strengths of the House of Representatives and the Senate, but it provides a special body of electors (who may not be members of Congress) to elect the President. Just as the creation of a bicameral legislature resolved the conflicting interests of large and small states, so were those interests again reconciled in the election of a President.

Throughout our history, the Electoral Col-

lege has served well. It has resolved conflicts with minimum delay and uncertainty. It would be singularly improvident to change from so effective a system to a direct popular vote.

The direct vote proposal has serious defects. In a close vote, who would believe the count? The potential for recount would be opened wide. With three candidates, do we accept minority government or do we have a run-off election? The system would intensify strife and confusion.

Politicians appeal to the spectre of George Wallace to arouse popular opposition to the third party threat. Their fears actually underscore the special merit of the Electoral College. The present law does not allow minority government. It requires a majority of the electoral votes for election.

Thus, Richard Nixon carried a majority of the electoral vote even though he did not win a majority of the popular vote. That was true of John F. Kennedy in 1960. We regard them as majority presidents.

If Richard Nixon had received less than a majority of the electoral votes, the Wallace electors would have been required by the interests of their voters to cast their votes for Nixon rather than Humphrey. The Electoral College would have expressed the will of the people without the confusion and turmoil of a run-off election.

The direct vote plan has even more serious defects. It would destroy state participation in the electoral process and centralize election control in the federal government. With the capacity of modern news media to shape public opinion, the invitation to demagogy is apparent. No one who cherishes the American system of government can vote for such change.

There are some, however, who would withdraw the discretion of electors in voting for a president. That ill-considered proposal would destroy one of the most valuable features of the College—its capacity to resolve minority elections. Although this option is rarely exercised, it should be retained.

Others suggest that the electors should be chosen, one from each congressional district and two from the state at large, as are members of Congress. The suggestion has merit, but it is already within the power of the states. It can be adopted by state legislatures whenever the voters insist on that method of choosing their electors. A constitutional amendment is not required.

The campaign for electoral reform comes chiefly from those socialist-oriented Americans who see salvation in a centralized all-powerful government. They have no taste for the American way.

Mr. President, that column was written by Thomas A. Lane, a very able writer on the American scene.

WHICH WAY AMERICA?

Now, turning to another topic, ever so often an author will be moved by some indefinable inspiration to sum up concisely the mood of the Nation. He will hit upon exactly the thoughts which everyone is thinking, and express them clearly, and with a profound understanding of their meaning.

Such an article appears in the August issue of Christian Economics, an article entitled "Which Way America?" It was written by the distinguished Southern journalist, Anthony Harrigan, who has recently assumed the post of executive vice president of the Southern States Industrial Council. Mr. Harrigan has written a broad ranging and deeply philosophical piece which explains the present predicament of our Nation, and offers a solution.

Mr. Harrigan points out that our present situation is unique because, for the first time, we must recognize that many Americans—a minority, to be sure—have accepted the concept of the United States as an evil Nation that must be destroyed. He traces the growth of this concept to the transplantation of absolutist thinking from Europe during the thirties and forties. He says:

The traditional pattern of life here had allowed different areas to live in different ways. Americans did not anticipate the conditioning of minds or centralization of opinion. Local loyalties and traditions were respected. The notion of the law as an instrument for accomplishing social revolution was alien to our people.

Mr. Harrigan then goes on to say:

Law in the American sense, was designed to protect the individual from oppression and wrong-doing. It was regarded as a restraining influence, not as a monolithic directing force. Such a non-absolutist attitude towards law, government and society was bitterly opposed by the Europeans who assumed commanding positions in the universities and the intellectual community off-campus. The traditional easy-going American approach to national problems gave way to an angry, harsh, all-out approach which stressed "necessity."

This absolutist approach in our universities and in other positions of intellectual leadership has borne its bitter fruit. The great centralizing effect of national radio and television has served to promote this line of thought in a way that would have been impossible to foresee. As Mr. Harrigan writes:

It's no wonder that such moral and intellectual confusion abounds. Never before in the nation's history has there been a studied attempt to change American psychology, to dissolve faith in America's achievements and values, to make dirty things of national symbols, to brainwash the entire population and to create inside the country a parallel society of protesters who dissent from every action and value of the United States. We are witnesses, in other words, to an effort to transform our society by lies and violence and to liquidate its strength.

Mr. President, this is a vitally important article, and I urge all Americans to study it carefully. Mr. Harrigan has captured the essence of our problem, which is basically moral and spiritual at heart.

Mr. President, I think that this article, "Which Way America?" by Anthony Harrigan is so important that I would like to read the entire piece into the RECORD at this time.

WHICH WAY AMERICA?

(By Anthony Harrigan)

The signs of our time point to the fact that we in the United States are entering a dark age of internal strife, marked by the decline of civilized values and the emergence of a new barbarism and revolutionary spirit. In Asia, the U.S. is on the verge of suffering total defeat in war because of indecisiveness and revolutionary agitation on the homefront. Authority and discipline in the nation's armed forces have been downgraded to where some troops use the clenched-fist salute of communist origin and where the command structure is virtually powerless to halt publication of underground subversive newspapers on military posts. A filthy flood of pornography covers the country and is described as a "sexual revolution." Nihilists in universities occupy academic buildings, threaten professors with bodily injury, and hold guns on administrators. Bishops of an historic communion bow to blackmail and vote to give money to an organization that calls for destruction of the U.S. government and the crippling of American society.

DISAFFECTED CITIZENS

The United States has been beset before by deep-seated divisions. It has known internal conflict and experienced losses of loyalty among some of its citizens. Except for the Civil War, however, the nation's difficulties always have been resolved without resort to open conflict. Peaceful adjustment and reasonable accommodation always have been possible. Today, Americans have reason to doubt that the nation's problems can be solved as they have in the past. New and severe methods may be necessary to assure the nation's survival and to protect cherished freedoms.

The unhappiest reality of our era is the acceptance by numerous Americans of a concept of the United States as an evil nation that must be destroyed. Radicalism is nothing new in the history of the U.S. What is new and perilous is the burning hatred of America by many thousands of disaffected citizens who enjoy its freedom, security and prosperity, who bite the proverbial hand that feeds them. This ugly passion has been revealed in the revolt of the Vietniks, but it has deeper roots than protest against U.S. participation in the Vietnam War.

A CONTINENTAL GERM

Prof. Andrew Ezergailis, writing in the *Yale Review* (June, 1969), asserts that the havoc in America today stems from seeds of absolutism (advocacy of a rule by absolute standards or principles) planted in the last generation. "Somewhere along the way since the end of the Second World War," he says, "a portion of America's youth caught the continental germ of absolutism and now they demand totalitarian purity in politics and society."

In years past, U.S. colleges and universities spoke for the churches and states that created them and for the alumni who received their education there and sustained the institutions' growth. The idea of alienation from the surrounding American life was virtually unknown.

A NEW IDEOLOGICAL EMPHASIS

To be sure, America was not wholly free of ideological thinkers even in the early years of the 20th Century. Nevertheless, the number of ideologies in America was small until a generation ago.

Significant change took place in the thirties and forties. A generation was involved in a world war in which ideology was a factor. At the same time, the United States gave refuge to many educated Europeans who were steeped in the absolutist doctrines of the continent. Many of these refugees became formidable figures in America's intellectual life. They stamped their ideological approach to public issues on a rising generation of writers, jurists and public officials. For the first time in American history, newcomers shaped the nation's thinking, instead of American society giving shape to the newcomers' vision of life in this land.

A NEW ACTIVIST MENTALITY

America was not ready to receive such a transfusion of absolutist conceptions. American society had not evolved so as to be able to deal effectively with the sophisticated absolutism of European origin. The traditional pattern of life here had allowed different areas to live in different ways, Americans did not anticipate the conditioning of minds or centralization of opinion. Local loyalties and traditions were respected. The

notion of the law as an instrument for accomplishing social revolution was alien to our people.

Law, in the American sense, was designed to protect the individual from oppression and wrong-doing. It was regarded as a restraining influence, not as a monolithic, directing force. Such a non-absolutist attitude toward law, government and society was bitterly opposed by the Europeans who assumed commanding positions in the universities and the intellectual community off-campus. The traditional easy-going American approach to national problems gave way to an angry, harsh, all-out approach which stressed "necessity."

One of the first departments of American life to feel the impact of the new intellectual approach was the law. Activist judges swept aside the precedents born of generations of adjudicating disputes among American citizens, states and the federal government. A passion for "justice," narrowly defined and shaped to serve a particular conception of government, became so strong in the fifties and sixties that fundamental needs of society—under the heading of law and order—were ignored or scorned.

FRUIT OF ACTIVISM: CONFLICT

What happened in this period is that the conscience of a large part of the nation was radicalized. In this process, the electronic media, chiefly television, played a central role. Television, as in the "news" programs of the late Edward R. Murrow, became an instrument of absolutists who were trying to impose their conceptions on the American public. The cameras presented lawful authorities as overbearing and brutal, but carefully avoided showing any of the provocative acts engaged in by political activists. Spokesmen for revolutionary change were given ample time to make a powerful impact on national audiences. Revolutionaries were presented as calm and logical. No embarrassing questions were put to demonstration organizers. Their smooth words were recorded but not their brutal or insulting actions. As a result, revolutionaries received a sympathetic feedback. Many young viewers were fired with enthusiasm for turning America upside down.

CHALLENGE OF NAKED POWER

The challenge to government and society is one of naked power—the same challenge that the Nazis held up to the German people in the 1930's. Concerned citizens often ponder the ugly record of recent years: Watts, Detroit, Newark, the yippie war against Chicago, the Easter bomb plot in New York City, the junkets to Hanoi by various American friends of Ho Chi Minh, the march on the Pentagon, the SDS coups at Columbia and Harvard and the invasion of the Wisconsin Assembly. Nothing succeeds like success. Thus the abuse and terror continue: more threats of arson, militants shouting obscenities at churchmen gathered in convention, insults to judges on the bench and Black Panthers teaching children to kill policemen.

THE FOLLY OF POWER WORSHIP

The absolutists in our midst, who have caused this mess, started out justifying anything in the name of "justice." Now, they worship the absolute of power. They talk of "participatory democracy," but aim at an absolutist "democracy" of their own making. Young men are told—and many are persuaded—that rioting and a touch of arson can bring a world without war, prejudice or hunger. Anyone who can believe that can believe anything.

Ten or even five years ago, if America's leaders had appreciated the danger posed by absolutist conceptions, it would have been relatively easy to prepare universities for the coming assault, to stiffen the backbone and moral understanding of the churches and to prevent infiltration of the armed forces by militants. Because nothing was done to defuse the New Left and to pulverize its incipient absolutism, an evil has spread across the nation.

A DAZED CITIZENRY ASK QUESTIONS

The prestige and authority of the United States government has accumulated in the course of almost 200 years. Yet as our country approaches its bicentennial celebration, much already has been accomplished by the New Left to eradicate the esteem with which Americans have viewed their republic. Many citizens seem dazed by the efforts of those who distort and downgrade America. The U.S. public may be approaching the point where it doesn't know what to believe about the country. After years of ceaseless propaganda from homegrown haters of the United States, many Americans ask: Are our military leaders the cause of wars in the world today? Is the United States attacking a legitimate nationalist movement in Vietnam? Has our society adopted inhuman values?

It's no wonder that such moral and intellectual confusion abounds. Never before in the nation's history has there been a studied attempt to change American psychology, to dissolve faith in America's achievements and values, to make dirty things of national symbols, to brainwash the entire population and to create inside the country a parallel society of protesters who dissent from every action and value of the United States. We are witnesses, in other words, to an effort to transform our society by lies and violence and to liquidate its strength.

Survival requires that the federal and state governments use all their lawful authority to deter and isolate those who make a new religion or cult of violence against America and its institutions. Fortunately, the hard-core of violence oriented defectors from our society is still a small percent in a nation of more than 200 million people.

PRESCRIPTION FOR PEACE WITH FREEDOM

Stamping out the revolutionary movement will require unusual firmness and steadfastness. Americans place a high value on tolerance, and are reluctant to take vigorous measures against even the most open and notorious advocates of disorder. One is reminded of Hegel's dictum: "History is not the realm of happiness." This absolutist, whose conceptions have brought so much woe to mankind, was right in indicating that the carrying out of essential task of life and leadership, can be an unhappy experience. We all yearn for the older America that was free of internal clashes and ideological strife. Nevertheless, we won't again enjoy the blessings of peace with freedom without administering unpleasant remedies, precisely as the physician often has to prescribe bitter medicine in order to restore health to a sick man.

It is important to bear in mind that no irreversible law of breakdown rules our society. Breakdown occurs only where our society has failed to take preventive measures against the sick, aberrant element within. This destructive element, which is trying to destroy our way of life, has seceded from allegiance to America. An inner secession from our country is no more permissible in the late 20th Century, however, than a sectional secession was tolerable to the nation in the mid-19th Century.

WEAPONRY TO COMBAT INTERNAL BARBARIANS

If the law is our shield and spear, it will have to be used in innovative fashion. Laws already on the books can be used in new ways.

The law doesn't afford society sufficient protection where it only imposes punishment on those who commit acts of violence. To be adequate to the needs of peace and justice for the community, the law has to apply against those who advocate violence and preach overthrow of the United States or its political subdivisions. Long ago, the American judiciary established the principle that freedom of speech does not extend to those who shout "fire" in a crowded theater. Today, the entire United States is a crowded theater—a setting where an irresponsible act could result in a massive conflagration.

If we accept the concept of law barring advocacy of revolution in any form or whatever guise, this understanding will crystallize out in the form of new rules for the operation of our society—rules that will make possible the security of America in the remaining years of this century.

THE DARKNESS CAN BE DISSIPATED

The basic assumption we must make is that our society has a right to defend itself against those who would liquidate its values—that there is a superior wisdom in the organization and purposes of the United States that rightfully commands protection. To put this truth in other terms, America has an inalienable right to keep the internal barbarians at bay. The darkness that's fallen over America will lift if the American government and people offer total resistance to revolution.

THE FLIGHT TO THE SUBURBS

Mr. THURMOND. Mr. President, Mr. Walter Trohan, the head of the Chicago Tribune Washington Bureau, wrote an article for the Tribune which was published in that newspaper on September 7, 1970, entitled "Flight To Suburbs Has Meaning."

This article is one of importance, and I feel it should be called to the attention of the Members of this body, and, therefore, I should like to read it to the Senate at this time.

Mr. Trohan says in the article:

Perhaps nothing so demonstrates the failure of the school integration decision of 16 years ago as the preliminary figures of the 1970 census. This is your failure and my failure and the failure of every American man, woman and child.

The preliminary figures show that suburbanites now outnumber residents of the central city for the first time. The trend away from the central city is not only common to New York and Chicago but also to lesser concentrations like Peoria. Washington's suburban population is over 800,000, exceeding that of the capital itself.

Many reasons may be offered for this, but we must face the facts. One of the more important reasons is the school integration program. In the capital of the nation, the population has virtually stood still between 1960 and 1970, but the schools have become almost entirely black.

Whites have fled to the suburbs here, as they have in other cities. Their places have been taken by blacks who have come from the deep South or from the slums of northern cities.

And in the South, integration is also failing. In Summerton, S.C., for example, one of the cities involved in the historic decision declaring racial segregation must cease, the once white schools have an all black enrollment because whites have turned to private schools.

America should have learned from Prohibition that it is impossible to legislate morals. The noble experiment, which was conceived in the highest idealism, resulted in wholesale disrespect for law and the rise of syndicated crime with its murders, extortion and violence.

Integration had even loftier aims which few opposed in their hearts, but many, saw as moving too rapidly. The result has been

that today most blacks are not happy with whites of any hue and many whites are disappointed with blacks.

There may be much in the black contention that integration is proceeding on white terms. But this would hardly seem to justify the position of some blacks that they be segregated on their own terms.

One of the saddest stories of the integration drive comes from Fayette, Miss., a test tube of the race issue. In this predominantly Negro town, blacks once lived in fear, but today whites live in fear, according to an article in the magazine, Business Week, and the Delta Democrat Times of Greenville, Miss.

Fayette has Mississippi's only black mayor, Charles Evers, the brother of Medgar Evers, the Negro civil rights leader who was assassinated in Jackson, Miss, on June 11, 1963. Mayor Evers says there is no "tension" in Fayette, but Mrs. Marie F. Walker, editor of the weekly Fayette Chronicle, says there is black terrorism, in speaking for the whites, outnumbered four to one.

Mrs. Walker tells a sad story of intimidation and disregard of law. This commentator doesn't know enough of the acts to decide whether right lies with Mayor Evers or Mrs. Walker, but he does know that politicians—white, red, black or yellow—generally justify any form of extremism to remain in power.

Our concern should be with any and all evidence that integration is breaking down. If we are to survive, it should not break down, but it cannot be kept afloat on either black or white terms.

George Meany, head of the AFL–CIO, made it clear that blacks should not be taken into unions merely because they are black, but promised they will be accepted if qualified.

Integration doesn't mean an all black society, nor does segregation necessarily mean an all white society. In the ideal community equality must be built on ability and culture—not revolution and prejudice.

THE BLIGHT OF "WELFARE"

Mr. THURMOND. Mr. President, I should like to invite the attention of the Senate to an editorial published in the Chicago Tribune recently, entitled "The Blight of 'Welfare.'" This is a subject on which the Senate will be legislating in the near future and is one of paramount importance today. Because of that, I should like to present this editorial to the Members of the Senate.

"Welfare" is a word of good connotation—cf, Webster's: "state or condition in regard to well-being; condition of health, happiness, prosperity, and the like"; also, "good cheer; material plenty; a good thing." In order to capitalize on these euphoric definitions, the politicians have given us the Department of Health, Education, and Welfare [bundling all good things into one] and the "welfare state," under which, supposedly, we should all be as happy as kings.

But lest we be carried away let us examine the realities beneath the buoyant terminology. A helpful point of departure is the extraordinarily informed, and profoundly depressing, paper read here last week by Roger A. Freeman before the Governmental Research Association. Mr. Freeman is associated with the Hoover Institution on War, Revolution, and Peace at Stanford, and until recently was special assistant to President Nixon.

His conclusion, buttressed by overwhelming statistics and specific citations of failure, is that everything touched by government, no matter how good the intention, is blighted and withered. There is a general death of every part touched. In every program of government activity, after the expenditure of billions, hundreds of billions, and even trillions, Mr. Freeman says, all attempts to correlate tangible achievements with resources applied "have cast great doubt on the idea that improvements are necessarily proportionate to the amounts spent or even tend to be favorably affected."

What are the primary purposes of the state? First, the protection and safety of its citizens, their lives and property, from would-be attackers, foreign and domestic. Second, to establish and enforce rules for the ordinary and peaceful conduct of civil affairs and to settle disputes among its citizens.

The thrust of the "welfare state," however, is not in these directions. It has succeeded in circumscribing the range of decisions a citizen can make for himself and his family by assuming to make these decisions for him and it has drastically infringed on his right to determine the share of his resources which he can allocate to his various wants according to his own wishes by taking such determinations unto itself. It aims to overrule, thru the political process or by threats, the rewards and punishments of the free market, both in the disposition of goods and resources and in ideas and options.

With what result? "Our international position and our defensive strength, measured against the power of potential enemies," Mr. Freeman says, "have never been as weak. The safety of person and property in our homes and streets—and on highways—has never been as much threatened or more frequently violated. At the same time, government has never before claimed, held, or exercised so many responsibilities for our personal affairs nor made so many decisions affecting our individual lives. It has assumed duties which, judging by the results, it is unable to discharge satisfactorily, while neglecting or forsaking its foremost and primary obligations."

While the "welfare state" proliferates, devouring an ever-increasing share of total tax revenue, the political statists who try to daub cosmetics over its manifold failures keep up their dishonest bleat that, if it weren't for expenditures on national defense, government "services" wouldn't be "starved."

Mr. Freeman disposes of that propaganda by demonstrating that, since 1952, defense spending declined from 50 per cent of all federal expenditures to about 18 per cent today, while domestic services climbed from 37 per cent to 66 per cent in the same period. Of $145 billion now being laid out on domestic services, $118 billion goes for social welfare.

Despite these huge outlays, results are negligible where they are not counter-productive. Crime, delinquency, and most kinds of social ills are multiplying at a frightening rate, the federal, state, and local expenditures on crime prevention and law enforcement have increased 338 per cent in 17 years. A criminal has four chances in five never to be arrested; a person arrested has five chances out of six not to serve time in jail or prison; and the one in about 30 criminals who winds up behind bars serves on the average only 55 per cent of the time to which he has been sentenced.

The status and products of our educational system do not reflect the fact that more than five times as much is now allocated to it each year as was being allocated two decades ago. Expenditures for public education have increased 489 per cent since 1952 and staff in the school system has increased 172 per cent, while enrollment has been increasing only 78 per cent. Yet the result is what one study committee called a continuous "spiral of decline."

The government's approach to relief for the poor and aid to families with dependent children, Mr. Freeman says, is not directed at rehabilitating recipients or turning them into self-sustaining workers. Rather, its precept is that there should be no connection between work and income. "Why," Mr. Freeman asks, "should persons of little skill and low productive capacity work for a wage that is not more than what they can get on welfare, and often less?" So the rolls increase by leaps and bounds even in times of rising prosperity and employment—that of ADC rising from 2 million recipients in 1952 to 7.5 million now, with benefits rising 117 per cent in the same period.

These enormous "welfare" outlays have a bearing on inflation, of which we all complain. But, as Mr. Freeman says, only government can create inflation: thru budget deficits, easy money, and lopsided labor policies.

For example, consider construction costs. In 22 years the urban renewal program has destroyed three times as many buildings as it has completed. It has not removed slums but shifted them from one part of the city to another. In doing this, government adds billions to the housing demand in subsidies, grants, loans, and guarantees, and this in a market in which private demand is high and costs and prices are rising faster than in the rest of the economy. The inflation engineered in this way drives moderate income families out of the housing market and adds their voices to the clamor for more housing subsidies.

These examples could be multiplied endlessly, in every field from farm quotas and subsidies to foreign aid, with its harvest of thistles and venom. Taxes on everyone, except the free riders, are already prohibitive. How much crazier can we get?

Mr. President, that is an article which I hope will be read by all Senators. I hope they will study this subject further and in depth. The matter of welfare today is one of great importance. It is costing this country billions of dollars. Sooner or later we must come to the point of providing people on welfare with various types of trade school, technical and vocational training, so that they can make their own way in life. It is unfair to the individual to keep him on welfare when he can be trained and made into a productive citizen.

Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER (Mr. BELLMON). The clerk will call the roll.

The legislative clerk proceeded to call the roll.

Mr. BELLMON. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

DIRECT POPULAR ELECTION OF THE PRESIDENT AND THE VICE PRESIDENT

The Senate continued with the consideration of the joint resolution (S.J. Res. 1) proposing an amendment to the Constitution of the United States relating to the election of the President and the Vice President.

Mr. BELLMON. Mr. President, as a member of the commission of the American Bar Association that spent some 2 years in studies and in the preparation of the language which has become the main portion of Senate Joint Resolution 1, and also as a representative of a small State

I feel that I am in a rather unique position so far as this debate is concerned.

I might say that when the American Bar Association commission undertook its study of the electoral college, I entered into this study as a Governor of a small State and with my mind, I thought, made up that I would never be in favor of any change that would abolish the electoral college. I felt, rather selfishly I might say, that the electoral college gave the small States some advantage, and while it had flaws and imperfections the approach we should take would be to correct those flaws and imperfections and yet preserve the system.

But as the studies of the American Bar Association commission proceeded, I began to realize more and more that my earlier feeling toward the electoral college was a mistake. I felt simply because a State like Oklahoma, with a fairly small population, and with eight electors, by virtue of an elector for each Representative and Senator, had a small advantage.

As I worked with other members of the commission and understood more how the electoral college operates I began to see that the small States are at a great disadvantage during campaigns, as party platforms are drawn, and also as the executive branch operates in the administration of the programs Congress passes. The reason is very simple. At the present time, because of the "winner take all" provision of the electoral college, a candidate for President can be elected if he carries only the 12 most populous States. This, then, causes the candidates for President and the parties preparing to make the campaigns for President, to generally ignore the small and less populous States and prepare campaigns and platforms that appeal to the most populous States of the Union.

I have before me a compilation of appearances made by both candidates for President in 1968. This information was furnished to my office by the national committees of both parties. We found that both of the committees concentrated the campaigns and scheduled candidates in those States which have been referred to as the "big eight." These are the States that have the most electoral votes. These States are: New York, Pennsylvania, Ohio, California, Illinois, Michigan, Texas, and New Jersey. Those so-called big eight States have a total of 227 electoral votes. In 1968 the presidential candidates made a total of 63 visits to those eight States.

Looking at the attention which the candidates paid to the less populous States, we find there are 16 States with 82 electoral votes where the candidates made no appearances at all. That is to say, neither the Republican nominee nor the Democratic nominee took time to stop in any of these 16 States.

Also there were a large number of States in which the candidates made only one stop: Delaware, Iowa, Louisiana, Maine, North Carolina, North Dakota, Oregon, South Carolina, South Dakota, Virginia, West Virginia, Wisconsin and Idaho. A candidate of one party or the other made one stop in those States so, Mr. President, you can see there is a total of 13 States where the candidates made a total of only one stop in each State and 16 States where they made no stops at all; and in eight States with the most electoral votes they made 63 visits.

This is symbolic of the attention the smaller States get from the parties and the candidates when they are running for President and it indicates the attention they get from the executive branch after the campaign is finished and the winner begins discharging his duties as the Chief Executive of this Nation.

I recognize there are many persons who feel otherwise; who feel that a State like Alaska, with two Senators and one Representative has more influence now than it would have under a direct vote. But I submit that this is not the case because at the present time the State of Alaska gets no attention from the candidates and if we had the direct vote the voters of that State would be just as important as the voters of another State.

At the present time a candidate who takes time out to go to Alaska can only hope, if he succeeds to win every vote in that State, to get the three electoral votes. The candidates feel the time would be better spent in a State where they would get a larger block of electoral votes.

I feel very strongly that the smaller States of this Union need all the breaks they can get. Our population trends are continuing in the direction of the concentrating of more and more people in our more populous States, to the great disadvantage of those States and also the entire Union. Therefore, I feel that the Congress ought not to take steps that are likely to further that trend.

I would certainly not favor a change in our electoral system if I felt the small States were going to be damaged by such a change in the Constitution, but my study of this question throughout the time I served as a member of the American Bar Association commission, and since that time, convinces me that the smaller States are going to be helped, and not hurt, by the abolition of the electoral college and by the substitution of a direct vote for President in its place.

I feel very strongly that as long as a voter in California is a means by which a candidate for President may hope to win 40 electoral votes and when a voter in the State of New York is a means whereby a candidate can win 43 electoral votes, those votes are going to be more important to the candidate than the votes of citizens in a State like Oklahoma where the candidate can hope to gain only eight electoral votes or, perhaps under the new census, only seven votes. Therefore, we in the smaller States are going to have to take a back seat to the larger States under the present electoral college system.

That would not be the case if every voter had an equal vote and an equal voice in the election.

The interesting thing about a political campaign is that the crowds that candidates get are as large in the small States as they are in the big States. So it is not the fact that the candidates appear before larger groups that motivates candidates to go into large States like California and New York, and the other States that make up the Big Eight, but, rather, by going into those States the candidates are hopeful of winning the big blocks of electors that make the difference in the outcome of presidential elections.

There is another reason why I feel the electoral college works to the great disservice of the smaller States. Anyone who has studied the outcome of elections in States like Illinois and New York, particularly, will recognize that the vote between the out-State voters and the urban centers voters divides almost evenly.

For example, in Illinois, the down-State vote generally goes Republican and the Cook County vote tends to be Democratic. Since we have a winner-take-all situation in the electoral college, the pressures are tremendous on the Democratic organization in Cook County to build up a sufficient majority to overcome the down-State Republican vote and in that way throw the total block of electors in the State of Illinois to the Democratic Party.

The same is true in New York. The New York City vote tends to be Democratic, and the upstate voters in New York State tend to vote Republican. So there are tremendous pressures in the city of New York for the Democratic organization to deliver a large enough vote to overcome the Republican majority in upstate New York, and in that way capture the total block of electors for the Democratic Party.

I believe that this situation, more than anything else, contributes to some of the irregularities that have plagued our presidential elections in recent decades. If every voter in this country were of equal importance, the pressures would be just as great in the small precincts and in the small States to get the voters to vote as they presently are to get the voters to cast their votes in those special situations.

There is another reason that causes the electoral college to work to the disadvantage of the small States, and that is that many of our small States tend to be one-party States. For instance, my State of Oklahoma has tended, until very recently, to be a one-party State. The same is true of the State of Kansas. My State of Oklahoma tended to be Democratic. The State of Kansas tended to be Republican.

Under the present system with the electoral college, the Republican voters in a State like Oklahoma had little tendency to go out to vote because the State generally ended up in the Democratic column, and the votes cast for the Republican candidate did not count.

In Kansas, the Democratic voters had little tendency to vote because the State generally went Republican and their votes were disfranchised.

Under the direct vote proposal, the vote of all citizens in all parts of the country will be counted, because the votes will be cast directly for the President, and the minority voters will not be ruled out or disfranchised by the winner-take-all arrangement.

The same kind of problem would exist if we went to some of the other kinds of changes proposed in our electoral system. Under the district system, the minority party in a district that tended to vote with the other party would be disfranchised, and that plan would be undesirable for a large number of voters in this country.

When I first became involved in an effort to improve the electoral system, I felt very strongly that there were some aspects of the present system that needed to be corrected, but that they could be corrected and the system could be preserved; but I feel now, as I felt after I studied the question for a while, that there is absolutely no way that the electoral vote in the electoral college can be preserved, but, rather, that the time has come for us to completely abolish the system and give every voter in this country an equal vote and a direct voice in the choosing of our President and Vice President.

In my opinion, these two offices are by far the most important offices in the world in these times, and they deserve to be filled by individuals who have gained those offices by virtue of having been the choice of a majority of the voters in this country, who have gained those offices without resorting to any kind of trickery or kind of political machinations, and who, therefore, can serve without the feeling on the part of many of our citizens that they were the second choice or that they were not chosen except by accident.

I feel that if we continue using the electoral college as it now exists, the day will come when we will have a candidate who will have gained the office of President by accident, and that fact will turn the country into turmoil. A Chief Executive who will not have the full backing of the voters of this country will therefore find it difficult to discharge the onerous task that goes with leading the most powerful nation on earth.

I feel, therefore, the time has come when the Senate must follow the pattern that the House has already followed and abolish the electoral college and substitute in its place a direct vote for President.

I feel very strongly, as has already been said on the floor, that the hour is late; that if we undertake to amend Senate Joint Resolution 1, throwing it back into a conference with the House, the time will expire, the Senate will adjourn, and we will not be able to amend the Constitution during this session; that it will take many months to reach this point again in another session, and before the Congress is able to act, the time will expire and we will not be able to get the approval of the various State legislatures, and that we will have another Presidential election under the same system now in existence.

Therefore, I feel it is extremely urgent that the Senate vote on this matter and that we place it before the State legislatures, so that they will be able to act upon it, to truly modernize our system of electing a President.

I recognize that there are many who are fearful that the change to a direct vote will cause some serious changes in the makeup of our National Government; but I do not share those fears.

I have checked the CONGRESSIONAL RECORD for the year 1911, at which time the Senate was debating the question as to whether or not we should change to a direct vote for choosing Members of the Senate. Up until that time, as Senators will remember, Members of the Senate were chosen by the State legislatures, and there were many who felt that if we gave up that system and went to a direct vote for Senators, very serious and undesirable results would follow.

For example, in the debate, the then Senator from New York, Mr. Elihu Root, on February 10, 1911, speaking in defense of retaining the system whereby members of the State legislature chose U.S. Senators, made this statement:

> Let us continue upon the theory that State governments are corrupt and incompetent. The time will come when the Government of the United States will be driven to the exercise of more arbitrary and unconsidered power, will be driven to greater concentration, will be driven to extend its functions into the internal affairs of the States; and then sooner or later the people of the country will reject a Government that has subjected their personal and intimate neighborhood affairs to the control of a central power in Washington, and then in the place of competent States governing their own affairs we shall go through the cycle of concentration of power at the center while the States dwindle into insignificance, and ultimately the breaking up of the great Republic upon new lines of separation.
>
> Mr. President, there is another view of the fundamental proposition on which this resolution rests. It is an expression of distrust for representative government. It does not stand alone. It is a part of the great movement which has been going on now in these recent years throughout the country and in which our people have been drifting away from their trust in representative government. These modern constitutions which are filled with specific provisions, limiting and directing the legislature in every direction, furnishing such startling contrasts to the simplicity of the Constitution of the United States, are an expression of distrust in representative government. The referendum is an expression of distrust in representative government.

It is obvious that Senator Root was very much concerned that giving the people the opportunity and responsibility of voting directly for U.S. Senators was going to produce some fundamental changes in our Federal system. It is equally obvious that the years since 1911 have shown that Senator Root's concern was not well founded. I doubt that any Member of the Senate would be willing now to go back to the old system of having Members of the Senate chosen by the legislatures of the various States.

I believe that Senator Root suffered from the pain that was described many years ago by Walter Bagehot, in an article entitled "Physics and Politics," in which he said that one of the greatest pains to human nature is the pain of a new idea. I would suspect that for Senator Root, the idea of running in a public election was rather painful because it was new.

I am of the opinion, having heard some of the debate here, that one of the things that makes many Senators today oppose the change in our electoral college and the adoption of the direct vote for President is that the idea is somewhat new to them. I doubt that their fears will come to pass, any more than the fears Senator Root had some 50 years ago, when he stood on this floor and advocated retaining the system by which Senators were elected by State legislatures.

I share some of the fears expressed by some of my colleagues; but after studying the matter from the viewpoint of the smaller States, I feel strongly that the best interests of the country and of the smaller States will be served by abolishing the present electoral system, with its winner-take-all arrangements, and going to a direct vote, which will give every qualified voter in this country an equal voice in choosing the President, and thereby make certain that the person who occupies the position of President of this country holds his position by virtue of being the choice of most of the voters in the country, and is thus the unchallenged leader of the United States in conducting its affairs as they relate both to the progress of our country and to his peacekeeping responsibilities.

I very strongly feel that the time when this decision should be made is now. It should not be put off any longer, and I am hopeful that if the Senate will act promptly, the State legislatures will also act, so that, by the time we elect our new President in 1976, we will have a new system, which will give every voter a reason to participate, and to realize that his vote counts the same as the vote of any voter in any other State.

Mr. BAYH. Mr. President, will the Senator yield?

Mr. BELLMON. I am glad to yield to the Senator from Indiana.

Mr. BAYH. I have listened with great interest to my colleague from Oklahoma. Having been familiar with the development of the support for this particular proposal, I must suggest that the contribution that the Senator from Oklahoma makes is perhaps more significant than that which might be made by any other Senator. He had the opportunity to study this proposition independently before he came to the Senate, and from talking with him personally as well as listening to his remarks I know that his views changed somewhat as he went through the study.

My experience was similar. My opinion changed as I delved into the actual functioning of the electoral college system. I compliment my distinguished friend and colleague from Oklahoma particularly for presenting to the Senate the quotation from former Senator Root, in which he prophesied that there would be great discord and the country would be on its knees if the Members of this body were chosen by a direct popular vote.

I ask my friend from Oklahoma to comment briefly as to whether he shares my opinion that the change which we propose—direct popular vote for President—is not in fact a revolutionary change. Nor would it be a panacea for all of the other problems that confront

our country today. I hope he agrees that we do not offer it as a panacea for problems, but rather because it gives us the opportunity to minimize the chance of malfunction of the Presidential election system.

Mr. BELLMON. I certainly agree with my colleague from Indiana. I feel that Senate Joint Resolution 1 does exactly that. It will prevent, or at least greatly lessen, the opportunity for a breakdown in the system whereby we choose our President. Also, in my opinion, as I have already stated, it will lessen the pressures for malfeasance in the way our electoral processes are carried on. I very strongly feel that this country, at the present time, and perhaps for the next decade or so, is going to face very tense times, both here at home and abroad. I seriously doubt that a President who held his office as a result of what could appear to some to be trickery, or perhaps even just an accident, could discharge the duties that he will be faced with and make the decisions he will be called upon to make.

I feel that while this proposal, as the Senator has stated, is not revolutionary, it is certainly one of the most important decisions that the Senate and Congress will be called upon to make for many years. I am very pleased that the committee of which the Senator from Indiana is chairman, and which he has led so ably, has come to the conclusion that the House of Representatives reached, and that this makes it possible for us to go ahead and act upon this matter promptly and to bring about the change which I feel is absolutely necessary and which in many ways is long overdue.

I might say to the Senator from Indiana that one of the recent developments that strengthens my belief in what is about to happen here is what has happened to us in the State of Oklahoma. Until the present time, the State of Oklahoma has had eight electors because of the fact that we have two Senators and six Members of the House of Representatives. As the result of the most recent census, which is not yet final, but based upon the preliminary reports, our State has gained 7.3 percent in population; yet, we apparently are going to lose a Representative. This means that the voters of Oklahoma, when they vote next for President, will have one less elector, even though we have more citizens than we have had in the past.

To me, it is rather arbitrary and totally unfair that the electoral system works to deprive a growing State, as we are, of our voice in choosing the President.

Under the present system—that is, under the system in effect—when we chose our President in 1968, one electoral vote in Oklahoma represented 291,035 citizens. If we lose one of our representatives and one of our electors, as apparently is going to happen, when we vote in 1972 and in 1976 and in 1980, one electoral vote in Oklahoma will amount to 356,911 voters. This, I think, shows how totally unrealistic and how wrong it is to have such an arbitrary system that changes the voting strength of an individual citizen of this country simply because his State happens to wind up one side or the other of the line when the representatives are divided up.

According to the figures we have been able to compute, as based upon the most recent census, in the United States the average elector represents 372,000 citizens. So our State, which is a small State, would still have fewer than the average for the Nation, but an electoral representative would represent about 60,000 more voters than was true when we voted in 1968.

Mr. BAYH. I appreciate the focus that the Senator from Oklahoma brings to bear on the question of the small-State large-State argument. Indeed, some Senators are concerned that a change would penalize the small States. But the Senator from Oklahoma, who comes from a less-populated State, has studied this matter carefully and has reached the conclusion that going to a direct popular vote would not be disadvantageous to the small State.

Mr. BELLMON. That is correct. I feel that small States have a great disadvantage at the present time, and the fact that Presidential candidates do not even bother to campaign in 16 of the smaller States is eloquent testimony to that.

One other reason that causes me, as a citizen of a small State—and, as I have said, of a traditionally one-party State—to favor a change to direct vote is the fact that the present system discourages citizen participation. The fact that we have an electoral college and the fact that many citizens do not feel that they are actually voting for President tends, I believe, to discourage them from even voting at all.

I served as State chairman of a political party and also for a time as national campaign chairman for President Nixon during the early days of his campaign. I know that in many of the one-party States there was not even serious thought about President Nixon campaigning. We recognized that there was no chance to win in those States, and therefore there was no reason for him to put in an appearance. We realized that if he did not get a majority of the votes in those States, he would get no electors at all.

If we go to the direct vote system, then no matter how strongly a one-party tradition may exist in a given State, there will still be reason for a candidate to go there and campaign, because he will get some votes as a result of his effort.

Mr. BAYH. Then, in addition to the small State-large State argument, which I think the Senator from Oklahoma has put to rest very ably, it appears to me that the Senator is dealing with accusations and concerns of some opponents of Senate Joint Resolution 1 that direct election would weaken the two-party system. It is the experience of the Senator from Oklahoma that the contrary would be true. Is that accurate?

Mr. BELLMON. That is exactly true. I feel that the present system, which makes it rather unnecessary—and, in fact, futile—for candidates to campaign in one-party States, would be totally changed if the candidate knew that by going to these States he would get a certain number of votes under a direct-vote system.

For example, if I had been the manager of Hubert Humphrey's campaign in 1968, I certainly would not have allowed Vice President Humphrey to campaign in a State such as Kansas or Nebraska, or for that matter, even in Oklahoma—though he did come there—because those States were leaning strongly the other way. There would be no purpose in Candidate Humphrey even planning to come to those States, because there was no chance for him to gain anything from it.

I think that the present system works to the disadvantage of many sectors of the country and totally to the disadvantage of our form of representative government.

I strongly feel that this is the most important question that has been before the Senate this year, and since I have been a Member of this body. I again want to congratulate the Senator from Indiana for the leadership he has displayed in bringing this matter before the Senate in the way it has been done.

Mr. BAYH. I do not want to delay the Senator further, but I wish to compliment him on his remarks. I hope that history will show that because of the leadership and the determination of him and other Senators, such as the distinguished Senator from Tennessee, at long last we will lay to rest the possibility that this system will malfunction.

Although there has been concern about fraud, we must recognize that fraud alone will not cause malfunctioning. Fraud is not the only way the present system can malfunction. Three times in the past the electoral college has given to the country a President who has fewer votes than the man he is running against, as the Senator from Oklahoma knows.

We could, of course, continue the system in which all our votes do not count the same.

But we now have a chance to rectify these inequities and to protect ourselves from such a possible malfunctioning.

I express my personal appreciation to the distinguished Senator from Oklahoma for the contribution he has made.

Mr. BAKER. Mr. President, will the Senator yield?

Mr. BELLMON. I am happy to yield to the distinguished Senator from Tennessee.

Mr. BAKER. Mr. President, I wish to commend the Senator from Oklahoma for this presentation and to apologize to him for not being present in the Chamber during the entire delivery.

He makes a point, though, that is important to all of us who come from small or medium sized States, who are confronted with the anomaly of an increasing population and a decreasing electoral vote. Tennessee, it appears, may be one of those States, where we now have 11 electoral votes—nine Members of the House of Representatives and two Senators—and there is at least some possibility that our House delegation will be reduced from nine to eight and our electoral vote from 11 to 10. Yet, the popula-

tion of Tennessee has increased very materially.

It seems to me that this anomaly is proof positive of the necessity for overhaul of the electoral system if the medium and small sized States are to continue to be effective partners in the federal system.

Mr. BELLMON. I agree with the Senator.

I have not had an opportunity to discuss this matter with many of the voters in Oklahoma. In fact, these figures are very recent. But I think I can sense some of the frustration and perhaps even anger that is going to be fairly widespread in my State when they realize that, because of the working of the system we have, they are going to be about 12 percent disenfranchised as a result of the electoral college.

I might say to the Senator from Tennessee, I do not know what his observation has been, but in my State many polls have been taken, and certainly in the many conversations I have had with the voters, they show me that among the populations of the smaller States such as Oklahoma, the electoral college system is not understood and is not popular. The voters generally greatly prefer to go to the direct vote system, even though some of the politicians try to make it appear that they are being helped by the present system. I feel that the voters generally are willing to be treated as equals, that they do not expect any real or suggested advantages, and that at least in our State the direct vote for President is the way the voters prefer to see any changes brought about. I doubt strongly that the voters would like to see us merely amend the electoral college system. They feel that the time has come for a direct vote for President as it was changed in 1911 so that the people could vote directly for their Senators.

Mr. BAKER. I entirely agree and commend the Senator from Oklahoma for a perceptive observation as to the attitude of the public generally toward the electoral college system. I agree with him. I think the same situation pertains in my State of Tennessee. As a matter of fact, I would hazard the guess that many people in the United States think that they vote for their President and are not aware of the fact that the system prohibits anyone from voting for the President but rather for a slate of electors. The disillusionment I found in some quarters when this point was made is real and substantial and constitutes a hazard to the respect and support that representative government must have if it is to function properly.

The Senator from Oklahoma pointed out that he was, at one time, the national campaign manager for President Nixon before he relinquished that post in order to mount his own campaign for the U.S. Senate. I remember his early and effective organizational ability for our President. I know of the high esteem and respect in which he is held by President Nixon. I do not speak for the junior Senator from Oklahoma and neither for the President, but I would speculate that the fact the President is strongly in favor of electoral reform in this manner, and the fact that the junior Senator from Oklahoma is such an effective advocate of this proposal on the floor of the Senate, is not coincidental.

Mr. BELLMON. I might say, in reply to my good friend from Tennessee, that the voters in Oklahoma became incensed as a result of the 1960 incident in which one of the Republican electors, Henry Erwin of Bartlesville, who had been elected an elector on the assumption he was going to cast his electoral vote for candidate Nixon, actually cast his vote for Harry F. Byrd. Since then, the Republican voters in our State who thought they had cast their votes for candidate Nixon felt that was an absolute violation of trust, as they felt they were, as the Senator said, voting directly for the candidate of their choice; yet when it became clear to them that they had not done so, that the person in whom they had placed their trust had violated that trust, they were incensed.

At that time, I was serving as Republican State chairman, and we had a great deal of correspondence over that incident and many confrontations with irate citizens who began to demand immediately that the system be changed. That was the point at which my interest in the electoral college system was first kindled, and I have become more interested in this problem since that time.

The State legislature of Oklahoma, as a result of that incident, changed the law so that there will probably not be a repeat of that situation ever again in our State, but there is still the danger that if one of the parties who gains the most electoral votes should lose his life before he is sworn in, the electors would have a completely free hand to choose any candidate they wished to be President of the United States. That is certainly not going to be that way if we go into the direct vote system.

There are many other flaws, Mr. President, in the electoral college system that will be brought out during debate, and I hope to have further comment on that in the future.

I ask unanimous consent to have printed in the RECORD, Mr. President, a table showing the number of appearances candidates Nixon and Humphrey made in each State of the Union during the 1968 campaign.

There being no objection, the table was ordered to be printed in the RECORD, as follows:

SCHEDULE OF CANDIDATE APPEARANCES[1] BY STATES, 1968 CAMPAIGN (SEPT. 3 TO NOV. 3, 1968)

	Nixon	Humphrey	Total
Alabama	10		0
Alaska	3		0
Arizona	5		0
Arkansas	6		0
California	40	4	3	7
Colorado	6	1	1	2
Connecticut	8	1	1	2
Delaware	3		1	1
Florida	14	2	1	3
Georgia	12	2		2
Hawaii	4			0
Idaho	4	1		1
Illinois	26	4	3	7
Indiana	13	1	1	2
Iowa	9	1		1
Kansas	7			0
Kentucky	9	1	1	2
Louisiana	10	1		1
Maine	4		1	1
Maryland	10			0
Massachusetts	14	1	2	3
Michigan	21	4	3	7
Minnesota	10	2		2
Mississippi	7			0
Missouri	12	3	1	4
Montana	4			0
Nebraska	5			0
Nevada	3			0
New Hampshire	4			0
New Jersey	17	2	2	4
New Mexico	4			0
New York	43	6	9	15
North Carolina	13	1		1
North Dakota	4	1		1
Ohio	26	4	4	8
Oklahoma	8	1	1	2
Oregon	6		1	1
Pennsylvania	29	6	4	10
Rhode Island	4			0
South Carolina	8	1		1
South Dakota	4		1	1
Tennessee	11	2	1	3
Texas	25	3	2	5
Utah	4	1	1	2
Vermont	3			0
Virginia	12	1		1
Washington	9	1	1	2
West Virginia	7		1	1
Wisconsin	12	1		1
Wyoming	3			0
District of Columbia	3			

[1] 16 States not visited by either candidate—with 82 electoral votes, ranging from 3 to 10.

Mr. BAYH. Mr. President, one further observation for the record, if I may. The Senator from Oklahoma described his experience in Oklahoma in 1960, concerning the truant or the errant elector and noted that subsequently the State Legislature of Oklahoma attempted to deal with that problem.

Several years ago, I recall a Supreme Court case, Ray against Blair, in which a candidate exacted a pledge from an elector. But the Court held that there was no way it could be enforced because of the freedom given by the Constitution to the elector.

I think the concern of the Senator from Oklahoma is evidenced by his leadership in our efforts to try to provide direct election for the people of this country of their President. The experience we all had here in January, on the opening day of the Senate in 1969, in which we had the Dr. Bailey incident, the errant elector in North Carolina, led me to believe that this whole issue is very much alive and has not been laid to rest. There is no way it can be laid to rest except to proceed with adoption and, hopefully, the ratification of Senate Joint Resolution 1.

Now, Mr. President, if I could have the attention of the Senator from Alabama (Mr. ALLEN) who, I think, perhaps, has inherited the mantle of the opposition here, for the time being——

Mr. ALLEN. I am delighted to yield to the Senator from Indiana.

Mr. BAYH. I should like to pose this question because, I understand, the Senator from Nebraska would desire to proceed to other business now, and perhaps the majority leader would as well. But I should like to know whether those in opposition have any idea as to when we would be prepared to put this issue to a vote.

I feel that it has been discussed and

covered rather well, and I am prepared at this moment to go on to the next legislative step. Of course, we do not want to rush into this when some Senators have not been heard.

Therefore, would the Senator from Alabama care to hazard an opinion on this matter?

Mr. ALLEN. I notice on the wire this afternoon that the Senate Democratic leadership and committee chairmen decided today "to shoot for adjournment October 15 without ditching any major legislation. Senate Majority Leader MANSFIELD said it would take the unanimous cooperation of all 100 Senators and added that is always something difficult to do. The majority leader and the chairmen set a tentative timetable for each piece of legislation which MANSFIELD said will make it possible for the Senate to complete its work by mid-October."

So I do not know what tentative schedule has been set by the majority leader. The junior Senator from Alabama would state that he is not sitting in for the majority leader. He would have thought, since the distinguished Senator from Indiana (Mr. BAYH) has been occupying that chair, he himself was sitting in for the majority leader at this time.

Mr. BAYH. It is difficult for me fully to occupy the chair of the majority leader but I am certain that I am accurate in suggesting that the majority leader would be willing to support the motion which the Senator from Indiana is prepared to make now, that we go to third reading, if the Senator from Alabama is prepared not to object to such a motion.

Mr. ALLEN. The Senator from Alabama notes that in the committee report itself there is a suggested amendment by the distinguished Senator from Michigan (Mr. GRIFFIN) and the distinguished Senator from Maryland (Mr. TYDINGS). Certainly the junior Senator from Alabama would not want to cut them off from their right to offer an amendment.

Also, the district plan is embraced in a proposed amendment to the resolution. The proportional plan will probably be offered as an amendment and also the possible planned revising of the functions and setup of the present electoral college.

So, the junior Senator from Alabama feels sure that the distinguished Senator from Indiana would not want to cut off amendments, which moving the resolution to third reading at this time would do.

Mr. BAYH. Mr. President, I would not want to cut off amendments. The Senator from Alabama was desirous of knowing the opinion of the majority leader.

The judgment of the Senator from Indiana is that the majority leader probably would not support any of the amendments that the Senator from Alabama has just mentioned.

I was hoping, inasmuch as many of our colleagues have other obligations and the senior Senator from Tennessee and possibly other Senators have important appointments with constituents, that it would be helpful in advising our colleagues who are not present if we can suggest a timetable. I would hope that maybe tomorrow or by next week we would make the maximum effort to dispose of all amendments. I would not want to prevent the offering of any amendments. However, the quicker we can get to them the quicker the Senate can work its will.

Mr. ALLEN. Mr. President, the junior Senator from Alabama has no amendment which he wishes to offer. He does feel, though, that the right of Senators who do have amendments to offer them should not be cut off.

All that the junior Senator from Alabama could suggest is that the Senator from Indiana, if he desires to make a unanimous-consent request, should do so, and then the membership present could decide whether they wished to give unanimous consent to the request.

Mr. BAYH. Mr. President, the Senator from Indiana does not want to be arbitrary in any way about this matter.

It is the recollection of the Senator from Indiana that it is the responsibility of those who have amendments to be prepared to offer them. Since the Senator from Indiana has no such amendments, he is hardly in a position to offer amendments for other Senators.

I feel charged with the responsibility of expediting the consideration of this measure as much as possible.

Mr. ALLEN. Mr. President, the junior Senator from Alabama does not have authority to speak for any other Senators. He just happens to be here at this time to speak for himself and the people he represents.

Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The assistant legislative clerk proceeded to call the roll.

Mr. MANSFIELD. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

ORDER OF BUSINESS

Mr. MANSFIELD. Mr. President, I ask unanimous consent, under the informal agreement made, that the pending business be laid aside temporarily until after the conclusion of morning business tomorrow.

The PRESIDING OFFICER. Without objection, it is so ordered.

HEART DISEASE, CANCER, STROKE, AND KIDNEY DISEASE AMENDMENTS OF 1970

Mr. MANSFIELD. Mr. President, I ask unanimous consent that the Senate now turn to the consideration of Calendar 1100, S. 3355.

The PRESIDING OFFICER. The bill will be stated by title.

The assistant legislative clerk read as follows: A bill (S. 3355) to amend title IX of the Public Health Service Act so as to extend and improve the existing program relating to education, research, training and demonstrations in the fields of heart disease, cancer, stroke, and other major diseases and conditions, and for other purposes.

The PRESIDING OFFICER. Is there objection to the present consideration of the bill?

There being no objection, the Senate proceeded to consider the bill which had been reported from the Committee on Labor and Public Welfare with an amendment to strike out all after the enacting clause and insert:

TITLE I—AMENDMENTS TO TITLE IX OF THE PUBLIC HEALTH SERVICE ACT

SEC. 101. This title may be cited as the "Heart Disease, Cancer, Stroke, and Kidney Disease Amendment of 1970".

SEC. 102. (a) Section 900(a) of the Public Health Service Act is amended—

(1) by inserting "and contracts" immediately after "grants";

(2) by striking out "related demonstrations" and inserting in lieu thereof "demonstrations";

(3) by striking out "and related diseases" and inserting in lieu thereof "kidney disease, and other major diseases and conditions".

(b) Section 900(b) of such Act is amended by striking out "diagnosis and treatment of these diseases" and inserting in lieu thereof "prevention, diagnosis, and treatment (including treatment through home health care) of these diseases and conditions, and in the rehabilitation (including rehabilitation through home health care) of individuals suffering from these diseases and conditions".

(c) Section 900 of such Act is further amended by—

(1) striking out "and" at the end of subsection (b) thereof;

(2) redesignating subsection (c) thereof as subsection (d); and

(3) inserting after subsection (b) thereof a new subsection (c) which reads as follows:

"(c) to promote and foster regional cooperation among health care institutions and providers so as to strengthen and improve primary care and the relationship between specialized and primary care; and".

(d) Section 900(d) of such Act (as redesignated by subsection (c)(2) of this section) is amended by striking out "the health manpower and facilities to the Nation" and inserting in lieu thereof "the quality and enhance the capacity of the health manpower and facilities available to the Nation and to improve health services for persons residing in areas with limited health services".

SEC. 103. (a)(1) The first sentence of section 901(a) of such Act is amended by striking out "and $120,000,000 for the next fiscal year, for grants" and inserting in lieu thereof "$120,000,000 for the fiscal year ending June 30, 1970, $150,000,000 for the fiscal year ending June 30, 1971, $200,000,000 for the fiscal year ending June 30, 1972, $250,000,000 for the fiscal year ending June 30, 1973, and for each of the next two fiscal years, for grants".

(2) The second sentence of section 901(a) of such Act is amended to read as follows: "Of the sums appropriated under this section for the fiscal year ending June 30, 1971, not more than $15,000,000 shall be available for activities in the field of kidney disease."

(b) Section 901 of such Act is further amended by adding at the end thereof the following new subsection:

"(e) At the request of any recipient of a grant under this title, the payments to such recipient may be reduced by the fair market value of any equipment, supplies, or services furnished to such recipient and by the amount of the pay, allowance, traveling expenses, and any other costs in connection

with the detail of an officer or employee to the recipient when such furnishing of such detail, as the case may be, is for the convenience of and at the request of such recipient and for the purpose of carrying out the regional medical program to which the grant or contract under this title is made."

SEC. 104. (a) Section 902(a) of such Act is amended by striking out "training, diagnosis, and treatment relating to heart disease, cancer, or stroke, and at the option of the applicant, related disease or diseases" and inserting in lieu thereof "training, prevention, diagnosis, treatment, and rehabilitation (including home health care) relating to heart disease, cancer, stroke, or kidney disease, and, at the option of the applicant, other major diseases or conditions".

(b) Section 902(a) of such Act (as amended by subsection (a) of this section) is further amended, in the part thereof which precedes clause (1) thereof, by—

(1) inserting "(i)" immediately after "engaged"; and

(2) inserting immediately before the semicolon the following: ", or at the option of applicant, (ii) in developing and demonstrating systems for organizing and delivering medical care, but only (I) with respect to an applicant which is engaged in one or more of the activities referred to in subclause (i), and (II) for any period of time, if prior to the commencement of such period the applicant has for a reasonable period of time engaged in one or more of the activities referred to in subclause (i)".

SEC. 105. Section 902(f) is amended by striking out "includes" and inserting in lieu thereof "means new construction of facilities for demonstrations, research, and training when necessary to carry out regional medical programs,".

SEC. 106. Section 903(b)(4) of such Act is amended—

(1) by striking out "voluntary health agencies, and" and inserting in lieu thereof "voluntary health agencies, official health and planning agencies, and"; and

(2) by inserting immediately after "under the program", where it first appears therein, the following: "(including as an ex officio member, if there is located in such region one or more hospitals or other health facilities of the Veterans' Administration, the individual whom the Administrator of Veterans' Affairs shall have designated to serve on such advisory group as the representative of the hospitals or other health care facilities of such Administration which are located in such region)"; and

(3) by striking out "need for the services provided under the program" and inserting in lieu thereof "need for and financing of the services provided under the program, and which advisory group shall be sufficient in number to insure adequate community representation (as determined by the Secretary)".

SEC. 107. That part of the second sentence of section 904(b) of the Public Health Service Act preceding paragraph (1) is amended by striking out "section 903(b)(4) and" and inserting in lieu thereof the following: "section 903(b)(4), if opportunity has been provided, prior to such recommendation, for consideration of the application by each public or nonprofit private agency or organization which has the responsibility for development of a comprehensive regional, metropolitan, or other area plan referred to in section 314(b) covering any area in which the regional medical program for which the application is made will be located, and if the application".

SEC. 108. Section 905(a) of such Act is amended—

(1) by striking out "The Surgeon General, with the approval of the Secretary," and inserting in lieu thereof "The Secretary";

(2) by striking out "the Surgeon General" and inserting in lieu thereof "the Assistant Secretary of Health, Education, and Welfare for Health and Scientific Affairs";

(3) by inserting immediately after "chairman," the following: "the Chief Medical Director of the Veterans' Administration who shall be an ex officio member,";

(4) by inserting "health care administration," immediately after "the medical sciences,";

(5) by striking out "study, diagnosis, or treatment of cancer" and inserting in lieu thereof "study of or health care for persons suffering from cancer"; and

(6) by striking out "and one shall be outstanding in the study, diagnosis, or treatment of stroke" and inserting in lieu thereof "one shall be outstanding in the study of or health care for persons suffering from stroke, one shall be outstanding in the study of or care for persons suffering from kidney disease, and three shall be members of the public".

SEC. 109. Section 907 of such Act is amended by striking out "or strike," and inserting in lieu thereof "stroke, or kidney disease,".

SEC. 110. Section 909(a) of such Act is amended by inserting "or contract" after "grant", each place it appears therein.

SEC. 111. (a) Section 910 of such Act is amended to read as follows:

"SEC. 910. (a) To facilitate interregional cooperation, and develop improved national capability for delivery of health services, the Secretary is authorized to utilize funds appropriated under this title to make grants to public or nonprofit private agencies or institutions or combinations thereof and to contract for—

"(1) programs, services, and activities of substantial use to two or more regional medical programs;

"(2) development, trial, or demonstration of methods for control of heart disease, cancer, stroke, kidney disease, or other major disease or conditions;

"(3) the collection and study of epidemiologic data related to any of the diseases and conditions referred to in paragraph (2);

"(4) development of training specifically related to the prevention, diagnosis, or treatment of any of the diseases or conditions referred to in paragraph (2), or to the rehabilitation of persons suffering from any of such diseases or conditions; and for continuing programs of such training where shortage of trained personnel would otherwise limit application of knowledge and skills important to the control of any of such diseases or conditions; and

"(5) the conduct of cooperative clinical field trials.

"(b) The Secretary is authorized to assist in meeting the costs of special projects for improving, or developing new means for, the delivery of health services concerned with any of the diseases or conditions with which this title is concerned.

"(c) The Secretary is authorized to support research, studies, investigations, training, and demonstrations designed more effectively to utilize health personnel in the delivery of health services."

(d) The heading to section 910 of such Act is amended to read as follows:

"MULTIPROGRAM SERVICES".

SEC. 112. The heading to title IX of such Act is amended by striking out "STROKE, AND RELATED DISEASES" and inserting in lieu thereof "STROKE, KIDNEY DISEASE, AND OTHER MAJOR DISEASES AND CONDITIONS".

SEC. 113. Sections 902(a), 903(a), 903(b), 904(a), 904(b), 905(b), 905(d), 906, 907, and 909(a) (as amended by the preceding provisions of this title) are each further amended by striking out "Surgeon General" each place it appears therein, and inserting in lieu thereof "Secretary".

TITLE II—AMENDMENTS TO TITLE III OF THE PUBLIC HEALTH SERVICE ACT

PART A—RESEARCH AND DEMONSTRATIONS RELATING TO HEALTH FACILITIES AND SERVICES

SEC. 201. (a)(1) Section 304(a) of the Public Health Service Act is amended—

(A) by inserting "(1)" immediately after "SEC. 304. (a)".

(B) by redesignating clauses (1) and (2) as clauses (A) and (B), respectively; and

(C) by redesignating clauses (A), (B), and (C) as clauses (i), (ii), and (iii), respectively.

(2) Section 304(b) of such Act is amended—

(A) by striking out "(b)" and inserting in lieu thereof "(2)"; and

(B) by striking out "this section" each place it appears therein and inserting in lieu thereof "this subsection".

(3) Section 304(c) of such Act is amended—

(A) by striking out "(c)" and inserting in lieu thereof "(3)"; and

(B) by striking out "this section" each place it appears therein and inserting in lieu thereof "this subsection".

(b) Section 304 of such Act is further amended by adding after the provision thereof redesignated as paragraph (3) by subsection (a)(3)(A) of this section the following new subsection:

"Systems Analysis of Alternative National Health Care Plans

"(b)(1)(A) The Secretary shall develop, through utilization of the systems analysis method, alternative plans for health care systems designed adequately to meet the health needs of the American people. For purposes of the preceding sentence, the systems analysis method means the analytical method by which alternative means of obtaining a desired result or goal is associated with the costs and benefits involved.

"(B) The Secretary shall complete the development of the alternative plans referred to in subparagraph (A), within such period as may be necessary to enable him to submit to the Congress not later than June 30, 1971, a report thereon which shall describe each plan so developed in terms of—

"(i) the number of people who would be covered under the plan;

"(ii) the kind and type of health care which would be covered under the plan;

"(iii) the cost involved in carrying out the plan and how such costs would be financed;

"(iv) the number of additional physicians and other health care personnel and the number and type of health care facilities needed to enable the plan to become fully effective;

"(v) the new and improved methods, if any, of delivery of health care services which would be developed in order to effectuate the plan;

"(vi) the accessibility of the benefits of such plan to various socioeconomic classes of persons;

"(vii) the relative effectiveness and efficiency of such plan as compared to existing means of financing and delivering health care; and

"(viii) the legislative, administrative, and other actions which would be necessary to implement the plan.

"(C) In order to assure that the advice and services of experts in the various fields concerned will be obtained in the alternative plans authorized by this paragraph and that the purposes of this paragraph will fully be carried out—

"(i) the Secretary shall utilize, whenever appropriate, personnel from the various agencies, bureaus, and other departmental subdivisions of the Department of Health, Education, and Welfare;

"(ii) the Secretary is authorized, with the

consent of the head of the department or agency involved, to utilize (on a reimbursable basis) the personnel and other resources of other departments and agencies of the Federal Government; and

"(iii) the Secretary is authorized to consult with appropriate State and local public agencies, private organizations, and individuals.

"Cost and Coverage Report on Existing Legislative Proposals

"(2)(A) The Secretary shall, in accordance with this paragraph, conduct a study of each legislative proposal which is introduced in the Senate or the House of Representatives during the Ninety-first Congress, and which undertakes to establish a national health insurance plan or similar plan designed to meet the needs of health insurance or for health services of all or the overwhelming majority of the people of the United States.

"(B) In conducting such study with respect to each such legislative proposal, the Secretary shall evaluate and analyze such proposal with a view to determining—

"(i) the costs of carrying out the proposal; and

"(ii) the adequacy of the proposal in terms of (I) the portion of the population covered by the proposal, (II) the type health care provided, paid for, or insured against under the proposal, (III) whether, and if so, to what extent, the proposal provides for the development of new and improved methods for the delivery of health care and services.

"(C) Not later than December 31, 1970, the Secretary shall submit to the Congress a report on each legislative proposal which he has been directed to study under this paragraph, together with an analysis and evaluation of such proposal."

(c) Subsection (d) of section 304 of such Act is hereby redesignated as subsection (c) and is amended to read as follows:

"(c)(1) There are authorized to be appropriated for payment of grants or under contracts under subsection (a), and for purposes of carrying out the provisions of subsection (b), $84,000,000 for the fiscal year ending June 30, 1971 (of which not less than $4,000,000 shall be available only for purposes of carrying out the provisions of subsection (b)), $85,000,000 for the fiscal year ending June 30, 1972, $94,000,000 for the fiscal year ending June 30, 1973, $110,000,000 for the fiscal year ending June 30, 1974, and $130,000,000 for the fiscal year ending June 30, 1975.

"(2) In addition to the funds authorized to be appropriated under paragraph (1) to carry out the provisions of subsection (b) there are hereby authorized to be appropriated to carry out such provisions for each fiscal year such sums as may be necessary."

(d) The amendments made by subsection (c) of this section shall be effective only with respect to fiscal years ending after June 30, 1970.

SEC. 202. That provision of section 304 of the Public Health Service Act redesignated by section 201(a) of this Act as paragraph (3) of subsection (a) is further amended—

(1) by inserting "(A)" immediately after "(3)"; and

(2) by adding after and below such provision the following new subparagraph:

"(B) The amounts otherwise payable to any person under a grant or contract made under this subsection shall be reduced by—

"(i) amounts equal to the fair market value of any equipment or supplies furnished to such person by the Secretary for the purpose of carrying out the project with respect to which such grant or contract is made, and

"(ii) amounts equal to the pay, allowances, traveling expenses, and related personnel expenses attributable to the performance of services by an officer or employee of the Government in connection with such project, if such officer or employee was assigned or detailed by the Secretary to perform such services,

but only if such person requested the Secretary to furnish such equipment or supplies, or such services, as the case may be."

SEC. 203. That provision of section 304 of the Public Health Service Act redesignated by section 201(a) of this Act as paragraph (1) of subsection (a) is further amended by—

(1) striking out the period at the end thereof and inserting in lieu thereof ", and"; and

(2) adding after and below the clause thereof redesignated by such section 201(a) as clause (iii) the following new clauses:

"(iv) projects for research, experiments, and demonstrations dealing with the effective combination or coordination of public, private, or combined public-private methods or systems for the delivery of health services at regional, State, or local levels, and

"(v) projects for research and demonstrations in the provision of home health services."

PART B—NATIONAL HEALTH SURVEYS AND STUDIES

SEC. 210. (a)(1) Clause (1) of section 305(a) of the Public Health Service Act is amended—

(A) by striking out "and" at the end of subclause (D); and

(B) by inserting after the semicolon at the end of subclause (E) the following: "(F) health care resources; (G) environmental and social health hazards; and (H) family formation, growth, and dissolution;".

(2) Such section 305(a) is further amended by adding at the end thereof the following new sentence: "Except to the extent otherwise provided by regulations of the Secretary, no information obtained as a result of surveys and studies conducted persuant to this subsection shall be disclosed or used for any purpose other than the statistical purposes for which it was supplied; and no such information relating to any particular establishment or person shall be published in a form which identifies such establishment or person unless such establishment or person consents to the publication of such information in such form."

(b) Section 305 of such Act is further amended—

(1) by redesignating subsections (b), (c), and (d) thereof as subsections (c), (d), and (e), respectively; and

(2) by inserting immediately after subsection (a) thereof a new subsection (b) as follows:

"(b) The Secretary is authorized, directly or by contract, to conduct research and demonstrations, and to make evaluations, relating to the design and implementation of a cooperative system for producing comparable and uniform health information and statistics at the Federal, State, and local levels."

PART C—GRANTS TO STATES FOR COMPREHENSIVE STATE HEALTH PLANNING

SEC. 220. (a)(1) The first sentence of section 314(a)(1) of the Public Health Service Act is amended by striking out "June 30, 1970" and inserting in lieu thereof "June 30, 1975".

(2) The second sentence of such section 314(a)(1) is amended by striking out "and $15,000,000 for the fiscal year ending June 30, 1970" and inserting in lieu thereof the following: "$15,000,000 for the fiscal year ending June 30, 1970, $15,000,000 for the fiscal year ending June 30, 1971, $17,000,000 for the fiscal year ending June 30, 1972, $20,000,000 for the fiscal year ending June 30, 1973, $30,000,000 for the fiscal year ending June 30, 1974, and $35,000,000 for the fiscal year ending June 30, 1975".

(b) Section 314(a)(2)(B) of such Act is amended by striking out "State and local agencies" and inserting in lieu thereof "Federal, State, and local agencies (including as an ex officio member, if there is located in such State one or more hospitals or other health care facilities of the Veterans' Administration, the individual whom the Administrator of Veterans' Affairs shall have designated to serve on such council as the representative of the hospitals or other health care facilities of such Administration which are located in such State)".

(c) Section 314(a)(2)(B) of such Act (as amended by subsection (b) of this section) is further amended by, inserting "(including representation of the regional medical program or programs within the State)" immediately after "concerned with health".

(d) Section 314(a)(2)(C) of such Act is amended by inserting, "and including home health care" immediately after "private".

PART D—PROJECT GRANTS FOR AREAWIDE HEALTH PLANNING

SEC. 230. Section 314(b) of the Public Health Service Act is amended—

(a) by striking out, in the first sentence thereof, "June 30, 1970" and inserting in lieu thereof "June 30, 1975";

(b) by inserting after the word "services" the second place it appears therein, the phrase " and including the provision of such services through home health care";

(c) by striking out, in the second sentence thereof, "and $15,000,000 for the fiscal year ending June 30, 1970" and inserting in lieu thereof the following: "$15,000,000 for the fiscal year ending June 30, 1970, $20,000,000 for the fiscal year ending June 30, 1971, $30,000,000 for the fiscal year ending June 30, 1972, $40,000,000 for the fiscal year ending June 30, 1973, $50,000,000 for the fiscal year ending June 30, 1974, and $60,000,000 for the fiscal year ending June 30, 1975";

(d) by inserting "(1)(A)" immediately after "(b)"; and

(e) by adding after and below the existing language contained therein the following:

"(B) Project grants may be made by the Secretary under subparagraph (A) to the State agency administering or supervising the administration of the State plan approved under subsection (a) with respect to a particular region or area, but only if (i) no application for such a grant with respect to such region or area has been filed by any other agency or organization qualified to receive such a grant, and (ii) such State agency certifies, and the Secretary finds, that ample opportunity has been afforded to qualified agencies and organizations to file application for such a grant with respect to such region or area and that it is improbable that, in the foreseeable future, any agency or organization which is qualified for such a grant will file application therefor.

"(2) In order to be approved under this subsection, an application for a grant under this subsection must contain or be supported by reasonable assurances that there has been or will be established, in or for the area with respect to which such grant is sought, an areawide health planning council. The membership of such council shall include representatives of public, voluntary, and nonprofit private agencies, institutions, and organizations concerned with health (including representatives of the interests of local government, of the regional medical program for such area, and of consumers of health services). A majority of the members of such council shall consist of representatives of consumers of health services."

PART E—PROJECT GRANTS FOR TRAINING, STUDIES AND DEMONSTRATIONS

SEC. 240. Section 314(c) of the Public Health Service Act is amended—

(a) by striking out, in the first sentence thereof, "June 30, 1970" and inserting in lieu thereof "June 30, 1975"; and

(b) by striking out, in the second sentence thereof, "and $7,500,000 for the fiscal year ending June 30, 1970" and inserting in lieu thereof the following: "$7,500,000 for the fiscal year ending June 30, 1970, $8,000,000 for the fiscal year ending June 30, 1971, $9,000,000 for the fiscal year ending June 30, 1972, $10,000,000 for the fiscal year ending June 30, 1973, $11,000,000 for the fiscal year ending June 30, 1974, and $12,000,000 for the fiscal year ending June 30, 1975".

PART F—GRANTS FOR COMPREHENSIVE PUBLIC SERVICES

SEC. 250. Section 314(d)(1) of the Public Health Service Act is amended by striking out "and $100,000,000 for the fiscal year ending June 30, 1970" and inserting in lieu thereof "$100,000,000 for the fiscal year ending June 30, 1970, $130,000,00 for the fiscal year ending June 30, 1971, $145,000,000 for the fiscal year ending June 30, 1972, $165,000,000 for the fiscal year ending June 30, 1973, $180,000,000 for the fiscal year ending June 30, 1974, and $200,000,000 for the fiscal year ending June 30, 1975".

PART G—PROJECT GRANTS FOR HEALTH SERVICES DEVELOPMENT

SEC. 260. (a)(1) The first sentence of 314 (e) of the Public Health Service Act is amended by striking out "and $80,000,000 for the fiscal year ending June 30, 1970" and inserting in lieu thereof "$80,000,000 for the fiscal year ending June 30, 1970, $109,500,000 for the fiscal year ending June 30, 1971, $135,000,000 for the fiscal year ending June 30, 1972, $157,000,000 for the fiscal year ending June 30, 1973, $186,000,000 for the fiscal year ending June 30, 1974, and $213,000,000 for the fiscal year ending June 30, 1975".

(2) The first sentence of such section 314 (e) is further amended by inserting "(including equity requirements of and amortization of loans for facilities)" immediately after "cost".

(b)(1) The second sentence of such section 314(e) is amended to read as follows: "Grants under this subsection shall be made only upon applications therefor which are approved by the Secretary, and the Secretary may not approve any application for any grant under this subsection with respect to any area unless he is satisfied (on the basis of evidence contained in or submitted in connection with such application) that reasonable opportunity for review of and comment on such application has been provided (i) to the agency or organization referred to in subsection (b) which is responsible for the development, for such area, of a comprehensive regional, metropolitan, or other area plans for coordination of existing and planned health services, or (ii) if there is no such agency or organization, to such other public or nonprofit private agency (if any) which is determined (in accordance with regulations of the Secretary) to be performing for the area with respect to which such grant is requested, health planning functions similar to those performed by an agency or organization referred to in subsection (b) which is responsible for the development of comprehensive regional, metropolitan, or other area plans for coordination of existing and planned health services.

(2) The amendment made by paragraph (1) shall be effective with respect to grants under section 314(e) of the Public Health Service Act which are made after the date of enactment of this Act.

PART H—ADMINISTRATION OF GRANTS IN CERTAIN MULTIGRANT PROJECTS

SEC. 270. Part A of title III of the Public Health Service Act is amended by adding at the end thereof the following new section:

"SEC. 310a. For the purpose of facilitating the administration of, and expediting the carrying out of the purposes of, the programs established by title IX, and sections 304, 314(a), 314(b), 314(c), 314(d), and 314 (e) of this Act in situations in which grants are sought or made under two or more of such programs with respect to a single project, the Secretary is authorized to promulgate regulations—

"(1) under which the administrative functions under such programs with respect to such project will be performed by a single administrative unit which is the administrative unit charged with the administration of any of such programs or is the administrative unit charged with the supervision of two or more of such programs;

"(2) designed to reduce the number of applications, reports, and other materials required under such programs to be submitted with respect to such project, and otherwise to simplify, consolidate, and make uniform (to the extent feasible), the data and information required to be contained in such applications, reports, and other materials; and

"(3) under which inconsistent or duplicative requirements imposed by such programs will be revised and made uniform with respect to such project;

except that nothing in this section shall be construed to authorize the Secretary to waive or suspend, with respect to any such project, any requirement with respect to any of such programs if such requirement is imposed by law or by any regulation required by law."

PART I—ANNUAL REPORT

SEC. 280. Part A of title III of the Public Health Service Act is further amended by adding after section 310a thereof (as added by section 270 of this Act) the following new section:

"310b. On or before January 1 of each year, the Secretary shall transmit to the Congress a report of the activities carried on under the provisions of title IX of this Act and sections 304, 305, 314(a), 314(b), 314(c), 314(d), and 314(e) of this title together with (1) an evaluation of the effectiveness of such activities in improving the efficiency and effectiveness of the research, planning, and delivery of health services in carrying out the purposes for which such provisions were enacted, (2) a statement of the relationship between Federal financing and financing from other sources of the activities undertaken pursuant to such provisions (including the possibilities for more efficient support of such activities through use of alternate sources of financng after an initial period of support under such provisions), and (3) such recommendations with respect to such provisions as he deems appropriate.

TITLE III—NATIONAL COUNCIL ON HEALTH POLICY

SEC. 301. (a) There is hereby established, in the Executive Office of the President, a National Council on Health Policy (hereinafter referred to as the "Council"), which shall consist of three members who shall be of distinguished competence in the field of health or any field related thereto, and who are not otherwise in the employ of the United States. Members of the Council shall be appointed by the President, to serve at his pleasure, by and with the advice and consent of the Senate. The President shall designate one of the members of the Council to serve as Chairman.

(b) Each member of the Council shall hold office for a term of three years, except that any member appointed to fill a vacancy occurring prior to the expiration of the term for which his predecessor was oppointed shall be appointed for the remainder of such term, and except that the terms of office of the members first taking office shall expire, as designated by the President at the time of appointment, one at the end of the first year, one at the end of the second year, and one at the end of the third year, after the date of appointment. A member shall not be eligible to serve continuously for more than two terms.

(c) Members of the Council shall serve full time, and the Chairman of the Council shall be compensated at the rate provided for level II of the Executive Schedule (5 U.S.C. 5313). The other members of the Council shall be compensated at the rate provided for level IV of the Executive Schedule (5 U.S.C. 5315).

SEC. 302. (a) It shall be the duty and function of the Council to conduct studies, research, and investigations for the purpose of setting goals for a national health policy for the United States and of making recommendations to the President and to the Congress of various means whereby such goals may be attained.

(b) In carrying out its duty and function, the Council shall—

(1) conduct a continuous evaluation of policies and programs related to the Nation's health (including policies and programs related to disaster planning) and make recommendations for the revision, expansion, and improvement of such policies and programs;

(2) initiate, study, and develop measures designed to assure the provision of adequate manpower, services, and facilities for the Nation's health, including the mobilization, allocation, and utilization of such manpower, services, and facilities;

(3) evaluate studies and surveys made by or concerned with departments and agencies of the Federal Government in relation to the Nation's health needs and resources;

(4) advise and consult with departments and agencies of the Federal Government on policies and programs concerned with health services, manpower, and facilities; and

(5) upon the request of the President with respect to any matter concerning the Nation's health, submit to the President a report containing such information, data, or recommendations on such matters as the President may indicate in such request.

(c) The Council shall submit annually to the President and the Congress a report of its activities together with a statement of the national health policy and goals established by it and its recommendations of measures designed for the attainment of such goals.

SEC. 303. The various departments and agencies of the Federal Government shall cooperate with the Council in carrying out its responsibilities.

SEC. 304. The Council shall have authority to employ such professional, technical, and clerical staff as may be required to carry out its duties and functions. In addition, the Council may employ and fix the compensation of such experts and consultants as may be necessary to carry out its functions, in accordance with section 3109 of title 5, United States Code (but without regard to the last sentence thereof).

SEC. 305. For the purpose of carrying out the provisions of this title, there is authorized to be appropriated $300,000 for the fiscal year ending June 30, 1971, $700,000 for the fiscal year ending June 30, 1972, and $1,000,000 for each fiscal year after the fiscal year which ends June 30, 1972.

TITLE IV—AUTHORITY FOR GROUP PRACTICE

SEC. 401. (a) The Secretary of Health, Education, and Welfare may, in accordance with the provisions of this section, authorize any carrier, which is a party to a contract entered into under chapter 89 of title 5, United States Code (relating to health benefits for Federal employees), or under the Retired Federal Employees Health Benefits Act, or which participates in the carrying out of any such contract, to issue in any State contracts entitling any person as a beneficiary to

receive comprehensive medical services (as defined in subsection (b)) from a group practice unit or organization (as defined in subsection (c)) with which such carrier has contracted or otherwise arranged for the provision of such services.

(b) As used in this section, the term "comprehensive medical services" means comprehensive preventive, diagnostic, and therapeutic medical services (as defined in regulations of the Secretary), furnished on a prepaid basis; and may include, at the option of a carrier, such other health services including mental health services, and equipment and supplies, furnished on such terms and conditions with respect to copayment and other matters, as may be authorized in regulations of the Secretary.

(c) As used in this section—

(1) The term "group practice unit or organization" means a nonprofit agency, cooperative, or other organization undertaking to provide, through direct employment of, or other arrangements with the members of a medical group, comprehensive medical services (or such services and other health services) to members, subscribers, or other persons protected under contracts of carriers.

(2) The term "medical group" means a partnership or other association or group of persons who are licensed to practice medicine in a State (or of such persons and persons licensed to practice dentistry or optometry) who (A) as their principal professional activity and as a group responsibility, engage in the coordinated practice of their profession primarily in one or more group practice facilities, (B) pool their income from practice as members of the group and distribute it among themselves according to a prearranged plan, or enter into an employment arrangement with a group practice unit or organization for the provision of their services, (C) share common overhead expenses (if and to the extent such expenses are paid by members of the group), medical and other records, and substantial portions of the equipment and professional, technical, and administrative staff, and (D) include within the group at least such professional personnel, and make available at least such health services, as may be specified in regulations of the Secretary.

(d) Nothing in this section shall preclude any State or State agency from regulating the amounts charged for contracts issued pursuant to subsection (a) or the manner of soliciting and issue such contracts, or from regulating any carrier issuing such contracts in any manner not inconsistent with the provisions of this section.

Mr. GRIFFIN. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The assistant legislative clerk proceeded to call the roll.

Mr. YARBOROUGH. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. YARBOROUGH. Mr. President, the proposed act now before the Senate, Senate bill 3355, is the Health Services Improvement Act of 1970. It is a bill to amend titles III and IX of the Public Health Service Act so as to extend and improve the existing program relating to education, research, training, and demonstrations in the fields of heart disease, cancer, stroke, and other major diseases and conditions, and for other purposes.

While we have had a number of health acts before the 91st Congress last year and this year, and will have others, this is one of the two most important health programs before the Congress this session.

This bill would make important additions to existing legislation relating to improved health statistical systems. This is in addition to extending the authorizations for regional medical programs and the comprehensive health planning and health services research and development.

This legislative extension is badly needed. As the distinguished Senator now presiding (Mr. SAXBE) knows, being a member of the full committee and having heard the discussion, the bill would establish a Council of Health Advisors and would encourage the group practice of medicine. It is a very far-reaching and comprehensive health bill.

TITLE I

The substantive authority for regional medical programs, comprehensive health planning and services and health services research and development expired last June 30. This 5-year extension is, therefore, essential, if we are to continue to make progress against this country's health care crisis.

Mr. President, I would like to briefly describe each of these programs as well as the other major amendments the committee is recommending.

Initially established in October 1965, as a result of the DeBakey Commission, the chairman of which was the famous heart surgeon, Dr. DeBakey, of Houston, Tex., the regional medical programs have developed regional cooperative arrangements among medical centers, hospitals, practicing physicians, voluntary and official health agencies, and other health interests and groups for the purpose of improving the quality of care for heart disease, cancer, and stroke.

Heart disease, cancer, and stroke are the major killers of the American people. In that order, they kill more Americans than any other disease.

During the extensive hearings on S. 3355, the Health Subcommittee of the Senate Labor and Public Welfare Committee was provided with evidence of substantial progress in implementing the concept and achieving the goals of regional medical programs.

Of the 55 regional medical programs established for planning programs during the first 2 years of the program, 54 are now operational. These 55 cover the entire country and all its people. The regions range in population from a few hundred thousand to as many as 20 million; they vary in area from several counties to several States; and the 55 reflect great differences, as well as similarities, in the nature and magnitude of their health resources and needs.

All, however, are characterized by a degree of local autonomy and decisionmaking that is unique among Federal health programs.

Let me repeat, it is unique among Federal health programs that each has a great deal of autonomy and decisionmaking power. Thus, each program has been encouraged to deal with the particular health needs of the region it serves. This has been possible because of the flexibility of the original law, the concept of regionalization it represented, its effective national administration, and, in the final analysis, the skill, motivation, and good judgment of those who are locally implementing the programs.

To achieve this, virtually all elements of the health care system—medical schools—which had a great influence—hospitals, academic and practicing physicians, dentists, members of all of the allied health professions, voluntary and public health organizations and agencies, and National, regional, State, and local government agencies—which historically were reticent to join together in such cooperative arrangements, were reached and convinced of both the uniqueness of regional medical programs and the need for this implementation. The extent to which this joining together under regional medical programs has been accomplished can be illustrated by the numbers of individuals and institutions involved. Over 10,000 hospital administrators and trustees, practicing physicians, medical center and medical school officials and faculty, and representatives of public and private agencies serve as members of regional planning committees and regional task forces and 330 local action groups.

In addition, over and above the working staffs of the 55 programs, 3,000 individuals are serving on RMP regional advisory groups in the various disciplines for these different areas. These individuals represent a total of some 6,300 health and health-related institutions, including all of the Nation's medical schools, hospitals, every State medical society, State and city health departments, voluntary health associations, other private and public agencies, and also consumer groups.

Coming to the bill itself, title I of the bill, in addition to extending regional medical programs for 5 years through June 30, 1975, and authorizing appropriations totaling $1.1 billion, includes the following legislative modifications:

The bill adds "kidney disease" and "other major diseases and conditions" to the original three—heart disease, cancer, and stroke—and provides that a maximum of $15 million of the amount appropriated in fiscal year 1971 be available for kidney disease activities. This broadened program authority will permit testing and evaluation methods for prevention and control at the community level, and support the organization and implementation of kidney disease programs on an interregional basis across the Nation. I would remind my colleagues that nearly 8 million persons in the United States are afflicted with kidney disease, of which about 60,000 progress to a terminal condition and death each year, if life-sustaining treatment is not available.

Mr. President, I would point out in that connection that with kidney disease, where a few years ago most cases progressing to that point would lead to a very terrible and painful death, now many people are saved, either through a kidney transplant operation or through the use of a dialysis machine. There are

not enough dialysis machines, and there is a terrible problem constantly facing the medical profession at the present time as to who shall receive the treatment and who shall not, and thus be condemned to certain death.

But the medical profession has progressed to the point where it has permitted some persons to go home and live a good number of years, perhaps even to their normal life expectancy. So this has been successful, Mr. President, not merely experimental, like the heart transplant operation. Both types of treatment have succeeded, the kidney transplant and the dialysis machine.

It would make explicit that prevention and rehabilitation—including home health care—as well as diagnosis and treatment, are clearly within the scope of the regional medical program.

In other words, it is not just a matter of treatment, but also of prevention and rehabilitation—prevention of the disease to begin with, and rehabilitation after recovery. We are broadening the coverage in this bill. It also emphasizes that regional medical programs must be concerned with strengthening and improving primary care and the relationship between specialized and primary care; and improving health services for persons residing in areas with limited health services.

It would promote increased cooperation and coordination with the comprehensive health planning program by providing for representation of official health and planning agencies on the regional advisory groups and, at the same time, RMP representation at the State and areawide comprehensive health planning councils.

Representation of the Veterans' Administration would similarly be required, though on an ex officio basis.

It also provides that before a regional advisory group may recommend approval of an operational grant, an opportunity must be provided for consideration of that application by the appropriate areawide comprehensive health planning agency. These changes are designed to encourage and accelerate the development of a practical working relationship between these programs along the lines that already have emerged in some regions and localities, but not in all.

The bill includes explicit contract authority for regional medical programs. This is especially important in relation to the expanded multiprogram services authority included in the bill. Not only would the authorization for interregional support activities of use to two or more regional medical programs be continued, but it would allow, for example, cooperative clinical field trials and demonstrations. Activities such as these are far more effectively accomplished by utilizing the contract mechanism.

Finally, S. 3355 adds authority for the new construction of facilities for demonstration, research, and training unique to regional medical programs. The need for limited construction of facilities specifically tailored to the purposes of the regional medical programs was clear as long ago as 1967, or within 2 years after the original law was passed. Those needs were documented in the 1967 "Report to the President and the Congress on RMP's." Those needs have not yet been met. They have in fact continued to increase, despite the action taken by Congress in 1967.

TITLE II

Title II of the bill extends and improves the legislative authorities for the comprehensive planning program, health services research and development programs, and health statistical activities. Title II would also permit in appropriate and limited circumstance, the joint administration of the grant programs covered in the bill, as well as require the Secretary of Health, Education, and Welfare to annually report to the Congress on the effectiveness of those programs.

We added to the bill the provision for the annual report to Congress so that Congress could, with its oversight authority, see that this money was being expeditiously and efficiently spent.

COMPREHENSIVE HEALTH PLANNING

S. 3355 extends and modifies the comprehensive health planning and services program.

When the Congress first enacted this legislation in 1966, it acknowledged the necessity for encouraging and assisting communities and States—working in concert—to take stock of their own health problems and resources and to determine the means best suited to their situations for solving problems.

The committee's bill would make several improvements in the comprehensive health planning program:

First. It would provide for representation on State and areawide planning groups by Veterans' Administration representatives—on an ex-officio basis—as well as including RMP representatives.

Second. It would make explicit the concern of comprehensive health planning agencies with home health care resources and services.

Third. In limited circumstances, it would permit project grants to State planning agencies for providing planning assistance to areas of that State which are not likely to have the resources to mount an areawide planning effort of their own. This was primarily to assist rural areas in a State with primarily small rural populations. This improvement will greatly assist rural areas, which otherwise would not have the resources to independently sustain an areawide planning effort.

Fourth. It would require the areawide planning agencies to comment upon applications for health services support under section 314(e) of the program, thereby fostering greater coordination.

Fifth. Lastly, with respect to the partnership program, it would authorize payments under section 314(e) for loan amortization and equity requirements on facilities. This provision will facilitate the planned transfer of certain neighborhood centers projects from OEO to HEW.

HEALTH STATISTICAL ACTIVITIES

The proposed amendments regarding health statistics in title II would change the National Health Survey provisions in section 305(a) of the Public Health Service Act to reflect the increasing demand for data regarding health care resources, environmental and social health hazards, and family information, growth, and dissolution, and would provide an assurance of confidentiality for information collected for survey purposes.

Most important, it would authorize the development and demonstration models of a cooperative Federal-State-local health statistics system. The Federal Government is now dependent upon State and local sources for many types of health statistics, principally in fields of births, deaths, health facilities, and manpower. On the other hand, local areas often rely on Federal statistical resources for information, which they should be obtaining for themselves in detail, that would permit adequate health planning and evaluation of program progress. The intent of this legislation is to permit research needed to develop a cooperative system in which each level of jurisdiction carries on those functions for which it has the greatest capability, with an interchange of statistical information of uniform quality and comparability, so that statistics will mean something and they will be understood in all areas of the country.

HEALTH SERVICES RESEARCH AND DEVELOPMENT

Title II also extends section 304 of the Public Health Services Act, which enables HEW to assist communities in improving their health services through research and development. Section 304 authorizes grants and contracts for research, development, demonstrations, and related training in all aspects and problems of the organization, delivery, and financing of health services.

Experiments may be conducted on the construction, organization, and operation of hospitals and other facilities, experimental automated equipment, new careers in health services and new methods of training health personnel, and on entire new systems for organizing, delivering and financing health services in communities. Under this authority, HEW has begun projects with the leaders of the health professions and institutions involving contract-supported research and development on the practical problems involved in extending access to health services, while containing cost and maintaining quality of services.

The committee bill would broaden these activities by calling for the development, through systems analysis, of alternative national systems for the organization and delivery of health services, to be submitted to Congress by June 30, 1971, and a cost and coverage report on the legislative proposals for national health insurance pending before this Congress to be submitted by December 31, 1970.

JOINT ADMINISTRATION OF COMBINED PROJECTS

The bill also provides mechanisms for improved grant administration through joint administration projects involving more than one of the grant programs covered by the bill. The committee's amendment in this regard is innovative yet prudent. Its coverage is restricted to

the grant programs authorized by this bill. Its scope is limited only to administrative functions, as contrasted to requirements imposed by law or regulations required by law. Finally, the single administrative units which could be designated to administer such combined projects is limited to one of the units, which administers the programs included in the bill, or the units to which they directly report—the Health Services and Mental Health Administration.

ANNUAL REPORT

The bill also calls for a single annual report assessing the effectiveness of these grant programs and examining the effectiveness of these grant programs and examining their overall relationship to health financing mechanisms.

TITLE III

Title III of S. 3355 provides for a three-member National Council on Health Policy to be established in the Executive Office of the President, which would set goals for a national health policy for the country, and would make recommendations to the President and Congress on the means for attainment of those goals. The Council would annually report to the President and Congress on its activities. It would be the health counterpart to the Council of Economic Advisers.

The distinguished occupant of the Chair will recall that in the committee, when we were discussing this, it was said that this Nation is spending $63 billion a year on its health, when we count the personal expenditures and tax expenditures. So, to raise this to a level of this national problem, this bill would create this council of health advisers to the country, as we say, hoping that it will reach the status of the National Council of Economic Advisers.

TITLE IV

Title IV of the bill would facilitate the group practice of medicine. It provides that the Secretary of Health, Education, and Welfare may authorize insurance carriers participating in Federal health insurance programs for Federal employees to issue prepaid group practice health insurance policies for all persons, whether or not such persons are Federal employees.

The purpose of title IV is to promote the development and use of prepaid group practice, and thereby to make this innovative type of health care delivery system available to both consumers and physicians who desire to take advantage of it. The committee believes that prepaid group practice is one of the most promising developments in recent years for improving the delivery of high-quality medical care in the United States. Many health experts regard group practice as the health care of the future in America. They believe it is the best available method to achieve more effective and more economical use of our scarce professional personnel and expensive health facilities.

We know that there are some 17 countries in the world where the average male child is going to live longer than the average male child in the United States. We are 13th among the nations of the world with respect to children who die in the first year after birth. We are 7th among the nations of the world with respect to mothers who die in childbirth. There are many other respects in which our health, while not declining per se, has declined in comparison with other industrial nations of the world.

CONCLUSION

Finally, Mr. President, let me strongly underscore the importance of the programs contained in the committee's bill. We all are painfully aware of our country's health care crisis. At this time, the prognosis for the alleviation of these problems in America is not clear. The programs in this bill, particularly the regional medical programs, are essentially tools for productively influencing the organization and delivery of health services to the people of the country. We think it is the duty of this Government, particularly Congress, to make every effort to insure that they remain so. The committee's bill does just that.

The present regional medical health program is very successful. By these broadening provisions, we hope to make it more successful in the future.

The bill reported by the committee, now before the Senate, is open to amendment, and a number of amendments have been offered.

Mr. President, I offer, on behalf of myself and the distinguished Senator from New York (Mr. JAVITS), an amendment and ask that it be stated.

The PRESIDING OFFICER. The amendment will be stated.

The legislative clerk read as follows:

On page 32, after line 33, insert the following:

PART J—COMMUNITY MENTAL HEALTH CENTERS

SEC. 290. Section 201 of the Community Mental Health Centers Amendments of 1970 is amended by adding at the end thereof the following new subsection:

"(c) In the case of any community mental health center—

"(1) for which a staffing grant was made under part B of the Community Mental Health Centers Act for any period which began on or before June 30, 1970; and

"(2)(A) with respect to which the portion of the costs (as described in section 220(a) of such Act) which may be met from funds under a grant under such part B is increased (by reason of the enactment of the preceding subsections of this section) for any period after June 30, 1970; or

"(B) with respect to which the period during which a grant under such part B may be made is extended by reason of the enactment of subsection (a) of this section; the provisions of section 221(a)(4) of such Act shall be deemed to have been complied with for any period after June 30, 1970, if the Secretary determines that there is satisfactory assurance that the amount of total costs (as described in section 220(a) of such Act) which will be incurred by such center for staffing purposes for any period after June 30, 1970 will not be less than the amount of such total costs for the period which last commenced on or before June 30, 1970."

Mr. WILLIAMS of Delaware. Mr. President, has the Senator finished?

Mr. YARBOROUGH. I have a brief explanation of the amendment, and then I think the Senator from Illinois has a statement in connection with the amendment, in lieu of the Senator from New York (Mr. JAVITS).

Mr. President, the amendment that I and the distinguished ranking minority member of the Senate Labor and Public Welfare Committee offer today will remedy an unforeseen defect in Public Law 91–211, the Mental Health Center Amendments of 1970.

Congress recently markedly liberalized the terms and conditions under which grants may be awarded to staff community mental health centers. For example, the length of grant support has been increased for 4 to 8 years. The ratio of Federal participation has been significantly increased. And even higher ratios of Federal support have been authorized for centers serving poverty areas.

The basis for Congress action in this regard was principally the administration's testimony that the preexisting grant mechanism was inadequate. In fact, a substantial proportion of the Mental Health Centers which had been funded under the old authority were in serious financial difficulty. Accordingly, we in Congress, at the behest of the administration, significantly liberalized the law. We also intended that all previously funded centers would be converted, as of July 1, 1970, to the appropriate higher rate of Federal funding.

What was not foreseen at that time was that to convert those centers to the higher rate would conflict with a provision of the Community Mental Health Centers Act. That provision, commonly known as the "maintenance-of-effort" provision, requires that Federal funds not be used to supplant non-Federal funds.

Accordingly, we are faced with the bizarre situation of having accidentally excluded from the new legislation those centers, which by the nature of their financial distress, provided the justification for the improvements which the administration requested and with which the Congress concurred.

This amendment rectifies that obvious inequity. Its effect is to mandate the conversion of each of those centers without regard to the maintenance-of-effort provision, so long as the total program effort of the center is not diminished in absolute terms.

Mr. President, as I have said, this situation was not foreseen either by the administration or by the Congress at the time we enacted these amendments last March. If we had foreseen it, we would have included language like that contained in this amendment last March. This is a good amendment. It grants special privilege to no center, but it prevents unfair discrimination against some mental health centers. Senator JAVITS and I urge its adoption.

The Senator from Illinois (Mr. SMITH) has a word to say on behalf of the Senator from New York (Mr. JAVITS), who is not here at this time.

Mr. SMITH of Illinois. Mr. President, as a minority member on the committee, I have been advised that there is no objection, on behalf of the Senator from New York (Mr. JAVITS), who is the ranking minority member, to adoption of the pending amendment.

The PRESIDING OFFICER (Mr. Mc-

INTYRE). The question is on agreeing to the amendment of the Senator from Texas (Mr. YARBOROUGH).

The amendment was agreed to.

Mr. YARBOROUGH. Mr. President, the Senator from Illinois (Mr. SMITH) is waiting with an amendment.

The PRESIDING OFFICER. The Senator from Illinois is recognized.

Mr. SMITH of Illinois. Mr. President, on behalf of myself, and Senators JAVITS, SCOTT, PERCY, GOLDWATER, BROOKE, MILLER, MURPHY, PACKWOOD, DOLE, HRUSKA, TOWER, THURMOND, and PROUTY, I send to the desk an unprinted amendment and ask that it be stated.

The PRESIDING OFFICER. The amendment will be stated.

The legislative clerk read as follows: After line 23, page 32, insert the following:

SEC. 281. (a) The Congress finds that there is general agreement that air, water, and other common environmental pollution may be hazardous to the health of individuals resident in the United States, but that despite the existence of various research papers and other technical reports on the health hazards of such pollution, there is no authoritative source of information about (1) the nature and gravity of these hazards, (2) the availability of medical and other assistance to persons affected by such pollution, especially when such pollution reaches emergency levels, and (3) the measures, other than those relating solely to abatement of the pollution, that may be taken to avoid or reduce the effects of such pollution on the health of individuals.

(b) The Secretary of Health, Education, and Welfare shall immediately commence (a) a study of the nature and gravity of the hazards to human health and safety created by air, water, and other common environmental pollution, (b) a survey of the medical and other assistance available to persons affected by such pollution, especially when such pollution reaches emergency levels, and (c) a survey of the measures, other than those relating solely to abatement of the pollution, that may be taken to avoid or reduce the effects of such pollution on the health of individuals.

(c) The Secretary shall, within nine months of the enactment of this Act, transmit to the Congress a report of the study and surveys required by subsection (b) of this section, including (a) his conclusions regarding the nature and gravity of the hazards to human health and safety created by environmental pollution, (b) his evaluation of the medical and other assistance available to persons affected by such pollution, especially when such pollution reaches emergency levels, (c) his assessment of the measures, other than those relating solely to abatement of the pollution, that may be taken to avoid or reduce the effects of such pollution on the health of individuals, and (d) such legislative or other recommendations as he may deem appropriate.

(d) The Secretary shall, within one year of his transmittal to the Congress of the report required by subsection (c) of this section, and annually thereafter, supplement that report with such new data, evaluations, or recommendations as he may deem appropriate.

(e) There are authorized to be appropriated such sums as may be necessary to carry out the provisions of this section.

Mr. SMITH of Illinois. Mr. President, in January, I introduced S. 3316, the Health Hazards of Pollution Act. The bill would have required the Secretary of Health, Education, and Welfare to begin immediately three parallel inquiries: First, a study of the nature and gravity of the health hazards created by air, water, and other common pollution; second, a survey of the medical and other assistance available to persons affected by pollution, especially pollution at what might be called "emergency levels," and third, a survey of the measures, outside of pollution abatement, that may be taken to avoid or reduce the health hazards that lurk in the polluted environment. At the completion of his inquiries and within 9 months of the bill's enactment, the Secretary would report his findings, evaluations, and recommendations to the Congress.

Sixteen Senators have joined in cosponsorship of S. 3316, including both the ranking majority and minority members of the Labor and Public Welfare Committee, and the distinguished minority leader of the Senate.

As yet there has been no opportunity for hearings on the bill. In my opinion, hearings would accomplish relatively little. The bill is simple. The need is urgent. The cost is small.

The amendment I offer to S. 3355 is identical to S. 3316.

It is, in some respects, promised upon the adage that men often cannot see the trees for the forest. It seems to me, Mr. President, that in the number and variety of our antipollution proposals, we have consistently overlooked the principal cause of our concern about the environment, the effects of pollution upon the health of our citizens. We have proposed the establishment of air and water quality standards and their enforcement, increased Federal aid for the construction of antipollution facilities—even the taxation of pollution by the pound.

Our proposals to date vary in scope and in merit, but they all have one thing in common. They all seek pollution abatement or control in the future. They cannot help people overcome the recognized health hazards of pollution now. During the time that we introduce these measures, conduct hearings on them, debate them, pass, and begin to implement them—and the time they take hold and succeed in substantially removing the noxious agents now present in our land, air, and water—thousands, maybe scores of thousands, of Americans with respiratory or cardiac ailments will die because they are uninformed about the special hazards pollution creates for them. They will die because no one warned them to stay indoors on a certain day, or to avoid strenuous activity in a heavily polluted atmosphere. They will die because of a lack of personnel to treat them or of equipment to assist them. In times of lengthy temperature inversions and highly toxic air content, they will die—as did 4,000 in London in 1952, 62 in the Meuse Valley of Belgium in 1930, 22 in Donora, Pa., in 1948, as did scores in New York City around Thanksgiving Day in 1966—because their public officers have failed to create air pollution emergency plans.

Many, of course, will not be so dramatically affected. They will suffer aggravation of preexisting health conditions, or slowly develop new, chronic ailments. The strongest—or the luckiest—will sustain only headaches, smarting eyes and burning skin, or nausea. Like the greatest percentage of the thousands in Riverside, Calif., who suffered attacks of gastroenteritis during May and June of 1965, while a Salmonella organism went undetected in the public water supply, they will recover, hopefully without permanent health damage.

But the terrible truth is, that from November 7 to 13, 1969, when sulphur dioxide pollution in the city of Chicago rose twice to levels exceeding 25 parts per million, deaths from trachial bronchitis in children of crib age rose 50 percent beyond projected levels. That same combination of noxious gas and inversion conditions has prompted pollution alerts in cities across our land during the past year. In September of 1969, the Eastern Seaboard from Maine to the Carolinas was covered in a pollution-laden blanket of stagnant air, that contributed to untold suffering, and many hundreds of deaths. During that same month, the city of Los Angeles declared its fourth pollution alert of 1969. The smog problems of that fine city are the brunt of many jokes, but few realize the grim consequences of air pollution in Los Angeles: One in eight persons there suffer from one or more types of chronic respiratory ailments, and the incidence of emphysema has risen fourfold there in the past 10 years. Emphysema is, in fact, the fastest growing cause of death in the United States, according to the Social Security Administration, which expends over $80 million in disability payments on account of emphysema each year.

All of this is not a very pleasant picture. I do not mean to paint it in a "sky is falling" fashion. But I do mean to start some people thinking about what we know about the health hazards of pollution, what we can do to help those affected, what we can do to cut down on death and disease caused by pollution—while we are fighting to eradicate it. Are our medical schools preparing our doctors to minister to rising populations concentrated in soot and gas-laden atmospheres in or near our urban and industrial centers? Do our family physicians and public health officers know enough about the health hazards of pollution? Are they equipped to alert us, to treat us, to take prompt, effective action especially in emergency situations? These are some of the questions we need answers to right now.

The situation in many ways parallels our concern in recent years over the health hazards of smoking and the health hazards of pesticides. For at least two decades researchers conducted independent studies of the effects of cigarette smoking on human health. The results of their work for a long time received only the limited attention of their scientific colleagues through publication in technical and professional journals. It took the initiative of the Surgeon General of the United States to produce the reports

that in 1967 and 1968 began bringing the message of smoking's health hazards home to the American people.

Likewise, appreciation of the hazards of DDT was for many years restricted to the exchange of sophisticated technical data among researchers and technicians in professional journals and symposia. Again, it took the initiative of a public officer, Secretary of Health, Education, and Welfare, Robert Finch, to create the report authoritatively linking DDT with malformations of fetuses and the increasing incidence of cancers in experimental animals. The publication of the smoking and pesticides reports, together with the recommendations of those responsible for them, has already begun to save or extend human life, to prevent the onset or advancement of disease in millions. We need a similar rallying point to roll back the toll of avoidable deaths and diseases caused by air and water and other environmental pollution, and we need it now.

Mr. President, the Health Hazards of Pollution Act and my amendment which I now offer would require the Secretary of Health, Education, and Welfare to begin immediately three parallel inquiries: First, a study of the nature and gravity of the health hazards created by air, water, and other common pollution; second, a survey of the medical and other assistance available to persons affected by pollution, especially pollution at what might be called emergency levels, and third, a survey of the measures, outside of pollution abatement, that may be taken to avoid or reduce the health hazards that lurk in the polluted environment. At the completion of his inquiries and within 9 months of the bill's enactment, the Secretary would report his findings, evaluations and recommendations to the Congress. I would hope that his report would result, as did both the Surgeon General's Report on Smoking and Health and the Secretary's Report on Pesticides and the Environment, in a forthright, dispassionate, and authoritative treatment of a vital health question. The Secretary has demonstrated commendable efficiency and industry in organizing and producing the pesticides report in only 8 months. I am sure he shares our sense of urgency about pollution and health.

Mr. President, this session will surely see environment-related activity, but while we debate alternative methods of pollution control, while we haggle about how much money the Government ought to be making available to abate the fouling of our air and water, while we shuffle to the hopper with bills and resolutions of every variety, hoping to gain a consensus on a course of action, Americans will be suffering and dying. Someone ought to be informing them, warning them, planning to prevent or diminish the threat to their lives and health, while the pollution—and our debate—continues.

Mr. SCOTT. Mr. President, would the distinguished Senator from Illinois yield?

Mr. SMITH of Illinois. I yield.

Mr. SCOTT. Mr. President, I am very happy to support the amendment and to express the hope that the manager of the bill would find it possible to accept it.

Mr. YARBOROUGH. Mr. President, the distinguished Senator from Illinois gave us notice about this amendment about a week ago. In fact, he gave us copies 2 days ago so that we would have time in which to study it.

The Department of Health, Education, and Welfare says that they can administer this measure and that it is satisfactory with them. With the assurance of the Health, Education, and Welfare Department, we are prepared to accept the amendment.

Mr. SMITH of Illinois. Mr. President, I thank the distinguished minority leader.

Mr. PERCY. Mr. President, today, my colleague from Illinois, Senator RALPH SMITH, introduced an amendment to S. 3355 which I am pleased to cosponsor. This amendment would require the Secretary of Health, Education, and Welfare to conduct three studies: First, a study of the nature and gravity of the health hazards created by pollution of all types; second, a survey of the medical and other assistance available to persons affected by pollution; and third, a survey of the measure, in addition to pollution abatement, that may be taken to avoid or reduce the health hazards that are caused by pollution.

Mr. President, should we have any doubt as to the magnitude of the health problems created by pollution we need only analyze an article reporting on the results of a study conducted by two Pittsburgh economists, Dr. Lester B. Lave and Eugene P. Seskin of the Carnegie-Mellon School of Industrial Administration. The study conducted by these two men indicated that if air pollution were reduced by 50 percent in our major cities:

First, a newborn baby would have an additional 3 to 5 years' life expectancy;

Second, deaths from lung cancer, and other lung diseases would be reduced by 25 percent;

Third, death and disease from heart and blood vessel disorders might be reduced by 10 to 15 percent; and

Fourth, all disease and death would be reduced by 4.5 percent yearly and the annual saving to the Nation would be at least $2 billion.

Clearly this study indicates that pollution is a health problem of great magnitude and that this amendment is indeed necessary. We have made a number of efforts this session to deal with the abatement of pollution. But these efforts will take time to become effective. We should take action now which will enable us to measure the exact magnitude of the present health hazard and which will enable us to take the necessary steps to reduce or avoid the problem.

The PRESIDING OFFICER. The question is on agreeing to the amendment of the Senator from Illinois.

The amendment was agreed to.

Mr. SMITH of Illinois. Mr. President, on behalf of the Senator from Vermont (Mr. PROUTY), I ask unanimous consent that a statement by him on the pending bill be printed in the RECORD.

There being no objection, the statement by Senator PROUTY was ordered to be printed in the RECORD, as follows:

STATEMENT OF SENATOR PROUTY

Mr. President, two amendments were accepted in committee without opposition.

The first changed the definition of an RMP by adding a new subsection dealing with health care delivery systems. S. 3355 called for revision of Section 902(a) of the Public Health Service Act to allow for an expanded categorical approach including attention to Heart, Stroke, Cancer, Kidney, and other diseases as opted for by the applicant. Senator Prouty added a new definition of an RMP as one which voluntarily develops and demonstrates health care systems while continuing its other activities required by the categorical definition.

The language is permissive and not mandatory. It also precludes an untested RMP from entering the delivery field while insuring continued operation of ongoing categorical activities. The amendment will allow RMPs who are developing systems approaches in their categorical activities to offer more assistance to regions and localities in allocating their health care resources and services.

The second amendment expands the project authority for Section 304 of the Public Health Service Act providing Research and Demonstration relating to health facilities and services. By adding delivery of health services to existing project authority for construction, equipment and manpower activities, I opened a new source of funds to RMPs wanting to demonstrate new health care delivery systems.

I was also a co-sponsor of S. 3316, calling for a study of Health Hazards of Pollution and support it as an amendment to S. 3355.

The PRESIDING OFFICER. The bill is open to further amendment.

Mr. WILLIAMS of Delaware. Mr. President, the pending bill calls for appropriations of $3,594,500,000. I certainly think that we will want a record vote on this matter. I therefore ask for the yeas and nays on final passage.

The yeas and nays were ordered.

Mr. WILLIAMS of Delaware. Mr. President, I quote from a letter from the Bureau of the Budget as to the need for the bill:

In the light of the serious fiscal situation now foreseen, we think the authorization levels contained in S. 3355 are not realistic.

They go on in the letter to point out that, confronted with a deficit of the size we now have, we cannot afford to expand these programs to the extent proposed in the Senate bill. They only recommended $377 million for fiscal 1971. The committee bill increased that to $516.8 million. The committee bill recommends $621,700,000 in 1972, and $737 million in 1973, $818 million in 1974, and $901 million in 1975, for a total of $3,594,500,000.

I think it is about time that Members of the Senate begin to think about the higher taxes that will be required to support some of these ever expanding programs.

Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The legislative clerk proceeded to call the roll.

Mr. YARBOROUGH. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. YARBOROUGH. Mr. President, I call up amendment No. 2, an amendment by the Senator from Colorado (Mr. DOMINICK), the Senator from New York (Mr. JAVITS), and the Senator from California (Mr. MURPHY).

The PRESIDING OFFICER. The amendment will be stated.

The legislative clerk read as follows:

On page 32, after line 23, insert the following:

"PART K—REGULATION OF VACCINES, BLOOD, BLOOD COMPONENTS, AND ALLERGENIC PRODUCTS

"SEC. 290. Section 351 of the Public Health Service Act is amended by inserting, after 'antitoxin', each time such word appears the following 'vaccine, blood, blood component or derivative, allergenic product,'."

Mr. SMITH of Illinois. Mr. President, on behalf of the Senator from Colorado (Mr. DOMINICK), I ask unanimous consent that a statement by him on the pending amendment be printed in the RECORD.

There being no objection, the statement by Senator DOMINICK was ordered to be printed in the RECORD, as follows:

STATEMENT OF SENATOR DOMINICK

Mr. President, this amendment is identical to S. 3601, the Administration bill which I introduced March 17 for myself, Senator Javits and Senator Murphy.

The amendment would clarify the intent of Section 351 of the Public Health Service Act by including vaccines, blood, blood components, and allergenic products in the list of biological products which must meet the licensing requirements of that Section.

This amendment is in the nature of emergency legislation made necessary by a 1968 decision of the Fifth Circuit Court of Appeals (*Blank* v. *United States*, 400 F.2d 302) holding that certain blood products used in blood transfusions are not biological products within the meaning of Section 351 of the Public Health Service Act, and are therefore not subject to regulation thereunder. The Court's rationale was that since the products and processes involved in blood transfusions were not known in 1902 when the "Virus-Toxin law", which preceded Section 351, was enacted, Congress could not have intended that they be included. This reasoning would also cast doubt on the Secretary of HEW's authority to regulate allergenic products.

Since the Department of HEW was not aware of the effect of the Court's decision until after the time for seeking review in the Supreme Court had expired, it would take considerable time to have the Secretary's authority to regulate under Section 351 clarified by the courts. It would be unwise to leave the Secretary's authority on such an important public health matter unsettled for that period of time.

As an interim measure, the Department of HEW has amended regulations under the Food, Drug and Cosmetic Act to incorporate by reference the regulations issued under Section 351 of the Public Health Service Act setting standards for manufacturing, processing, packing and holding of biological products.

In addition to blood, blood components, and allergenic products, this amendment would include vaccines on the list of biological products subject to licensing requirements. Although the *Blank* decision does not affect vaccines directly, its inclusion is consistent with the intent of the original "Virus-Toxin Law" of 1902 to protect the public health through the control of biological products.

I think the public interest would be served by favorable action on this emergency legislation now.

Mr. YARBOROUGH. Mr. President, the proponents of this amendment are not present. However, the staff in studying the amendment—and we have had the amendment before us for some time; it was originally offered as a separate bill—feel that the amendment has merit and that it might be an improvement in the present law in amending and defining these terms. So I am prepared to accept the amendment.

The PRESIDING OFFICER. The question is on agreeing to the amendment.

The amendment was agreed to.

Mr. YARBOROUGH. Mr. President, I call up a series of amendments on the National Health Advisory Council. The amendments have no name on them. They were to have been offered on behalf of the administration. Our staff has been studying them and they define the new National Health Advisory Council. We have come to the conclusion that they would not be detrimental to the bill but would probably be beneficial. The Department wanted the amendments.

The distinguished ranking minority Member planned to be here but has been unable to get here because of a delay occasioned by a plane. I feel certain that he would want these amendments to be offered. I therefore offer them on his behalf.

The PRESIDING OFFICER. The amendments will be stated.

The legislative clerk read as follows:

The Senator from Texas (Mr. YARBOROUGH), on behalf of the Senator from New York (Mr. JAVITS), offers a series of technical amendments reading as follows:

NATIONAL ADVISORY COUNCIL

SEC. —. (a)(1) Section 217(b), 432(a), 443(b), and 703(c) of such Act are amended by inserting "or committees" after "councils" wherever it appears therein.

(2) Sections 431, 432(b), 433, 443, and 452 of such Act are amended by inserting "or committee" after "council" wherever it appears therein.

(3) Subsections (b) and (c) of section 222 of such Act are amended by inserting "council or" before "committee" wherever it appears therein.

(4) Such section is further amended by inserting in the heading thereof "COUNCILS OR" before "COMMITTEES".

(b)(1) Subsection (c) of section 208 of the Public Health Service Act is amended to read:

"(c) Members of the National Advisory Health Council and members of other national advisory or review councils or committees established under this Act, including members of the Technical Electronic Product Radiation Safety Standards Committee and the Board of Regents of the National Library of Medicine, but excluding liaison representatives, while attending conferences or meetings of their respective councils or committees or while otherwise serving at the request of the Secretary, shall be entitled to receive compensation at rates to be fixed by the Secretary, but not exceeding the maximum rate specified at the time of such service for grade GS–18 in section 5332 of title 5, United States Code, including travel time; and while away from their homes or regular places of business they may be allowed travel expenses, including per diem in lieu of subsistence, as authorized by section 5 of the Administrative Expenses Act of 1946 (5 U.S.C. 5703(b-d), 5707) for persons in the Government service employed intermittently."

(2) The second sentence of subsection (d) of section 306, the second sentence of subsection (d) of section 307, the first sentence of paragraph (2) of subsection (f) of section 358, subsection (d) of section 373, subsection (e) of section 641, subsection (d) of section 703, subsection (d) of section 725, subsection (d) of section 774, subsection (c) of section 841, and subsection (c) of section 905 of such Act are deleted.

(3) Paragraph (2) of subsection (f) of section 358 is further amended by striking out "under this subsection" in the second sentence thereof and by inserting in lieu thereof "to members of the Committee who are not officers or employees of the United States pursuant to subsection (c) of section 208 of this Act".

(4) Subsection (d) of section 905 of such Act is redesignated as subsection (c).

(c)(1) Subsection (a) of section 222 of such Act is amended to read:

"(a) The Secretary may, without regard to the civil service laws and the classification act, from time to time, appoint such advisory councils or committees (in addition to those authorized to be established under other provisions of law), for such periods of time, as he deems desirable with such period commencing on a date specified by the Secretary for the purpose of advising him in connection with any of his functions.

(2) Subsection (c) of such section is amended by inserting "or programs" after "projects"

(d)(1) Subsection (g) of section 408 of the Food, Drug, and Cosmetic Act is amended by striking out "as compensation for their services a reasonable per diem, for time actually spent in the work of the committee, and shall in addition be reimbursed for their necessary traveling and subsistence expenses while so serving away from their places of residence." after "shall receive" and by inserting in lieu thereof "compensation and travel expenses in accordance with subsection (b)(5)(D) of section 706."

(2) Subparagraph (D) of paragraph (5) of subsection (b) of section 706 of such Act is amended by striking out the third sentence thereof and by inserting in lieu thereof the following new sentence:

"Members of any advisory committee established under this Act, while attending conferences or meetings of their committees or otherwise serving at the request of the Secretary, shall be entitled to receive compensation at rates to be fixed by the Secretary but not exceeding the maximum rate specified at the time of such service for grade GS–18 in section 5332 of title 5, United States Code, including travel time; and while away from their homes or regular places of business they may be allowed travel expenses, including per diem in lieu of subsistence, as authorized by section 5 of the Administrative Expenses Act of 1946 (5 U.S.C. 73b–2) for persons in the Government service employed intermittently."

The PRESIDING OFFICER. The question is on agreeing to the amendments.

Mr. WILLIAMS of Delaware. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The legislative clerk proceeded to call the roll.

Mr. YARBOROUGH. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. HART. Mr. President, first I wish to pay tribute to the chairman of the

Committee on Labor and Public Welfare, the able Senator from Texas (Mr. YARBOROUGH) for the very significant contribution he has made to the Nation's health programs during his chairmanship of this powerful committee.

Particularly, I want to commend the senior Senator from Texas for the outstanding job he has done in presenting to us S. 3355, a bill to extend and improve existing programs in the fields of heart disease, cancer, stroke and other major diseases and conditions.

The chairman knows of my interest and that of constituents in Michigan that the bill before us today would extend its coverage to arthritis in the category of other major diseases and conditions. I understand the reluctance to enumerate in the bill or in the report the various possible diseases and conditions which might be eligible for financial assistance under the bill. But I would like to ask the chairman whether he could clarify for the record whether I am correct in understanding that an arthritis program could be an eligible program under this legislation.

Mr. YARBOROUGH. Mr. President, I thank the distinguished Senator for his kind remarks. I appreciate his remarks all the more since, with his great service and investigative work he has done much for the health care of American people. He is knowledgeable in this area. I wish he were a member of our health committee.

As he knows, this country faces a worsening health care crisis which demands that each of us does the utmost in seeing that our health resources are used in the most effective and efficient manner possible.

When Congress first authorized the regional medical programs in 1965, it was limited to heart disease, cancer, stroke, and related diseases. In other words, we adopted a prudent course at that time.

Based upon the progress which has been made during the last 5 years, we now believe it is time to broaden the scope of the program. Accordingly, the committee's bill adds "kidney disease and other major diseases and conditions" to the RMP authority.

It would, therefore, be possible for an arthritis program to be eligible for support under this broadened authority. Clearly arthritis is a disease of major significance, as well as one which could be included as an integral aspect of a regional medical program.

Mr. HART. Mr. President, I thank the chairman. As he knows, I have been endeavoring to assist the regional arthritis control program in Michigan, which is jointly sponsored by the University of Michigan's medical and public health schools and four teaching hospitals, including the Henry Ford Hospital in Detroit. I appreciate this assurance that they will have a place to turn for Federal assistance, and I hope our Senate conferees will be able to see to it that the language "and other major diseases and conditions" emerges from the conference with the other body.

Again, I thank the able Senator from Texas for this and so many other valuable services he has contributed to millions of Americans who have never heard of him by name but who are better today because of his many contributions.

Mr. YARBOROUGH. I thank the distinguished Senator. I commend him for what he has been doing in Michigan to get this research on arthritis underway. We have no cure yet for arthritis. We hardly have relief possible from pain in a limited way, but not from the disability.

We have recently concluded hearings on a bill concerning digestive diseases. At NIH they do investigative research into digestive diseases. We have gone into that matter in the last 2 weeks. I had had reports that they have virtually abandoned research into the cause of arthritis, particularly rheumatic arthritis, which is one of the most crippling types. NIH assured me that that was not so but that they had been expanding and enlarging the program.

I hope the great State the Senator represents, with its fine medical educational institutions, will press forward under the stimulus of his encouragement and lead the Nation in this area. We need more research. We have not made the progress in the cure of arthritis that we have made in certain other diseases. It is badly needed. I thank the Senator.

Mr. JAVITS. Mr. President, I would like to apologize to the chairman of the committee for not having been here when the bill was first brought up this afternoon. I was detained with the Secretary of State on the very urgent problem of the airplane hijackings.

I am grateful to my colleague for assisting me by offering the amendment which is now pending, which is an administration amendment. I would like to ask the Senator, as a courtesy, if he would mind withdrawing it so that I might offer the amendment inasmuch as the administration wishes to be identified with the amendment.

Mr. YARBOROUGH. Mr. President, I ask unanimous consent that the amendment I had offered may be withdrawn.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. JAVITS. Mr. President, I send an amendment to the desk.

The PRESIDING OFFICER. The amendment will be stated.

The legislative clerk proceeded to read the amendment.

Mr. JAVITS. Mr. President, I ask unanimous consent that further reading of the amendment be dispensed with.

The PRESIDING OFFICER. Without objection, it is so ordered; and, without objection, the amendment will be printed in the RECORD.

The amendment, ordered to be printed in the RECORD, is as follows:

At the end of the bill, add the following:

"TITLE V—MISCELLANEOUS PROVISIONS

"NATIONAL ADVISORY COUNCIL

"SEC. 501. (a)(1) Sections 217(b), 432(a), 443(b), and 703(c) of the Public Health Service Act are amended by inserting 'or committees' after 'councils' wherever it appears therein.

"(2) Sections 431, 432(b), 433, 443, and 452 of such Act are amended by inserting 'or committees' after 'council' wherever it appears therein.

"(3) Sections (b) and (c) of section 222 of such Act are amended by inserting 'council or' before 'committee' wherever it appears therein.

"(4) Such section is further amended by inserting in the heading thereof 'COUNCILS OR' before 'COMMITTEES'.

"(b)(1) Subsection (c) of section 208 of the Public Health Service Act is amended to read:

"'(c) Members of the National Advisory Health Council and members of other national advisory or review councils or committees established under this Act, including members of the Technical Electronic Product Radiation Safety Standards Committee and the Board of Regents of the National Library of Medicine, but excluding liaison representatives, while attending conferences or meetings of their respective councils or committees or while otherwise serving at the request of the Secretary, shall be entitled to receive compensation at rates to be fixed by the Secretary, but not exceeding the maximum rate specified at the time of such service for grade GS–18 in section 5332 of title 5, United States Code, including travel time; and while away from their homes or regular places of business they may be allowed travel expenses, including per diem in lieu of subsistence, as authorized by section 5 of the Administrative Expenses Act of 1946 (5 U.S.C. 5703(b-d), 5707) for persons in the Government service employed intermittently.'

"(2) The second sentence of subsection (d) of section 306, the second sentence of subsection (d) of section 307, the first sentence of paragraph (2) of subsection (f) of section 358, subsection (d) of section 373, subsection (e) of section 641, subsection (d) of section 703, subsection (d) of section 725, subsection (d) of section 774, subsection (c) of section 841, and subsection (c) of section 905 of such Act are deleted.

"(3) Paragraph (2) of subsection (f) of section 358 is further amended by striking out 'under this subsection' in the second sentence thereof and by inserting in lieu thereof 'to members of the Committee who are not officers or employees of the United States pursuant to subsection (c) of section 208 of this Act.'

"(4) Subsection (d) of section 905 of such Act is redesignated as subsection (c)."

"(c)(1) Subsection (a) of section 222 of such Act is amended to read:

"'(a) The Secretary may, without regard to the civil service laws and the Classification Act, from time to time, appoint such advisory council or committees (in addition to those authorized to be established under other provisions of law), for such periods of time, as he deems desirable with such period commencing on a date specified by the Secretary for the purpose of advising him in connection with any of his functions'.

"(2) Subsection (c) of such section is amended by inserting 'or programs' after 'projects'.

"(d)(1) Subsection (g) of section 408 of the Food, Drug, and Cosmetic Act is amended by striking out 'as compensation for their services a reasonable per diem, for time actually spent in the work of the committee, and shall in addition be reimbursed for their necessary traveling and subsistence expenses while so serving away from their places of residence.' after 'shall receive' and by inserting in lieu thereof 'compensation and travel expenses in accordance with subsection (b)(5)(D) of section 706.'

"(2) Subparagraph (D) of paragraph (5) of subsection (b) of section 706 of such Act is amended by striking out the third sentence thereof and by inserting in lieu thereof the following new sentence:

"'Members of any advisory committee established under this Act while attending conferences or meetings of their committees or otherwise serving at the request of the Secretary, shall be entitled to receive compensation at rates to be fixed by the Secretary but not exceeding the maximum rate specified at the time of such service for grade GS–18 in section 5332 of title 5, United States Code, including travel time; and while away from their homes or regular places of business they may be allowed travel expenses, including per diem in lieu of subsistence, as authorized by section 5 of the Administrative Expenses Act of 1946 (5 U.S.C. 73b–2) for persons in the Government service employed intermittently.'"

Mr. JAVITS. Mr. President, this is exactly the amendment offered by the Senator from Texas (Mr. YARBOROUGH). It relates to compensation of members of the Public Health Service Advisory Council and committees which are established under this bill.

Current provisions of the PHS Act relating to compensation of members of the Public Health Service advisory councils and committees establish varying and widely disparate rates of remuneration for the members of these various groups. At present, and for no discernible reason, some groups are entitled to less than half of the compensation available to the membership of others. These proposed amendments will permit the establishment of uniform rates of compensation for all members of these councils and committees and will thus insure consistent and equitable treatment. They authorize compensation at rates to be fixed by the Secretary, not to exceed the maximum rate specified at the time of service for grade GS–18. They provide for a uniform method of payment for expenses including per diem in lieu of subsistence as authorized for persons in the Government service employed intermittently. The advisory councils and committees play a major role in the NIH programs and those of other Public Health Service agencies. Equitable treatment of their membership in the manner of compensation is in keeping with the importance of their responsibilities.

Also, the amendment being submitted is similar to part C of the General Education Provisions Act and represents the administration's effort—which acts here through me, as I am the ranking minority member of the committee—to bring about this degree of uniformity.

Again I express my gratitude to the Senator from Texas (Mr. YARBOROUGH). I hope the Senate will take favorable action on this amendment.

Mr. YARBOROUGH. Mr. President, I congratulate the distinguished Senator from New York. As the ranking minority member of the committee he has had a hand in every health bill that has been passed. He is a leader in this field and his services are invaluable.

We have had a great body of health legislation due to the cooperation of the Senator from New York, as the ranking minority member of the committee, and our side. We would not have had this body of health legislation without the active cooperation of the distinguished Senator, and I thank him for it.

The PRESIDING OFFICER. The question is on agreeing to the amendment of the Senator from New York.

The amendment was agreed to.

Mr. PELL. Mr. President, will the Senator yield?

Mr. JAVITS. Mr. President, I have another amendment to offer, but I am glad to yield to the Senator from Rhode Island.

Mr. PELL. Mr. President, I rise to congratulate the Senator from Texas on all his good work in the field of health, as well as in so many other fields, and to support S. 3355, this excellent bill, to extend the regional medical program, comprehensive health planning program, and the national health research and demonstration program.

This bill, designed to improve our country's delivery of health care services, is most needed and most important in view of the very serious health care problems with which we are all familiar.

I am particularly proud to support this bill since title II of S. 3355 represents my own bill S. 3634, the National Health Care Systems Study, Research, and Demonstrations Act of 1970.

This title does two things basically: First, it extends the authority for the National Center for Health Research and Demonstrations to develop model health care systems—as a matter of fact, I am hopeful that my own State of Rhode Island will serve as a model health care State—second, the bill instructs HEW to undertake a systems study of the alternative plans that could be developed to reform our inefficient $60 billion national nonsystem of health care.

There have been many plans suggested for the reform of our Nation's health care system. Senators KENNEDY and YARBOROUGH have introduced an excellent measure, which I have cosponsored, to establish a national health insurance plan through employer and employee contributions. Senator JAVITS has introduced a bill based on somewhat similar principles. Senator FANNIN has introduced a tax credit proposal. Other approaches have been suggested calling for a more decentralized approach for the provision of national health care, such as requiring employers to provide a minimum level of health care to their employees and families in much the same way as employers are required to pay a minimum wage.

All these suggestions have a similar purpose, that is to provide a basic floor of health care for all Americans. The question is, By what means we can best obtain that purpose? The systems study that I propose should provide some insights into the answer to that question.

The systems study I propose requires that alternatives to the present system of health care be compared to the present system in terms of their relative cost, extensive coverage, their benefits to various socioeconomic groups, and their relative efficiency and effectiveness.

Upon completion of this study the Secretary of the Department of Health, Education, and Welfare will report his findings to the Congress. Hopefully this study will provide the information that Congress needs to legislate, in a rational manner, a reform of our Nation's system of health care during the next session of Congress.

There have been no objections to this study that I know of. As a matter of fact, I have received some encouragement for this study. The Aetna Life and Casualty Co., which has a proposal of its own, supports my proposal. I ask unanimous consent that their letter of support be included in the RECORD at this point.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

AETNA LIFE AND CASUALTY CO.,
Hartford, Conn., June 23, 1970.

Re 3.3634—National Health Care Systems Study, Research, and Demonstration Act of 1970

Hon. CLAIBORNE PELL,
U.S. Senate,
Washington, D.C.

DEAR SENATOR PELL: Ætna Life & Casualty is the Nation's largest private health insurer. As such, we have a compelling interest in each of the many proposals for a National Health Insurance Program which have been presented to the Congress.

Some of these proposals would bypass the health insurance industry, while others would afford us a rather full role in the delivery and financing of health care in the future.

We are proud of our role in the development of the health insurance industry and confident that we possess an organization of many skills. We are also realistic enough to perceive that the health care delivery system in the near future will be characterized by change; that we cannot survive by a "business as usual" philosophy in our health insurance operations.

In this context, it seems not only in the Nation's interest, but in our own, that the Congress have available to it a carefully conducted study of alternative National Health Care Plans. The Ætna Life & Casualty has made certain suggestions of its own to the Congress in this regard and we are now working with the Health Insurance Association of America to develop a program the entire health insurance business could support.

For these reasons, we are pleased to assure you of our support for S. 3634.

Sincerely,

JAMES H. HUNT,
Director, Government Relations Group Division.

Mr. YARBOROUGH. Mr. President, I thank the Senator from Rhode Island for his kind remarks, and congratulate him on his leadership in this field. As was stated in explaining the bill originally, title II is now incorporated in the bill. It was thought that we could better handle these programs by incorporating them in one bill, his bill is now incorporated into the pending bill.

I want to congratulate the Senator on his help in legislation that we hope will result in the improvement of the health of the people of this Nation.

As the Senator from Delaware stated a few minutes ago, this is a very important bill. It is broad in scope. It costs money. But the health care of the people of this country is declining and something must be done. The Senator from Rhode Island has made a major contribution to what is now in the bill. We hope to hold it in conference with the House. I thank the Senator for his work.

Mr. PELL. I thank the Senator.

Mr. JAVITS. Mr. President, I send another amendment to the desk and ask that it be stated.

The PRESIDING OFFICER. The amendment will be stated.

The legislative clerk read the amendment, as follows: On page 32, after part J, insert a new part K.

PART K—REGULATION OF VACANCIES, BLOOD, COMPONENTS, AND ALLERGENIC PRODUCTS

SEC. 290. Section 351 of the Public Health Service Act is amended by inserting, after "antitoxin", each time such word appears, the following: "vaccine, blood, blood component or derivative, allergenic product,".

Mr. JAVITS. Mr. President, the research contracting authority of the Public Health Service will expire on June 30, 1971. The amendment proposed will extend the authority for an indefinite period of time, deleting present time limitation under section 301(b) of the Public Health Service Act. The use of this authority is to complement basic research—conducted in universities and other nonprofit organizations—supported through the grant-in-aid. It is used when the Government is seeking highly specific and sharply circumscribed research results. This instrument—the research contract—is particularly appropriate for applied research or technological development efforts intended to exploit most expeditiously and efficiently discoveries arising out of grant-supported basic research programs. Industrial firms, which are not eligible for PHS grants-in-aid, have been able to make significant contributions to a number of PHS research programs through existing research contract authority.

This would make the provision for contract authority consistent with the provision for grant authority.

I hope the Senate will act favorably on the amendment.

The PRESIDING OFFICER. The question is on agreeing to the amendment.

Mr. YARBOROUGH. Mr. President, I accept the amendment.

The PRESIDING OFFICER. The question is on agreeing to the amendment.

The amendment was agreed to.

Mr. JAVITS. Mr. President, I send another amendment to the desk and ask that it be stated.

The PRESIDING OFFICER. The amendment will be stated.

The legislative clerk read the amendment, as follows:

At the end of the bill add a new title V:

TITLE V—MISCELLANEOUS PROVISIONS

"TRAINING AUTHORITY OF INSTITUTE OF GENERAL MEDICAL SCIENCES

"SEC. 502. Section 442 of the Public Health Service Act is amended by striking out 'research' before 'training'."

Mr. JAVITS. Mr. President, this proposal amends section 442 of the Public Health Service Act to permit the National Institute of General Medical Sciences to support clinical, as well as research, training related to its mission and thus to make the scope of its training authorities identical to those of the other institutes. The National Institute of General Medical Sciences as well as its predecessor, the Division of General Medical Sciences, initially was assigned responsibility for the basic and preclinical medical sciences. The scope of this Institute's program has gradually evolved to include several clinical sciences; for example, anesthesiology and radiology, in which there are critical shortages of training specialists and seriously limited national institutional capacity for the training of those clinical specialists. Historically, the National Institutes of Health effectively solved such problems in many other fields. This minor alteration in the requested authority will enable the NIGMS similarly to meet urgently important national needs within its domain of responsibility.

I hope the Senate will act favorably on the amendment.

Mr. YARBOROUGH. Mr. President, I accept the amendment.

The PRESIDING OFFICER. The question is on agreeing to the amendment.

The amendment was agreed to.

Mr. JAVITS. Mr. President, these amendments represent three administration amendments, which complete the administration's contributions to the bill.

I support and urge the enactment of "The Health Services Improvement Act of 1970" (S. 3355). The legislation incorporates many of the provisions of the administration's "Health Services Improvement Act of 1970" (S. 3443) which I introduced—with the cosponsorship of all the Republican members of the Labor and Public Welfare Committee—as an essential initiative for improving our health programs to meet the urgent need for improved health care for the Nation.

S. 3355 is a comprehensive bill to extend and improve the regional medical programs, comprehensive health, planning and services, national center for health services research and development and the national center for health statistics authority and permits the joint administration of projects involving one or more of said authorities. In addition, the bill: requires an annual report on program effectiveness; establishes a national council on health policy; and authorizes Federal health benefit providers to issue contracts for prepaid group practice health services.

In order to launch a national comprehensive cooperative medical program for the treatment of kidney disease, to control and reduce kidney disease of prevention and detection programs, and to provide research support for kidney disease programs, as contemplated by the "National Kidney Disease Act of 1969" (S. 2482) which I introduced for myself, the Senators from Washington (Mr. MAGNUSON and Mr. JACKSON), the Senator from Texas (Mr. YARBOROUGH) and 36 other Senators from both parties—Title I of the bill would broaden the categorical purview of the regional medical program to include kidney disease.

A broadened program authority would allow the mechanism of regional cooperative arrangements to be used to more comprehensive advantage and reflects growing concern over the national status of this major chronic disease. Nearly 8 million persons in the United States are afflicted with kidney disease, of which about 60,000 progress to a terminal disease condition and death each year if life-sustaining treatment is not available. Diseases of the urinary tract rank fourth among causes of death from chronic disease. Kidney disease also tends to strike in the middle, most productive years of life, compared to other chronic diseases.

In order to provide a specific focus to kidney disease, the proposed legislation specifies that a maximum of $15 million of the amount appropriated in fiscal year 1971 be available for kidney disease activities. It also specifies that the National Advisory Council on Regional Medical Programs shall include membership outstanding in the study or care of kidney disease.

Section 260(a)(2) of the bill remedies the barrier of the transfer of appropriate projects—for example, where the Department of Health, Education, and Welfare assumes support for selected, mature neighborhood health service centers previously funded by the Office of Economic Opportunity, consistent with the Department's commitment and plan to develop systems of primary health care for the poor and to work toward extending the strategy to the health care needs of the total population—by authorizing the payment of equity requirements and amortization of loans on facilities as part of the costs of project grants for comprehensive health services. Whereas the Office of Economic Opportunity is authorized to pay, as part of the costs of such projects, equity requirements and amortization of loans on facilities, the Department of Health, Education, and Welfare lacks any clear such authorization under section 314 of the Public Health Service Act.

In order to facilitate and expedite joint administration of projects in which there are costs eligible for assistance from more than one program for which funds are authorized by the bill, section 270 of the bill authorizes the Secretary to promulgate regulations pursuant to which a single administrative unit may perform the necessary administrative functions for all the programs, reducing and simplifying the numbers and types of separate forms, reports and data requests which have to be submitted, and revising and making uniform any inconsistent or duplicative program requirements. The Secretary would not be authorized, however, to waive or suspend any requirement imposed by law or by any regulation required by law. Additionally, the bill limits the single administrative unit to either the unit which administers one of the programs covered by S. 3355 or the administrative unit charged with the supervision of two or more of such programs. Under current HEW organization that would have the effect of limiting the designation of such a unit to the Regional Medical Program Service, the Community Health Service, the National Center for Health Services Research and Development, or the Health Services and Mental Health Administration.

Title III of the bill creates a National Council on Health Policy—originally in-

troduced by me as a separate bill—S. 770 to establish a Federal Council of Health which will have the responsibility of fixing a coherent set of national health goals for our Nation.

The National Council on Health Policy would be modeled along the lines of the Council of Economic Advisers and the recently created Council on Environmental Quality. It would be located in the Executive Office of the President, and would consist of three full-time members appointed by the President with the advice and consent of the Senate.

The principal function of the Council would be to establish a national health policy for the United States, and to make recommendations to the President and Congress on methods to achieve the goals of the policy. The Council would provide new executive leadership at the national level in health affairs. As a high-level coordinator and policymaker in the health field, the Council would study and evaluate health activities throughout the Federal, State, local, and private sectors, and would suggest new programs and new approaches in all areas of health policy, such as research, facilities, services, manpower, and the organization, delivery, and financing of health care.

This measure would bring into being the recommendations of the Task Force on Federal Medical Services of the Second Hoover Commission, which have been ignored for 14 years. While temporary, short-term groups such as Presidential commissions, ad hoc committees, and interagency committees have been created to deal with specific problems in the health field, none of these groups has had the scope or power of the recommended National Council on Health Policy. The creation of a National Council on Health Policy is overdue, especially in light of the tremendous growth of Federal health programs in recent years, and the lack of an adequate existing mechanism for setting national health policies and long-range goals.

The National Council on Health Policy would fulfill a function in the area of health affairs similar to the function now fulfilled by the Council of Economic Advisers in the area of economic affairs.

The Council would perform a corresponding function in health policy, and would establish itself as an entity distinct from the existing Federal departments and agencies with operating responsibilities in health affairs. Ideally, the annual report of the Health Council would become the same sort of major health event in the Nation that the annual report of the Council of Economic Advisers represents for the economy.

To promote the development and use of prepaid group practice, and thereby to make this innovative type of health care delivery system available to both consumers and physicians who desire to take advantage of it, title IV of the bill would facilitate the group practice of medicine. It provides that the Secretary of Health, Education, and Welfare may authorize carriers participating in Federal health benefit programs for Federal employees to issue contracts for prepaid group practice health services to any persons, whether or not such persons are Federal employees.

The authorization given to the Secretary in title IV is intended to encourage those group practice programs that have the greatest potential for improving the delivery of health care. It will encourage greater participation by the private, or "voluntary," health sector in developing innovative approaches to health care. Such encouragement is especially needed at this time, when we want to assure all Americans—whatever their economic status—accessible, quality health care at a time when health care is one of the fastest increasing items in the cost of living.

Also, Mr. President, to give form and direction, and to change the dangerously haphazard organization of our health care in America, we have given this additional authority to the Secretary, with the proposal of encouraging what is gradually emerging as one of the most likely forms of the delivery of health services, to deal effectively both with quality health care and with the cost of those services; to wit, the so-called group practice units.

I hope very much the Senate will vote favorably on the bill.

Mr. President, I conclude by saying that too often, we take for granted the unbelievable amount of labor which goes into the establishment of the program for the American people which, when it becomes law, will be contained in this bill. I think it is a great tribute to the patriotism and to the humanitarian spirit of the Senator from Texas (Mr. YARBOROUGH) and to his love for his fellow man, that, notwithstanding the kind of vicissitudes politically which could easily have frustrated other men, he has persisted not only indefatigably but with style and grace in seeing these measures through the Senate of the United States. I am proud to be associated with him and to be his friend, and I think it should be noted time and again that he continues in the most exemplary way to pursue a tradition which has marked his service here for many years, and which, in this as in so many other matters affecting the health of our people, will be enormously beneficial to all Americans.

Mr. YARBOROUGH. Mr. President, I thank the distinguished Senator from New York for his kind remarks. In our work on these health bills, education bills, and labor bills, I think that despite the fact that we are the senior members of our parties in our respective categories, he and I have agreed on at least 90 percent of the provisions of practically every bill that has come out of that committee. I feel honored to be complimented by a man who is himself exemplary when it comes to indefatigable labor.

I think at this time we ought to pay tribute to our staffs. I have just been handed a card from the cloakroom informing me that some of the staff members are in the cloakroom, and were not able to get into the Chamber. I ask unanimous consent that at least one staff member for each member of the Labor and Public Welfare Committee be permitted the privilege of the floor. We have worked long and hard on this, we have had long sessions and long hearings in the subcommittee and the committee, and it is difficult to obtain a quorum at this time.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. JAVITS. Mr. President, I thank the Senator from Texas for his reference to the staff, and I would like to name specifically Jack Forsythe and LeRoy Goldman, who is on the floor now, and, on the minority side, Jay Cutler, Roy Millenson, and Martin Klein who have worked so very hard on this bill.

Mr. YARBOROUGH. I thank the Senator for his consideration in specifically naming those staff members. Jack Forsythe has been counsel for the committee, first with the House of Representatives and then with the Senate, and has been a staff member for 16 years. He started his work in public health under the recent chairman of the committee, Senator Lister Hill. We have had many years of accumulated staff experience, which has gone into bringing what we think is a major health bill to fruition. The staff deserves a great deal of credit for working it out to where it is presented in its present form on the floor of the Senate. There has been much staff work on both sides.

The PRESIDING OFFICER. The bill is open to further amendment.

Mr. WILLIAMS of Delaware. Mr. President, in view of the fact that this measure will cost a little over $3.5 billion I should like to extend appreciation to the taxpayers who will have to pay for this measure. Their contribution, which is substantially above the administration's request if it passes, should be recognized. It is so seldom that the taxpayers are given any consideration by the Senate that I thought some not of appreciation to these hard-pressed taxpayers should be mentioned.

I address this inquiry to the chairman of the committee: H.R. 18110 and H.R. 17570 both show cross references on the calendar to Calendar No. 1100, which is S. 3355, the bill now before us. Do I understand that S. 3355 embraces the provisions of both of those bills as passed by the House of Representatives to which I have referred except that it also contains the usual Senate increases in authorizations?

Mr. YARBOROUGH. Basically, they are included in the Senate bill, but there are some differences to be ironed out in conference.

Mr. WILLIAMS of Delaware. The difference is that the Senate has added several hundred million dollars to what the House provided; is that correct?

Mr. YARBOROUGH. That is correct.

Mr. WILLIAMS of Delaware. I wonder why we do not just pass the House bills, instead of the Senate bill, because the House bills are several hundred million dollars less for the two programs, and I am sure, as I have already stated, that in view of the financial situation the House could not support S. 3355, the bill now

before us, with all the extravagant ideas of the Senate added.

I again quote from the statement of the Director of the Budget:

> In the light of the serious fiscal situation now foreseen, we think the authorization levels currently contained in S. 3355 are not realistic.

Would it not be more realistic, in the light of the fiscal problems we face—a deficit of over $1 billion per month—to adopt the limits provided in the House bills?

Mr. YARBOROUGH. Mr. President, in response to the Senator's inquiry, first, we do not feel, after our subcommittee and committee have thrashed this out, that we should accept the House bills, because we have many provisions in our bill which are not in their bills. If we accepted theirs, we would be surrendering many beneficial items.

In the second place, I do not think, Mr. President, that this is extravagant. I join the Senator in his thanks to the taxpayers. We are trying to do something for the taxpayer, who is paying $63 billion a year for health care and not receiving adequate health care. The purpose of the bill is to bring adequate health care to the people.

This argument is like every argument I hear on education and on health bills: The opponents always add up the appropriations for 5 years, and say, "This bill is costing $3 billion." It does, over 5 years. But when we have a war bill, for the war in South Vietnam, they do not add up 5 years, they always come in with only 1 year. The defense bill is $73 billion; why do we not use the same rule for military expenditures that we do for the civilian expenditures? If we did that, and we had before us that defense bill we passed the other day—offense bill, I would call it—we would say five times $73 billion, and we would have $365 billion. I am not saying the Senator from Delaware is responsible for that; I do not charge him with that. But this is what happens on the floor of the Senate. I have been here for 13 years and 4 months, and every time we bring in a veterans bill, a cold war GI bill, a health bill, or an education bill, we hear every time how many billions it is costing.

Never, in all the years I have been here, have I ever one time heard anyone who brought up one of these big military bills of $73 billion for 1 year, roll it all together, and say, "That is $365 billion." But if we take the military authorization of $73 billion for this year, five times that is $365 billion. Here we have provided, for the people, less than 1 percent of that amount. Mr. President, I think the people of this country are entitled to that 1 percent. This is the people's money, being spent for the benefit of the people by Congress.

I think the people, if they knew the facts, would be proud that we are going to use some money for their benefit.

Mr. WILLIAMS of Delaware. Mr. President, as one who is connected with an administration which in the last 70 years has never had a war and one which has been having to provide the methods to finance the war started by the administration with which the Senator is associated, I enjoy the remarks of the Senator from Texas. I, too, have been discouraged by the cost of these wars, and I hope we can keep an administration in power which will recognize that the best way to prevent wars is not to start wars.

Mr. YARBOROUGH. And if they are started and somebody says he will stop them, they will be stopped.

Mr. WILLIAMS of Delaware. I sympathize with those who want to get the war over. Senators have been debating this point for the last 6 weeks, "Let's get the war over."

Some of these Senators remind me of the village ruffians who start a fire in the village schoolhouse and then heckle the firemen because they cannot extinguish the flames faster.

I want to stop these wars, but I am getting impatient at the continuous effort to justify every program on the basis that if we do not have to pay for the wars we can spend all the money. After all, taxes are paid by all Americans, whether we are Republicans or Democrats, whether the wars started in a Democratic administration, as they were, or paid for in a Republican administration, we still have to pay for them.

I hope that those Senators who are concerned about the cost of these wars will recognize the cost at the time the war is started. The way to save money is not to start the war. I hope that lesson will be remembered by all administrations in the years ahead.

To get back to the subject before us, we are going to have a tax bill before Congress in the next few months. I note that the cost of this bill is over $3.5 billion over a 5-year period, and I should like to ask this question, because I do not want to belabor this matter: How much is this increase over the amounts provided in the bills as passed by the House? I have the House bill before me, but I do not have a report tabulating the totals. Does the Senator have the exact figures?

Mr. YARBOROUGH. I do not have those figures, but the staff advises me that it would be several hundred million dollars, apparently the figure the Senator has given.

Mr. WILLIAMS of Delaware. That is what I thought.

Mr. YARBOROUGH. I point out this difference: The other is a 3-year bill, while ours is a 5-year bill.

Mr. WILLIAMS of Delaware. That is correct. But there are still the increases to which we have referred, which, even on an annual basis, is substantially above the House figure.

Mr. YARBOROUGH. The staff is of the opinion that they are not substantially different on an annual basis. Ours is a 5-year bill, as contrasted to theirs, which is a 3-year bill. Ours has in it all that they have in their two bills, and more, with the new titles that have been added. One, as the Senator from Rhode Island pointed out is that several items have been added to title II, to have a comprehensive study, to roll these things together and try to get some efficiency in the health care system of the country.

Mr. WILLIAMS of Delaware. I realize that the committee bill provides for 2 additional years, and we shall not mention those for the moment. But since the Senator says there is not too much difference in the objectives or what they would achieve in the two bills perhaps he would accept a couple of minor amendments which on that premise will not affect his bill but would save $125 million.

I note that the House bill to amend section 901(a) for the year 1972 provides $150 million. the Senate bill provides $200 million for the year ending June 30, 1972, or an increase of $50 million. I assume that there will be no objection to an amendment reducing that amount to the House figure, since, as the Senator has stated, they are somewhat comparable.

Mr. YARBOROUGH. There would be most strenuous objections, I say to the Senator from Delaware, because the amounts in the Senate bill were not just dropped in there casually. These amounts were debated in the subcommittee and the full committee, and the figures as finally reflected in the bill reported to the floor are not figures in the original bills. These are compromise figures and are reduced over other figures given to us in evidence and other figures that had been advocated.

The figures in the Senate bill are the reduced compromise figures reached in the committee.

Mr. WILLIAMS of Delaware. They may be lower than the figures in some of the original bills introduced, but they are substantially higher than those approved by the House and higher than the administration requests, and the Senator has already complimented the House on its action.

I have an amendment with respect to those figures, and I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The assistant legislative clerk proceeded to call the roll.

Mr. WILLIAMS of Delaware. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER (Mr. SPARKMAN). Without objection, it is so ordered.

Mr. WILLIAMS of Delaware. Mr. President, I send to the desk an amendment and ask that it be stated.

The PRESIDING OFFICER. The amendment will be stated.

The assistant legislative clerk read as follows:

> On page 10, line 8, strike out "$150,000,000" and insert in lieu "$125,000,000"; on line 9, strike "$200,000,000" and insert "$150,000,000"; on line 10 strike out "$250 million" and insert "$200 million".

Mr. WILLIAMS of Delaware. Mr. President, it would be in order to ask for a separate vote on each but in order to expedite matters, I ask unanimous consent that these amendments be considered en bloc, if the Senator from Texas has no objection.

Mr. YARBOROUGH. I have no objection.

The PRESIDING OFFICER. Without objection, the amendments will be considered en bloc.

Mr. WILLIAMS of Delaware. Mr. President, this amendment would restore the figures under section 103 of the bill as it would amend section 901 of the act to the exact figures provided in the House bill with this exception, that it would leave in the Senate bill the additional 2 years authorization, with which I do not quarrel. If we could get acceptance of the proposal here to maintain the House figure this would mean a reduction of $125 million on this particular section, and I hope that the Senator from Texas would feel he could accept the amendment.

Mr. YARBOROUGH. Mr. President, we cannot accept the amendment of the distinguished Senator from Delaware without crippling the bill. As was pointed out earlier in debate, in extending the bill on heart, cancer, and stroke we added kidney disease and certain other major diseases. In colloquy with the Senator from Michigan it has been developed that kidney disease is having a crippling effect on many Americans who suffer great pain as a result of it.

We have held hearings on heart, cancer, stroke, and kidney diseases and this bill does not contain enough money to do the job. We are not fooling ourselves. The budget stringencies were presented to the committee. This is a minimal program. The staff has added up the cost and the total amount for the first 3 years that the Senate exceeds the House bill is $165 million over those 3 years which we have in our bill over the House bill. So I think there is no magic in the House bill. Why have hearings if we settle for the House bill. We have done our work. The committee has an able staff and has been working on these matters for years. We are conscious of the fact that in conference with the House, we may have difficulties, but these cuts would cut us off in the hip pocket before we could make a start on these other diseases.

I would respectfully request that my colleagues in the Senate not accept the amendments. There is too much at stake in the health of the American people. They have spent, both privately and publicly, $63 billion, and the situation is getting worse in many parts of the country. Heart disease, cancer, and stroke are three of the biggest killers of the American people today. Cancer is killing one-third of a million people annually. It has reached epidemic proportions here. One-fourth of the American people will have cancer before they die, and one-sixth will die from it unless we can find some remedy. We are trying to increase our research into these diseases. Cancer has grown so fast proportionately in this country that it has now reached epidemic proportions. We must not cut back on research to improve the health of the American people, especially with cancer, which is the slowest and most painful of all diseases.

I urge the Senate not to cut research into these painful, killing diseases and respectfully ask the Senator from Delaware to join me in rejecting the amendments.

I know the Senator from Delaware, I have served with him for many years. He is sincere in all his efforts to protect the budget. But, this is not the bill to cut expenditures on, as we search for the answers that will cure heart disease, cancer, stroke, and kidney disease.

Mr. WILLIAMS of Delaware. Mr. President, even with the adoption of this amendment the bill would carry several million dollars more than has been spent heretofore. It would, even with the adoption of this amendment, still exceed what the budget had requested, but I would go along with that figure. I realize that cancer and other diseases which the Senator from Texas has mentioned are threatening the people of this country, and I certainly want to do something about eliminating them. But we also have the cancerous growth of inflation in this country, which is getting out of hand and which will continue to get out of hand unless Congress holds down its appropriations. I am one of those who think that we have to cut back on all appropriations, not on just Defense. I supported the amendment of the Senator from Wisconsin (Mr. PROXMIRE) the other day to cut $5 billion from Defense, but we are going to have to cut across the board on all programs in the Government if we are to approach a balanced budget.

I do not question the sincerity of the Senator from Texas or the sincerity of other Senators who feel that we could put more money into these programs, but as a member of the Finance Committee I am greatly concerned over the fact that we are going to have to continue to keep raising taxes to pay for all these increased expenditures. The taxpayers are already overburdened. We have already done serious damage to the elderly through inflation, which has eroded the purchasing power of their pensions, their life insurance, their savings accounts, and their bonds. They have all been eroded as a result of inflation—inflation caused to a large extent by the extravagance of Congress. That, too, must be considered.

This amendment proposes a reduction back to the House figure. The House bill passed overwhelmingly, and I do not believe that Members of the House were being unrealistic or hardhearted when they passed their bill. They, too, share the same concern as Members of the Senate on the problems of health. But there is a limit as to what we can afford. If the Senator from Texas will not accept the amendment I would ask for the yeas and nays on it.

The yeas and nays were ordered.

Mr. WILLIAMS of Delaware. Mr. President, I am ready to vote.

Mr. JAVITS. Mr. President, the Senator from Delaware, as is always true of him, has challenged us. I honor him for it. He always makes us face ourselves, which we should do in this case.

It is a fact, as the chairman of the committee has said, in the other body, the figures for the various categories of authorizations of appropriations which appear on page 2 of the committee report were increased over those requested by the administration.

For example, with respect to the first item of regional medical programs, the administration requested some $100 million for 1971 and the House voted $125 million. The figure we have in the Senate bill for the authorization is $150 million.

As the Senator has fairly stated, that goes on all through the bill, resulting in an increased figure of authorizations for the 3 years, bearing in mind that we have an order of magnitude of something overall—according to the rather quick calculation I have just made—of between 10 and 15 percent; so that the Senate authorization, if this bill passes, will have been increased over the House authorization, by that order of magnitude.

I invite the views of Senators upon this proposition.

We are for allpractical purposes engaged in Congress in determining what we think ought to be the priorities with respect to expenditures on the part of United States. I, too, voted to cut materially defense spending, as did the Senator from Delaware. I voted for that cut because I felt that rating the priorities without depriving our country of security was the action by which we could make a change in priorities and make our legislative contribution to what the administration thinks ought to be done. After all, we have cut the administration's ideas on defense spending, too, not withstanding their recommendations.

Mr. President, it seems to me that the order of magnitude here is such that an investment over this period of 3 years is amply justified in the way of a shifting of priorities.

My distinguished chairman has already noted that kidney disease is included as part of the program covered by this bill which heretofore related to heart disease, cancer, and stroke.

This is a very significant inclusion in the bill. It has been the subject of enormous concern because 8 million Americans are estimated to be affected by kidney disease and a very substantial number of those Americans—in the hundreds of thousands—are adversely affected because of the inadequacy of treatment and treatment facilities.

This bill adds kidney disease to the expanded regional medical programs covered by the bill presented by the administration. I am the principal sponsor of the National Kidney Disease Act of 1969, S. 2482, introduced on June 25, 1969, with 39 other Senators joining me in sponsoring this particular addition.

This in itself can be a major cause for the increased authorization which we have given.

Page 18 and subsequent pages of the committee report make explicit the prevention and rehabilitation, including health care that are essential elements in what we are seeking to provide in this bill as well as diagnosis and treatment of the four diseases—kidney, heart, cancer, and stroke.

Also, another innovation in respect to the bill is experimentation on how to deliver health care most economically.

I spoke a while ago about the encouragement of group practice units. The bill authorizes research and reporting into the various alternative plans for

some form of national health care coverage.

I refer to page 22 of the committee report which indicate the financing mechanisms that could serve as the basis of alternative plans for national health coverage. Among them are my own plan, which is a payroll deduction as well as a general revenue plan. I notice that the Senator from New Mexico (Mr. ANDERSON) is in the Chamber. The Senator from New Mexico first educated me on this whole level years ago. He and I collaborated in what ultimately became the Medicare plan.

There is a tax credit plan, such as outlined in the bill by the Senator from Arizona (Mr. FANNIN), and a private health insurance premiums plan which is generally considered to be the AMA plan, but in this case was suggested by the Aetna Insurance Co.

Mr. President, as we have added critically important aspects to the bill, it is very natural that we included additional authorizations in order to cover them.

I respectfully submit that the order of magnitude of these additional authorizations for the 3 years which results in contemporaneous reach of both the House and the Senate bill are not so great—under 10 percent—as to justify the Senate in reversing the concepts of the committee which did such a thorough job under the leadership of the Senator from Texas (Mr. YARBOROUGH) in this matter.

I repeat in closing that I respect enormously the Senator from Delaware. However, I respectfully submit that the order of magnitude and the reasons for the action amply justify the action taken by the Senate committee.

I hope the Senate will sustain that action.

Mr. YARBOROUGH. Mr. President, I point out in this connection that under the expired law, authorizations for heart disease, cancer, stroke, and related diseases were $200 million for the year ending June 30, 1968. Due to the effects of the war in Vietnam, the next year the authorizations were reduced down from $200 to $65 million.

They then began to increase in 1970 and went to $120 million. Now we would have this amount up to $150 million for the year ending June 30, 1971. We would have it go to $200 million in 1972.

We had a $200 million authorization back in 1968. The gross expenditures in the war, reaching at one time as high as $3 billion a month, or $36 billion a year, reduced that amount.

Under the committee bill, it will take us until 1972 to get back to the authorization we had in 1968, in spite of the fact that we have added other diseases to the bill.

Mr. HATFIELD. Mr. President, as a cosponsor of S. 3355. I want to commend my distinguished colleague from Texas for his leadership in this area.

On July 8 of this year, I spoke on the floor about one facet of the objectives of this bill, that is, kidney disease. I am sure that my colleagues here today would find sentiments in their State as strong as I found in Oregon in support of this program.

I ask unanimous consent that my statement of July 8 and the accompanying material be reprinted in the RECORD.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

KIDNEY DISEASE—THE LIVES THAT COULD BE SAVED

Mr. HATFIELD. Mr. President, S. 3355, Heart Disease, Cancer, Stroke, and Kidney Disease Amendments of 1970, of which I am a cosponsor, has been reported to the Senate floor. The bill will act as a general vehicle to extend and improve our existing health programs. One important addition has been made: the great need for funding of kidney disease treatment is recognized.

Many times, the Senate has expressed its awareness of the need of additional medical treatment for the American people. As we all know, technology and medical research have now alleviated many of our past generation's most feared diseases. Yet when the discoveries are made, when theoretical remedies and treatments are actualized, we are often denied the benefits because the treatment programs are scarce and inadequately funded.

Kidney disease is a killer, yet it can be prevented and its effects deterred. On a national basis, it is estimated that close to 8,000 salvable lives are lost annually because of prohibitive costs and the inacessibility of treatment of kidney disease.

The situation in Oregon is a microcosm of our United States. The Good Samaritan Hospital, which has the only Oregon facilities for home dialysis training, is able to treat annually only 12 of the 58 to 78 Oregon citizens who will reach end stage renal failure each year. Mr. Don Fry, the director of development at Good Samaritan, has pointed out that there are, in additon, two young vascular surgeons who are anxious to be trained for kidney transplants, were the funds available.

The costs for home dialysis is high: $13,000 to $15,000 for the first year and an average of $4,000 each successive year. State organizations including the Oregon Medical Association and the Kidney Association of Oregon have diligently cooperated with local, county, and State boards, but funds remain inadequate.

The passage of this bill would save the lives of many now suffering from kidney diseases. The amount allotted is minimal, yet, this is action in the right direction. Remedies for kidney disease and many other major diseases are possible, research often on the brink of cure, the problem is basically one of financial support. I urge my colleagues to pass favorably on S. 3355.

Mr. President, I ask unanimous consent that the letter sent me by Mr. Chuck Foster, executive director of the Kidney Association of Oregon, Inc., describing case histories of Oregon patients, be printed in the RECORD. I call particular attention to the remarkable success of the program and the number of very young lives that were saved. Also, I ask unanimous consent that a letter I received from Mr. Don Fry, along with the supportive letters and a description of Good Samaritan's Home Hemodialysis Training for Oregon Renal Patients and application for a U.S. Public Health grant to assist the Oregon programs, be printed in the RECORD.

(There being no objection, the items were ordered to be printed in the RECORD, as follows:)

KIDNEY ASSOCIATION OF OREGON, INC.,
June 26, 1970.

Hon. MARK HATFIELD,
U.S. Senate,
Washington, D.C.

DEAR SENATOR HATFIELD: Mr. Don Fry, Director of Development, Good Samaritan Hospital & Medical Center in Portland, outlined to you in his letter of June 10 the cooperative program of the hospital and the Kidney Association of Oregon to provide training and treatment for end-stage kidney failure patients through hemodialysis.

In order to make this information complete, Mr. Fry has asked me to provide you with material on an extremely important phase of our program, the rehabilitation of our patients.

We have been highly successful, not only in saving the lives of kidney failure patients, but we have also been successful in returning patients to their homes, their families and their jobs. Therefore, they are rehabilitated to lead relatively normal, productive lives.

Here are just a few examples, showing how people who were faced with death have become almost normal persons:

Kathleen Adams, 27, of Canby holds down a full-time job as a tab operator for Peerless Trailer and Truck Service in Tualatin.

Harold Belknap, 42, is a full-time custodial supervisor for the schools in Burns.

Frank Clancy, 23 was re-trained by the Oregon Department of Vocational Rehabilitation as a welder. He has been working as a full-time welder during the past year.

Vincent Dulcich, 44, is Athletic Director at the Astoria High School. Because of his illness, he signed a half-time contract with the school system in 1969. He is looking forward to working full time next year. He is married and the father of four children.

Don Gee, 35, formerly a teacher in the Gresham school system, was retrained as a computer operator for the Multnomah County I.E.D. and works full-time. He is the father of three children.

Mrs. Kathryn McDonald, 46, of Portland is the mother of four sons. She performs all of her own housework, except for heavy chores like floor scrubbing. She cooks meals for her family of five.

Susan Morrow, 44, works full-time in the records department at the University of Oregon Medical School. Single, her brother helps her perform her dialysis "runs".

Ted M. Peterson, 53, has just returned to his home in Eugene following his 10 week training period at Good Samaritan Hospital. He is now working full-time as Manager of Sales and Service at Ultra-Tone Drapery Cleaners of Eugene.

Mrs. Barbara J. Pinkerton, 56, is a full-time social worker for the State of Oregon Public Welfare Division.

Frank Tamney, 51, is the owner and operator of a 40 acre orchard in Ashland.

Betty Jo Brown, 21, of Portland has, until recently, been working full-time at Tektronix. She has applied for a kidney transplant and on the advice of her physician has stopped work temporarily.

Nine women Kidney Association patients have been rehabilitated to take care of their homes and their families. They are: Mrs. Twila Bradshaw, Medford; Mrs. Marie Day, Klamath Falls; Mrs. Eleanor Gipe, Canby; Mrs. Delina Schonneker, Milwaukee; Mrs. R. C. Shoemaker, Albany; Mrs. Helen Strouse Troutdale; Mrs. Ruth Waggoner, Lake Oswego, Mrs. Ann Van Winkle, West Linn and Mrs. Clara Stratton, The Dalles.

Mrs. Gladys J. Fisher, 58, has just completed her training period at Good Samaritan Hospital, and will be discharged today to return to her home in Lake Oswego with her artificial kidney machine. She is already searching for employment.

Only one of our 22 kidney failure patients, James Joy of Reedsport, is unable to be employed. He has had a series of medical problems, some of them unrelated to kidney failure.

The above case histories of patients of the Kidney Association of Oregon illustrate dramatically not only the success of the training center and emergency facilities of Good Samaritan Hospital, but of our ability

to rehabilitate our patients in their home environment.

We will appreciate your assistance in securing funds for Good Samaritan Hospital so that they may continue and expand their extremely worthwhile work.

Sincerely yours,

CHUCK FOSTER,
Executive Director.

GOOD SAMARITAN HOSPITAL &
MEDICAL CENTER,
June 10, 1970.

HON. MARK HATFIELD,
U.S. Senate, Washington, D.C.

DEAR SENATOR HATFIELD: Hemodialysis for end failure renal patients was first performed in Oregon at Good Samaritan Hospital and Medical Center in 1962, in a program supported entirely by this hospital.

Aside from the program at the U.S. Veterans Hospital, we are still the only dialysis training center in the State. The University of Oregon Medical School does have a limited dialysis program as back up for kidney transplant work done there on a rather limited scale.

The program is very expensive—so expensive that no hospital can carry the cost without some outside assistance.

We have attempted to operate as a training center only—a center where a patient could be trained and then returned to the care of his own physician and hospital for further care. However, when a patient's life is dependent on dialysis and he knows the training center has the facilities and the knowledge to care for his affliction, that patient is going to return to that center in desperation whenever he is in trouble. Hence, it seemingly is impossible for a center to ever be relased from the care of a patient it has trained—and the cost continues.

About three years ago we assisted in the organization of the Kidney Association of Oregon, a non profit organization, which has been very successful in securing private gifts and state funds to assist in carrying on the program. Presently, all of our hemodialysis patients enter training through the KAO program.

The 1967 Legislature appropriated $200,000 on an emergency basis for the care of Oregon kidney patients and KOA directed the expenditure of this fund, using a portion for the cost of the training. Last year The Oregon Department of Rehabilitation appropriated $218,000 for kidney patients.

We have attempted on numerous occasions to secure support for the program through HEW of the U.S. Public Health Service. Our latest effort toward this end was an application filed in April of 1968 which was approved and lay dormant until June of 1969 when it was rejected for want of available funds. This application was filed under the provisions of Section 314(e)(1) of P.L. 89–749.

The Oregon Rehabilitation funds come indirectly from federal sources, but aside from that not one penny of federal money has ever been spent in the care of Oregon kidney patients, other than those eligible for benefits of the Veterans Administration Hospital.

Applying the statistics of the Burton and Gottschalk reports (made two years ago to the Secretary of HEW) to Oregon's population, we find that between 58 and 78 Oregon people will reach end stage renal failure a year.

The Medical Screening Committee of KAO, which passes on all patients accepted for home dialysis training, handles an average of three applications per month. Some are eliminated for medical reasons, but available funds will allow the acceptance of but *one new patient a month.*

Statistics of all the patients trained for home dialysis at Good Samaritan are not readily available, but KAO has accurate records of the patients trained since the inception of their organization. Their records show: 23 patients on home dialysis, 2 now in dialysis training, 2 deceased, 3 have had kidney transplants (two of these surviving).

When a patient is accepted for the program, he enters the hospital for cannula surgery and then goes to the Kidney Laboratory on an outpatient basis for training for a period of from six to eight weeks.

The costs during the first year range from $13,000 to $15,000. This includes the cost of hospitalization, surgery, training, a home model artificial kidney machine, drugs, supplies and medical and surgical services.

During the second and all successive years the cost averages $4000 a year. This would cover additional cannula surgery as required, drugs, supplies and physician services.

Unless the patient can undergo a kidney transplant, this cost will continue as long as he lives.

Our Kidney Laboratory now has two nurses (subject to call 24 hours a day), an artificial kidney technician, a medical director, an associate medical director and a secretary.

The Kidney Association of Oregon reimburses us for the payroll costs and we absorb some $20,000 a year plus for rent, utilities, housekeeping, accounting, administration, etc.

Nearly all of the patients have come from Multnomah and contiguous counties.

Statistics would cause us to believe there are people from other parts of the State who suffer end renal failure. Probably if a kidney program were added to the Regional Medical Program as S. 3355 would provide, many of these people might be given the benefit of a hemodialysis program.

KAO during the last six months has been actively projecting a fund raising program, which has produced some $80,000 for use in the care of these unfortunate people.

Some of the patients have insurance and some have resources of their own, but it is seldom a patient has resources sufficient to sustain them on the program without assistance.

I trust this information will emphasize the needs for some federal assistance for a hemodialysis program.

So you will have at hand more detailed information on the training and treatment program, I am enclosing the narrative portion of our last application for assistance from HEW. I am also sending along copies of supporting letters from the medical associations and the State Health Officer.

I am asking Mr. Charles N. Foster, director of KAO to give you information on the rehabilitation of these patients, who faced certain death before they entered the hemodialysis program.

If I can be of further assistance, please let me know.

Cordially,

DON FRY,
Director of Development.

P.S.—We have two young vascular surgeons who are eager to train themselves for kidney transplant work, but we have not been able to find funding for such animal laboratory studies and training.

OREGON MEDICAL ASSOCIATION,
Portland, Oreg., March 28, 1968.

DAVID BRAND, M.D.,
Chronic Disease Consultant, U.S. Public Health Service, DHEW, San Francisco, Calif.

DEAR DR. BRAND: We are advised Good Samaritan Hospital and Medical Center of Portland is submitting an application, through your office, for federal support of their renal-disease dialysis program.

This Association has followed with considerable pride the work at Good Samaritan Hospital in pioneering the development of a renal dialysis program, the building of a home dialysis unit and generally assuming the obligations, including financial, during the early months and years of this project. Dr. Otto C. Page of its Medical Staff originally stimulated the interest and carried the responsibility.

Later this activity was carried on by Dr. Richard F. Drake and now since Dr. Drake has been called into military service, Dr. Charles Martinson is the physician in charge. The program at Good Samaritan continues to be under the direction of highly motivated and competent physicians.

It is strongly recommended that the application of Good Samaritan Hospital for federal support of this dialysis program be approved.

Very truly,

GLENN M. GORDON, M.D.,
President.

GOOD SAMARITAN HOSPITAL &
MEDICAL CENTER,
Portland, Oreg., February 23, 1968.

DAVID BRAND, M.D.,
Consultant Chronic Disease, U.S. Public Health, DHEW, San Francisco, Calif.

DEAR DOCTOR BRAND: The medical staff of Good Samaritan Hospital & Medical Center is fully cognizant of the work in hemodialysis being carried on in the dialysis training center at this hospital.

This program has the support and endorsement of the medical staff. We would further recommend this program for support of the federal government in accord with the application being filed by the hospital with Charles Martinson, M.D., as the project director.

Cordially,

JOHN O. BRANDFORD, M.D.,
Chief of the Medical Staff.

OREGON STATE BOARD OF HEALTH,
Portland, Oreg., November 10, 1967.

DAVID BRAND, M.D.,
Medical Consultant, National Center for Chronic Disease Control, U.S. Public Health Service, Department of Health, Education, and Welfare, Federal Office Building, San Francisco, Calif.

DEAR DR. BRAND: Mr. Fry has recently made available to me a copy of their application for a project grant for home hemodialysis training for Oregon renal patients requesting a letter of endorsement to you.

Their hospital has, I believe, pioneered in the area of home renal dialysis and in the revision, modification and simplification of the equipment involved. The project, as described, appears to have an excellent potential for some valuable training for both practicing physicians and the house staff at Good Samaritan Hospital. It should also significantly increase the number of patients for whom this life-prolonging procedure would be made available and, at the same time, reduce the cost and allow it to be performed in their own homes. I would hope that, in the future, training in this activity would also be made available to students and faculty at the Medical School in Portland, and I feel confident that the officials at Good Samaritan Hospital would be sympathetic toward this.

I see this proposed project as an excellent expansion of activities that they have promoted assiduously and would not hesitate to strongly endorse their application.

Sincerely,

EDWARD PRESS, M.D.,
State Health Officer.

P.S.—I thought you might be interested in the attached copy of a newspaper clipping on "Kidney Rent Inaugurated" (in Washington, D.C.).

OFFICE OF THE GOVERNOR,
Salem, Oreg., October 25, 1967.

Dr. DAVID BRAND,
Chief, Chronic Disease Section, U.S. Public Health Service, San Francisco, Calif.

DEAR DR. BRAND: The care of Oregon people suffering from chronic renal disease, requiring dialysis, is a matter of grave concern to me.

The recent session of our Legislature made an emergency appropriation to aid in the care of these people. We are well aware, however, that this fund is not sufficient.

The State money for treatment of chronic kidney disease is being administered by the Kidney Association of Oregon, which is cooperating in the training and treatment program being carried on at Good Samaritan Hospital & Medical Center in Portland.

The Good Samaritan Hospital program is the only training and treatment program in Oregon. The physicians and nurses at Good Samaritan have sustained the life of a number of our Oregon people confronted with end-renal failure.

We have confidence in this program; and I would commend it to you as you review the application, which I understand is being made, for U.S. Public Health funds for support of the renal dialysis work at Good Samaritan Hospital & Medical Center.

Sincerely,

JOHN MCCALL,
Governor.

KIDNEY ASSOCIATION OF OREGON, INC.,
Portland, Oreg., October 23, 1967.

U.S. PUBLIC HEALTH SERVICE, DHEW,
Region IX,
San Francisco, Calif.

GENTLEMEN: The Kidney Association of Oregon, the only civic group in this state organized to give financial assistance to people with end-failure kidney disease, is cooperating in the hemodialysis training program at Good Samaritan Hospital & Medical Center in Portland.

Our organization was selected by the recent session of the Oregon Legislature to administer state funds appropriated to assist the kidney dialysis program in Oregon. These funds and money supplied from volunteer community efforts are available for support of renal patients and are being used to assist patients in the Good Samaritan Hospital program.

Our organization is to sponsor public appeals for funds in various parts of the state for support of the dialysis program.

We are familiar with the application being made by Good Samaritan Hospital & Medical Center for funds under the provisions of P.L. 89–749 and are committed to provide the major portion of the "applicant's share" of the costs of this program.

We believe this dialysis training and treatment program is essential and it has our full endorsement. However, without federal support as requested by this grant, we can see no way at the present time of carrying out this program, so urgently needed in Oregon.

Sincerely,

CHARLES N. FOSTER,
Executive Director.

HOME HEMODIALYSIS TRAINING FOR OREGON RENAL PATIENTS

INTRODUCTION

This project, submitted under the provisions of Section 314(e)(1) of the Public Health Service Act, as amended by Public Law 89–749, requests a U.S. Public Health grant to assist Good Samaritan Hospital & Medical Center in Portland, Oregon and the Oregon Kidney Association to provide hemodialysis treatment and training for residents of this area with chronic renal disease.

Over a period of five years Good Samaritan Hospital & Medical Center has, without government funds, developed a well recognized hemodialysis program. A substantial portion of the cost has been carried by the Hospital, some community funds, a limited amount of State funds and the resources of patients have contributed.

Recently the Oregon Kidney Association was formed to secure financial assistance for persons suffering chronic kidney affliction.

Patients determined to be physically and psychologically suitable for hemodialysis would be trained at the Good Samaritan Center and then released for home dialysis and returned to the care of their own physician.

This proposal asks U.S. Public Health Service to share the cost of training and supplies for endstage renal patients, accepted in the program, during the first year of dialysis. The Kidney Association of Oregon will assume the responsibility for the patients after the first year, although every effort will be made to utilize the resources the patients and their families may be able to provide.

The Oregon Kidney Association is now administering $150,000 of State funds appropriated for patient care during the biennium. Community funds have been raised and the Association contemplates additional fund raising appeals.

The project anticipates the admission of one new patient a month, with a total of 12 to be trained each year.

Attached is a copy of Good Samaritan Hospital's indirect cost agreement with the U.S. Public Health Service. The agreement approves an indirect cost rate of 23.58%. This rate does include fringe benefits, which amount to 13 percent of the payroll and which are included in the budget for this project.

1. PROJECT OBJECTIVES

This project proposes to continue and perfect an existing home hemodialysis training program. Medically suitable patients selected by a medical screening committee will be admitted to the program at the rate of one per month. Each patient will be supplied with hemodialysis equipment and accessory supplies sufficient for 12 months of home treatment. The patient will be trained for an eight-week period and then returned to his home.

The project further proposes to facilitate the integration of the techniques of chronic hemodialysis and management of chronic uremia into the various health services within the state of Oregon. Each patient will be returned to his home town to be managed medically by his local physician; when hospitalization is necessary every effort will be made to have the patient admitted to the local hospital used by the local physician.

2. PROJECT EVALUATION

The results of this project will be easily evaluated by reviewing several routine records of patient progress. Composite records with a narrative summary will be submitted semi-annually to interested agencies.

Patients will maintain daily log books which will note general condition and equipment problems or failures. Medical data such as weight, diet, blood pressures, need for blood transfusions, and blood chemistries will be recorded. These records will be kept in duplicate and one copy will be sent to the training center at monthly intervals.

Patients will be required to visit their local physician once monthly, and take with them their copy of the daily log book. The medical director will communicate once monthly with the local physician regarding patient progress, data in the log book, and recent knowledge which may apply to the patient. Records of these communications will become part of the training center's records.

The patient will be required to revisit the training center once every three months. At this time a review of medical and equipment problems will be possible. Any necessary revision of techniques can be accomplished during this one-day period.

The project has a built-in continuation evaluation process, resulting from the use of consultants from leading kidney centers on the West Coast. One of these consultants comes from the University of Washington Kidney Center in Seattle, and the other from the San Francisco center, and each will make bi-monthly visits to the Good Samaritan Center to appraise the work being done. In their capacity as consultants, they will be in a position to not only evaluate the program, but to make suggestions for improvements for better patient care and to recommend the use of new drugs, chemicals and equipment, which may be developed.

These same factors will be observed by the project director in travel to other nearby centers and to the annual meeting of the American Society of Artificial Internal Organs.

Further evaluation of the program will come from its acceptance by physicians of the state and by participation of other hospitals in the care of rental patients trained in the program.

3. PROJECT NEED AND BACKGROUND

Statistics from the Burton and Gottschalk reports indicate that Oregon's population will produce fifty-eight to seventy-eight patients yearly coming to end-stage renal function. Recent experience of the Medical Screening Committee reveals that there are monthly two or three patients considered for home hemodialysis.

The state of Oregon has only three hospitals currently able to offer long-term treatment of the patient with terminal irreversible uremia. In the Veterans Administration Hospital in Portland there is a center dialysis unit and a recently initiated transplant program. The University of Oregon Medical School has completed ten kidney transplants as of March 1, 1968; this unit has its own dialysis backup program.

The dialysis training center at Good Samaritan Hospital & Medical Center is the only other hospital offering chronic dialysis, and is the only hospital offering training in home hemodialysis.

Hemodialysis in Portland, Oregon was first performed at Good Samaritan Hospital & Medical Center in 1962. This initial program was supported in total by the hospital. The formation of the Columbia Regional Artificial Kidney Center offered hope that funds from public donation could augment this initial program which was center-oriented.

The former medical director of the training center, Dr. Richard Drake, collaborated with Mr. Charles Willock to develop a proportioning dialysate delivery system which made possible in 1965 the first home hemodialysis in Oregon. The Drake-Willock system is currently used around the world for center and home hemodialysis.

In 1967 the Oregon State Legislature appropriated $150,000 to be used "exclusively for the benefit of Oregon residents requiring dialysis treatment." This money was allocated to the Kidney Association of Oregon, Inc., a newly formed organization which replaced the less effective Columbia Regional Artificial Kidney Center.

Since July, 1967 the Kidney Association has solicited public funds to augment the funds apportioned by the State Legislature, and has been successful in doing so. The goal of this organization has been to accept one patient monthly for home hemodialysis training and on-going treatment.

The goal of the Kidney Association is to provide training and treatment for all Oregon patients accepted for dialysis. Although

the community has responded generously, this program is not possible without substantial government assistance.

Selection of patients for this program is the purpose of a medical screening committee sponsored by the Multnomah County Medical Society and the Oregon Medical Association. Accepted patients are referred to the Good Samaritan Hospital & Medical Center for initial treatment and subsequent training.

As of March 1, 1968 nine patients trained at Good Samaritan Hospital are in their homes utilizing home hemodialysis. Two other patients are in training now. The Kidney Association of Oregon has sponsored eight of these patients, and the Seattle Artificial Kidney Center supports another. The remaining two patients are privately supported. All patients were approved by the medical screening committee. All patients are managed by their private physicians, with consultations available from training center personnel. The resident staff at the University of Oregon Medical School is functioning as the "local physician" for one patient.

Local hospitals have cooperated in the continuing care of these patients. The Good Samaritan Hospital training center has sent its personnel to several hospitals in this city and elsewhere to train local nurses, technicians, and physicians in the use of hemodialysis equipment used by the patients.

Training of local physicians in home hemodialysis and in the management of the patient with chronic uremia has been the function of the medical director. This has been effected by the aid of the training center for on-site familiarization with equipment, scheduled lectures, and by the distribution of the Physicians' Manual for Treatment of Chronic Uremia (University of Washington). Funds to purchase the latter have come from a small grant by the Collins Foundation of Portland, Oregon.

This existing program was initiated by Dr. Richard Drake while he was chief medical resident at Good Samaritan in 1962. Dr. Drake continued to improve the program after he entered private practice. He is the individual primarily responsible for the present training center. Dr. Drake was inducted into military service in January, 1968.

Dr. Otto Page, as Chief of Medicine, Good Samaritan Hospital, was instrumental in directing Dr. Drake to this project, and Dr. Page has acted as senior advisor to the program since its beginning.

4. METHOD OF PROCEDURE

All patients admitted to this program must have approval by the medical screening committee. Patient acceptance is determined by medical and psychological factors only.

Most patients are presented to the committee before the need for dialysis exists. Dialysis is initiated when the creatinine-clearance falls below 5 ml per minute, or when the patient develops complications such as uremic pericarditis, peripheral neuropathy, or metabolic bone disease.

When dialysis becomes necessary, the patient is admitted to Good Samaritan Hospital. An external arterio-venous shunt of polyvinyl and teflon tubing is inserted by a surgeon skilled in the use of this material. We prefer the lower arm site for the cannula because of the fewer days of hospitalization required during cannula healing.

Approximately one week is spent in the hospital by the patient. When his uremic state is stabilized after three dialyses over a seven-day period he is discharged to the training unit as an out-patient.

Out-patient training requires from six to eight weeks. The patient is dialyzed Monday, Wednesday, and Friday; he spends Tuesday and Thursday in the unit's kidney laboratory receiving practical and theoretical instruction regarding dialysis and the uremic state.

Family members are admitted to the unit for short visits only during the first four weeks of training. These individuals are required to be present during the last two to four weeks of training; the patient will by this time be able to instruct his relatives in proper dialysis techniques. Staff members will supervise the entire procedure but will gradually withdraw from active participation as the patient and his assistant become proficient in self-care.

By the time the patient is ready to return to his home for hemodialysis his equipment will be installed by the technician. Prior analysis of water pressure and water calcium content will have been accomplished, and appropriate measures taken if indicated.

A nurse will be available in the home for the first dialysis only. The family physician is encouraged to visit the home sometime during the first dialysis.

A. Patient selection

Patient selection is performed by the medical screening committee which meets monthly in the office of the Multnomah County Medical Society. Details on committee members are included as an addendum. Efforts are being made to include members from more distant cities in Oregon.

Patient presentation to the committee is required to be made by letter or in person to the patient's private physician; this physician must agree to assume the management of medical problems after patient training has been completed. Satisfactory evidence of current medical status must be accompanied by sufficient historical and laboratory data necessary to determine the patient's need for dialysis. Renal biopsy information is requested but not mandatory. Coexistent disease is carefully searched out and appropriate consultants requested if indicated.

A social and psychiatric evaluation of the patient and his family is performed if there appears to be no medical contraindication to dialysis. Social screening is performed at present by a professional social worker in private practice in Portland. Psychiatric evaluation is performed by or under the supervision of the Department of Psychiatry at the University of Oregon Medical School.

No patient is selected until his condition indicates an immediate need for dialysis. The screening committee has several cases tabled for monthly reviews. (Many patients screened have benefited from helpful suggestions to family physicians regarding current concepts of conservative medical management of chronic uremia.)

An acceptable patient must be one who is a stable, emotionally mature citizen of Oregon residing in the state for at least six months. The candidate's age must be 15 to 50 physiologically. He must not be afflicted by other chronic disease unrelated to renal disease. Specifically, the candidate must not suffer from diabetes mellitus, cerebral aneurysm, or permanent neurologic deficit which would preclude rehabilitation as a useful family member. He cannot live alone.

B. Patient training

While hospitalized for cannula insertion and initial dialysis the patient will be introduced to general principles of dialysis; particular attention will be given to cannula care and diet. After discharge the patient will enter six to eight weeks of training. The training manual is added as an addendum.

Training curriculum

Week 1: Correct hand washing and its importance; basic principles of aseptic techniques; the cannulas—their structure, function, care, problems; measurement of the blood pressure; the artificial kidney—structure and function; collection of blood samples from the cannulas; weights and measures used in dialysis; syringes and needles—size, how to use; basic information about the dialysate delivery system; diet instruction.

Week 2: The dialyzer—cleaning, building, sterilizing and rinsing it for a run; initiating and discontinuing dialysis; administration of blood, normal saline, and medications during dialysis; problems which may occur during dialysis—hypotension, chills and fever, ruptured membranes, clotting; measurement of hyparinization—Lee & White clotting times; dialysate delivery system—safety devices, alarm and warning lights—what to look for and what to do when they indicate trouble; diet instruction.

Week 3: Preparation of the dialyzer and dialysate delivery system for dialysis: initiating and discontinuing dialysis; testing the chloride content of the dialysate; dialysate delivery system—mechanical problems; drawing blood cultures; declotting the cannulas; diet instruction.

Week 4: Preparation of the dialyzer and dialysate delivery systems for dialysis; initiating and discontinuing dialysis; monitoring the run—clotting times, administering blood, saline, etc., chloride tests; sterilization of supplies at home; record keeping—important items to note—accuracy.

After the first four weeks of intensive training, the patient and his family member will be prepared to begin taking more responsibility for the runs, cleaning up the equipment, keeping their records, etc. The staff of the unit will permit them to be as much on their own as possible, so that they will become accustomed to performing all tasks required before discharge from training.

C. Laboratory use during dialysis

The addendum contains a schedule of laboratory tests desirable during training and after. During the training period all laboratory tests will be done in the central laboratory of Good Samaritan Hospital & Medical Center.

Frequent notation of blood chemistries is necessary during early dialysis; less frequent determination suffice after the individual patient's pattern is established.

The Multichemistry is a 12-channel autoanalyzer technique used for monthly surveys of slowly-changing chemical values. This battery of determinations includes: Blood Urea Nitrogen, Calcium, Inorganic Phosphorus, Alkaline phosphatase, total protein, albumin, uric acid, cholesterol, bilirubin, SGOT, SLDH, and Glucose. This monthly analysis will aid in the diagnosis of anicteric hepatitis and metabolic bone disease.

Transfusions of packed red cells will be given only when the hematocrit is below 18 to 20%. Post-dialysis BUN values of 40 or less are desirable. Pre-dialysis potassium levels should be 6 meq per liter or less. Pre-dialysis creatinine levels should be less than 12 to 14 milligrams per 100 cc blood.

Serum iron determinations will discover those individuals having excessive blood requirements secondary to ion deficiency.

Electrocardiograms and chest X-rays are done routinely. Hand X-rays are done to aid in the detection of bone disease. Urine culture and colony counts are performed routinely every two months because of the susceptibility these patients have to urinary tract infections.

D. Training of the patient's family physician

Each physician is given a copy of the Physicians Manual for Treatment of Chronic Uremni (University of Washington School of Medicine). Experience has shown that any physician who has a background of general medicine (internal medicine) and who is capable of caring for the patient with a chronic illness can successfully manage the patient on chronic hemodialysis.

The physician is not expected to have a thorough understanding of the dialysate delivery system. He must have an understanding of various physiologic changes which occur during dialysis. He will be required to make decisions regarding cannula function, blood requirements, fluid and salt restrictions, hypertension and hypotension, and febrile reactions. An awareness of signs and symptoms of defects in iron and calcium metabolism, peripheral neuropathy, and pericarditis is required.

Physicians of patients living more than 50 miles from the unit can obtain sufficient training in one or two visits to the training unit. Continued consultations with the medical director will reinforce information contained in the training manuals.

Because patients living in the greater Portland area have shown a tendency to consult the training unit rather than their family doctor a different approach is to be used. These physicians will make daily rounds on their patients during the last two to four weeks of training. The physician will thus make decisions regarding dialysis while the patients is still under the care of the medical director. It is hoped that this will give the patient more confidence in his family physician and will eliminate direct consultation between patient and training unit except for quarterly reviews.

E. Home preparation of dialysis

Prior to completion of patient training the technicians visits the patient's home for supervision of plumbing facilities in the "dialyzer room." The equipment is installed by the technician and is retested prior to use. If local water pressure is less than 40 pounds per square inch, a supplemental pump is installed. If the home water supply contains more than 0.6 milliequivalents per liter of calcium a sodium-exchange water softener must be installed.

F. Dialysis equipment used

Basis equipment used includes the Drake-Willock proportioning dialysate delivery system and the Kiil flat-board dialyzer. A copy of the Drake-Willock owner's manual is enclosed in the addendum.

G. Patient follow-up

The patient will keep a daily log of certain observations; a copy of the daily log sheet is contained in the addendum. These sheets will be kept in a hard-bound book which the patient will take to the doctor's office each visit. In addition, once monthly a copy will be sent to the training center.

The patient will make routine monthly visits to his physician. Once every three months he will visit the training center for review of medical status and dialysis techniques.

The technician will make home inspections at least once every three months, and monthly when possible or when necessary. In addition to inspection of dialysis equipment he will review with the patient any problems in procuring dialysis supplies and will make suggestions accordingly.

H. Hospital admissions following the training period

Cannula care and recannulation should be performed by a surgeon who has experience with problems peculiar to external shunts. Thus, until experience is obtained elsewhere in Oregon, it is anticipated that patients will return to Good Samaritan Hospital for cannula surgery. The Hemodialysis personnel will be able to offer dialysis during this period.

When interested surgeons so indicate, every effort will be made to encourage their participation in recannulation or in primary cannula insertion.

Hospitalization for other problems should be in the patient's home town, under the care of the family physician. Personnel from the training center will assume initial dialysis responsibility and will train people in local hospitals to supervise dialysis. Each patient will have at least one expert who should be utilized whenever possible; this is a relative, usually spouse, who assists in dialysis in the home.

5. PARTICIPATION OF OTHER AGENCIES

Support for this program has come from many sources within the state; both lay and professional groups have cooperated thus far and have indicated future continued efforts to improve treatment of persons with chronic irreversible renal failure.

The Multnomah County Medical Society and the Oregon Medical Association have both officially endorsed the project. (See letters attached) These professional groups have made possible the medical screening committee for the selection of patients for hemodialysis treatment, as described elsewhere in this narrative.

The Oregon State Board of Health has endorsed the program, as indicated by the attached letter from Dr. Edward Press, state health officer. Dr. William Wright, director of the chronic disease section of the State Board of Health has actively worked in support of both the project and the preparation of this application.

The approval of the official Oregon state government is indicated by the attached letter of endorsement from the Honorable Tom McCall, governor of the State of Oregon.

The Oregon State Legislature recognized an immediate need for dialysis treatment for Oregon residents with end-stage renal disease by appropriating $150,000 for this work during the biennium, July 1967–July 1969. This fund is being administered by the Kidney Association of Oregon through the Good Samaritan training program. The continuing interest of the State of Oregon in providing dialysis for Oregon kidney patients is indicated by the attached letter from State Senator Ted Hallock.

The University of Oregon Medical School has officially, by letter of endorsement, and unofficially, by cooperative patient care, been involved with this training program. Two members of the screening committee are on the full-time faculty of the Medical School.

The Kidney Association of Oregon, an organization of civic minded business and professional men, has as its purpose the raising of funds to provide dialysis equipment and hemodialysis treatment for suitable Oregon residents suffering from terminal renal disease. This organization is committed to the support of the Good Samaritan Hospital & Medical Center home hemodialysis training center as indicated in their letter attached as Addendum No. 13.

During April the Kidney Association of Oregon organized a subchapter in Eugene, for fund raising purposes; it is anticipated other chapters will be organized throughout the state.

All but one of the major Portland hospitals have cooperated in the continuing care of renal patients trained in this program. Several hospitals in other parts of the state have also accepted patients trained at the Center. There is no contractual arrangements with these hospitals; they have accepted patients in response to the patient's own physicians after the conclusion of the training period. However, personnel from the Good Samaritan Center have gone to some of these hospitals to teach the paramedical staff the techniques of dialysis.

Evidence of progress in technique and general acceptance of the dialysis patient on the wards of the hospitals is encouraging. There is no reason to believe the other hospitals in Portland and in other cities of the state will not become involved in the treatment of dialysis patients when the opportunity presents itself.

Private physicians from varied specialties and general practice have individually endorsed this program by offering continuing care for their patients after training.

6. PROJECT CONTINUATION

It is anticipated there will be a continuing need for a hemodialysis program, Progress in renal transplantation is encouraging, but does not offer the ideal treatment for all patients. Dialysis techniques and skills acquired in local hospitals during the duration of this project will, no doubt, be important to future transplant programs and to maintenance of patients prior to transplant or not suitable for transplant.

The Kidney Association of Oregon is organized on a permanent basis to supply funds to assist patients in hemodialysis training and on-going care. The board of trustees of the Kidney Association of Oregon has voiced recognition of future transplant activities as a natural evolution of the present singular function performed at this time.

An organ transplant program, to be conducted at Good Samaritan Hospital & Medical Center, has been authorized by the Board of Trustees of the Hospital. When the surgeons involved enter this phase of the program, the dialysis work of the Center will offer support.

The Kidney Association of Oregon is presently organizing chapters in various cities of the state for the purpose of enlarging its scope of financial support.

Several of the renal patients, accepted in the present program, have come from cities in other parts of the State. On each of these occasions, a local chapter has been organized in the community for the purpose of providing funds to be administered by the Kidney Association of Oregon.

The organizational program includes alerting newspapers, radio and television stations, and directing a full scale publicity program in a fund raising effort.

This type of program is to be continued in addition to the organization of local chapters in other communities.

The interest of the official State government in the welfare of end failure renal patients is continuing, as evidenced by the attached letter from State Senator Ted Hallock. Senator Hallock was a co-sponsor of the bill which appropriated state funds for renal patients during the last legislative session.

During the period of the grant, both the Oregon Kidney Association and Good Samaritan Hospital & Medical Center will continue to explore all possible sources of new revenue to support a continuation of this program.

Potential sources of support include: the Comprehensive Health Program, the Regional Medical Program, additional funds from the State of Oregon, funds from both state and federal rehabilitation programs, Title 19 of the Medicare program, insurance programs, support from the United Good Neighbors, grants from private foundations, local philanthropy and further development of the fund raising efforts now being conducted throughout the state by the Oregon Kidney Association.

7. PROJECT STAFFING

The Good Samaritan Dialysis training center is an operating function with adequate staff available to immediately carry out the program as outlined in this application.

Dr. Charles L. Martinson, the project director, is an internist, who has taken special post graduate training in hemodialysis for end-stage renal patients, under Dr. Belding Scribner at the University of Washington. Since January 1, 1968, he has been the medical director of the Good Samaritan Center. Prior to that time, he worked closely with Dr. Richard F. Drake, who previously directed the Center.

Dr. John F. Hayes, who would provide the cannula surgery, has been serving in this capacity since the inauguration of dialysis

training at Good Samaritan in 1962. Under this program he would devote 10% of his time to staff service, and would bill for each cannula surgery at a nominal fee.

Dr. Otto Page, an internist who has been identified with the Good Samaritan dialysis program since its inception, would continue to serve as a medical consultant.

Dr. Christopher Blagg of the University of Washington home hemodialysis program, and Dr. Bernice Barnett, who is now working in a kidney program in San Francisco, are also to serve as consultants to the Good Samaritan Center. Either one or the other will visit the Portland Center, at sixy day intervals.

Miss Jeannie Lawrence, R.N., the chief kidney nurse in the project has occupied this position in the Good Samaritan program for four years. Her experience includes the care of both chronic and acute renal problems requiring hemodialysis. During this period she has continually been engaged in the training of patients for home dialysis and has assisted other hospitals and centers in the establishment of dialysis programs, and has demontrated the use of artificial kidney equipment.

The other two registered nurses, affiliated with the project, have had special training in hemodialysis under Miss Lawrence, Dr. Drake and Dr. Martinson.

Robert L. Eash, the chief kidney technician, has served three and a half years in this capacity at Good Samaritan's center. His work in the training of patients in "building the artificial kidney", care and maintenance of the equipment and in applying the solution concentrates, has been very effective.

An assistant kidney technician is used and is needed particularly when the Center has several patients, for relief, and when the Center personnel is away on training missions.

8. FACILITIES AVAILABLE

The training center is located on the second floor of a building originally constructed as a dormitory for the Hospital's school of nursing. This building is directly across the street from the main hospital. The entire East wing of the second floor of this building is used exclusively as a hemodialysis training facility for patients with end-stage renal disease. There are eight rooms in the suite, as well as dressing, shower, and lavatory facilities for patients and family members. The unit occupies a total of 2200 square feet of floor space. (Floor plan attached)

Three of the rooms in the suite are specifically designated as patient rooms, used for the training of an individual patient and his relative. A fourth room, presently used as an examination room, could be easily converted into a patient treatment room. Individual dialysate supply systems are used for the patients, each patient receiving his training on the equipment which he subsequently takes home with him. Each patient room is equipped with a water supply and a drain to accommodate the single-pass dialysate delivery unit. The electrical power supply for each dialysate delivery system is separate from the main power supply for the rest of the building. The chemical content of Portland's water makes it adequate for use in dialysis without special treatment.

One room in the suite is used as a "kidney laboratory" for the building, maintenance, and storage of the Kill dialyzers. There are two sinks with attached drainboards to permit the "building" of two dialyzers at the same time. The facilities closely resemble those found in the home.

Another room of the unit is used for storage of consumable supplies, storage of extra equipment, and for the general use of the technician who is in charge of storage and inventory maintenance.

Inasmuch as the analytical determinations required by the project are made in the Hospital's central laboratory, no separate laboratory facilities are required.

The last two rooms of the suite are designated as offices. One of these accommodates the medical director, the other is utilized by the nursing and technician staff.

9. PROJECT BUDGET

This is primarily a home hemodialysis training program and the financial obligation of the project to a patient is confined to the periods of hospitalization for cannulation, eight weeks of training and ten months of dialysis in the patient's own home. Consequently the budget does not reflect a pyramiding cost of the type to be anticipated if the perpetual care of the patients is charged to the project.

Following the period specified in this application, the patients will be dependent upon their own resources, insurance and support supplied by the Kidney Association of Oregon. The Kidney Association of Oregon will have increasing costs each year in maintaining patients, but these costs are not applicable to this budget, and except as indicated, these costs will occur after the end of the project's responsibility to the patients.

Because the project does not involve continual on-going care for the patients the cost of training and maintaining the patients on home dialysis reaches its peak in the second year. Consequently the budgets for the second through fifth year of the project are much the same. Provision is made for salary increases during these years.

A degree of mortality among end-stage renal patients is recognized in the equipment demands of the budget for the third through fifth years. During the third and succeeding years it is anticipated that a portion of the artificial kidney units, dialysers and pumps can be recovered for reassignment to new patients. Probably much of this equipment will require factory reconstruction; however, a savings of 10 percent in the cost of equipment purchase is projected.

The budget makes provision for three consultants. Dr. Page practices in Good Samaritan Hospital and is available for consultation at all times. Dr. Blagg is affiliated with the University of Washington Kidney program and the budget provides an annual stipend of $1,500 for his service, plus travel costs from Seattle for bi-monthly visits to the Portland Center. Dr. Barnett is associated with a kndney center in San Francisco. The budget also provides an annual fee of $1,500 for her with additional provision for her travel to Portland six times yearly.

A list of the equipment included in the kits to be supplied each patient is detailed in Addendum No. 2.

The laboratory procedures required during the training period are listed in Addendum No. 3.

The laboratory procedures or tests to be made during the ten month period of home dialysis are detailed in Addendum No. 4. It is anticipated these tests will be made in the patient's home town under the direction of the patient's attending physician, whenever possible.

Details of the costs of both original and recannulation procedures are listed in Addendum No. 5.

The costs of supplies, chemicals, laboratory determinations, drugs, etc., for the first year are based on 23 patient months of training and 55 patient months on home dialysis. During the second and succeeding years the budget provides for 24 patient months of training and 120 patient months of home dialysis. Supplies used during training are listed in Addendum No. 7. The monthly supply needs during home dialysis are listed in Addendum No. 6.

Each patient and his physician will be supplied a copy of the Center's "Patient Manual" on dialysis procedure, at a cost of $5.00 per copy. The physician attending each patient will be supplied a copy of the University of Washington's "Physicians' Manual" at a cost of $2.50 a copy.

The budget provides $500 a year each for the project director and the chief kidney nurse to attend the annual meeting of the American Society of Artificial Internal Organs and an additional $500 for use of the project director to visit other kidney centers to observe any new treatment techniques or newly devised equipment being used.

Mr. WILLIAMS of Delaware. Mr. President, I hope the Senate approves this amendment. It does not destroy the bill or its objectives. The bill, as it now stands, would provide $516,800,000 for 1971, $621,700,000 for 1972, and $737 million for 1973. I will not mention 1974 or 1975 which were added in the Senate bill but not in the House. Altogether for the 3 years the amount would be $1.874 billion.

The adoption of this amendment, rolling the Senate figure back to the House figure for those 3 years, would reduce the amount by $125 million or to about $1.7 billion. Certainly rolling the figure back $125 million to the House figure is not being unrealistic nor is it trying to destroy the program.

Mr. President, I wish to refer to the statement of the Director of the Budget which was received by me under date of August 31 of this year, and I refer to their comments on this bill, S. 3355. I shall not read the entire letter, but it is summed up in this one sentence:

> However, in light of the serious fiscal situation now foreseen, we think the authorization levels currently contained in S. 3355 are not realistic.

They do not support it in the present form. This amendment merely rolls the amounts back to the House figure, with a cut in 1971 of $25 million, in 1972 of $50 million, and in 1973 of $50 million, for a total of $125 million over the 3-year period.

I think the very least the Senate can do, realizing the serious deficit with which we are confronted, is to agree to the amendment.

Mr. President, I am ready to vote.

The PRESIDING OFFICER. The question is on agreeing to the amendment of the Senator from Delaware (Mr. WILLIAMS) on page 10, lines 8, 9, and 10. On this question the yeas and nays have been ordered, and the clerk will call the roll.

The assistant legislative clerk called the roll.

Mr. BYRD of West Virginia. I announce that the Senator from Nevada (Mr. BIBLE), the Senator from North Dakota (Mr. BURDICK), the Senator from Virginia (Mr. BYRD), the Senator from Nevada (Mr. CANNON), the Senator from Idaho, (Mr . CHURCH), the Senator from Connecticut (Mr. DODD), the Senator from Arkansas (Mr. FULBRIGHT), the Senator from Indiana (Mr. HARTKE), the Senator from Iowa (Mr. HUGHES), the Senator from Washington (Mr. JACKSON), the Senator from Massachusetts (Mr. KENNEDY), the Senator from Washington (Mr. MAGNUSON), the Senator from Minnesota (Mr. MCCARTHY), the

Senator from Wyoming (Mr. McGEE), the Senator from South Dakota (Mr. McGOVERN), the Senator from Montana (Mr. METCALF), the Senator from New Mexico (Mr. MONTOYA), the Senator from Connecticut (Mr. RIBICOFF), the Senator from Georgia (Mr. RUSSELL), the Senator from Missouri (Mr. SYMINGTON), the Senator from Maryland (Mr. TYDINGS), and the Senator from Ohio (Mr. YOUNG), are necessarily absent.

I also announce that the Senator from Maine (Mr. MUSKIE) and the Senator from New Jersey (Mr. WILLIAMS) are absent on official business.

I further announce that, if present and voting, the Senator from Idaho (Mr. CHURCH), the Senator from Arkansas (Mr. FULBRIGHT), the Senator from Iowa, (Mr. HUGHES), the Senator from Washington (Mr. JACKSON), the Senator from Massachusetts (Mr. KENNEDY), the Senator from Washington (Mr. MAGNUSON), the Senator from Wyoming (Mr. McGEE), the Senator from New Jersey (Mr. WILLIAMS), the Senator from Connecticut (Mr. RIBICOFF) would each vote "nay."

Mr. GRIFFIN. I announce that the Senators from Vermont (Mr. AIKEN and Mr. PROUTY), the Senator from Utah (Mr. BENNETT), the Senator from Massachusetts (Mr. BROOKE), the Senator from New Hampshire (Mr. COTTON), the Senator from Colorado (Mr. DOMINICK), the Senator from Hawaii (Mr. FONG), the Senators from Arizona (Mr. FANNIN and Mr. GOLDWATER), the Senator from New York (Mr. GOODELL), the Senator from Florida (Mr. GURNEY), the Senator from Wyoming (Mr. HANSEN), the Senator from California (Mr. MURPHY), and the Senator from Texas (Mr. TOWER) are necessarily absent.

The Senator from South Dakota (Mr. MUNDT) is absent because of illness.

The Senator from Delaware (Mr. BOGGS), the Senator from Maryland (Mr. MATHIAS), and the Senator from Pennsylvania (Mr. SCHWEIKER) are absent on official business.

The Senator from Kentucky (Mr. COOPER) and the Senator from North Dakota (Mr. YOUNG) are detained on official business.

If present and voting, the Senator from Massachusetts (Mr. BROOKE) would vote "nay."

On this vote, the Senator from Colorado (Mr. DOMINICK) is paired with the Senator from California (Mr. MURPHY). If present and voting, the Senator from Colorado would vote "yea" and the Senator from California would vote "nay."

On this vote, the Senator from South Dakota (Mr. MUNDT) is paired with the Senator from Vermont (Mr. PROUTY). If present and voting, the Senator from South Dakota would vote "yea" and the Senator from Vermont would vote "nay."

On this vote, the Senator from Texas (Mr. TOWER) is paired with the Senator from New York (Mr. GOODELL). If present and voting, the Senator from Texas would vote "yea" and the Senator from New York would vote "nay."

The result was announced—yeas 8, nays 48, as follows:

[No. 284 Leg.]

YEAS—8

Bellmon	Griffin	Thurmond
Curtis	Hruska	Williams, Del.
Dole	Miller	

NAYS—48

Allen	Hart	Pastore
Allott	Hatfield	Pearson
Anderson	Holland	Pell
Baker	Hollings	Percy
Bayh	Inouye	Proxmire
Byrd, W. Va.	Javits	Randolph

Cooper	Magnuson	Tower
Cotton	Mathias	Tydings
Dodd	McCarthy	Williams, N.J.
Dominick	McGee	Young, N. Dak.
Fannin	McGovern	Young, Ohio
Fong	Metcalf	

So the amendments of Mr. WILLIAMS of Delaware were rejected.

Mr. YARBOROUGH. Mr. President, I move to reconsider the vote by which the amendment was rejected.

Mr. SCOTT. I move to lay that motion on the table.

The motion to lay on the table was agreed to.

The PRESIDING OFFICER. The bill is open to further amendment.

Mr. WILLIAMS of Delaware. Mr. President, I intended to offer another amendment, but in the light of the recent vote, which I am sure illustrates the sentiment of the Senate, I shall not offer it; I abide by the Senate's decision. I merely point out that we shall be voting here on a bill providing $3.594 billion over a 5-year period. The House bill had provided for a 3-year period a total of $1.874 billion. The Senate bill, on the same 3-year period, would increase the authorization in the House bill by around $350 million to $400 million. In addition, the Senate bill adds $1.7 billion for the 2 years beyond the House bill. Altogether the bill we are voting on will cost about $2 billion more than the two comparable bills sent over by the House of Representatives.

The Senate has made its decision, but I think it is unfortunate; and I quote again the statement of the Director of the Budget:

> In the light of the serious fiscal situation now foreseen, we think the authorization levels currently contained in S. 3355 are not realistic.

They go on to point out that the figures in the Senate bill are so far above the budget that they cannot support them.

Mr. YARBOROUGH. Mr. President, I point out that this 3½ billion is for the fight against cancer, heart disease, stroke, and other major diseases, and that averages out, for the 200 million American people, to an average expenditure of about $2.50 a year per citizen, to try to help fight these wasting diseases so seriously affecting the American people.

When we consider that it costs $146,000, by the Defense Department's figures, to kill one Vietcong, I think this is a very modest expenditure in behalf of the American people.

Mr. WILLIAMS of Delaware. Mr. President, I agree that we need to consider the health of our Nation, and I only hope none of the taxpayers when they realize the size of the tax bills created by this extravagant Congress will have heart failure.

Mr. CRANSTON. Mr. President, I rise in support of S. 3355.

First, I would like to congratulate the distinguished chairman of the Labor and Public Welfare Committee, Senator YARBOROUGH, who is also chairman of the Health Subcommittee, for his outstanding leadership in developing S. 3355. The bill as reported out by the committee will make substantial improvement in the operation of several basic health programs, and I believe Senator YARBOROUGH deserves great credit for this achievement.

I certainly do not need to bring to the attention of the Members of the Senate the acute shortages our Nation faces in all aspects of medical care—health manpower, health care facilities, health services, health training, and health research facilities. These shortages all cause critical deficiencies in the delivery of health care to the individual in the community. Congress, in the past 5 years has taken some dramatic legislative steps to forestall the collapse of our so-called "health system," and with very promising results, by providing for greater utilization of existing and projected facilities and resources through planning mechanisms and cooperative efforts built into the community health structure. Among these enactments were those creating comprehensive State health planning—CHP—and regional medical programs—RMP. Both of these programs are extended in S. 3355.

Mr. President, I would like to discuss several amendments to S. 3355 which I offered and which were accepted unanimously in committee. First were amendments—in sections 106(2), 108(3), and 220(6) of the bill—to provide for the representation on an ex officio basis of the Veterans' Administration on the advisory bodies to State health planning agencies and regional medical programs, as well as on the RMP National Advisory Council.

One common base of RMP and CHP programs is a firm foundation in existing community medical resources with the goal of expanding and coordinating these resources to improve the health care provided to the members of the community.

The hospital and other medical facilities of the Veterans' Administration also have a vital interest in the development of the community's health resources. And, on their part, the communities stand to gain substantially from a closer association with this most extensive of Federal health systems. The

beneficiaries of the Veterans' Administration have close ties with the community through their families, and, of course, are themselves members of the community; thus the state of their health is closely related to the health of other members of the community, and planning for health care delivery in the communities is incomplete if it does not take into account the services provided by the VA facilities.

These services and facilities are extensive, and the number of individuals served each year is sizable. The Veterans' Administration has 166 hospitals in the United States, whose total daily census is about 85,960. In fiscal year 1971 it is estimated total admissions to VA hospitals will be 875,883, while total outpatient visits will be 7,852,000.

These VA facilities cannot operate at top efficiency when isolated from the resources of the community. In turn, the contributions these facilities make to improving medical care and increasing medical manpower are highly beneficial to the community. Half of all medical students receive a portion of their training in a VA facility. One-fifth of our physicians have received residency training at these facilities, and in all, some 40,000 professionals and paraprofessionals receive training each year in VA facilities. VA medical research has resulted in improved treatment procedures in many disease categories. Strengthening the ties between this Federal system and the community system would create a potential for even greater achievement in both sectors.

In many instances, close involvement of VA and other Federal medical facilities with community facilities and programs is already a fact, and has proven highly beneficial to all concerned. But in some areas such relationships are minimal or nonexistent. I believe that the advisory council representation I have proposed offers a sound mechanism for greater communication between, and coordination of, health programs, but not for domination of one system over the other. Thus, representation on these advisory groups would be required only where there are appropriate facilities of the VA within the geographic area involved, and such representation would be on an ex officio basis.

Mr. President, I wish to make perfectly clear that my amendments are intended in no way to dilute the authority of community representatives in developing and administering health programs, but rather to expand the community's vision to encompass all facilities within their geographical area. Neither are they intended to impose any restrictions on the VA medical system, but rather to foster greater communication between that system and community health programs for their mutual benefit.

Representation of the Veterans' Administration on the State health planning advisory councils should result in, first, better coordination of planning for facilities construction; second, better planning for costly specialized medical units; third, greater ability to determine the State's competence to train medical personnel needed for its population; and fourth, improved planning for the optimum delivery of health care of the State's residents. Informal methods of participation already exist in VA/CHP relationships, particularly in arrangements with areawide, 314(b), sponsored programs. I believe this salutary trend can be expanded by the closer relationship at the State level which S. 3355 would require.

Representation of the VA on RMP advisory councils will insure that VA treatment procedures are up to date with the most modern developments and techniques. Likewise, new techniques developed in the VA system can be immediately brought to the attention of the community. The RMP-sponsored continuing education program in the treatment and prevention of diseases will have a highly beneficial impact on all VA hospitals, particularly those in remote areas. Many of the university-affiliated VA hospitals in turn can make outstanding contributions to development of these educational programs. In the critical disease areas of the regional medical programs, treatment facilities and procedures are highly specialized and extremely costly and normally are not operated 100 percent of the time. A great opportunity exists for sharing or joint planning in the establishment of such facilities.

Important advances have been made in the extent of participation of VA hospitals in regional medical programs. Currently 72 VA hospitals are participating in 39 of the 54 operating RMP's. In many areas, these cooperative efforts have been highly successful and have encouraged a trend toward more valuable interrelationships.

In 1965, when regional medical programs were first authorized by Public Law 89–239, the bill as reported and passed by the Senate included the Chief Medical Director of the VA as an exofficio member of the National Advisory Council. Later, the Senate adopted the House bill without change, and that bill did not include VA representation. I believe the Chief Medical Director should attend and participate as a nonvoting member in meetings of this council. Certainly the Nation's largest medical system should be in communication with those who are advising on regional medical programs, and such representation, now provided for in S. 3355, would assure this communication.

The benefits of such coordination to the veteran are clearly documented in a recent article published in the Journal of Public Health, written by Dr. John W. Walsh, one of the outstanding VA hospital directors. Mr. President, I ask unanimous consent that this article be printed in the RECORD at the conclusion of my remarks.

During committee consideration of S. 3355, I also introduced a number of amendments which give full recognition to the important role home health care can and should play in the Nation's medical care system. I was very pleased that all were accepted by the members of the committee.

These amendments, first, include home health care programs as an integral part of regional medical programs; second, place research and demonstration projects in home health care on an equal priority with those health care methods highlighted as eligible for grants awarded for research and development in health services delivery; and third, assure that in planning for the delivery of health services at both the State and area level, full consideration be given to the potential of home health care services to meet health needs.

Because of the importance which I attach to home health care as a means of solving a number of deficiencies in our health care system, I would like to speak extensively about the history of this medical technique and the unrealized opportunities it offers for many, many sick and disabled persons with no alternative to becoming institutionalized to receive health care.

Mr. President, among various systems of health care delivery developed and improved upon within the past few years, one of the most promising yet least perfected and recognized is the system of home health care. Although home health care is certainly not a novel program—in the United States, the first organized program was established in 1796—several more recent developments have created a demand that these programs provide highly sophisticated, efficient, medical services as a complementary system to the inpatient and outpatient services generally thought of as the basic health delivery system.

These recent developments include medical advances which have made it possible to save many lives that in previous decades would have been lost to disease and accidents. In addition, the average lifespan has vastly increased due to improved medical techniques and increased knowledge in the treatment and prevention of disease. The result has been a much larger population, with a higher proportion of elderly individuals who are particularly subject to chronic illness, and an increase in the number of individuals of all ages who are temporarily or permanently disabled. Many of these individuals are not ill to the extent that an acute care hospital bed or full-time institutional care is needed. But they are not ambulatory enough to utilize outpatient facilities, and physician-directed medical care is essential to their recovery.

A second major development in recent years has been the sharp increase in the cost of hospital care, due partly to the expense of acquiring and staffing the new equipment and services modern medicine has produced and partly to increased operating costs and increased construction and renovation costs. Unfortunately, the cost of delivering hospital care has increased at a higher rate than the overall cost of living. These higher hospital expenses are included in overhead costs and transferred to the patient in the daily charge for his hospital bed. Thus, the hospitalized convalescent or chronically ill patient shares the burden of the cost of expensive acute care even though he is not utilizing it.

A third factor encouraging the development of home health care service has

been the increase in the utilization of hospital beds. The growth of third party private insurance plans and the enactment of medicare has made hospitalization possible for many who in previous years were unable to afford it when they needed it. At the same time, most of these insurance plans provide reimbursement only for services performed during hospitalization, which restriction has served to increase hospital utilization substantially. As a result, many hospitals, particularly in urban areas, are operating at 95 percent capacity. Accordingly, communities and hospitals have been pressed to find methods of relieving the hospital of overcrowding and to insure the availability of the necessary number of beds for emergency situations. The result has been the establishment of a number of hospital-based home health care agencies, as well as agencies affiliated with one or more hospitals.

Currently, some of the major private third-party insurance plans include in their coverage the cost of posthospitalization home health care services, and in a few cases include prehospitalization services. Among prepaid group practice plans, Kaiser Permanente in Oregon pioneered in demonstrating the efficacy of including home care programs among the services provided its membership. Home health care services are now included in the benefits provided by about one-fourth of the prepaid group practices in the United States.

Congress at an early date recognized the potential of home health care services to meet these new demands on the health care delivery system. In adopting the Medicare Act, title 18 of the Social Security Act, Congress in 1965 included home health care service as a reimbursable service under both part A, "Hospital Insurance Benefits for the Aged," and part B, "Supplementary Medical Insurance Benefits for the Aged." These provisions made it economically feasible for individuals over 65 to utilize home health care services and at the same time provided some assurance to those wishing to develop such services in the community that there would be a demand from patients with financial ability to pay for the services so that investment in home health care systems would be economically viable. At the same time, Congress provided, through special appropriations in 1966 and 1967, seed money to foster the establishment of home health care agencies which could meet the certification requirements of medicare.

These relatively recent developments have changed the concept of home health care and have brought about the creation of new patterns of delivering that care. Whereas originally, home health care was limited to the provision of a single service—such as a visiting nurse, or a homemaker aide—today the emphasis is on providing multiple services.

Special impetus to the development of a more complex home health care agency was provided by medicare through requirements that only those agencies providing nursing plus one other service—either physical therapy, occupational therapy, speech therapy, medical social services, or home health aid services—could be certified for medicare participation. However, of the over 2,100 certified home health agencies only 78 provide the full range of services suggested but not required by the certification requirements. And over half of the agencies are at the minimum level, limiting their services to a nurse plus only one of the five other services.

I wish to note that as with any developing new field, there have been some problems and deficiencies in home health care systems. Many existing agencies were hurriedly established in 1966 and 1967 following the enactment of medicare. Consequently, they were not properly planned and failed to develop close relationships with other medical services in the community. Recent concerns have been expressed by the Social Security Administration about abuses in the home health programs, and an instructional release has been issued to their carriers and intermediaries emphasizing the legislative requirements governing reimbursement for home health care services. The intent of these provisions is to permit the reimbursement for home health services only where such services are determined by the physician to be essential to the patient's recovery and are a less expensive alternative to institutional care.

I strongly endorse the principle and requirement in the Social Security Act that any treatment program carried out by home health agencies must initially be prescribed by a physician after a visit to the homesite and should be actively monitored by a physician through continued personal, direct contact with the patient.

An important home care milestone is the development in a few communities of a comprehensive pattern of home health service—called the coordinated home care program. This type of program holds a tremendous potential for meeting many of the deficiencies of existing health delivery systems. These programs coordinate a wide range of home services around the needs of an individual patient as prescribed by his physician; they are centrally administered; and operate on a team concept in providing multidisciplinary services which can include medical, dental, nursing, social, educational, or other related services.

Ideally, such a coordinated home care program has relationships with other services in the community, such as hospitals—to assure immediate availability of hospital inpatient services when needed—laboratory and radiology services, occupational and physical therapy services, psychological services, educational services, and many, many others. Under these circumstances, the program becomes a full partner in the community system of health and social services and provides those types of services which can both be provided most efficiently in a home situation and at the same time be closely coordinated with more complex systems for the provision of necessary services beyond the scope of the home health care program. Unfortunately, the number of home care agencies which have developed this comprehensive, coordinated approach is still very small.

Despite the progress I have outlined, much still needs to be done in this increasingly important field:

First. The distribution of home care agencies throughout the country is very uneven. Fifty-four percent of the counties in the country have no home health care coverage. Many of these are rural or sparsely populated counties, but among them are 99 counties with populations over 50,000. In these 99 counties there are many hospitals, extended care facilities, mental health centers, a few rehabilitation centers, but not a single home health care agency. Moreover, only five States have home health care agencies available for 100 percent of the population and only another 13 States have these services available for 90 to 99 percent of their population. Seven have them available for 75 to 90 percent. Seventeen States have these services available for 50 to 75 percent of their population, and eight have these services available for less than 50 percent of their population. Thus, there is an obvious need to develop these home health care programs in many areas of the United States.

Second. At the same time, new methods of administration of home health services need to be developed. Each community has its own needs, and each pattern of home health care has its particular utility depending on the circumstances of the patient and the circumstances of the health delivery system and other related systems of the community. In some communities, the services may be hospital-based or multihospital-based; in others they may be organized independently of any existing medical agency; in still others they might come under the auspices of a single agency or a multiagency council. A rural community may have a very limited base of health services on which a home health care program can be built, while an urban community may have such a wealth of programs that its challenge may lie in utilizing them fully or in overcoming entrenched but outmoded attitudes of providing services. Many communities have found it difficult to break into long-standing medical care patterns traditionally built around institutional care. Many existing home health care agencies were established without adequate community planning and support and as a result are inadequate to the particular needs of that community. Thus, considerable study is still necessary to develop further the various methods and scope of delivery of home health care services and to determine means of matching particular models to a particular community's needs and resources.

Third. There is a need for adapting treatment procedures for additional diseases to the home health care delivery method. Significant opportunities exist for treatment at home in the area of the premature infant, the mentally ill, the chronically ill, especially in the area of

renal or respiratory diseases, and the spinal cord injured. The child of working parents who becomes ill may require a parent to stay home from work to supervise him. Home care services offer responsible care for such a child without jeopardizing the parent's job career or financial stability. Home health care can be provided the terminal patient, giving him the psychological boost of familiar surroundings and warm loving attention so essential to maintaining his spirits. Finally, a great potential exists in the provision of home health care services prior to hospitalization, particularly in the case of elective surgery, where the first days of hospitalization may be devoted to undergoing a battery of tests which could be provided at home at considerably less expense.

Fourth. Experiments and demonstrations in the innovative use of allied health personnel in home health care programs need to be developed. Opportunities also exist for the development of programs to train the nonprofessional health aide as an extension of the professional worker in the home setting. A special potential for expanding health manpower resources offered by home care programs is the opportunity they provide to utilize on a part-time basis the professional who is unable to meet the rigid schedule of a full-time job in an institutional setting.

Fifth. Studies need to be undertaken in the area of cost effectiveness to develop a formula which could determine with reasonable precision the moment where the transfer of a patient to or from a hospital or other medical facility would be most economical, as well as medically productive, both for the institution and the patient and his family. These studies need not be confined to the more complex home health care systems. Indeed, the recent report of the staff to the Senate Committee on Finance on "Medicare and Medicaid, Problems, Issues, and Alternatives," recommended consideration of extending medicare benefits to include homemaker costs in home health coverage as an alternative to more costly institutional care. The report stated:

> Many physicians and a number of health insurers have pointed out the pressure for continued hospitalization of a patient for several days more than medically necessary because of the lack of someone to assist the patient at home with food preparation, routine cleaning, etc., during the first week or two following discharge from the hospital. During that period, the patient gradually recovers capacity for independent living and ability to meet his routine living needs. In the absence of assistance at home during that recuperative period, physicians are understandably reluctant to discharge patients and patients are reluctant to go home. The present alternative to continued hospitalization is to discharge the patient to an extended care facility or skilled nursing home, which, while less costly than hospital care, is still quite expensive and often encompasses more care than those patients need. (S. Rept. No. 744, 90th Cong., 1st Sess. (Nov. 14, 1969).)

Sixth. To encourage greater utilization of home health care services, there is a need to find means of giving recognition and visibility to home care programs, both in the medical community and in the consumer's community. A study undertaken in 1964 under the direction of Dr. Roger Egeberg, now Assistant Secretary for Health and Scientific Affairs in the Department of Health, Education, and Welfare, showed that 7 percent of hospital patients were medically suited for home health care. Yet currently only 2½ percent of hospital patients are being discharged to home health care programs. This discrepancy is due to the fact that many individuals in communities are unaware of the availability of home care services and many doctors also are equally unaware of the extent of the availability of such services, or are unaccustomed to utilizing the services effectively, if at all. Fuller exposure of the medical student to home care programs should be included in his medical school training so that he can learn early in his career the value of such services in the treatment of his patients.

Underutilization of home health care services is also caused to some extent by the limitations of private third-party insurance plans in including such services in their coverage. In those cases where it is covered, it usually is reimbursable only following hospitalization. And even where covered in private third-party insurance plans and in medicare there is considerable underutilization of the services. A study of medicare beneficiaries who were hospitalized during 1 year, indicated that the rate of utilization of home health care per State ranged from 3.2 individuals per 1,000 hospitalized to 37.8 per 1,000, with the individual State average being 13.2 individuals per 1,000 hospitalized.

When the expensive daily costs of hospital care are considered, this wide differential in the use of home health care services indicates that considerable savings might have been realized had home health care services been fully utilized. For example, a Blue Cross study of some 2,500 Blue Cross, medicare, and other patients in Philadelphia indicated that by utilizing home care services for these patients, some 33,000 hospital days were saved. For each patient the saving represented an average of 13 days of inpatient hospital care, and the cost of home health care on the average was roughly one-half that of the same care provided in a hospital.

Underutilization of home care services following hospital treatment can also be attributed to a lack of adequate hospital patient-discharge planning due partly to inertia in changing established patterns of care and partly to the lack of financial motive for the hospital, the physician, and the family. The hospital, if not operating at capacity, loses revenue; the physician's reimbursable services are not covered as fully as in the case of a hospitalized patient; and the family may find home care more expensive in terms both of utilization of their own time, and financially in that only limited coverage or none may be available—for example, after the initial benefits are used up in the case of medicare, reimbursement is limited to 80 percent of the costs.

In sum the potential for improvement and development of home health care programs is almost unlimited. Experience and recent research findings have shown that home health care programs can accelerate the rate of recovery from illness, can prevent or postpone disability, can reduce the time of hospitalization, can prevent rehospitalization, and can achieve these results at lower cost than the same services provided in an institutional setting. Benefits to the patient are considerable, economically in terms of reduced cost of care and psychologically in terms of a comfortable recovery in a noninstitutional, familiar, home environment. The amendments made to S. 3355 will encourage the development of new and the improvement of existing home health care agencies and services.

The amendments to title IX of the Public Health Service Act—sections 102 (b) and 104(a) of the bill—are intended to emphasize that home health care is an important method of care to be utilized in regional medical programs. The critical diseases which are the major concern of regional medical programs are particularly appropriate for home care treatment. Three instances applicable to RMP are described in an article "Home Health Service—Past, Present, Future," in the September 1969 issue of the American Journal of Public Health, as follows:

> 1. In one community, program evaluation had revealed that not a single patient with terminal cancer had been admitted to the home although many cancer patients had remained in hospitals until death. The following year, a concerted effort by hospital and home care staffs resulted in home care for selected patients with terminal cancer. Patient and family response was encouraging. The patients were more at ease and required fewer sedatives and drugs for pain; the families were better able to cope with grief. In general, these terminal patients were better off, both physically and mentally, in the home setting.
>
> 2. Growing concern in the health field over the restricted number of patients who can receive intermittent renal dialysis in hospital centers suggests the need for dialysis at home. The development of a portable dialysis unit, and evidence that continuing intermittent renal dialysis can be carried on at home . . . makes utilization of home care programs particularly pertinent to treatment of kidney disease. (The Veterans' Administration is already carrying out home dialysis in ten areas.)
>
> 3. St. Luke's Hospital in New York City has instituted a home health nursing program for outpatients with heart disease. The addition of public health nursing visits as follow-up to the outpatient cardiac program has reduced the rate of hospitalization for congestive heart failure. The staff feels that an anticipatory home care program based in a community hospital "has great potential both for improving the health status of patients with chronic illness and for bringing the hospital closer to its community."

These examples, I believe, are clear evidence of the need to include home health care programs as an integral part of procedures utilized in regional medical programs.

An amendment to section 304(a) of the Public Health Service Act—section 203(2) of the bill—would place research in home health care in its proper per-

spective as a full member of a comprehensive health care delivery system. There is a continuing need for research in this special means of health care delivery to, first, find better methods of delivering home health care; second, find additional medical fields in which home health care can be utilized; third, develop innovative uses of new types of allied health professionals; and fourth, undertake studies to enable the doctor to determine the most effective way of caring for the individual patient—home care or institutional care—and when the transition should occur. This amendment would give research in home health care the same priority as research in other modes of health services delivery.

The amendments to section 314(a) and (b) of the Public Health Service Act—sections 220(d) and 230(b) of the bill—would encourage the utilization of home health care services in the community and would encourage the development of additional agencies and programs by identifying home health care as a service that should be included in health services planning at both the State and areawide level. To meet community needs adequately, home health agencies must be planned and developed with the full cooperation and counsel of the areawide comprehensive health planning agency (314(b)). This participation would be assured by these amendments in S. 3355.

I also feel special efforts should be made by the 314(a) and 314(b) agencies to seek representation on their advisory councils of representatives of substantial home health care programs to insure that this kind of service is given full consideration in the planning of community and State health services.

Furthermore, in the development of State plans for the utilization of section 314(d) formula money, I believe that each State should be strongly encouraged to devote a portion of its funds to encourage the establishment of home health services and to the support of one or more individuals whose function would be to provide guidance and counsel to existing home health care agencies in methods of improving their utilization within the community and meeting the specific health needs of the community. Section 1902(a)(24) of the Social Security Act requires that each State provide consultative services to home health agencies, among other types of facilities, to assist them in qualifying for reimbursement under the provisions of medicaid. Thus a nucleus already exists for these additional counseling functions.

Greater emphasis must also be placed in the allocation of section 314(e) funds on the establishment of home health agencies or the provision of home health services. In particular, I recommend to the Secretary of Health, Education, and Welfare that in granting funds for the establishment of comprehensive health care programs, such programs in all cases include the delivery of home health care services. Currently, I understand, 33 primary health care projects are being funded by section 314(e) grants. Of these 33 projects funded for the purpose of providing comprehensive health care to a select group or to a community, 12 fail to mention the provision of home health care services; eight plan to refer cases which require home care to other existing agencies, in many instances, the Visiting Nurse Association; and only 13 include home health care services as a component of their program. My proposal would insure that in all these projects, due consideration would be given to the feasibility of including home health care services among those provided by the program.

Considerable opportunity exists in the Hill-Burton program—support of hospital and other health facilities construction—for encouraging such facilities to utilize both prehospitalization and posthospitalization home health care services. In the awarding of grants or other forms of support for these facilities, recipients should be encouraged to provide such services either directly or through arrangements with an existing home health care agency.

As a member of the Health Subcommittee of the Labor and Public Welfare Committee over the past 20 months since I entered the Senate, I have become greatly concerned about the impending crisis in our total health delivery system—if a system it is—and about the need to prod the medical community to move far faster in adjusting to today's needs, yesterday's means of caring for the sick, rehabilitating the disabled, and preventing injury and disease. I believe that S. 3355 can provide some of that necessary impetus by giving home health care the full recognition it requires as an important functioning part of a health care delivery system suited to today's needs and by encouraging full utilization of these services in plans for improving the delivery of comprehensive and specialized health services in our communities.

Mr. President, at the same time, as chairman of the Subcommittee on Veterans' Affairs of the Labor and Public Welfare Committee and in line with my particular interest in the Veterans' Administration medical program, I plan to introduce amendments to section 612 (a) and (f) of title 38, United States Code, which will give impetus to the provision of home health care services as part of the outpatient medical services provided a veteran for a service-connected disability, before, after, and independent of hospitalization. These same home health care services would also be made available to a veteran eligible for hospitalization and treatment even though his injury or illness is not service connected.

These new authorities would enable the Veterans' Administration more efficiently to perform its vital function of providing first quality modern health care for our veterans.

Mr. President, I was also privileged to cosponsor two amendments to this bill. Senator PROUTY'S amendment to title IX of the Public Health Service Act—section 104(b) of the bill—would enable regional medical programs, after they have well-established activities in the prevention, diagnosis, treatment, and rehabilitation of the critical diseases which are the special responsibility of RMP, to develop and demonstrate systems for the organization and delivery of medical care. I believe this amendment will give those medical experts whose participation makes regional medical programs so successful, the much needed flexibility to expand their activities, if they wish, to include systems for the delivery of health services.

Similarly, I was pleased to cosponsor with Senator KENNEDY, a provision—section 401 of the bill—which would foster the development and use of prepaid group practice systems. Such systems, I believe, hold great promise in meeting the deficiencies of our health delivery system, by emphasizing preventive care, and by treating the "individual" rather than his disease. The most notable example of prepaid group practice is the Kaiser Permanent program, originally conceived by Henry Kaiser in the depression years of 1933–38 in southern California. Today the Kaiser plan has 2 million subscribers served by numerous outpatient centers, five clinics, and 22 hospitals in six States. The plan provides comprehensive care at an annual cost of $100 per capita, or only two-thirds the cost of comparable care in most other parts of the country.

Mr. President, I have spoken so extensively about S. 3355 because I feel it is a piece of legislation which offers substantial promise for affecting the way in which health care is provided in this country. Improving our methods of health care delivery is, I feel, the greatest challenge in the years ahead to those dedicated to helping our Nation overcome the health crisis now upon us.

The regional medical programs in many States—I know particularly about the excellent programs in my own State of California—are already contributing substantially to this end. Under this bill, I believe that these RMP's as well as the expanded programs of the comprehensive health planning agencies will be afforded the opportunity to make still more vital and impressive contributions to health care in our country.

Again, I congratulate the author of this bill, Senator YARBOROUGH, for his great initiative and leadership and thank him and my other colleagues on the Labor and Public Welfare Committee for their support of my amendments to the bill. I urge overwhelming support for this very greatly needed piece of health legislation.

I ask unanimous consent to have printed in the RECORD an article entitled "Planning Health Care for Veterans."

There being no objection, the article was ordered to be printed in the RECORD, as follows:

PLANNING HEALTH CARE FOR VETERANS

(By John W. Walsh, M.D.)

Veterans Administration planning must be based, as a minimum, on these considerations: Size and characteristics of the veteran population; eligibility of the veteran to receive care from the Veterans Administration; ability of the veteran to receive care from a non-VA provider of health care; changes in

the health field which affect all Americans, including veterans; and the mission of the VA as a whole, and the mission of each VA field installation.

As of December 31, 1968, there were about 26.5 million veterans—veterans being defined as having been on active duty during periods of time determined by Congress as wartime service. It is estimated that, with 800,000 personnel discharged from service annually, there will be more than 28 million veterans by the early 1970s. Of these 26.5 million veterans, 1.7 million served in World War I, 14.7 million in World War II, and more than 10 million have been on active duty in more recent years.

Of particular importance for future planning is the discontinuity in the ages of the population served. In the 1960s, VA medical care—particularly hospital care—for the most part has been directed to older veterans of World War I and prior military service. This is not unexpected because of the tendency to use medical care systems with advancing age. The average age of World War I veterans is 74 years and that of World War II veterans is 49 years.

The usage of Veterans Administration hospital facilities rises rapidly as the veteran ages. A recent review of our hospitalization rate per 1,000 veterans revealed the following relationship:

Veteran age and hospital utilization rate per 1,000 veterans

Under 35	1.40
35–44	2.67
45–54	4.21
55–64	7.78
65–74	12.45
75 and up	19.20

Thus, discontinuity and the hospital utilization rate must be considered when one attempts to make long-range projections using current experience. The large proportion of our recent inpatient demand has been generated by the older World War I veteran who, of course, is eligible for non-VA service under Public Law 89–97. What needs to be considered, however, is what impact the 14 million veterans of World War II will have on the VA medical care system, as they enter the sixth decade of life. Their impact will require considerable study.

ELIGIBILITY OF VETERANS TO RECEIVE CARE FROM THE VETERANS ADMINISTRATION

Absolute right for both inpatient and outpatient care exists, of course, for the veteran who needs treatment for his service-incurred disability or disease. Lesser degrees of eligibility have been established by either congressional legislation or by regulation for other segments of the veteran population. For instance, the Spanish American veteran is entitled to outpatient care for any disability, whether or not incurred in service.

A veteran who has no service-connected disability or disease can receive hospital care provided (a) he needs it on medical grounds; (b) he signs a statement of inability to defray his own expenses. However, eligibility for inpatient care does not imply eligibility for outpatient care for a nonservice-connected condition. Medical eligibility is not automatic. In a recent 12-month period, the VA received 1,054,700 applications for hospital care but admitted only 647,241. Only 65 per cent of applicants were deemed medically eligible.

Financial eligibility is a complex problem. Congress, in approving the post-World War II expansion of the VA hospital system, affirmed the need for a veteran to state, in writing, his inability to defray hospital costs. At other times, VA has been enjoined against questioning the veteran's signature.

Because it is essential that only those nonservice-connected (NSC) veterans who are in financial difficulty be admitted to VA hospitals, the VA has been asking the NSC veteran to fill out a financial addendum when he submits his request for hospital care. His fiscal statement is reviewed in the light of prevailing medical care costs for treatment of his condition. If the VA review of the financial statement suggests the applicant can afford it, he is advised that he ought to consider treatment elsewhere. If he insists on VA treatment in spite of counseling, he is given the benefit of the doubt, but his financial statement is referred to VA attorneys for possible recovery of costs later.

Sometimes, a veteran claims that he cannot afford to pay for his hospital care, but he is covered by third-party insurance. Unfortunately, however, many hospital and medical insurance plans stipulate that the policy does not cover medical care by the federal government, so that VA recoveries from insurance carriers are not substantial. The experience of Philadelphia VA Hospital in effecting such recoveries is typical of many others. During the fiscal year ending June 30, 1969, 851 patients were discharged. Although a *theoretical* $146,000 might have been collected, our *actual* reimbursement was just under $22,000.

The veteran, aged 65 and over, has dual eligibility for medical care through the Social Security Trust Fund and the Veterans Administration. Public Law 89–97, however, has a specific interdiction against reimbursement of federal hospitals for care of Medicare beneficiaries. Whether Congress will change this stipulation is unknown.

ABILITY OF A VETERAN TO RECEIVE MEDICAL CARE FROM NON-VA PROVIDERS

Ability of a veteran to receive medical care from non-VA providers is a subject which varies widely from community to community Medical care costs, the availability of physicians, bed occupancy, the patient's condition, and local policy all have a bearing. It is the writer's impression that the larger, more affluent communities and service areas expect the VA to be responsible only for the medical care of the service-connected veteran. They expect the community to consider the veteran with a nonservice-connected condition as if he were not a veteran.

On the other hand, the less affluent and often smaller community, which is having money problems of its own, often assumes no responsibility for a veteran, whether his condition is service-connected or not. It is not uncommon for a man to request medical assistance only to be told that he is a veteran, and the "VA should take care of you." If "taking care of him" involves admission to the hospital, there is no problem. However, the problem still exists when he requires only outpatient care, for the VA may have no legal authority to give it to him.

INFLUENCE OF CHANGES IN THE HEALTH FIELD ON VA MEDICAL CARE SYSTEM

Let us examine, first, the various non-VA health programs which might have an impact on the Veterans Administration. As of May 31, 1969, the VA had 44,764 beds for the care of psychiatric patients. Some of the beds were in large psychiatric institutions, others in general hospitals in accordance with the 1961 recommendations of the Presidents' Commission on Mental Illness and Health.

Of the 2,011,323 veterans receiving compensation for service-connected disabilities, approximately 440,255 have a significant service-connected psychiatric or neurological disorder.[1] National experience recently indicated that the demand for hospital care for mental illness is falling. VA experience parallels non-VA findings, for the number of veterans waiting for admission to a psychiatric inpatient program is decreasing.[2] Length of stay is shorter and there is increased reliance on ambulatory treatment.

The goals of the community mental health centers program are to have 500 in 1970. Presumably the large psychiatric hospital is to be a thing of the past. The question facing VA planners, however, is whether the changing program will, in effect, provide for the psychiatric veteran, particularly the nonservice-connected psychotic. The VA, on at least two occasions, has attempted to reduce its inpatient load by transferring veterans to the care of a community center, but without success.

In the spring of 1967, VA hospital directors were asked to determine from local authorities how care for the psychiatric veteran was to be included in the over-all community or state plan. Although excellent responses were received from a few locations, the vast majority of the answers forwarded to headquarters suggested that no interrelationship between VA and the community was envisioned. The lack of community interrelationship is disturbing, particularly when one recalls the comment by the National Commission on Community Health Services:

"Separate systems of health care now exist for many groups in the population, such as veterans, labor organizations, merchant seamen, and the medically indigent. The welding of separate systems into a community-wide program would preclude new construction or expansion of hospitals for separate population groups." [3]

The Heart Disease, Cancer and Stroke Program developed from the famous DeBakey Report.[4] In enacting Public Law 89–239, Congress somewhat departed from the original ideas of the DeBakey Committee, although the concept of centers of research and information dissemination on a regional basis has been retained. The Report to the President of June 30, 1967, emphasizes the extent to which funds for *planning* grants have been effectively utilized. On the other hand, the number of *operational* grants—monies to actually implement the results of grants—is limited so far, with 40 operational grants in 55 regions.[5]

A preliminary review of the grants points out how intimately VA may be involved in Regional Medical Programs (RMP). Among our 166 VA hospitals, some 47 installations have at least some minimal operational responsibility through research and teaching affiliations with medical schools. In 18 instances, the RMP has resulted in a major VA commitment. However, one needs to hedge—to be cautious—with regard to projections in this program.

The original legislation authorized the expenditure of $340 million over a period of three years, but only part of this has actually been appropriated. One can visualize a problem developing in which limitation of funds for Public Law 89-239 would result in the educational institutions receiving adequate operational funds without their counterpart—the affiliated VA hospital—receiving anything. To have veteran medical care keep pace with other activity in the community may require the VA Central Office to add additional funds to the operating budget of the VA hospitals.

Medicare and Medicaid—actually the Social Security Amendments of 1965—have had a major impact in this country. From a broad viewpoint, they have relieved the financial and psychological burden from the older American's illness or disability. Concurrent with (but not necessarily because of) this legislation, medical care costs have risen, and the length of hospital stay increased more than one day.

As might be expected, VA hospital admissions of the veteran who is 65 years and over have decreased since July 1, 1966. Our planning problem, however, is to "blue sky" the question as to whether the Medicare effect

Footnotes at end of article.

will be a sustained one. A preliminary study of the Minneapolis area suggested that the impact of Title XVIII was considerable. However, as we followed this program more carefully, we found that the initial effect was not maintained. Some transitory changes are due to seasonal factors. Other changes in demand may be related to the fact that the extended care features of Medicare did not become operative until January 1, 1967.

The veteran, aged 65 and over, has dual entitlement. He can receive medical care under Public Law 89–97, or he can come to the VA for inpatient care. Some may even elect to use both systems. As part of the VA's admission procedure, we point out to a veteran, 65 years and over, that his community hospital has the facilities to treat his illness. Some veterans decline admission when so advised, while others still request VA treatment for a number of reasons—personal preference, reluctance to pay the deductible costs, or availability of a bed. Medicaid, or Title XIX of Public Law 89–97, has not, in the writer's opinion, had its final permanent effect on the Veterans Administration. The full impact may not be apparent for many years.

Comprehensive Health Planning legislation has been passed in two successive Congresses. Although it is difficult to summarize all the important changes, embodied in Public Laws 89–749 and 90–174, the following are particularly pertinent from the VA viewpoint: Authority for planning the delivery of health care is to be vested in a central office in a political jurisdiction, such as a state. This central planning agency will interrelate all the needs for health care in the area under its jurisdiction. Perhaps there will be adjudication of the needs of the mentally ill versus the physically ill; or the needs for new construction versus operation of existing facilities; or perhaps decisions will be needed to determine which portion of the population more urgently needs care.

To strengthen the planning authority of each state and political jurisdiction, Congress has departed from its previous position of appropriating funds for specific diseases, such as tuberculosis or venereal disease. Instead, funds will be disbursed to the states on a more or less lump-sum basis, with the states determining which categories of disease most urgently need correction.

The legislation assumes that all portions of the economy which deliver health care must, and will cooperate in providing such care to all the population in the most economic manner feasible. Machinery to initiate cooperation between the public and the private sectors of the economy will be established. In addition, the various public sectors—local, state, and federal (including, of course, the Veterans Administration)—will be called upon to work together more closely than before.

The type of cooperative planning envisioned in Public Laws 89–749 and 90–174 is not new. Community fund programs and Hill-Burton agencies have been doing this for decades. More recently, the Regional Medical Program, the Model Cities legislation, and the OEO programs have entered the field. It will take some time to blend the planning efforts fostered by different legislation. As these various disciplines crystallize their thinking, the mission of the VA installations will become clearer.

MISSION OF THE VETERANS ADMINISTRATION

For decades, the VA medical program has been considered to have three types of medical facilities: (a) hospitals for inpatient care of eligible veterans; (b) domiciliaries ("soldiers homes") for "bed and board" care for those veterans whose combined medical and economic condition precluded them from independent living; (c) outpatient clinics for some veterans to receive ambulatory medical care, and for others to be examined to determine the extent of their disabilities.

Hospitals were originally designed to provide medical, surgical, psychiatric, and nursing care for veterans who were in need of hospital bed care, and who were eligible for such care. But VA hospitals—as is the case with community hospitals—have undergone considerable change in their role. With the growth of medical school affiliations after World War II, many VA hospitals became more than simply a place to treat service-connected veterans. VA hospitals developed extensive residency training programs. They afforded medical students opportunities for clinical clerkships. In 1967, 46 per cent of all medical school graduates had received part of their education in VA institutions.

The VA-medical school affiliation, which now exists in 89 of the 166 hospitals, has been a two-way street. The medical school affiliation enhances medical treatment for veterans; it provides additional "teaching beds" for medical schools. In a number of communities, the VA hospital has become an integral part of the university medical center, virtually indistinguishable from the university and community hospitals associated with the center.

The mission of such an affiliated hospital, therefore, not only includes inpatient care, but also the education of health manpower. In addition, the hospital has an important role in follow-up medical care. When it became apparent, a number of years ago, that the length of stay in VA hospitals was being prolonged because of the ineligibility of nonservice-connected veterans to receive nonbed care, Congress authorized prebed care (PBC) and posthospital care (PHC) for those nonservice-connected veterans who require bed care. The legislation (Public Law 86–639) has accomplished its purpose, for the VA length of stay has decreased in recent years. Of all veterans treated in VA hospitals in fiscal year 1968, 7.1 per cent had prehospital "workups" and 46.4 per cent had at least one follow-up visit.

As a result of such legislation, VA clinics are providing more ambulatory medical care. Of course, they continue to treat veterans with service-connected disabilities, and continue to determine, for monetary purposes, the extent of existing disabilities. In addition, they also provide ambulatory medical care for some nonservice-connected veterans, mostly those who would otherwise occupy an expensive hospital bed.

It might be argued that pre- and posthospital care have opened the door to unlimited outpatient care for NSC veterans. So far, this has not occurred; in fact, it has not even occurred with respect to hospital bed care for all veterans. Although there were more than 26 million veterans potentially eligible for hospitalization in fiscal year 1967, less than half a million were actually admitted. Many VA hospitals had no significant waiting lists all year.

The VA domiciliaries, or soldiers homes, gradually have undergone change too. It almost went unnoticed that, in 1965, the VA closed two domiciliaries when it finally closed five hospitals. Those 16 which remain are gradually changing to meet changing demands.

To the long-standing tradition of having three types of medical facilities—hospitals, clinics, and domiciliaries—the 88th Congress also requested VA to initiate a program of extended care facilities. Currently, there are 4,000 nursing-home type beds operated by VA, and plans to expand this figure to 6,000 are being developed.[6]

SUMMARY

Planning health care for more than 27 million veterans is a difficult problem. All veterans do not have the same needs for health care. The resources of the community, and the community approach to its responsibility for veterans, in large measure will determine the medical care mission of Veterans Administration facilities. As the National Commission on Community Health Services emphasized, there must be greater VA-community interaction as this country develops its health care delivery systems.

Mr. NELSON. Mr. President, I want to associate myself with the closing remarks by the junior Senator from California (Mr. CRANSTON) in support of this vitally important health legislation.

I would also like to take this opportunity to review another subject related to the comprehensive health planning program.

When the Senate Labor and Public Welfare Committee considered H.R. 11102, the medical facilities construction and modernization bill, earlier this year, the Senator from California (Mr. CRANSTON), the Senator from Rhode Island (Mr. PELL), and I were successful in amending the Senate bill to provide that once the Secretary of HEW determines that a State comprehensive health planning agency has developed effective plans that are in harmony with the purposes of the Hill-Burton program, the State Hill-Burton plan must be consistent with those plans developed by the State comprehensive health planning agency.

In 1966, when the 89th Congress included the concept of comprehensive health planning in the partnership for health amendments, it was felt that the previous lack of planning and control in health services had resulted in fragmentation, unnecessary and costly duplication and virtually no unified attack on poor health care.

However, until this year the present Hill-Burton statute did not require any coordination between the State agency administering Hill-Burton programs and the State agency responsible for comprehensive health planning.

The original administration Hill-Burton bill required approval of Hill-Burton projects by the State comprehensive planning agency while the House-passed bill gave the State or local area—planning agency an opportunity to consider project applications.

If the State comprehensive planning agency is expected to carry out the legislative mandate to coordinate health planning within a State, it was our belief that Hill-Burton projects should be "in accordance with" State comprehensive plans that are developed.

Presently, State plans providing public health services under section 314(d), including activities such as immunization

projects, mental health programs, and the training of State and local health personnel, must be "in accordance with" the comprehensive health plans of each State.

Our amendment would have had the effect of extending this coordination with State comprehensive health plans to Hill-Burton State plans.

Those States that have not yet developed an effective State planning organization and an effective State comprehensive plan would not have been affected by this provision.

However, our amendment would have enabled those States which have or soon will have an effective plan to gain the benefits of true comprehensive health planning in their States.

In addition, it would have established a firm objective for other States to work toward in the development of their comprehensive health planning programs.

Several States have already taken the initiative to establish formal or informal coordination between the Hill-Burton and comprehensive health planning agencies in their States.

Our amendment would have given formal recognition to these arrangements and offered an incentive for other States to also establish this coordination.

When the Senate and House conferees met to discuss the Senate and House versions of H.R. 11102 to extend the Hill-Burton program, there was thorough discussion of this provision in the Senate bill.

Agreement was reached, based on a proposal made by a House conferee, that the Senate would recede on its provision requiring the approval of Hill-Burton State plans by certain State comprehensive planning agencies on the condition that there be language in the conference report indicating that it should be expected at the expiration of the program's new authorization that Hill-Burton plans or projects would be made by statute subject to the approval of comprehensive health planning agencies. Also, the House provision on project review by planning agencies was adopted as an initial step toward better coordination.

However, due to an oversight in the drafting of the conference report, there was no reference to this understanding in the report.

On June 18 Senator CRANSTON and I wrote to the chairman of the House Interstate and Foreign Commerce Committee, Congressman HARLEY O. STAGGERS, regarding the absence of this agreed-upon report language.

On June 23, Congressman STAGGERS responded to our letter and I ask unanimous consent that his letter be printed in the RECORD at this time.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

CONGRESS OF THE UNITED STATES,
Washington, D.C., June 23, 1970.

Hon. GAYLORD NELSON,
U.S. Senate,
Washington, D.C.

DEAR SENATOR NELSON: Thank you for your joint letter of June 18 with Senator Alan Cranston concerning language which the Conferees on H.R. 11102 agreed would be included in the statement of the Managers on the part of the House with respect to approval of Hill-Burton plans.

This language did not appear in the statement of the Managers due to an oversight, but should have been included therein.

In the near future the House will consider H.R. 18110, providing an extension of the comprehensive health planning program, and in my remarks on the floor in connection with that legislation I will state that we expect to give serious consideration in connection with the next renewal of the Hill-Burton program to providing oversight authority to comprehensive health planning agencies at both state and local levels over the programs and projects for hospitals and other health facilities construction. I intend to make this statement, regardless of the outcome in connection with the consideration of the President's veto of H.R. 11102.

Sincerely yours,
HARLEY O. STAGGERS,
Member of Congress, Chairman.

Mr. NELSON. The remarks that Congressman STAGGERS mentioned in his letter did appear in the House report on H.R. 18110, which was published on July 20, 1970.

I hope that this review of the background of our amendment and the understanding that was reached during the House-Senate conference on the Hill-Burton program will make the record on this proposal absolutely clear so that our proposal will be considered in the proper light when the Hill-Burton program is again considered by Congress.

Mr. CRANSTON. Mr. President, I am pleased that the Senator from Wisconsin took the time to outline the legislative history of our proposed amendment to H.R. 11102 to improve the coordination between State comprehensive planning agencies and State Hill-Burton agencies.

While a Hill-Burton agency and its statutory advisory council have a responsibility to develop an annual health facilities construction plan based on local need, resources and priorities, that agency's area of responsibility is limited to only those health facilities for which Federal assistance is requested for construction. The comprehensive health planning agency is the only one which has an overall responsibility for determining need and priority regardless of the construction funding source.

Furthermore, in keeping with their legislative mandates to coordinate and plan comprehensively for all health needs, State and areawise planning agencies are endeavoring to establish informal and/or formal coordinating channels with Hill-Burton agencies. The current situations in California, Minnesota, West Virginia, Illinois, Florida, Oklahoma, and New York are good examples of the varying levels and forms of health planning and Hill-Burton relationships already formed.

Presently, these State comprehensive health planning agencies are in varying states of development, but in general they have moved rapidly through the organizational stages into substantive planning. Enabling legislation for comprehensive health planning was signed November 3, 1966 and the first grant was made to Illinois in July 1967.

Already, though, a number of the young comprehensive health planning agencies are demonstrating their effectiveness in unifying the attack on poor health care and eliminating duplication of resources including facilities, manpower, and services.

Furthermore, many State Governors, State legislatures, and others have repeatedly demonstrated their confidence in the capabilities of comprehensive health planning agencies by virtue of the specific responsibilities they have assigned to them, including in many instances the review of Hill-Burton applications.

California's Office of Comprehensive Health Planning is located in the State department of public health and is responsible directly to the director's office.

The functions and responsibilities of the State advisory hospital council—Hill-Burton review—have been transferred to the State health planning council—CHP.

In a series of legislative actions, California has recently tied State and areawide health planning to facility licensure, construction, loan insurance, and payment under Medi-Cal. Licenses for new construction, conversion, or facility additions are to be issued only upon a favorable recommendation to the licensing authority—the State health department—by an area health planning agency. Presently there are eight funded areawide CHP agencies in California and a ninth is being organized so that the State's total geographic area will be covered by nine areawide health planning agencies.

In Idaho, the State legislature enacted a recommendation by the Committee on Health Facilities of the Governor's Advisory Council on Comprehensive Health Planning for the licensing of nursing home administrators.

The Idaho State Board of Health has also accepted a council recommendation that the State board of health, as the health facilities licensing authority, review and amend licensure requirements to the end that licenses issued to various types of health facilities more accurately reflect the level of services provided by the facility.

Also, in Idaho, by direction of the State administrator of health, the State health planning agency reviews all Hill-Burton applications.

Hill-Burton applications in Wyoming are being referred to the State health planning agency voluntarily for review and comment.

The Colorado State Comprehensive Health Planning agency officially reviews all health aspects of construction and planning grants for the State.

In Minnesota, the State health planning agency's efforts were instrumental in getting the legislature to authorize the development of all State hospitals as multipurpose regional centers with programs for mentally ill, mentally retarded, and inebriate patients. Previously this

type of care was being delivered in a fragmented, categorical manner. When the new centers are developed the quality and efficiency of care should be vastly improved.

These activities are an important start in involving health planning agencies in facilities construction decisions. I agree with Senator NELSON that such involvement must become the rule in the years ahead.

Mr. SCOTT. Mr. President, the Senate is considering the Health Services Improvement Act of 1970, a part of which extends and improves existing regional medical programs. These programs function as coordinated systems to provide specialized services for the benefit of physicians and patients. Pennsylvania has fared well under this program and I urge my colleagues to give the regional medical plan this added boost.

Pennsylvania is divided into three medical regions: First, Greater Delaware Valley; second, Susquehanna Valley; and third, Western Pennsylvania. These regions, in concert, serve the entire Commonwealth.

The Greater Delaware Valley regional medical program covers eastern Pennsylvania, with a population of 8.2 million. During the current year, this program will receive $3.2 million. Since receiving its first planning grant in 1967, it has received $7.3 million.

Several outstanding programs are now in effect in the Greater Delaware Valley region. Wilkes-Barre, Reading, and Allentown are the focal points for an intensive and successful coronary care training program. A pediatric pulmonary disease program is now operating in Philadelphia.

Pennsylvania's second medical region is designated as the Susquehanna Valley program. This region covers 27 counties in central Pennsylvania with a population of 2.1 million. This year, it will be allocated nearly $832,000 to boost its total to $1.6 million. The first planning grant was received in 1967.

The Susquehanna medical region boasts two noteworthy projects. One, in Altoona, is the establishment of a stroke unit to serve as a consultation and training resource for practicing physicians and nurses. The other project, operating from the Geissinger Medical Center in Sunbury, is a coronary care unit serving in a nurses' training program. It is the only such program in a surrounding eight-county area. But because of its existence, several neighboring hospitals are planning to establish units to serve auxiliary functions.

The third medical region in the Commonwealth is the western Pennsylvania regional program. It is centered in Pittsburgh and serves 28 surrounding counties with a population of 4.2 million. Since receiving its first planning grant in 1967, the region has received over $2 million.

In Pittsburgh, there is a program for long-term training of nursing home personnel. It is one of the best comprehensive continuing education programs in existence. A second outstanding program in the western Pennsylvania region is the regional medical library system which links over 100 hospitals in the 28-county area.

Regional medical care is one answer to the continuing crisis in health care. The regional concept allows the sharing of trained personnel and medical resources to keep down the cost of health and to increase the effectiveness of health services. I support this concept and hope that the pending legislation will continue to assist Pennsylvania in the years to come.

Mr. YARBOROUGH. Mr. President, I ask unanimous consent that the Senate proceed to the consideration of Calendar No. 1132, (H.R. 17570), the House-passed companion bill.

The PRESIDING OFFICER (Mr. Moss). The bill will be stated by title.

The assistant legislative clerk read as follows: Calendar No. 1132 (H.R. 17570) to amend title IX of the Public Health Service Act so as to extend and improve the existing program relating to education, research, training, and demonstrations in the fields of heart disease, cancer, stroke, and other related diseases, and for other purposes.

The PRESIDING OFFICER. Is there objection to the present consideration of the bill?

There being no objection, the Senate proceeded to consider the bill.

Mr. YARBOROUGH. Mr. President, I ask unanimous consent to strike out all after the enacting clause of H.R. 17570 and to insert in lieu thereof the text of S. 3355, as now amended by the Senate.

The PRESIDING OFFICER. Without objection, it is so ordered. The question is on agreeing to the amendment in the nature of a substitute.

The amendment was agreed to.

The PRESIDING OFFICER. The question is on the engrossment of the amendment and the third reading of the bill.

The amendment was ordered to be engrossed and the bill to be read the third time.

The bill (H.R. 17570) was read the third time.

The PRESIDING OFFICER (Mr. Moss). The bill having been read the third time, the question is, Shall it pass? On this question, the yeas and nays have been ordered, and the clerk will call the roll.

The assistant legislative clerk called the roll.

Mr. BYRD of West Virginia. I announce that the Senator from Nevada (Mr. BIBLE), the Senator from North Dakota (Mr. BURDICK), the Senator from Virginia (Mr. BYRD), the Senator from Nevada (Mr. CANNON), the Senator from Idaho (Mr. CHURCH), the Senator from Connecticut (Mr. DODD), the Senator from Arkansas (Mr. FULBRIGHT), the Senator from Indiana (Mr. HARTKE), the Senator from Iowa (Mr. HUGHES), the Senator from Washington (Mr. JACKSON), the Senator from Massachusetts (Mr. KENNEDY), the Senator from Washington (Mr. MAGNUSON), the Senator from Minnesota (Mr. MCCARTHY), the Senator from Wyoming (Mr. MCGEE), the Senator from South Dakota (Mr. MCGOVERN), the Senator from Montana (Mr. METCALF), the Senator from New Mexico (Mr. MONTOYA), the Senator from Connecticut (Mr. RIBICOFF), the Senator from Georgia (Mr. RUSSELL), the Senator from Missouri (Mr. SYMINGTON), the Senator from Maryland (Mr. TYDINGS), and the Senator from Ohio (Mr. YOUNG), are necessarily absent.

I also announce that the Senator from Maine (Mr. MUSKIE) and the Senator from New Jersey (Mr. WILLIAMS) are officially absent.

I further announce that, if present and voting, the Senator from Idaho (Mr. CHURCH), the Senator from Arkansas (Mr. FULBRIGHT), the Senator from Iowa (Mr. HUGHES), the Senator from Washington (Mr. JACKSON), the Senator from Massachusetts (Mr. KENNEDY), the Senator from Washington (Mr. MAGNUSON), the Senator from Wyoming (Mr. MCGEE), the Senator from Connecticut (Mr. RIBICOFF), and the Senator from New Jersey (Mr. WILLIAMS) would each vote "yea."

Mr. GRIFFIN. I announce that the Senators from Vermont (Mr. AIKEN and Mr. PROUTY), the Senator from Utah (Mr. BENNETT), the Senator from Massachusetts (Mr. BROOKE), the Senator from New Hampshire (Mr. COTTON), the Senator from Colorado (Mr. DOMINICK), the Senator from Hawaii (Mr. FONG), the Senators from Arizona (Mr. FANNIN and Mr. GOLDWATER), the Senator from New York (Mr. GOODELL), the Senator from Florida (Mr. GURNEY), the Senator from Wyoming (Mr. HANSEN), the Senator from California (Mr. MURPHY) and the Senator from Texas (Mr. TOWER) are necessarily absent.

The Senator from South Dakota (Mr. MUNDT) is absent because of illness.

The Senator of Delaware (Mr. BOGGS), the Senator from Maryland (Mr. MATHIAS) and the Senator from Pennsylvania (Mr. SCHWEIKER) are absent on official business.

The Senator from North Dakota (Mr. YOUNG) is detained on official business.

If present and voting, the Senator from Delaware (Mr. BOGGS), the Senator from Massachusetts (Mr. BROOKE), the Senator from Colorado (Mr. DOMINICK), the Senator from Hawaii (Mr. FONG), the Senator from New York (Mr. GOODELL), the Senator from South Dakota (Mr. MUNDT), the Senator from California (Mr. MURPHY), the Senator from Vermont (Mr. PROUTY) and the Senator from Texas (Mr. TOWER) would each vote "yea."

The result was announced—yeas 56, nays 1, as follows:

[No. 285 Leg.]

So the bill (H.R. 17570) was passed.

The title was amended, so as to read:

A bill to amend titles III and IX of the Public Health Service Act so as to revise, extend, and improve the programs of research, investigation, education, training, and demonstrations authorized thereunder, and for other purposes.

Mr. YARBOROUGH. Mr. President, I move to reconsider the vote by which the bill was passed.

Mr. LONG. I move to lay that motion on the table.

The motion to lay on the table was agreed to.

Mr. YARBOROUGH. Mr. President, I ask unanimous consent that the Secretary of the Senate be authorized, in the engrossment of the Senate amendment, to make certain technical corrections.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. YARBOROUGH. Mr. President, I ask unanimous consent that Calendar No. 1100, S. 3355, be indefinitely postponed.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. YARBOROUGH. Mr. President, I move that the Senate insist on its amendment on H.R. 17570 and request a conference with the House thereon, and that the Chair be authorized to appoint the conferees on the part of the Senate.

The motion was agreed to; and the Presiding Officer appointed Mr. YARBOROUGH, Mr. WILLIAMS of New Jersey, Mr. KENNEDY, Mr. EAGLETON, Mr. CRANSTON, Mr. HUGHES, Mr. PELL, Mr. DOMINICK, Mr. JAVITS, Mr. MURPHY, Mr. PROUTY, and Mr. SAXBE conferees on the part of the Senate.

REFERRAL OF BILL

Mr. MANSFIELD. Mr. President, I ask unanimous consent that Calendar No. 1131, H.R. 18110, be referred to the Committee on Labor and Public Welfare.

The PRESIDING OFFICER. Without objection, it is so ordered.

AIRCRAFT HIJACKING

Mr. JAVITS. Mr. President, I have just come from a conference with the Secretary of State on this matter. Aircraft hijacking is piracy which the community of nations no longer can tolerate. For centuries civilized nations, individually and collectively, have acted to suppress piracy on the high seas. President Thomas Jefferson set the precedent for our Nation through his courageous actions against the Barbary pirates in 1801. Suppressive action against the modern pirates of the skies is long overdue.

Concerted international action against organized groups committing air piracy should be initiated immediately. Members of such groups should be denied access to all means of international travel. They should be denied entry into foreign countries and all international airports. They should be denied visas and passports. Nations harboring organizations engaged in hijacking must bear prime responsibility for the suppression and disbandment of these groups. Nations unable or unwilling to move effectively against such organizations within their borders should be ostracized through the denial of all means of international transport.

The current situation involving the holding of hostages is a particularly acute challenge to the community of nations and to the United Nations. The immediate task is to save the lives of the hostages and to rescue them from their mad captors. These hostages of all nations must have the deepest sympathy and concern of all civilized mankind, which can feel only outrage for the criminal conduct of those who hold them captive.

One thing is clear, Mr. President. Not one of the hostages is any different from another with regard to national origin or religion, and the civilized world is responsible for and can accept nothing less than the release of all, whether they be from Britain, Switzerland, Germany, or the United States.

Looked at beyond this crisis, the Palestine-Arab refugee situation which spawned these hijackings reflects the bankruptcy of international policy as manifested by UNRWA. This is the whirlwind reaped by those Arab States which have used the refugees as pawns in their efforts to try to discredit Israel; and the tragedy of the Palestinian-Arab refugees caught in a historic crisis is what they have suffered at the hands of their Arab brothers. Now this catastrophic policy has produced the commando madness. One of the first items on the agenda of the U.N. General Assembly at its coming session must be the Palestine-Arab refugee question. The nations maintaining UNRWA simply cannot continue to pour money into this self-perpetuating failure. A better and saner way must be found. Error has been compounded for so long on this question that disaster has overtaken us.

MESSAGE FROM THE HOUSE

A message from the House of Representatives by Mr. Berry, one of its reading clerks, informed the Senate that, pursuant to the provisions of 20 United States Code 42 and 43, the Speaker had appointed Mr. ROONEY of New York as a member of the Board of Regents of the Smithsonian Institution, to fill the existing vacancy thereon.

The message also informed the Senate that, pursuant to the provision of section 601, title 6, Public Law 250, 77th Congress, the Speaker had appointed Mr. WHITTEN of Mississippi as a member of the Committee to Investigate Nonessential Federal Expenditures, to fill an existing vacancy thereon.

HEALTH INSURANCE FOR FEDERAL EMPLOYEES AND ANNUITANTS

Mr. PELL. Mr. President, on September 1, the Senate passed two items on the call of the Legislative Calendar which dealt with identical subject matters—S. 1772 and H.R. 16968. Before the error was discovered, the House companion item was messaged back to the House. It has now been returned to the Senate and is at the desk.

Having already vacated the previous action on the Senate bill, and to dispose of the matter as originally intended, I ask unanimous consent that the vote by which H.R. 16968 was read the third time and passed be reconsidered, and that the Senate proceed to the consideration of S. 1772.

The PRESIDING OFFICER. The passage of H.R. 16968 will be reconsidered together with the third reading and the Senate bill will be stated by title.

The legislative clerk read as follows:

A bill (S. 1772) to provide that the Federal Government shall pay one-half of the cost of health insurance for Federal employees and annuitants.

The PRESIDING OFFICER. Is there objection to the request of the Senator from Rhode Island to proceed to the consideration of the Senate bill? The Chair hears none, and it is so ordered.

The Senate proceeded to consider the bill, which had been reported from the Committee on Post Office and Civil Service with an amendment, to strike out all after the enacting clause and insert:

S. 1772

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That, except as provided by subsection (b) of section 8906 of title 5, United States Code, effective from the first day of the first pay period which begins on or after July 1, 1970, and continuing until the first day of the first pay period which begins on or after January 1, 1971, the biweekly Government contribution for health benefits for an employee or annuitant enrolled under a health benefits plan under chapter 89 of title 5, United States Code, shall be equal to 40 percent of the average of the subscription charges in effect on the beginning date of the adjustment, with respect to self alone or self and family enrollments, as applicable, for the highest level of benefits offered by—

"(1) the service benefit plan;

"(2) the indemnity benefit plan;

"(3) the two employee organization plans with the largest number of enrollments, as determined by the Commission; and

"(4) the two comprehensive medical plans with the largest number of enrollments, as determined by the Commission.".

SEC. 2. Effective January 1, 1971, section 8906(a) of title 5, United States Code, is amended to read as follows:

"(a) The Government contribution for health benefits for employees or annuitants enrolled in health benefits plans under this chapter shall be adjusted on the first day of the first pay period of each year to an amount equal to 40 percent of the average of the subscription charges in effect on the beginning date of the adjustment, with respect to self alone or self and family enrollments, as applicable, for the highest level of benefits offered by—

"(1) the service benefits plan;

"(2) the indemnity benefit plan;

"(3) the two employee organization plans with the largest number of enrollments, as determined by the Commission; and

"(4) the two comprehensive medical plans with the largest number of enrollments, as determined by the Commission.".

SEC. 3. (a) Section 8901(3)(B) of title 5, United States Code, is amended to read as follows:

"(B) a member of a family who receives an immediate annuity as the survivor of an employee or of a retired employee described by subparagraph (A) of this paragraph;".

(b) Section 8901(3)(D)(i) of title 5, United States Code, is amended by striking out ", having completed 5 or more years of service,".

SEC. 4. (a) Section 8907(a)(B) of title 5, United States Code, is amended by inserting "and the Panama Canal Zone" immediately before the semicolon at the end thereof.

(b) Section 8901(1)(ii) of title 5, United States Code, is amended by inserting "and the Panama Canal Zone" immediately before the semicolon at the end thereof.

SEC. 5. (a) The Retired Federal Employees Health Benefits Act (74 Stat. 849; Public Law 86-724) is amended as follows:

(1) Section 2(4) is amended by inserting immediately before the period at the end thereof a comma and the following: "and includes the Social Security Administration for purposes of supplementary medical insurance provided by part B of title XVIII of the Social Security Act";

(2) Sections 4(a) and 6(a) are each amended by adding at the end thereof the following sentence: "The immediately preceding sentence shall not apply with respect to the plan for supplementary medical insurance provided by part B of title XVIII of the Social Security Act.", and

(3) Section 9 is amended by adding at the end thereof the following subsection:

"(f) Notwithstanding any other provision of law, there shall be no recovery of any payments of Government contributions under section 4 or 6 of this Act from any person when, in the judgment of the Commission, such person is without fault and recovery would be contrary to equity and good conscience.".

(b) The amendments made by subsection (a) of this section shall become effective on October 1, 1970.

Mr. PELL. Mr. President, there is a technical committee amendment at the desk, and I call it up.

The PRESIDING OFFICER. The amendment will be stated.

The legislative clerk read as follows:

On page 2, line 7, after the word "after" strike out "July" and insert "October".

The PRESIDING OFFICER. The question is on agreeing to the amendment.

The amendment was agreed to.

Mr. PELL. Mr. President, I ask unanimous consent that the Senate proceed to the consideration of H.R. 16968.

The PRESIDING OFFICER. The bill will be stated by title.

The LEGISLATIVE CLERK. A bill (H.R. 16968) to provide for the adjustment of the Government contribution with respect to the health benefits coverage of Federal employees and annuitants, and for other purposes.

The PRESIDING OFFICER. Is there objection to the present consideration of the bill?

There being no objection, the Senate proceeded to consider the bill.

Mr. PELL. Mr. President, I move to strike out all after the enacting clause of H.R. 16968 and to insert in lieu thereof the text of S. 1772, as amended.

The PRESIDING OFFICER. The question is on agreeing to the motion of the Senator from Rhode Island.

Mr. GRIFFIN. I wish to indicate for the RECORD that this procedure has been cleared with Senators on this side of the aisle so far as the committee is concerned, and there is no objection of which I am aware.

The motion was agreed to.

The PRESIDING OFFICER. The question is on the engrossment of the amendment and third reading of the bill.

The amendment was ordered to be engrossed and the bill to be read a third time.

The bill was read the third time.

The PRESIDING OFFICER (Mr. Moss). The Chair would state that on H.R. 16968, just passed by the Senate, the title will be appropriately amended.

The PRESIDING OFFICER (Mr. Moss). The bill having been read the third time, the question is, Shall it pass?

The bill was passed.

Mr. PELL. Mr. President, I ask unanimous consent that S. 1772 be postponed indefinitely.

The PRESIDING OFFICER. Without objection, it is so ordered.

COMMISSION ON THE ORGANIZATION OF THE DISTRICT OF COLUMBIA

Mr. MANSFIELD. Mr. President, I ask unanimous consent that the Senate proceed to the consideration of Calendar No. 1134, H.R. 18725.

The PRESIDING OFFICER. The bill will be stated by title.

The assistant legislative clerk read as follows: H.R. 18725, to establish a Commission on the Organization of the Government of the District of Columbia and to provide for a Delegate to the House of Representatives from the District of Columbia.

The PRESIDING OFFICER. Is there objection to the present consideration of the bill?

There being no objection, the Senate proceeded to consider the bill.

Mr. ALLEN. Mr. President, I oppose the bill providing for a delegate from the District of Columbia in the U.S. House of Representatives. The District of Columbia is the seat of government of the Government of the United States of America. As such seat of government it belongs to all of the people of the United States, and is represented by 100 Senators and 435 Representatives. Each House of Congress has an able and dedicated Committee for the District of Columbia. Furthermore, the city of Washington has a municipal government which provides municipal services to the residents of Washington.

When the framers of the Constitution included a reference to a Federal district for the seat of government, it was their intent that the Congress should be protected from local political pressures during its deliberations.

I regard this bill as an entering wedge toward providing two U.S. Senators and one or two U.S. Representatives for the District of Columbia.

The bill is unwise and will start a chain reaction that will be extremely undesirable.

My vote will be cast against H.R. 18725.

The bill was ordered to a third reading, was read the third time, and passed.

Mr. MANSFIELD. Mr. President, I move that the vote by which the bill was passed be reconsidered.

Mr. BYRD of West Virginia and Mr. PELL moved that the motion to reconsider be laid on the table.

The motion to lay on the table was agreed to.

OFFICE OF DISASTER ASSISTANCE

Mr. MANSFIELD. Mr. President, I ask unanimous consent that the Senate proceed to the consideration of Calendar No. 1175, S. 3619.

The PRESIDING OFFICER. The bill will be stated by title.

The assistant legislative clerk read as follows: S. 3619, to create, within the Office of the President, an Office of Disaster Assistance, to revise and expand Federal programs for relief from the effects of major disasters, and for other purposes.

The PRESIDING OFFICER. Is there objection to the present consideration of the bill?

There being no objection, the Senate proceeded to consider the bill which had been reported from the Committee on Public Works with an amendment, to strike out all after the enacting clause and insert:

That this Act may be cited as the "Disaster Assistance Act of 1970".

TITLE I—FINDINGS AND DECLARATIONS; DEFINITIONS

FINDINGS AND DECLARATIONS

SEC. 101. (a) The Congress hereby finds and declares that—

(1) because loss of life, human suffering, loss of income, and property loss and damage result from major disasters such as hurricanes, tornadoes, storms, floods, high waters, wind-driven waters, tidal waves, earthquakes, droughts, fires, and other catastrophes; and

(2) because such disasters disrupt the normal functioning of government and the community, and adversely affect individual persons and families with great severity; special measures, designed to expedite the rendering of aid, assistance, and emergency welfare services, and the reconstruction and rehabilitation of devastated areas, are necessary.

(b) It is the intent of the Congress, by this Act, to provide an orderly and continuing means of alleviating the suffering and damage which result from such disasters by—

(1) revising and broadening the scope of existing major disaster relief programs;

(2) encouraging the development of comprehensive disaster relief plans, programs, and organizations by the States; and

(3) achieving greater coordination and responsiveness of Federal major disaster relief programs.

DEFINITIONS

SEC. 102. As used in this Act—

(1) "major disaster" means any hurricane, tornado, storm, flood, high water, wind-driven water, tidal wave, earthquake, drought, fire, or other catastrophe in any part of the United States, which in the determination of the President, is or threatens to be of sufficient severity and magnitude to

warrant disaster assistance by the Federal Government to supplement the efforts and available resources of States, local governments, and relief organizations in alleviating the damage, loss, hardship, or suffering caused thereby, and with respect to which the Governor of any State in which such catastrophe occurs or threatens to occur certifies the need for disaster assistance under this Act and gives assurance of the expenditure of a reasonable amount of the funds of such State, its local governments, or other agencies for alleviating the damage, loss, hardship or suffering resulting from such catastrophe;

(2) "United States" means the fifty States, the District of Columbia, Puerto Rico, the Virgin Islands, Guam, American Samoa, and the Trust Territory of the Pacific Islands;

(3) "State" means any State of the United States, the District of Columbia, Puerto Rico, the Virgin Islands, Guam, American Samoa, or the Trust Territory of the Pacific Islands;

(4) "Governor" means the chief executive of any State;

(5) "local government" means any county, city, village, town, district, or other political subdivision of any State, and includes any rural community or unincorporated town or village for which an application for assistance is made by a State or political subdivision thereof;

(6) "Federal agency" means any department, independent establishment, Federal corporation, or other agency of the executive branch of the Federal Government, except the American National Red Cross; and

(7) "Director" means the Director of the Office of Emergency Preparedness.

TITLE II—THE ADMINISTRATION OF DISASTER ASSISTANCE

PART A—GENERAL PROVISIONS

FEDERAL COORDINATING OFFICER

SEC. 201. (a) The President shall appoint, immediately upon his designation of a major disaster area, a Federal coordinating officer to operate under the Office of Emergency Preparedness in such area.

(b) In order to effectuate the purposes of this Act, the coordinating officer, within the designated area, shall

(1) make an initial appraisal of the types of relief most urgently needed;

(2) establish such field offices as he deems necessary and as are authorized by the Director;

(3) coordinate the administration of relief, including activities of the American National Red Cross and of other relief organizations which agree to operate under his advice or direction; and

(4) take such other action, consistent with authority delegated to him by the Director, and consistent with the provisions of this Act, as he may deem necessary to assist local citizens and public officials in promptly obtaining assistance to which they are entitled.

EMERGENCY SUPPORT TEAMS

SEC. 202. The Director is authorized to form emergency support teams of personnel to be deployed in a major disaster area. Such emergency support teams shall assist the Federal coordinating officer in carrying out his responsibilities pursuant to section 201(b) of this Act.

COOPERATION OF FEDERAL AGENCIES

SEC. 203. (a) In any major disaster, Federal agencies are hereby authorized, on direction of the President, to provide assistance by—

(1) utilizing or lending, with or without compensation therefor, to States and local governments, their equipment, supplies, facilities, personnel, and other resources, other than the extension of credit under the authority of any Act;

(2) distributing or rendering, through the American National Red Cross, other relief and disaster assistance organizations, or otherwise, medicine, food, and other consumable supplies, or emergency assistance;

(3) donating or lending equipment and supplies determined in accordance with applicable laws to be surplus to the needs and responsibilities of the Federal Government; and

(4) performing on public or private lands or waters any emergency work essential for the protection and preservation of life and property, including—

(A) clearing and removing debris and wreckage;

(B) making repairs to, or restoring to service, public facilities, belonging to State or local governments, which were damaged or destroyed by a major disaster except that the Federal contribution therefor shall not exceed the net cost of restoring such facilities to their capacity prior to such disaster;

(C) providing emergency shelter for individuals and families who, as a result of a major disaster, require such assistance; and

(D) making contributions to State or local governments for the purpose of carrying out the provisions of paragraph (4).

(b) Emergency work performed under subsection (a)(4) of this section shall not preclude Federal assistance under any other section of this Act.

(c) Federal agencies may be reimbursed for expenditures under section 203(a) from funds appropriated for the purposes of this Act. Any funds received by Federal agencies as reimbursement for services or supplies furnished under the authority of this section shall be deposited to the credit of the appropriation or appropriations currently available for such services or supplies.

(d) The Federal Government shall not be liable for any claim based upon the exercise or performance or the failure to exercise or perform a discretionary function or duty on the part of a Federal agency or an employee of the Federal Government in carrying out the provisions of this section.

(e) Any Federal agency designated by the President to exercise authority under this Act may establish such special groups, interdepartmental or otherwise, as it deems appropriate to assist in carrying out the provisions of law relating to Federal disaster preparedness and assistance, and the funds of any such agency may be utilized for the necessary expenses of any group so established.

(f) In carrying out the purposes of this Act, any Federal agency is authorized to accept and utilize the services or facilities of any State or local government, or of any agency, office, or employee thereof, with the consent of such government. Any Federal agency, in performing any activities under this section, is authorized to appoint and fix the compensation of such temporary personnel as may be necessary, without regard to the provisions of title 5, United States Code, governing appointments in the competitive service, and without regard to the provisions of chapter 51 and subchapter III of such title relating to classification and General Schedule pay rates, to employ experts and consultants in accordance with the provisions of section 3109 of such title, and to incur obligations on behalf of the United States by contract or otherwise for the acquisition, rental, or hire of equipment, services, materials, and supplies for shipping, drayage, travel, and communication, and for the supervision and administration of such activities. Such obligations, including obligations arising out of the temporary employment of additional personnel, may be incurred by an agency in such amount as may be made available to it by the President.

(g) In the interest of providing maximum mobilization of Federal assistance under this Act, the President is authorized to coordinate in such manner as he may determine the activities of Federal agencies in providing disaster assistance. The President may direct any Federal agency to utilize its available personnel, equipment, supplies, facilities, and other resources in accordance with the authority herein contained. The President may prescribe such rules and regulations as may be necessary and proper to carry out any of the provisions of this Act, and he may exercise any power or authority conferred on him by any section of this Act either directly or through such Federal agency as he may designate.

(h) The President, acting through the Office of Emergency Preparedness, shall conduct periodic reviews (at least annually) of the activities of Federal and State departments or agencies providing disaster assistance, in order to assure maximum coordination of such programs, and to evaluate progress being made in the development of Federal, State, and local preparedness to cope with major disasters.

USE OF LOCAL FIRMS AND INDIVIDUALS

SEC. 204. In the expenditure of Federal funds for debris clearance, distribution of supplies, reconstruction, and other major disaster assistance activities which may be carried out by contract with private organizations, firms, or individuals, preference shall be given, to the extent feasible and practicable, to those organizations, firms, and individuals who reside or do business primarily in the disaster area.

FEDERAL GRANT-IN-AID PROGRAMS

SEC. 205. Any Federal agency charged with the administration of a Federal grant-in-aid program is authorized, if so requested by the applicant State or local authorities, to modify or waive, for the duration of a major disaster proclamation, such conditions for assistance as would otherwise prevent the giving of assistance under such programs if the inability to meet such conditions is a result of the disaster.

STATE DISASTER PLANS

SEC. 206. (a) The President is authorized to provide assistance to the States in developing comprehensive plans and practicable programs for preparation against major disasters, and for relief and assistance for individuals, businesses, and local governments following such disaster. Such plans should include long-range recovery and reconstruction assistance plans for seriously damaged or destroyed public and private facilities.

(b) The President is authorized to make grants of not more than $250,000 to any State, upon application therefor, for not to exceed 50 per centum of the cost of developing such plans and programs.

(c) Any State desiring assistance under this section shall designate or create an agency which is specially qualified to plan and administer such a disaster relief program, and shall, through such agency, submit a State plan to the President, which shall—

(1) set forth a comprehensive and detailed State program for preparation against, and relief following, a major disaster, including provisions for emergency and long-term assistance to individuals, businesses, and local governments; and

(2) include provision for the appointment of a State coordinating officer to act in cooperation with the Federal coordinating officer appointed under section 201 of this Act.

(d) From time to time the Director shall make a report to the President, for submission to the Congress, containing his recommendations for programs for the Federal role in the implementation and funding of comprehensive disaster relief plans, and such

other recommendations relating to the Federal role in disaster relief activities as he deems warranted.

(e) The President is authorized to make grants not to exceed $25,000 per annum to any State in an amount not to exceed 50 per centum of the cost for the purpose of improving, maintaining, and updating that State's disaster assistance plans.

USE AND COORDINATION OF RELIEF ORGANIZATIONS

SEC. 207. (a) In providing relief and assistance following a major disaster, the Director may utilize, with their consent, the personnel and facilities of the American National Red Cross, the Salvation Army, the Mennonite Board of Missions and Charities, and other relief or disaster assistance organizations, in the distribution of medicine, food, supplies, or other items, and in the restoration, rehabilitation, or reconstruction of community services and essential facilities, whenever the Director finds that such utilization is necessary.

(b) The Director is authorized to enter into agreements with the American National Red Cross and other relief or disaster assistance organizations under which the disaster relief activities of such organizations may be coordinated by the Federal coordinating officer whenever such organizations are engaged in providing relief during and after a major disaster. Any such agreement shall include provisions conditioning use of the facilities of the Office of Emergency Preparedness and the services of the coordinating officer upon compliance with regulations promulgated by the Director under sections 208 and 209 of this Act, and such other regulations as the Director may require.

DUPLICATION OF BENEFITS

SEC. 208. (a) The Director, in consultation with the head of each Federal agency administering any program providing financial assistance to persons, business concerns, or other entities suffering losses as the result of a major disaster, shall assure that no such person, business concern, or other entity will receive such assistance with respect to any part of such loss as to which he has received financial assistance under any other program.

(b) The Director shall assure that no person, business concern, or other entity receives any Federal assistance for any part of a loss suffered as the result of a major disaster if such person, concern, or entity received compensation from insurance or any other source for that part of such a loss. Partial compensation for a loss or a part of a loss resulting from a major disaster shall not preclude additional Federal assistance for any part of such a loss not compensated otherwise.

(c) Whenever the Director determines (1) that a person, business concern, or other entity has received assistance under this Act for a loss and that such person, business concern or other entity received assistance for the same loss from another source, and (2) that the amount received from all sources exceeded the amount of the loss, he shall direct such person, business concern, or other entity to pay to the Treasury an amount, not to exceed the amount of Federal assistance received, sufficient to reimburse the Federal Government for that part of the assistance which he deems excessive.

NONDISCRIMINATION IN DISASTER ASSISTANCE

SEC. 209. (a) The Director shall issue, and may alter and amend, such regulations as may be necessary for the guidance of personnel carrying out emergency relief functions at the site of a major disaster. Such regulations shall include provisions for insuring that the distribution of supplies, the processing of applications, and other relief and assistance activities shall be accomplished in an equitable and impartial manner, without discrimination on the grounds of race, color, religion, nationality, sex, age, or economic status prior to a major disaster.

(b) As a condition of participation in the distribution of assistance or supplies under section 207, relief organizations shall be required to comply with regulations relating to nondiscrimination promulgated by the Director, and such other regulations applicable to activities within a major disaster area as he deems necessary for the effective coordination of relief efforts.

ADVISORY PERSONNEL

SEC. 210. The Director is authorized to assign advisory personnel to the chief executive officer of any State or local government within a major disaster area, upon request by such officer, whenever the Director determines that such assignment is desirable in order to insure full utilization of relief and assistance resources and programs.

DISASTER WARNINGS

SEC. 211. The President is authorized to utilize or to make available to Federal, State, and local agencies the facilities of the civil defense communications system established and maintained pursuant to section 201(c) of the Federal Civil Defense Act of 1950, as amended (50 U.S.C. app. 2281(c)), for the purpose of providing needed warning to governmental authorities and the civilian population in areas endangered by imminent major disasters.

PART B—EMERGENCY RELIEF

PREDISASTER ASSISTANCE

SEC. 221. To avert or lessen the effects of a major disaster, the President is authorized, without declaring a major disaster, to utilize Federal resources in providing disaster assistance to any State to assist such State or any local government thereof in circumstances which clearly indicate the imminent occurrence of a major disaster.

EMERGENCY COMMUNICATIONS

SEC. 222. The Director is authorized to establish emergency communications in any major disaster area in order to carry out the functions of his office, and to make such communications available to State and local government officials and other persons as he deems appropriate.

EMERGENCY PUBLIC TRANSPORTATION

SEC. 223. The Director is authorized to provide public transportation service to meet emergency needs in a major disaster area. Such service will provide transportation to governmental offices, supply centers, stores, post offices, schools, major employment centers, and such other places as may be necessary in order to enable the community to resume its normal pattern of life as soon as possible.

DEBRIS REMOVAL GRANTS

SEC. 224. The President, whenever he determines it to be in the public interest, is authorized to make grants to any State or local government for the purpose of removing debris on privately owned lands or waters as a result of a major disaster, and is authorized to make payments through such State or local government for the removal of debris from community areas which may include the private property of an individual. No benefits will be available under this section unless such State or local government arranges unconditional authorization for removal of debris from such property and agrees to indemnify the Federal Government against any claims arising from such debris removal.

FIRE SUPPRESSION GRANTS

SEC. 225. The President is authorized to provide assistance, including grants, to any State for the suppression of any fire on publicly or privately owned forest or grassland which threatens such destruction as would constitute a major disaster.

TEMPORARY HOUSING ASSISTANCE

SEC. 226. (a) The Director is authorized to provide on a temporary basis, as prescribed in this section, dwelling accommodations for individuals and families who, as a result of a major disaster, are in need of assistance by (1) using any unoccupied housing owned by the United States under any program of the Federal Government, (2) arranging with a local public housing agency for using unoccupied public housing units, or (3) acquiring existing dwellings or mobile homes or other readily fabricated dwellings, by purchase or lease. Notwithstanding any other provision of law, any existing dwellings, mobile homes, or readily fabricated dwellings acquired by purchase may be sold directly to individuals and families who are occupants of such temporary accommodations at prices that are fair and equitable. Any mobile home or readily fabricated dwelling shall be placed on a site complete with utilities provided by State or local government, or by the owner or occupant of the site who was displaced by the major disaster, without charge to the United States. However, the Director may elect to provide other more economical and accessible sites at Federal expense when he determines such action to be in the public interest.

(b) After the initial ninety days of occupancy without charge, rental shall be established for such accommodations, under such rules and regulations as the Director may prescribe taking into account the financial resources of the occupant. In case of financial hardship, rentals may be compromised, adjusted, or waived for a period not to exceed twelve months from the date of occupancy, but in no case shall any such individual or family be required to incur a monthly housing expense (including any fixed expense relating to the amortization of debt owing on a house destroyed or damaged in a major disaster) which is excess of 25 per centum of the monthly income of the occupant or occupants.

(c) The Director is further authorized to provide assistance on a temporary basis in the form of mortgage or rental payments to or on behalf of individuals and families who, as a result of financial hardship caused by a major disaster, have received written notice of dispossession or eviction from a residence by reason of foreclosure of any mortgage or lien, cancellation of any contract of sale, or termination of any lease, oral or written. Such assistance shall be provided for a period of not to exceed one year or for the duration of the period of financial hardship, whichever is the lesser. The Director shall, for the purposes of this subsection and in furtherance of the purposes of section 240 of this Act, provide reemployment assistance services to individuals who are unemployed as a result of a major disaster.

PART C—RECOVERY ASSISTANCE

SMALL BUSINESS DISASTER LOANS

SEC. 231. (a) In the administration of the disaster loan program under section 7(b)(1) of the Small Business Act, as amended (15 U.S.C. 636(b)), in the case of property loss or damage resulting from a major disaster as determined by the President or a disaster as determined by the Administrator, the Small Business Administration—

(1) to the extent such loss or damage is not compensated for by insurance or otherwise, (A) shall, on that part of any loan in excess of $500, cancel the principal of the loan, except that the total amount so canceled shall not exceed $2,500, and (B) may defer interest payments or principal payments, or both, in whole or in part, on such loan during the first three years of the term

of the loan without regard to the ability of the borrower to make such payments;

(2) may make any loan for the repair, rehabilitation, or replacement of property damaged or destroyed, without regard to whether the required financial assistance is otherwise available from private sources; and

(3) in the case of the total destruction of, or substantial property damage to a home or business concern, may refinance any mortgage or other liens outstanding against the destroyed or damaged property if such refinancing is for the repair, rehabilitation, or replacement of property damaged or destroyed as a result of such disaster and any such refinancing shall be subject to the provisions of clauses (1) and (2) of this subsection.

(b) Section 7 of the Small Business Act is amended—

(1) by revising paragraph (2) of subsection (b) to read as follows:

"(2) to make such loans (either directly or in cooperation with banks or other lending institutions through agreements to participate on an immediate or deferred basis) as the Administration may determine to be necessary or appropriate to any small business concern located in an area affected by a disaster, if the Administration determines that the concern has suffered a substantial economic injury as a result of such disaster;";

(2) by striking from the second sentence of subsection (b) the following: "meeting the requirements of clause (A) or (B) of paragraph (2) of this subsection,"; and

(3) by striking from subsection (f) the following: "in the case of property loss or damage as the result of a disaster which is a 'major disaster' as defined in section 2(a) of the Act of September 30, 1950 (42 U.S.C. 1855a(a)),".

FARMERS HOME ADMINISTRATION EMERGENCY LOANS

SEC. 232. In the administration of the emergency loan program under subtitle C of the Consolidated Farmers Home Administration Act of 1961, as amended (7 U.S.C. 1961–1967), and the rural housing loan program under section 502 of title V of the Housing Act of 1949, as amended (42 U.S.C. 1472), in the case of loss or damage, resulting from a major disaster, to property, including household furnishings, the Secretary of Agriculture—

(1) to the extent such loss or damage is not compensated for by insurance or otherwise, (A) shall, on that part of any loan in excess of $500, cancel the principal of the loan, except that the total amount so cancelled shall not exceed $2,500, and (B) may defer interest payments or principal payments, or both, in whole or in part, on such loan during the first three years of the term of the loan without regard to the ability of the borrower to make such payments;

(2) may grant any loan for the repair, rehabilitation, or replacement of property damaged or destroyed, without regard to whether the required financial assistance is otherwise available from private sources; and

(3) in the case of the total destruction of, or substantial property damage to a home or business concern may refinance any mortgage or other liens outstanding against the destroyed or damaged property if such refinancing is for the repair, rehabilitation, or replacement of property damaged or destroyed as a result of such disaster and any such refinancing shall be subject to the provisions of clauses (1) and (2) of this section.

LOANS HELD BY THE VETERANS' ADMINISTRATION

SEC. 233. (1) Section 1820(a)(2) of title 38, United States Code, is amended to read as follows:

"(2) subject to specific limitations in this chapter, consent to the modification, with respect to rate of interest, time of payment of principal or interest or any portion thereof, security or other provisions of any note, contract, mortgage or other instrument securing a loan which has been guaranteed, insured, made or acquired under this chapter;"

(2) Section 1820(f) of title 38, United States Code, is amended to read as follows:

"(f) Whenever loss, destruction, or damage to any residential property securing loans guaranteed, insured, made, or acquired by the Administrator under this chapter occurs as the result of a major disaster as determined by the President under the Disaster Assistance Act of 1970, the Administrator shall (1) provide counseling and such other service to the owner of such property as may be feasible and shall inform such owner concerning the disaster assistance available from other Federal agencies and from State or local agencies, and (2) pursuant to subsection (a)(2) of this section, extend on an individual case basis such forbearance or indulgence to such owner as the Administrator determines to be warranted by the facts of the case and the circumstances of such owner."

DISASTER LOAN INTEREST RATES

SEC. 234. (a) Any loan made under the authority of sections 231, 232, 236(b), 237, or 241 of this Act shall bear interest at a rate determined by the Secretary of the Treasury, taking into consideration the current average market yield on outstanding marketable obligations of the United States with remaining periods of maturity of ten to twelve years less not to exceed 2 per centum per annum.

(b) The next to the last sentence of section 7(b) of the Small Business Act is amended by striking out all that follows "exceed" and inserting in lieu thereof the following: "a rate determined by the Secretary of the Treasury taking into consideration the current average market yield on outstanding marketable obligations of the United States with remaining periods of maturity of ten to twelve years less not to exceed 2 per centum per annum."

AGE OF APPLICANT FOR LOANS

SEC. 235. In the administration of any Federal disaster loan program under the authority of sections 231, 232, or 233 of this Act, the age of any adult loan applicant shall not be considered in determining whether such loan should be made or the amount of such loan.

FEDERAL LOAN ADJUSTMENTS

SEC. 236. (a) In addition to the loan extension authority provided in section 12 of the Rural Electrification Act, the Secretary of Agriculture is authorized to adjust and readjust the schedules for payment of principal and interest on loans to borrowers under programs administered by the Rural Electrification Administration, and to extend the maturity date of any such loan to a date not beyond forty years from the date of such loan where he determines such action is necessary because of the impairment of the economic feasibility of the system, or the loss, destruction, or damage of the property of such borrowers as a result of a major disaster.

(b) The Secretary of Housing and Urban Development is authorized to refinance any note or other obligation which is held by him in connection with any loan made by the Department of Housing and Urban Development or its predecessor in interest, or which is included within the revolving fund for liquidating programs established by the Independent Offices Appropriation Act of 1955, where he finds such refinancing necessary because of the loss, destruction, or damage (as a result of a major disaster) to property or facilities securing such obligations. The Secretary may authorize a suspension in the payment of principal and interest charges on, and an additional extension in the maturity of, any such loan for a period not to exceed five years if he determines that such action is necessary to avoid severe financial hardship.

AID TO MAJOR SOURCES OF EMPLOYMENT

SEC. 237. (a) The Small Business Administration in the case of a nonagricultural enterprise, and the Farmers Home Administration in the case of an agricultural enterprise, are authorized to provide any industrial, commercial, agricultural, or other enterprise, which has constituted a major source of employment in an area suffering a major disaster and which is no longer in substantial operation as a result of such disaster, a loan in such amount as may be necessary to enable such enterprise to resume operations in order to assist in restoring the economic viability of the disaster area. Loans authorized by this section shall be made without regard to limitations on the size of loans which may otherwise be imposed by any other provision of law or regulation promulgated pursuant thereto.

(b) Assistance under this section shall be in addition to any other Federal disaster assistance, except that such other assistance may be adjusted or modified to the extent deemed appropriate by the Director under the authority of section 208 of this Act. Any loan made under this section shall be subject to the interest requirements of section 234 of this Act, but the President, if he deems it necessary, may defer payments of principal and interest for a period not to exceed three years after the date of the loan.

FOOD COUPONS AND DISTRIBUTION

SEC. 238. (a) Whenever the President determines that, as a result of a major disaster, low-income households are unable to purchase adequate amounts of nutritious food, he is authorized, under such terms and conditions as he may prescribe, to distribute through the Secretary of Agriculture coupon allotments to such households pursuant to the provisions of the Food Stamp Act of 1964 and to make surplus commodities available pursuant to the provisions of section 203 of this Act.

(b) The President, through the Secretary of Agriculture is authorized to continue to make such coupon allotments and surplus commodities available to such households for so long as he determines necessary, taking into consideration such factors as he deems appropriate, including the consequences of the major disaster on the earning power of the households to which assistance is made available under this section.

(c) Nothing in this section shall be construed as amending or otherwise changing the provisions of the Food Stamp Act of 1964 except as they relate to the availability of food stamps in a major disaster area.

LEGAL SERVICES

SEC. 239. Whence the Director determines that income individuals are unable to secure legal services adequate to meet their needs as a consequence of a major disaster, he shall assure the availability of such legal services as may be needed by these individuals because of conditions created by a major disaster. Whenever feasible, and consistent with the goals of the program authorized by this section, the Director shall assure that the programs are conducted with the advice and assistance of appropriate Federal agencies and State and local bar associations.

UNEMPLOYMENT ASSISTANCE

SEC. 240. The President is authorized to provide to any individual unemployed as a result of a major disaster, such assistance as he deems appropriate while such individual is unemployed. Such assistance as the President shall provide shall not exceed the maximum amount and the maximum duration of payment under the unemployment compensation program of the State in which the disaster occurred, and the amount of assistance under this section to any such individual shall be reduced by any amount of

unemployment compensation or of private income protection insurance compensation available to such individual for such period of unemployment.

COMMUNITY DISASTER LOAN FUND

SEC. 241. (a) There is established within the Treasury a Community Disaster Loan Fund from which the President may authorize loans to local governments for the purposes of meeting payments of principal and interest on outstanding bonded indebtedness, for providing the local share of any Federal grant-in-aid program which is designed to assist in the restoration of an area damaged by a major disaster, or for providing and maintaining essential public services. Such loans shall be made only if the local government has suffered a loss of either more than 25 per centum of its tax base or such a substantial amount that it is otherwise unable to meet such payments, local share obligations, or the cost of essential public services.

(b) Loans from the Fund established by this section shall be without interest for the first two years, shall be made for such periods as may be necessary, not to exceed twenty years, and shall bear interest after the first two years at a rate prescribed in section 234. The President may defer initial payments on such a loan for a period not to exceed five years or half the term of the loan, whichever is less. Any loans under this section may be made for a local government's fiscal year in which the disaster occurred and for each of the following two fiscal years. Loans for any year shall not exceed the difference between the average annual property tax revenue received by the local government for the three-year period preceding the major disaster and the local government's accrued property tax revenue for each of the three years following the major disaster. For purposes of computations under this section, the tax rate and tax assessment valuation factors in effect at the time of the disaster shall not be reduced during the three-year period following the disaster.

(c) (1) The President may transfer to the Fund such sums as he may determine to be necessary from the appropriations available to him for disaster relief. All amounts received as interest payments or repayments of principal on loans, and any other moneys, property, or assets derived from operations in connection with this section shall be deposited to the Fund.

(2) All loans, expenses, and payments pursuant to operations under this section shall be paid from the Fund. From time to time, and at least at the close of each fiscal year, there shall be paid from the Fund into the Treasury, as miscellaneous receipts, interest on the average amount of appropriations accumulated as capital to the Fund, less the average undisbursed cash balance in the Fund during the year. The rate of such interest shall not exceed any rate determined under section 234 for loans from the Fund. Interest payments may be deferred with the approval of the Secretary of the Treasury, but any interest payments so deferred shall themselves bear interest. If at any time the President determines that moneys in the Fund exceed the present and any reasonably prospective future requirements of the Fund, such excess may be transferred to the general fund of the Treasury or to the appropriations available to the President for disaster relief.

(d) There are hereby authorized to be appropriated such sums, not to exceed $100,000,000, as may be necessary to carry out the provisions of this section.

TIMBER SALE CONTRACTS

SEC. 242. (a) Where an existing timber sale contract between the Secretary of Agriculture or the Secretary of the Interior and a timber purchaser does not provide relief from major physical change not due to negligence of the purchaser prior to approval of construction of any section of specified road or of any other specified development facility and, as a result of a major disaster, a major physical change results in additional construction work in connection with such road or facility by such purchaser with an estimated cost, as determined by the appropriate Secretary, (1) of more than $1,000 for sales under one million board feet, (2) of more than $1 per thousand board feet for sales of one to three million board feet, or (3) of more than $3,000 for sales over three million board feet, such increased construction cost shall be borne by the United States.

(b) If the Secretary determines that damages are so great that restoration, reconstruction, or construction is not practical under the cost-sharing arrangement authorized by subsection (a) of this section, the Secretary may allow cancellation of the contract notwithstanding contrary provisions therein.

(c) The Secretary of Agriculture is authorized to reduce to seven days the minimum period of advance public notice required by the first section of the Act of June 4, 1897 (16 U.S.C. 476), in connection with the sale of timber from national forests, whenever the Secretary determines that (1) the sale of such timber will assist in the construction of any area of a State damaged by a major disaster, (2) the sale of such timber will assist in sustaining the economy of such area, or (3) the sale of such timber is necessary to salvage the value of timber damaged in such major disaster or to protect undamaged timber.

(d) The President, when he determines it to be in the public interest, and acting through the Director of Emergency Preparedness, is authorized to make grants to any State or local government for the purpose of removing from privately owned lands timber damaged as a result of a major disaster, and such State or local government is authorized upon application, to make payments out of such grants to any person for reimbursement of expenses actually incurred by such person in the removal of damaged timber, not to exceed the amount that such expenses exceed the salvage value of such timber.

PUBLIC LAND ENTRYMEN

SEC. 243. The Secretary of the Interior is authorized to give any public land entryman such additional time in which to comply with any requirement of law in connection with any public land entry for lands affected by a major disaster as the Secretary finds appropriate because of interference with the entryman's ability to comply with such requirement as a result of such major disaster.

MINIMUM STANDARDS FOR RESIDENTIAL STRUCTURE RESTORATION

SEC. 244. (a) No loan or grant made by any Federal agency, or by any relief organization operating under the supervision of the Director, for the repair, restoration, reconstruction, or replacement of any residential structure located in a major disaster area shall be made unless such structure will be repaired, restored, reconstructed, or replaced in accordance with such minimum standards of safety, decency, and sanitation as the Secretary of Housing and Urban Development may prescribe by regulation for such purpose, and in conformity with applicable building codes and specifications.

(b) In order to carry out the provisions of this section, the Secretary of Housing and Urban Development is authorized—

(1) to consult with such other officials in the Federal, State, and local governments as he deems necessary, in order that regulations prescribed under this section shall—

(A) carry out the purpose of this section; and

(B) have the necessary flexibility to be consistent with requirements of other building regulations, codes, and program requirements applicable; and

(2) to promulgate such regulations as may be necessary.

PART D—RESTORATION OF PUBLIC FACILITIES

FEDERAL FACILITIES

SEC. 251. The President may authorize any Federal agency to repair, reconstruct, restore, or replace any facility owned by the United States and under the jurisdiction of such agency which is damaged or destroyed by any major disaster if he determines that such repair, reconstruction, restoration, or replacement is of such importance and urgency that it cannot reasonably be deferred pending the enactment of specific authorizing legislation or the making of an appropriation for such purposes. In order to carry out the provisions of this section, such repair reconstruction, restoration, or replacement may be begun notwithstanding a lack or an insufficiency of funds appropriated for such purpose, where such lack or insufficiency can be remedied by the transfer, in accordance with law, of funds appropriated for another purpose.

STATE AND LOCAL GOVERNMENT FACILITIES

SEC. 252. (a) The President is authorized to make contributions to State or local governments to repair, restore, reconstruct, or replace public facilities belonging to such State or local governments which were damaged or destroyed by a major disaster, except that the Federal contribution therefor shall not exceed 50 per centum of the net cost of restoring any such facility to its capacity prior to to such disaster and in conformity with applicable codes and specifications.

(b) In the case of any such public facilities which were in the process of construction when damaged or destroyed by a major disaster, the Federal contribution shall not exceed 50 per centum of the net costs of restoring such facilities substantially to their prior to such disaster condition and of completing construction not performed prior to the major disaster to the extent the increase of such cost over the original construction cost is attributable to changed conditions resulting from a major disaster.

(c) For the purposes of this section "public facility" includes any flood control, navigation, irrigation, reclamation, public power, sewage treatment and collection, water supply and distribution, watershed development, or airport facility, any non-Federal-aid street road, or highway, and any other essential public facility.

PRIORITY TO CERTAIN APPLICATIONS FOR PUBLIC FACILITY AND PUBLIC HOUSING ASSISTANCE

SEC. 253. In the processing of applications for assistance, priority and immediate consideration may be given, during such period, not to exceed six months, as the President shall prescribe by proclamation, to applications from public bodies situated in major disaster areas, under the following Acts:

(1) title II of the Housing Amendments of 1955, or any other Act providing assistance for repair, construction, or extension of public facilities;

(2) the United States Housing Act of 1937 for the provision of low-rent housing;

(3) section 702 of the Housing Act of 1954 for assistance in public works planning;

(4) section 702 of the Housing and Urban Development Act of 1965 providing for grants for public facilities; or

(5) section 306 of the Consolidated Farmers Home Administration Act.

RELOCATION ASSISTANCE

SEC. 254. Notwithstanding any other provision of law or regulation promulgated thereunder, no person otherwise eligible for relocation assistance payments authorized under section 114 of the Housing Act of 1949 shall be denied such eligibility as a result of a

major disaster as determined by the President.

TITLE III—MISCELLANEOUS

TECHNICAL AMENDMENTS

SEC. 301. (a) Section 701(a)(3)(B)(ii) of the Housing Act of 1954 (40 U.S.C. 461(a)(3)(B)(ii) is amended to read as follows: "(ii) have suffered substantial damage as a result of a major disaster as determined by the President pursuant to the Disaster Assistance Act of 1970".

(b) Section 8(b)(2) of the National Housing Act (12 U.S.C. 1706c(b)(2)) is amended by striking out of the last proviso "section 2(a) of the Act entitled 'An Act to authorize Federal assistance to States and local governments in major disasters, and for other purposes (Public Law 875, Eighty-first Congress, approved September 30, 1950)" and inserting in lieu thereof "section 102(1) of the Diaster Assistance Act of 1970".

(c) Section 203(h) of the National Housing Act (12 U.S.C. 1709(h)) is amended by striking out "section 2(a) of the Act entitled 'An Act to authorize Federal assistance to States and local governments in major disasters and for other purposes' (Public Law 875, Eighty-first Congress, approved September 30, 1950), as amended" and inserting in lieu thereof "section 102(1) of the Disaster Assistance Act of 1970".

(d) Section 221(f) of the National Housing Act (12 U.S.C. 1715l(f)) is amended by striking out of the last paragraph "the Act entitled 'An Act to authorize Federal assistance to States and local governments in major disasters, and for other purposes', approved September 30, 1950, as amended (42 U.S.C. 1855–1855g)" and inserting in lieu thereof "the Disaster Assistance Act of 1970".

(e) Section 7(a)(1)(A) of the Act of September 30, 1950 (Public Law 874, Eighty-first Congress, as amended; 20 U.S.C. 241–1(a)(1)(A)), is amended by striking out "pursuant to section 2(a) of the Act of September 30, 1950 (42 U.S.C. 1855a(a))" and inserting in lieu thereof "pursuant to section 102(1) of the Disaster Assistance Act of 1970".

(f) Section 16(a) of the Act of September 23, 1950 (79 Stat. 1158; 20 U.S.C. 646(a)) is amended by striking out "section 2(a) of the Act of September 30, 1950 (42 U.S.C. 1855a(a))" and inserting lieu thereof "section 102(1) of the Disaster Assistance Act of 1970".

(g) Section 408(a) of the Higher Education Facilities Act of 1963 (20 U.S.C. 758(a)) is amended by striking out "section 2(a) of the Act of September 30, 1950 (42 U.S.C. 1855a(a))" and inserting in lieu thereof "section 102(1) of the Disaster Assistance Act of 1970".

(h) Section 165(h)(2) of the Internal Revenue Code of 1954, relating to disaster losses (26 U.S.C. 165(h)(2)) is amended to read as follows:

"(2) occurring in an area subsequently determined by the President of the United States to warrant assistance by the Federal Government under the Disaster Assistance Act of 1970,".

(i) Section 5064(a) of the Internal Revenue Code of 1954 (26 U.S.C. 5064(a)), relating to losses caused by disaster, is amended by striking out "the Act of September 30, 1950 (42 U.S.C. 1855)" and inserting in lieu thereof "the Disaster Assistance Act of 1970".

(j) Section 5708(a) of the Internal Revenue Code of 1954 (26 U.S.C. 5708(a)), relating to losses caused by disaster, is amended by striking out "the Act of September 30, 1950 (42 U.S.C. 1855)" and inserting in lieu thereof "the Disaster Assistance Act of 1970".

(k) Section 3 of the Act of June 30, 1954 (68 Stat. 330; 48 U.S.C. 1681), is amended by striking out of the last sentence "section 2 of the Act of September 30, 1950 (64 Stat. 1109), as amended (42 U.S.C. 1855a)" and inserting in lieu thereof "section 102(1) of the Disaster Assistance Act of 1970".

(l) Whenever reference is made in any provision of law (other than this Act), regulation, rule, record, or document of the United States to the Act of September 30, 1950 (64 Stat. 1109), or any provision of such Act, such reference shall be deemed to be a reference to the Disaster Assistance Act of 1970 or to the appropriate provision of the Disaster Assistance Act of 1970 unless no such provision is included therein.

REPEAL OF EXISTING LAW

SEC. 302. The following Acts are hereby repealed:

(1) the Act of September 30, 1950 (64 Stat. 1109);

(2) the Disaster Relief Act of 1966, except section 7 (80 Stat. 1316); and

(3) the Disaster Relief Act of 1969 (83 Stat. 125).

AUTHORIZATION OF APPROPRIATIONS

SEC. 303. Except as provided otherwise in this Act, there are hereby authorized to be appropriated such sums as may be necessary to carry out the provisions of this Act.

EFFECTIVE DATE

SEC. 304. This Act shall take effect immediately upon its enactment, except that sections 226(c), 237, 241, 252(a), and 254 shall take effect as of August 1, 1969.

Mr. STEVENS. Mr. President, I send to the desk an amendment and ask that it be stated—I will call it up later.

The assistant legislative clerk read as follows: On page 79, following line 2, insert the following new subsection:

(c) In the case of any loan made under section 7(b)(1) of the Small Business Act, as amended (15 U.S.C. 636(b)) as a result of the Good Friday earthquake, which occurred on March 27, 1964, the Small Business Administration shall, at the borrower's option, on that part of any loan in excess of $500 cancel (i) the interest due on the loan, or (ii) the principal of the loan, or (iii) any combination of such interest or principal except that the total amount so canceled shall not exceed $1,800.

Mr. STEVENS. Mr. President, I will call this amendment up at a later time.

The PRESIDING OFFICER. The amendment is withdrawn temporarily.

Mr. BAYH. Mr. President, a parliamentary inquiry.

The PRESIDING OFFICER. The Senator from Indiana will state it.

Mr. BAYH. Is S. 3619 now the pending order of business before the Senate?

The PRESIDING OFFICER. That is correct. That is the pending business.

Mr. BAYH. I thank the Presiding Officer.

Mr. President, the hour is late and the Senator from Indiana does not want to spend a great deal of the time of my colleagues. Suffice it to say that this bill is a product of some 3 or 4 years' effort.

The Senator from Alabama (Mr. SPARKMAN) is now in the Chamber. I should like to say that we are deeply indebted to him for the efforts his committee, the Banking and Currency Committee, expended in helping with this bill.

It is only fair to say, and perhaps the Senator from Kansas (Mr. DOLE) will want to verify this, that the administration has been very helpful.

Mr. President, the Committee on Public Works has unanimously approved S. 3619, a bill to revise and expand Federal programs for relief from the effects of major disasters.

As chairman of the Special Subcommittee on Disaster Relief, I wish to express my deep appreciation to the chairman of the full committee, Senator JENNINGS RANDOLPH, for his wise decision to establish the special subcommittee last year, for his assistance in arranging for hearings in the field and in Washington, and for his many courtesies and kindnesses with respect to consideration of this important bill in committee.

The ranking minority member of the committee, Senator JOHN SHERMAN COOPER, who sponsored the administration's disaster assistance bill, S. 3745, was, as always, most helpful and cooperative. I am also grateful for the generous cooperation given me by the members of the subcommittee on both sides of the aisle: Senators SPONG, EAGLETON, and GRAVEL, and Senators DOLE, GURNEY, and PACKWOOD. They have made valuable contributions to the final version of the proposal.

Likewise, I wish to thank the members of the Senate Banking and Currency Committee, who reviewed the bill before it was reported to the Senate and who proposed amendments affecting matters under their jurisdiction, for contributing their expertise and their valuable suggestions, all of which are contained in the bill as reported.

As a result, Mr. President, of the collaboration of all the Members I have mentioned, the committee has brought to the Senate a bill containing not only the best features of S. 3619, which I introduced with the cosponsorship of 30 other Senators and of S. 3745, the administration bill, but also a number of valuable amendments proposed in executive session by members of the Public Works Committee and the best thinking of the Senate Banking Committee. In addition, the committee accommodated Senators YARBOROUGH and TOWER of Texas, who had special concerns arising from recent disasters in their State.

This is a good bill, a strong bill, a far-reaching bill, and, at the same time, a completely nonpartisan bill.

The purpose of S. 3619, is to provide a permanent, comprehensive program for Federal disaster assistance and to strengthen the organization and administrative machinery needed to implement the program in an orderly and effective manner. It will enable the Federal Government, without further specific congressional action, to extend needed emergency relief and recovery assistance to individuals, organizations, businesses, and States and local communities suffering from a major disaster.

The bill consolidates into one act and repeals the three major existing Federal disaster assistance laws: The basic 1950 act, Public Law 875, 81st Congress; the 1966 Disaster Relief Act, Public Law 89–769; and the Disaster Relief Act of 1969, Public Law 91–79. This consolidation and the proposed broadening and enlargement of existing statutory provisions are designed to take into account the experience gained by the Congress and the Federal and State Governments from the devastating catastrophe caused in August 1969 by Hurricane Camille, the largest known destructive force of wind and

water ever to strike the United States, as well as the lessons learned from the tornado which struck Lubbock, Tex., in May this year.

The bill seeks to coordinate disaster relief and recovery efforts of all appropriate Federal, State, and local authorities, and relief and disaster assistance organizations under a single, permanent law, so that when disaster strikes anywhere in the country—as inevitably it will—the full resources of both public and private sectors may be brought to bear to meet the immediate challenge and to undertake the long, difficult and costly task of repair, rehabilitation, reconstruction, and replacement.

There are three principal reasons for enactment of this legislation: First, a number of the main provisions of the 1969 act—Public Law 91–79—will expire on December 31, 1970. These include sections dealing with repair and reconstruction of non-Federal aid roads and highways; the foregiveness feature of SBA, Farmers Home and VA loans; expanded temporary housing assistance; food stamp allotments; and unemployment assistance. These must all be extended beyond the end of this year.

Second, the time has come to codify the many diverse disaster assistance statutes into a single law. As President Nixon observed in his special message on April 22, 1970, the present program has "grown in a peacemeal and often haphazard manner, involving over 50 separate congressional enactments and Executive actions. This slow development process has created a complex program, one which has a number of gaps and overlaps and need increased coordination."

Third, the committee's hearings following the Camille disaster on the gulf coast and in Virginia and West Virginia clearly demonstrated the need for a number of new programs and directives in order to establish by law the fullest possible authority for the President and agencies of the Federal Government to respond to a major disaster quickly, efficiently, and without unnecessary restrictions.

Among the new proposals in this bill several are of outstanding importance: First, a program of aid to major sources of employment, to provide jobs for people thrown out of work by a disaster; second, a community disaster loan fund to make loans to local communities which have lost a substantial part of their tax base, so that they can pay interest and principal on outstanding bonded indebtedness, provide their share of matching funds for Federal grants necessary for restoration of the area, and provide or maintain essential public services; and third, 50–50 matching grants to restore damaged or destroyed State or local public facilities. These three programs are made retroactive to August 1, 1969, in order to make them available to the people and communities that were victims of Hurricane Camille.

In line with the administration's proposals, the amount of forgiveness on disaster loans under SBA and HUD programs has been increased from $1,800 to $2,500 on any loan of more than $500.

Also, the bill incorporates the interest rate recommended by the administration, as amended by the Banking Committee. The new rate on all disaster loans would be determined by the Secretary of the Treasury taking into account the current market yield on 10–12 year U.S. obligations less not to exceed 2 percent. The Treasury reports that the current rate is 7⅜ percent so the rate for disaster loans would be 5⅜ percent.

There are many other significant proposals contained in the bill and described in the report which I will not take time to enumerate.

All in all, Mr. President, this is as complete a program for meeting the impact of hurricanes, tornadoes, tidal waves, earthquakes, and other disasters as your committee, with all the information, advice and counsel it could obtain, has been able to devise. I urge the Senate to give S. 3619 its early approval.

Mr. MILLER. Mr. President, will the Senator from Indiana yield?

Mr. BAYH. I yield.

Mr. MILLER. I want to commend the Senator from Indiana for his work on this bill. I note that there are some familiar provisions in the bill which take me back to over 3 years ago when the Senator from Indiana and I collaborated on an extensive revision of the disaster relief laws, modeled somewhat after the Alaskan disaster relief legislation which was calculated to provide relief particularly to those who met great hardship as a result of tornadoes, floods, hurricanes, and the like.

I note particularly that the bill covers community disaster relief and temporary housing assistance. These are the two areas of greatest need which have not been covered heretofore by Federal legislation. I think that this legislation will be of great help. My only regret is that we could not make it retroactive to take care of those people who were so severely affected 2, 3, and 4 years ago; but we are making a great start here in the right direction and I am most happy to see this legislation come before the Senate.

Mr. BAYH. I appreciate the fact that the Senator from Iowa has called attention in the RECORD to some of the efforts that have been made in preparing the bill which is now before the Senate.

Ohio, Indiana, Illinois, Michigan, and other States in 1965 were hit by a series of tornados. Colorado in particular was stricken by a very serious flood. As a result, 16 Senators joined together shortly after Indiana was hit by the Palm Sunday 1965 tornado which killed 195 people, in an effort to secure a program establishing a meaningful disaster program. It was passed by the Senate but languished in the House until 1966, when part of the bill was enacted.

Last year, the Senator from Iowa will recall, the Senate adopted a very good disaster bill. The House was reluctant. During the August recess, as the Senator from Mississippi will recall, the gulf coast was hit by Hurricane Camille. Unfortunately, it took the impetus of Camille to get House, Senate, and the administration to get behind this type of program and secure its final enactment. However, several important provisions of that 1969 act will expire at the end of this year and must be extended.

In my opinion, this basic legislation should have been on the books 10 years ago.

Mr. STENNIS. Mr. President, will the Senator yield?

Mr. BAYH. I yield.

Mr. STENNIS. Mr. President, I thank the chairman of the subcommittee and all of its members, including the chairman of the full committee, the Senator from West Virginia (Mr. RANDOLPH), for the very fine work they did here on an emergency basis to start with and for following through with reference to Camille. But more than that, I have followed this matter. I think they have done an extraordinary job not only in taking care of some immediate emergency matter, but they have also evolved a national law that will be a tremendous asset to the country. It will give assurance with reference to financial investments and bonds and the insurance problems and a great many other matters. When we talk about destroying the tax base of any county or city, we have destroyed all of it.

The committee has worked out a remarkable remedy. I commend the Senator.

Mr. BAYH. Mr. President, I appreciate the remarks of the Senator from Mississippi. We are all indebted to him, to Senator EASTLAND, and to the chairman of the Public Works Committee, the distinguished Senator from West Virginia (Mr. RANDOLPH).

As the Senator from Mississippi knows well, a special subcommittee was appointed in the wake of Camille to which I was appointed chairman. We held extensive hearings in Mississippi in Biloxi and toured that area. Virginia was also our host, where the subcommittee studied the upper effects of Camille.

I believe that the product of this subcommittee is long overdue. I hope that the Senate will support it. If the United States can rush to Iran and Chile and to other places around the world with the beneficence of our tax dollars, I think that the time has come when we should treat the citizens of this country more compassionately when they are hit by a disaster. That is what this bill proposes to do.

Mr. RANDOLPH. Mr. President, will the Senator yield?

Mr. BAYH. I yield.

Mr. RANDOLPH. Mr. President, I am gratified to join in support to the Disaster Assistance Act of 1970, S. 3619, which was unanimously reported by the Committee on Public Works. This is vital legislation on which we have worked for an extended period of time.

The chairman of our Special Subcommittee on Disaster Relief, Senator BAYH, deserves high praise for his imagination and intelligence in conceiving this legislation. He has had diligence and perseverance over many years in pressing for adoption of the comprehensive nationwide and permanent program for disaster assistance embraced by this bill. He has been ably assisted by the other members of the subcommittee and the full committee.

I am sure that my distinguished friend from Kentucky, JOHN SHERMAN COOPER, is pleased to see much of his disaster relief bill, S. 3745, incorporated in the bill as reported. The ranking minority member of the subcommittee, Senator DOLE, has my commendation for his success in improving the bill with amendments urged by the administration.

This landmark legislation will be of benefit to the citizens of any State and locality in the United States that is so unfortunate as to be struck by a major disaster. It deserves, in my opinion, the affirmative vote of every Member of this body.

Mr. BAYH. Mr. President, I appreciate the kind remarks of the Senator from West Virginia. His assistance has been indispensable. I think that it is most appropriate that we also recognize the excellent efforts of the Senator from Kansas (Mr. DOLE). I earlier made reference to the contributions of the Senator from Kansas who was with us in Mississippi and Kansas and sat through the hearings.

I do not know of another example when we have had the joint efforts of Republicans and Democrats which would better meet the basic needs of the people of this country.

It seems to me unconscionable that we have gone so long without being prepared in advance. We do not know when we will have another disaster. However, history has proven to us that we will have more disasters.

This bill will provide one general act which will apply to any disaster. It should not be necessary to rush to Congress to seek special, piecemeal legislation after every disaster.

Mr. SPONG. Mr. President, will the Senator yield?

Mr. BAYH. Mr. President, I yield to my friend, the distinguished Senator from Virginia, who was our host in Virginia and who helped immeasurably on the bill. Part of the bill shows his footprints.

Mr. SPONG. Mr. President, the Disaster Assistance Act of 1970 will establish permanent machinery to respond quickly to the needs of individuals, businesses, and communities which may be struck by natural disasters.

The bill represents a constructive response to testimony received at hearings before the Special Public Works Subcommittee on Disaster Relief, a unit created to examine the effectiveness of the Federal response to Hurricane Camille last year, and to determine the need for additional legislation.

Heretofore, disaster relief measures have been enacted after disasters have occurred. Consequently, the assistance necessary to restore disaster-stricken areas often has lagged behind the need.

In addition, disaster victims and local government officials have had to examine several different laws for relief programs. The measure developed by the special subcommittee would codify these programs into a single statute, thereby simplifying existing procedures.

The pending bill would establish on a permanent basis the major provisions of the Disaster Relief Act of 1969, which expires this year. For example, the measure would authorize Federal grants for the removal of debris from private property, assistance for the repair and reconstruction on non-Federal-aid highways, and forgiveness of a portion of disaster loans made by the Small Business Administration and the Farmers Home Administration. It also includes provision for temporary housing, food stamps, legal services, and unemployment assistance.

Several sections of the bill would be retroactive to Hurricane Camille, and accordingly may provide additional assistance to individuals, businesses, and communities affected by the disaster along the gulf coast, and in the James River Basin of Virginia.

The retroactive provisions of the bill are as follows:

First. The Small Business Administration and Farmers Home Administration would be authorized to make loans to major sources of employment in a disaster-stricken area without regard to the $500,000 ceiling imposed administratively by SBA and FHA. In order to be eligible, an enterprise must have been damaged to the extent that it is no longer in substantial operation as a result of a disaster.

Second. The Director of the Office of Emergency Preparedness would be authorized to assume temporarily the mortgage or rental payments of victims who, because of financial hardship caused by a disaster, have received notice of eviction or foreclosure.

Third. A community disaster loan fund would be established to assist localities in meeting bond payments, providing the local share of Federal grant-in-aid programs, or for maintaining essential public services. Loans could be made in cases where the local government has suffered a loss of more than 25 percent of its tax base, or in cases where such a substantial amount of the tax base has been lost that the locality is unable to meet its obligations.

Fourth. Grants would be authorized for the repair or reconstruction of public facilites owned by States or localities. Eligibility would be extended to sewage treatment and collection, water supply and distribution, airport, flood control, irrigation, and other facilities. Grants would be limited to 50 percent of costs.

The bill also includes provision for purchasing as well as leasing of mobile homes. There would be no charge for rentals during the first 90 days of occupancy. Thereafter, the financial ability of the occupant would be considered in fixing rent.

Under present law, for disaster loans in excess of $500, a maximum of $1,800 can be canceled. Under a new formula developed by the subcommittee, the forgiveness level would be increased to $2,500.

Mr. President, having seen the devastation caused by Hurricane Camille in Virginia, and heard the accounts of the resulting hardships suffered by many individuals, I am convinced of the need for this legislation. It has been a privilege to serve with the able chairman of the subcommittee, the distinguished Senator from Indiana (Mr. BAYH), during the development of the bill.

Mr. President, I join in the commendations of the efforts of the Senator from Indiana and others. It was fortuitous for the people of Virginia and Mississippi and the other areas affected that legislation sponsored by the Senator from Indiana was pending at the time this disaster struck and that we were able to use the bill upon an emergency basis and perfect it in the form of the legislation we are considering here this evening.

On behalf of the people of Virginia, I thank all Senators who have made contributions to the pending legislation.

Mr. SPARKMAN. Mr. President, will the Senator yield?

Mr. BAYH. I yield.

Mr. SPARKMAN. Mr. President, I join with the other Senators in expressing my commendation and appreciation to the chairman of the subcommittee, the Senator from Indiana (Mr. BAYH), and to the chairman of the full committee, the distinguished Senator from West Virginia (Mr. RANDOLPH), both of whom have taken a great interest in this matter as have the other Senators who worked on it.

The Senator made reference a few minutes ago to the adoption of a suggestion our committee made. After the Public Works Committee finished its deliberations on the bill, in accordance with an understanding we had on the floor of the Senate when the bill was originally introduced, the bill was referred to the Banking and Currency Committee for such recommendations as it might want to make in those areas coming within the jurisdiction of the committee.

We did suggest a couple of amendments.

The Senator from Indiana referred to the one that relates to the interest rate. We tried to work that out to make it consisent with other similar programs.

Mr. BAYH. Mr. President, if the Senator will yield at that point, I ask unanimous consent to have printed at this point in the RECORD a letter contained in the report. The letter is from the distinguished chairman of the Committee on Banking and Currency to the chairman of the Public Works Committee. It incorporates the four suggestions made by the distinguished chairman and the members of the committee. It has been very helpful.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

U.S. SENATE,
COMMITTEE ON BANKING
AND CURRENCY,
Washington, D.C.

Hon. JENNINGS RANDOLPH,
Chairman, Committee on Public Works,
U.S. Senate, Washington, D.C.

DEAR MR. CHAIRMAN: On August 25, 1970, the Senate Banking and Currency Committee considered the housing and small business aspects of your committee's bill, the Disaster Assistance Act of 1970.

After reviewing these provisions, we recommend the following changes be made in the bill prior to its being reported to the Senate:

1. On page 17, section 231(a), after the words "major disaster" insert the words "as determined by the President or a disaster as determined by the Administrator." This will

make the provisions of section 231 of your bill apply to those disasters declared by the Administrator of the Small Business Administration as well as those major disasters declared by the President.

2. On page 21, section 234: (1) after the word "Act" insert ", or under the authority of section 7(b) of the Small Business Act." This provision would make the interest rate which the Small Business Administration charges on its economic disaster loans the same as those it charges under this bill on physical disasters;

(2) Insert "236(b)". This will make the provision of section 236(b) carry the interest rate formula contained in this section;

(3) Also increase the 1 percent figure in the interest rate formula to 2 percent thereby giving the disaster victims a greater break in their interest rate to be charged under this bill.

3. On page 20, delete section 233 and insert language which would treat veterans with direct VA loans who had property destroyed or damaged which secured these loans in the same manner as other victims of disaster. This new language would also give the Administrator of Veterans Affairs the right to forbear payments on the veterans loans at his discretion.

4. On page 22, section 236(b), delete the reference to interest rate. The interest rate under this section would be fixed at the formula set out in section 234 of the bill. This is recommended in order to make all the disaster provisions under this bill affecting HUD and SBA carry the same interest rate.

I am attaching copies of these amendments.

* * * * *

With best wishes, I am
Sincerely,
JOHN SPARKMAN, *Chairman.*

Mr. SPARKMAN. Mr. President, are those amendments incorporated in the final form of the bill as our committee recommended them?

Mr. BAYH. The Senator is correct. They are.

Mr. SPARKMAN. I simply wanted the record to show that.

Several Senators addressed the Chair.

Mr. BAYH. Mr. President, I yield to the Senator from Kentucky.

Mr. COOPER. Mr. President, I wish to join my colleagues on the Committee on Public Works and other Members of the Senate in commending the Senator from Indiana for his work in connection with this bill. In 1967 and 1968 he introduced a disaster relief bill as he had earlier in 1965 which resulted in the act of 1966. There was considerable discussion of that bill, different viewpoints, and thorough consideration which I believe was helpful in the development of the 1969 act and also of the bill which is now before us. Last year we had the California floods and the awful disaster of Hurricane Camille affecting especially Mississippi and Virginia. We were helped very much in the committee discussions on the 1969 act and on this bill by the distinguished Senators from Mississippi (Mr. STENNIS and Mr. EASTLAND), by the earnest and perceptive work of the Senator from Virginia who is a member of the committee (Mr. SPONG) and his colleague (Mr. BYRD). The Committee on Public Works established a Special Subcommittee on Disaster Relief, which held extensive hearings in the field and in Washington.

The President then sent to the Congress early this year a special disaster assistance message, containing the legislative recommendations of the administration, the most comprehensive disaster relief proposals made by any administration. I introduced the administration bill, S. 3745, on April 23, 1970, which was cosponsored also by Senator DOLE and Senators RANDOLPH and BAYH, chairmen of the full committee and the subcommittee. Most of those recommendations have been included in S. 3619.

I want to pay special tribute to the Senator from Kansas (Mr. DOLE) who is the ranking minority member of the subcommittee, and a new Member of the Senate. He entered into this work with all of his energy. He went to Mississippi, and he went to Virginia, when others found the trip too difficult or the weather too bad to go. He worked closely with the administration and diligently within our committee. I think the bill which is the result of these combined efforts is the most comprehensive of its kind ever to come before Congress.

The Disaster Assistance Act of 1970, S. 3619, represents efforts of the Subcommittee on Disaster Relief of the full Public Works Committee to bring orderly assistance to the chaos and suffering wrought by natural disasters. The committee's work on this legislation began on the gulf coast following Hurricane Camille, when hearings were held in Biloxi in January. Further field hearings were held in Roanoke, as well as several days of hearings here in Washington.

The committee's deliberations have focused on legislative proposals S. 3619 and S. 3745. The latter was an administration proposal which came to Congress with a Presidential message on disaster assistance. The committee, its staff, and officials of the administering agencies of the executive branch have worked together closely throughout the development of this legislation and I believe that the strong legislation before the Senate this evening reflects that careful and thorough deliberative process.

The bill recodifies much of existing law in the disaster assistance field and in doing so should greatly aid the task of State and local officials in determining what kinds of assistance are available to them in rebuilding their shattered communities. The confusion which has existed up to now, due to the different laws dealing with disaster relief, was repeatedly mentioned throughout the hearings.

On April 22, 1970, President Nixon sent a message to the Congress asking for the most comprehensive disaster relief in history. The administration can be proud of the provisions of S 3475, its bill which I introduced on April 23. They were good provisions and all but two of the major sections were included in the reported version of S. 3619 in whole or in some modified version.

I think the administration is to be further commended for the actions it has taken since Hurricane Camille to streamline and improve administering to people's needs in the period following a major disaster.

It is important, it seems to me, to note that throughout the committee's work on this legislation two threads of thought were constantly apparent. We wanted to design legislation to care for people. And secondly, we wanted to assure that the negative realities of destruction be turned, so far as possible, to constructive and productive rebuilding. S. 3619 seeks to fulfill those aims and its passage and enactment into law will do much to assure that we "build back better" what is destroyed by future natural disasters in the future.

Again, I commend the Senator from Indiana, Senator BAYH, our committee chairman, the junior Senator from Kansas, Senator DOLE, who worked hard in the hearings, in the field and on the development of the bill, Senator SPONG of Virginia, and all the members of our Public Works Committee and the staff.

Mr. President, I ask unanimous consent the message from the President to the Congress on April 22, 1970—the most comprehensive proposals on disaster assistance by any President, and which contributed so much to the development of this bill—be included in the RECORD following my remarks.

There being no objection, the message was ordered to be printed in the RECORD, as follows:

MESSAGE FROM THE PRESIDENT

To the Congress of the United States:

The spirit of neighborliness, the readiness to extend a helping hand in time of trouble, is one of the great traditions of this country. In the early years of our history, good neighbors were essential in coping with the hardships of pioneer life. They are equally essential in meeting the challenges of life today.

The spirit of the good neighbor was particularly evident in 1969 when natural disasters struck this country in unprecedented numbers and with unprecedented force. Twenty-nine major disasters and an untold number of smaller disasters were responsible for over 300 deaths and an estimated $2 billion in property damage in the last calendar year. Events such as the California floods and Hurricane Camille with the Virginia floods were exceptionally destructive.

Private voluntary agencies have traditionally played a crucial role during times of disaster. State and local governments are key factors in any successful disaster relief effort. Thus the Federal role is only one part of the overall response of the nation. But it is a very important part of that response. Under the Federal Disaster Acts of 1950, 1966, and 1969 and their amendments and under provisions in many other statutes, the Federal government works to help individuals through relief and rehabilitation efforts and to assist State and local governments by restoring public facilities essential to community life. In 1969 the Federal government allocated $150 million for assistance from the President's Disaster Relief Fund—the largest sum for any one year in history. Significant additional funds were spent on disaster assistance under other Federal programs. A report on our 1969 experience is being provided to the Congress.

We are confident that the general framework of our present program provides an effective mechanism for channeling Federal disaster assistance to individuals and communities. Rather than depending on a specialized disaster assistance agency, the present system makes maximum use of existing agencies, centrally coordinated by the Office of Emergency Preparedness, to perform tasks in time of emergency which are similar to those which they perform in normal circumstances. Our present arrangements also encourage constructive and cooperative efforts among, individuals, local communities, the States and the Federal government.

At the same time, however, we have learned that a number of improvements are in order

within the existing framework. The last Presidential special message on the subject of disaster assistance was written 18 years ago. Since that time, this program has grown in a piecemeal and often haphazard manner, involving over 50 separate Congressional enactments and executive actions. This slow development process has created a complex program, one which has a number of gaps and overlaps and needs increased coordination. It is time for new legislation and executive action to make our Federal disaster assistance program more effective and efficient.

LEGISLATIVE PROPOSALS

To extend and to improve the assistance which the Federal Government can provide in time of major disasters, I am asking the Congress to enact the Disaster Assistance Act of 1970. This legislation contains a number of specific proposals, the most important of which are the following:

Revenue maintenance

When a community experiences a major disaster, the physical impact is obvious. What the television camera does not capture, however, is the loss of property tax revenue which occurs when a substantial portion of a community's property tax base is destroyed and its essential services are disrupted.

To ease this difficulty, *I recommend that the Congress enact a property tax revenue maintenance plan.* Under this plan, the Federal government would be authorized to lend money at favorable interest rates to local governments to make up their loss of property tax revenues following a major disaster.

Permanent repair

I am asking the Congress for expanded Federal authority to permanently repair or fully replace essential public facilities damaged by disasters. This authorization would provide a more effective and practical approach to the replacement of damaged public facilities which are vital to community life. This Administration would give preference to local employees and contractors in repair and rebuilding work.

Economic development assistance

I am also asking the Congress to amend the Public Works and Economic Development Act of 1965, so that the Economic Development Administration would provide staff support, technical advice and financial assistance to those communities affected by major disasters. Such assistance is vital in recovery efforts, particularly when the community is attempting to begin long-range rebuilding or redevelopment efforts.

Disaster loans

I am proposing legislation to improve the disaster loan programs of the Small Business Administration and of the Farmers Home Administration. These loans are among our principal sources of assistance to stricken individuals. The recommended changes would provide for improved refinancing, payment deferral, and forgiveness arrangements and would assure disaster loans to older citizens. My proposed amendment would allow the FHA and SBA to provide faster service and would therefore promote speedier recovery following disasters.

Unemployment compensation

I am also recommending that the Congress extend for two years the expanded unemployment compensation provisions of the Disaster Relief Act of 1969. These provisions make temporary income available as promptly as possible to help individuals who are unemployed as the result of a major disaster. Such assistance to individuals was a new feature in the 1969 Act. Before last year, only those unemployed persons who could qualify for compensation under the normal unemployment insurance programs could receive income protection following a disaster. The two-year extension which I recommend would provide time to fully evaluate the new provisions and to consider appropriate legislation.

Housing

Hurricane Camille provided the greatest test of the Federal government's ability to provide temporary housing to victims of a major disaster. We believe we met that test; at the direction of the Office of Emergency Preparedness, the Department of Housing and Urban Development was able to place more than 5,000 mobile homes in the disaster area. We also believe, however, that the language of the law which authorizes such activities is confusing.

Two separate provisions in two different laws are now directed to temporary emergency housing. In order to simplify the legislative provisions that apply to this problem, *I propose that the provisions for temporary housing in PL 81–875 be amended so that they incorporate many of the broad principles of PL 91–79, without sacrificing flexibility.* A clarified version of this law would allow the government to provide temporary housing or other emergency shelter—including leased mobile homes or other readily fabricated dwellings.

Debris removal

One of the serious problems encountered in Hurricane Camille related to the removal of debris from private property. Current legislation in this area is confusing and difficult to administer. *I am therefore proposing corrective legislation that would simplify and speed debris removal from private property when it is in the public interest.* Again, preference would be given to local employees and contractors.

Disaster prevention

In March and April 1969 this Administration conducted a massive flood prevention program in the upper Midwest and New England. This program—Operation Foresight—was immensely successful; it prevented widespread human suffering and an estimated $200 million in damages, at a cost of $20 million. The success of this disaster prevention effort suggests that we can do a great deal to avoid or limit the effects of expected disasters. *Accordingly, I am proposing legislation which would extend the Federal government's authority to assist State and local governments in disaster prevention and damage reduction activities.*

Planning assistance

The Disaster Relief Act of 1969 authorized one-time matching grants to help States formulate better plans for coping with disasters. Almost half of the States have already indicated that they will join us in this effort and we expect that others will soon follow their lead. *I now recommend that the Congress expand this provision of the 1969 law in order to help States review and update these plans on a continuing basis.*

In addition to the major initiatives outlined above, the legislation prepared by the Administration includes a number of other changes designed to extend the scope and improve the effectiveness of Federal assistance.

Administrative actions

Legislative changes are not the only improvements which are presently required. Our experience indicates that changes in administrative procedures can be equally important in providing a more effective assistance program.

Coordination

To improve coordination of Federal Disaster Assistance efforts, both among Federal agencies and among Federal, State, and local officials, I am establishing a National Council on Federal Disaster Assistance. The Council will be composed of senior officials from Federal agencies concerned with disaster assistance and will be chaired by the Director of the Office of Emergency Preparedness.

To further improve coordination of disaster assistance activities in the field, I have also directed that the Regional Directors of the Office of Emergency Preparedness be included as ad hoc members of the newly formed Federal Regional Councils. This improvement will be supplemented by other actions to improve coordination among all levels of government, including the Office of Emergency Preparedness regional planning conferences with State officials with the first such conference this month on the West Coast.

In addition to improving coordination and developing more comprehensive plans, we need better procedures for continuous communication with State and local governments on such matters as disaster legislation. The Council of State Governments and such organizations as the International City Management Association, the National Association of Counties, the National League of Cities, and the United States Conference of Mayors are assisting us in this effort.

Improvements in disaster assistance also require an improved program of research and evaluation, the results of which are readily available to all who can benefit from them. I have therefore directed the Office of Emergency Preparedness to act as a central clearing house for all Federal research which is related to disasters.

Assistance to individuals

An important objective, particularly in large-scale disasters, is that of informing individuals of the assistance which is available and of the places where it can be obtained. To meet this problem, we are expanding our information efforts and keying those efforts to the needs of the individual citizens of the community, particularly those who are poor.

Whenever a disaster occurs, those who live in the area desperately want to be in touch with their friends and relatives who live elsewhere. Rescue workers also need better communication facilities within such areas. I have therefore asked the Office of Emergency Preparedness to provide better emergency communication services to stricken regions during times of disaster.

Just as we make it easier for individuals to get information, so we should make it easier for them to get assistance. It should not be necessary for individuals to travel from one place to another and then to still another location in order to obtain the help which various agencies of the Federal government are providing. *Accordingly, we are developing plans to provide "one-stop" service to individuals in disaster areas.* Representatives of the principal Federal agencies and of the Red Cross, as well as caseworkers and legal advisors, will all be available at a single assistance center.

Disaster assistance teams

Disaster stricken communities frequently lack trained personnel who can help them make the best possible use of the assistance which is available to them from many sources. To meet this need, I have directed the Office of Emergency Preparedness to form *Federal disaster assistance teams to help local communities coordinate the overall assistance effort.* These teams will be supervised by a Federal Disaster Assistance Coordinator who will act as an on-the-spot representative of the President in any particular disaster area.

Disaster Insurance

Our experience with disasters in 1969 clearly demonstrated the need for expanded insurance coverage for property owners. The national flood insurance sections of the Housing and Urban Development Act of 1968 presently permit Federal insurance assistance in flood-prone areas and we are now implementing that program on an accelerated

basis. *I am also directing that a comprehensive study of property insurance coverage for disaster situations be undertaken and that specific recommendations be provided me by the end of this year.* This study should take into account the views of the State insurance authorities, the insurance industry, lending institutions, and the general public.

Civil Defense

The disaster assistance activities of State and local governments often are closely related to their civil defense responsibilities. The relationship between the Federal government's disaster assistance and civil defense activities should now be carefully reviewed. Accordingly, I have asked that such a study be carried out and that its recommendations be given to me by December 31, 1970. It is important that any changes in this sensitive area be made only after a careful review, one which gives special attention to the impact of any suggested change upon national security.

* * * * *

As we move into a new decade, one of the nation's major goals is to restore a ravaged environment. But we must also be ready to respond effectively when nature gets out of control and victimizes our citizens.

With the improvements I have recommended to the Congress and those which I am instituting by Executive action, the disaster assistance program of the Federal government will continue to provide outstanding public service in times of crisis. This program manifests the extraordinary humanitarian spirit of our nation. The changes I have proposed would enable it to reflect that spirit even more effectively.

RICHARD NIXON.

THE WHITE HOUSE, *April 22, 1970.*

Mr. BAYH. Mr. President, I yield to the Senator from Kansas.

Mr. DOLE. Mr. President, I concur with the statements made earlier by the Senator from Indiana, the Senator from West Virginia, and the Senator from Kentucky, the Senator from Virginia, and, of course, the Senator from Mississippi.

It was an eye-opening experience for me and every member of our subcommittee to visit the Biloxi area. We visited Pass Christian and found an entire community leveled, the tax base destroyed, and no apparent means of reviving that community.

This field investigation and the hearings that ensued are responsible for some of the improvements proposed in this legislation.

I share the views of the Senator from Indiana who has been the leader in proposing disaster legislation. I had misgivings in the beginning about some provisions, but after witnessing the hardships and tragedies that result from disasters I am convinced the subcommittee has done an excellent job.

The bill represents the efforts of the subcommittee, the efforts of the administration, and the efforts of the minority and majority staff of the subcommittee and full committee who worked tirelessly with staff members of OEP to write a bill that is responsive to the needs of the people in time of disaster.

It is my opinion that we have passed and approved in the subcommittee and the full committee, with the approval of the Committee on Banking and Currency, landmark legislation. There are significant efforts to improve and update our disaster assistance programs.

Mr. President, on April 22, 1970, President Nixon, in the first special message to Congress on the subject of disaster assistance in 18 years, pointed out:

The spirit of neighborliness, the readiness to extend a helping hand in time of trouble, is one of the great traditions of this country. In the early years of our history, good neighbors were essential in coping with the hardships of pioneer life. They are equally essential in meeting the challenges of life today.

In 1969, the challenges posed by natural disasters surpassed those of any single year since the first comprehensive Federal Disaster Act was passed in 1950. There were 29 major disasters, which included the California floods and Hurricane Camille, described by the U.S. Geological Survey as "the most intensive hurricane on record to enter the U.S. mainland." As a result, the Federal Government allocated a total of $148,970,000 from the President's disaster fund, the largest sum for any year in history. In addition, the disaster loan programs of the Small Business Administration and the Farmers Home Administration were of major assistance during 1969 to homeowners, businessmen, and farmers. Food supplies from the Department of Agriculture, community relations services from the Department of Justice, and legal assistance grants from OEO also helped many disaster victims.

Despite the tremendous response of the Federal agencies to the major disasters of 1969, President Nixon recognized the need to improve our performance. In his special message to the Congress, he proposed far-reaching legislative and administrative changes. The President found that our disaster assistance program has "grown in a piecemeal and often haphazard manner, involving over 50 separate congressional enactments and Executive actions." He noted that—

This slow development process has created a complex program, one which has a number of gaps and overlaps and needs increased coordination.

The bill we are considering today includes the best concepts and proposals of S. 3619 introduced by Senator BAYH, chairman of the Subcommittee on Disaster Relief, and S. 3745, introduced by Senator COOPER, ranking minority member of the full Committee on Public Works, on behalf of the administration. Specifically, the following provisions from S. 3745 are included in this bill:

First. Provision for removal of the "emergency repair of temporary replacement" criteria of work on essential public facilities, with the proviso that the Federal cost of permanent repair or replacement not exceed the net worth of the facility to its predisaster capacity.

Second. Provisions to allow the President to contract or make agreements with private relief organizations in order that the activities of these organizations can be coordinated by appropriate officials and conditioning of such agreements on compliance with title VI of the Civil Rights Act of 1964.

Third. Provisions to provide for forgiveness of up to $2,500 on losses or damage in excess of $500 on the principle of an SBA or FHA disaster loan.

Fourth. Provision that the State planning program would be an ongoing activity rather than expire on December 31, 1970. Additionally, provisions to limit the amount of assistance available to any one State to $25,000 per annum and in amounts which shall comprise more than 50 percent of the total cost of such planning.

Fifth. Provision that debris-clearance assistance to the States and local governments not be made unless the State or local jurisdiction agrees to unconditionally indemnify the Federal Government from any claims arising as a consequence of the debris removal.

Sixth. Provision to establish a community disaster loan fund in the Treasury for assistance to local communities suffering substantial loss because of a major disaster.

Seventh. Provision to authorize assistance in advance of an imminent disaster.

Eighth. Provisions dealing with antidiscrimination in the administration of assistance; with the establishment of advisory groups on disaster relief, and on the assignment of advisory personnel, to local communities.

In addition, the President's program improvements to be achieved administratively have been accomplished or are well underway:

A National Council on Federal Disaster Assistance has been established. The Council brings together senior level officials of Federal agencies to improve coordination of Federal assistance efforts.

One-stop centers: The concept has been tried and proven in the recent Lubbock and Corpus Christi, Tex., disasters, making it easier for disaster victims to get information and assistance.

Disaster assistance teams: Teams of knowledgeable Federal officials, supervised by OEP disaster assistance coordinators, are helping communities and individuals in disaster relief and recovery efforts.

Disaster research: Within OEP, a research effort is being initiated, wherein the agency serves as the clearinghouse on all disaster-related research.

During our hearings, both in the field and in Washington, we heard many complaints about insurance coverage for property owners. At that time, the National Flood Insurance Section of the Housing and Urban Development Act of 1969, permitting Federal insurance assistance in flood-prone areas, had not been fully implemented. That program has now been accelerated, and many more communities are participating. Hopefully, the frustrations arising out of the insurance practices of the past will cease to occur. Further, President Nixon has requested a comprehensive study of property insurance coverage for disaster and will be receiving specific recommendations before the end of the year.

The response of State and local governments to a major natural disaster is one of the most important aspects of effective disaster assistance. We found that there was a wide variance in the ability of the States and in turn the local governments to truly aid their citizens. Oftentimes, those who are designated for

such duties are disaster victims themselves. Where there has been an affirmative response, it is often related to the viability of the State and local civil defense units. The relationship between the Federal Government's disaster assistance and civil defense activities is under review by the President. I am hopeful he will forward recommended changes to the Congress shortly after the first of the year.

As the President said in his disaster message:

> The general framework of our present program provides an effective mechanism for channeling federal disaster assistance to individuals and communities.

But this legislation for the first time consolidates our major disaster assistance programs and provides additional assistance in areas in which we have been deficient in the past. It is the result of bipartisan efforts of members of the committee and the responsible officials in the executive branch. As ranking minority members of the Subcommittee on Disaster Relief, I join my colleagues in supporting the Disaster Assistance Act of 1970. It will allow us, in the President's words, "to respond effectively when nature gets out of control and victimizes our citizens."

Mr. BAYH. Mr. President, I yield to the Senator from Texas. I understand he has an amendment.

Mr. YARBOROUGH. Mr. President, I send to the desk an amendment and ask that it be stated.

The PRESIDING OFFICER. The amendment will be stated.

The legislative clerk read as follows: On page 98, line 10, before the period insert the following: "and sections 231, 232, and 233 shall take effect as of April 1, 1970."

Mr. YARBOROUGH. Mr. President, I thank the distinguished Senator from Indiana for yielding to me. I compliment the Senator for his great work in connection with the important bill.

Mr. President, the amendment I have sent to the desk would apply retroactively the loan cancellation provisions, sections 231, 232, and 233, of S. 3619, to all victims of disasters occurring after April 1, 1970.

Mr. President, we have before us one of the most important pieces of legislation that Congress will consider this session. S. 3619, will provide a permanent and comprehensive disaster relief program which will be of immeasurable benefit to countless Americans. No one in this body realizes more fully the urgent need for this legislation than I. Having observed the damage done to my State this spring and summer by tornadoes, floods, and hurricanes, and having worked with disaster relief agencies and the unfortunate victims of these natural disasters, I know from personal experience the weaknesses in the present law and need for the changes proposed in S. 3619. This is why I am proud to be a cosponsor of this bill. Its excellent features are so many that I shall not take the time of the Senate to speak on them at this time; however, I do wish to commend the distinguished Senator from Indiana (Mr. BAYH) and the members of his subcommittee for their fine work on this bill.

The purpose for my amendment is to make available to the thousands of victims of major disasters that have occurred since April 1, 1970, the increased loan cancellation features of S. 3619. Under the present law, Public Law 91–79, which was enacted in October of 1969 in the wake of Hurricane Camille which ravished the gulf coast, the Small Business Administration and the Farmers Home Administration are authorized to cancel at the borrower's request up to $1,800 of any disaster loan in excess of $500. In other words, if a disaster victim obtained a $2,300 loan from the Small Business Administration to repair or restore his farm house or replace his livestock, he would be obligated to pay the first $500 but the balance would be canceled. When Public Law 91–79 was enacted in October of 1969, its provisions and benefits, including the loan cancellation feature, were made to apply retroactively to all major disasters that occurred after June 30, 1967. By making Public Law 91–79 retroactive to that date, the victims of Hurricane Beulah, which struck the gulf coast in September of 1967, were allowed to benefit by the law. My amendment does nothing more than was done when Public Law 91–79 was enacted.

The committee in reporting S. 3619 recognized that the cost of construction work has skyrocketed in the last year; therefore, the committee wisely increased the amount of a disaster loan that the Small Business Administration and Farmers Home Administration can cancel from $1,800 to $2,500. This increase of $700 may seem small and insignificant to those people of wealth; however, to the Mexican American and black citizens of Lubbock and Corpus Christi, to small businessmen and fishermen of the gulf coast, and to the farmers of Plainview, this amount could provide the means and assistance to stay in their communities and rebuild their homes, farms, and businesses rather than being forced to seek a new start in another area. This is why it is only fair and just that we make the increased benefits of S. 3619 available to as many disaster victims as possible.

In my State, there have been four major disasters since April of this year. The first of these disasters was the tornado that struck Plainview, Tex., and cut a 175-mile path of death and destruction in a 10-county area. Second, was the tornado that struck Lubbock, Tex., on May 11, affecting 2,500 square blocks of that prosperous city. Third, on May 15 of this year a flood devastated San Marcos, Tex. Last, but far from least, Hurricane Celia struck Corpus Christi, Tex., and many other towns and cities in a 12-county area in Texas in August. The damage figures are still being completed on all of these disasters; but from what information that is available, it is clear that the Lubbock tornado damaged or destroyed over 10,000 homes. The Plainview tornado caused over $10 million in property damage. The San Marcos flood caused over $2 million and Hurricane Celia has caused over $233 million in damages to real property and homes and automobiles alone as of this date.

In these areas in Texas, the Small Business Administration and the Farmers Home Administration have already made many disaster loans and there are still many loan applications to be acted on. In Lubbock, Tex., for example, the Small Business Administration has already made over $7 million in loans to homeowners and businessmen. Many more loan applications are still pending. In the counties affected by Hurricane Celia, the Small Business Administration has made 2,500 loans and the Farmers Home Administration has made 21 loans. Many more loan applications are pending for action by the Small Business Administration and Farmers Home Administration.

Under the present law, the Small Business Administration and Farmers Home Administration are authorized to defer the initial payments on these loans for a period of time in order to allow the borrower to get on his feet financially with his other creditors. For example, the initial payment on loans made by the Small Business Administration to a homeowner or business concern that cannot obtain funds from private sources may be deferred for a period of 5 months to 3 years, depending on the financial condition of the borrower. The Farmers Home Administration is authorized to allow the repayment of emergency loans for the purposes of replacing livestock and equipment for periods of up to 7 years and to allow loans for the purpose of repairing farm buildings and improvements to be repaid over periods of up to 20 years. Thus, in many situations, victims who have received disaster loans since April 1, 1970, have not even made the first payment on these loans and will not do so for some time. In many other cases, loan applications made by the victims of Hurricane Celia and the Lubbock tornado will not even be acted upon until after this legislation has passed. To people in these situations, it will appear that Congress has lost all interest in their problems if they are not offered the opportunity to take advantage of the cancellation provisions of S. 3619.

Mr. President, those who oppose my amendment usually offer two feeble reasons why it should not be passed.

First, it is argued that to make these provisions retroactive will impose great administrative difficulties for the Small Business Administration and Farmers Home Administration. When tested by experience, this argument will not stand up. As pointed out earlier, in many situations, the first payments have been deferred. In other situations the loan applications have not been acted upon. Thus, it would not seem to be an insurmountable task for these agencies to advise these borrowers of their rights under S. 3619 and offer them the opportunity to come under these provisions. It is true that it might cause these agencies some extra work and in some cases some inconvenience, however, when the public good is pitted against governmental inconvenience it is imperative that the public good prevails. The foundation of

government in a democracy is to be responsive to the needs of the people and to find ways of meeting these needs. When our Government stops acting in the best interest of the people and starts acting only for its own interest and convenience their own Government has failed in its basic function: to serve the people.

Second, it is argued that by applying this amendment retroactively, disaster victims will be hurt rather than helped because the interest rate will be increased from 3 to 5⅜ percent. This argument is also impersuasive because:

First, my amendment does not automatically increase the interest rate on any existing disaster loan. On the contrary, my amendment would offer disaster victims the choice of whether to retain their present loans at an interest rate of 3 percent with only $1,800 in cancellation authority or to take a new loan at 5⅜-percent interest with $2,500 in cancellation authority. Naturally, not all disaster victims will make the same choice; however, I do not believe that it would be too much of a burden on the agencies involved to make this choice available to these unfortunate people.

Second, in many cases, the benefits of the increased amount that can be canceled will far outweigh the effect that the interest rate might have. This is particularly true in the case of low-income people. For example, suppose a low-income family sustains $3,000 in damages to their home. Under the present law, this family would be entitled to have $1,800 of a $3,000 loan canceled, leaving them with the obligation of repaying $1,200 at 3-percent interest. If my amendment is enacted, this family would have the choice of receiving a loan under S. 3619 which would allow them to have $2,500 of this loan canceled, leaving them obligated to pay back $500 at 5⅜-percent interest. It seems obvious that a debt of $500 at 5⅜-percent interest is much easier for a low-income family to carry than a $1,200 debt at 3-percent interest. At the rate of 5⅜ percent the interest on $500 for 1 year is only $26.37. The interest on $1,200 at 3 percent for 1 year is $36. Therefore, it appears logical to me that low-income and middle-income people, when given the choice, would rather pay $526.87 than $1,236. The obvious benefits of the increased cancellation features of S. 3619 even with an increased interest rate, are pointed out by the committee on page 18 of the report on S. 3619 in which it is stated:

> Despite the higher interest rate which would be charged for disaster loans, substantial benefits will accrue under the new formula for many of those seeking assistance. A homeowner whose disaster loan exceeds $10,500 will be eligible for a forgiveness of the maximum amount, or $2500. His total encumbrance on $10,500 will be only $8000. A $6000 disaster loan will be credit with $2500, reducing the obligation to $3500. A borrower of $2000 will be entitled to a $1500 cancellation, leaving a balance of $500 to be repaid.

Mr. President, the amendment I have proposed is a fair and just measure. It is one that I am committed to because of what it means to the poor people who have suffered so much in these terrible disasters. I cannot turn my back on these people in their hour of need. Therefore, I ask all my colleagues who care about the welfare of the thousands of small farmers, businessmen, and working people throughout America who are trying desperately to rebuild their homes and their lives to join with me in approving this important amendment.

Mr. President, I commend the Senator from Indiana for his thorough research in connection with the bill and the hearings that have been held all over the country, as well as the provisions in the bill to help the people in my State, mainly those of Mexican-American extraction who were faced with the loss of their homes by mortgage foreclosures where they did not have the funds to make mortgage payments or rent payments. Many of these people worked in plants that were destroyed. The committee adopted my amendment which would provide the money for people to make their rent or mortgage payments. This is a great advancement in the efforts of government to meet the basic needs of disaster victims.

I have offered a limited amendment. I ask the distinguished chairman to accept the more limited amendment at this time.

Mr. BAYH. Mr. President, the Senator from Texas has discussed with me the unique problem he has in Texas now and also the terrible disaster that hit the area along the coast down there. I would have no objection to accepting that particular amendment.

Mr. YARBOROUGH. It is more restrictive than the earlier amendment I offered.

Mr. BAYH. As some of those Senators present know, I had hoped we could get this covered in other areas. I say to my friend I do not know what the attitude of the House will be, but we will certainly try to get it approved.

Mr. YARBOROUGH. I would like to point out that this is not only a Texas amendment. Since that date there have been disasters, declared by the President, in Alabama, North Dakota, Kansas, Florida, New York, and Minnesota. It is not a one-State amendment. It covers situations in those States, as well.

Mr. DOLE. Mr. President, will the Senator yield?

Mr. BAYH. I yield.

Mr. DOLE. The amendment provides for the retroactive application of sections 231, 232, and 233, which apply to disaster loans by SBA and FHA and loans held by VA, respectively.

If section 231 is made retroactive to April 1, 1970, loans will require reworking to provide the additional $700 cancellation feature. Another, but perhaps more important, feature of the new act provides for a different interest rate on disaster loans. Thus, if a loan is reworked to include the $700 additional cancellation feature, it appears that the interest rate—estimated at 5⅜ percent—required by the new act would also have to be applied to that loan. This would require that SBA discuss the advantages and disadvantages with each applicant covered by the amendment. It appears that confusion among applicants would result. The act further provides that certain conditions of eligibility for disaster loans be removed. If made retroactive, it would appear SBA would be required to inform persons previously not eligible for loans that they may now qualify, including those who did not apply because they know they did not meet eligibility requirements. This would also require SBA to accept applications for all SBA declared disaster loan areas as well as Presidential declarations of major disasters.

As for section 232, FHA has approved loans that include the $1,800 forgiveness feature authorized by existing statute. The comments made with regard to section 231 also apply to this section.

Furthermore, no benefit to disaster victims would result from retroactive application of section 233, and VA presently has the authority which would be granted by that section. Thus, there is no reason for such action.

But Mr. President, I am not going to object to the amendment, I only raise these questions for the record. I am in sympathy with the objective of the Senator from Texas. If I understand the amendment clearly, it means that SBA will find it necessary to rework some 20,000 loans that have already been made and that it might result in an increase in interest paid by some applicants. Do I understand that sections 232 and 233 would also be added?

Mr. YARBOROUGH. Mr. President, will the Senator yield?

Mr. BAYH. I yield.

Mr. YARBOROUGH. I believe the Senator is referring to my former amendment. It went back to August of 1969. Under that amendment, there would have been 20,000 loans to review. This limited amendment, as the chairman will verify, would cover only about 3,000 to 4,000 such loans.

Mr. BAYH. Between 3,000 and 4,000.

Mr. YARBOROUGH. Yes; less than one-fifth as many loans as under my earlier amendment. We are hopeful there would be no objection to it.

Mr. DOLE. Does that same date apply to FHA and VA loans—to all three sections?

Mr. YARBOROUGH. All three sections.

Mr. BAYH. All three sections.

Mr. DOLE. I do not know how many FHA loans would be affected by the new date but apparently fewer than 1,000.

With that modification I am willing to accept the amendment of the Senator from Texas.

The PRESIDING OFFICER. The question is on agreeing to the amendment of the Senator from Texas.

The amendment was agreed to.

Mr. YARBOROUGH. Mr. President, I send to the desk another amendment, with which the Senator is familiar. I ask for its acceptance. It relates to damage to real estate in Cameron and Willacy Counties, Tex., where there was a rather unfortunate occurrence.

The PRESIDING OFFICER. The amendment will be stated.

The legislative clerk read as follows:

On page 65, line 5, after "Act." it is proposed to insert the following:

Funds allocated for the relief of areas devastated by major disasters occurring between July 1, 1967, and December 31, 1970, shall be expended on the basis of costs as certified by State and local governments and shall not be limited to costs estimated by damage surveys made after obligations have been incurred.

Mr. MILLER. Mr. President, will the Senator from Texas yield?

Mr. YARBOROUGH. I yield.

Mr. MILLER. Mr. President, I ask for the yeas and nays on the passage of the bill. I couple this with the observation that I think the Senate is acting on one of the most meaningful pieces of proposed legislation in my 10 years in the Senate. We have had trouble with the House mainly, I think, because the House has not understood some of the background which resulted in this bill. I would hope that we would have a unanimous vote on the bill. I think it would help us in our dealings with the House.

Mr. President, I ask for the yeas and nays on the passage of the bill.

The yeas and nays were ordered.

Mr. YARBOROUGH. Mr. President, I digress for a moment from discussing the amendment to concur in the observations of the Senator from Iowa on this great piece of legislation. I want to point out something else. The poor people who suffer in these disasters have no legal representation in the usual case. I have been on the scene. I have an office opened in Corpus Christi to assist disaster victims. I have had as many as four assistants there at a time working with these unfortunate people. There is no Federal money provided for these services. I have had to raise the money to keep this office open.

There is no legal assistance available for the poorer disaster victims. They are not able to hire lawyers to explain to them their rights under the various disaster programs.

The Senator from Alaska (Mr. GRAVEL) and I offered an amendment to S. 3617 which would provide legal assistance to disaster victims when they are not able to hire lawyers for themselves. I am pleased that it was accepted. This is another advancement.

This is a very fine bill. I commend the distinguished Senator from Indiana, the distinguished Senator from West Virginia, and other Senators from both sides of the aisle who have worked out the finest disaster relief bill in the history of the United States.

Now I return to my limited amendment.

The amendment pertains to the Hurricane Beulah disaster which struck the Texas east coast on the morning of September 20, 1967, which was declared a natural disaster by President Johnson on September 28, 1967. Local officials of Cameron and Willacy Counties, two of the most seriously devasted counties in the disaster area, immediately pursued rehabilitation efforts, making every effort to comply with the guidelines of the Office of Emergency Preparedness.

Despite the good faith efforts of these counties and the performance of work by contractors, there has been constant disputing over the reimbursement of expense relating to the rehabilitation efforts, even though the Governor of the State of Texas has certified these costs as well as the local governments. The Governor has also appealed the determinations of the Office of Emergency Preparedness, but unsuccessfully.

The circumstances of this problem are fairly simple. There was a hurricane, and relying on indications that the area would be declared a natural disaster, the counties began the emergency rehabilitation as they should. After the fact and after obligations were made by the counties, OEP made their own damage survey estimate and denied the claims after the obligations had already been incurred.

This is an unforgiveable situation in which the OEP has a contractual obligation to reimburse for reasonable sums expended in performance of eligible work under the Federal Disaster Act and the counties expended substantial sums in reliance on this commitment. There is no allegation that the counties did not make every effort to comply with all the guidelines of OEP, yet their claims have been denied.

If these costs are not reimbursed then it would be unreasonable to assume that any contractor would assist in rehabilitation efforts until he had the cash in hand, since the Government's contracts would be meaningless. It is my understanding that this amendment would cost no new money, since $10 million was allocated for the relief following Hurricane Beulah and there is more than enough remaining to pay these remaining claims.

Mr. President, I ask all Senators to give this amendment their full support.

Mr. DOLE. Mr. President, will the Senator from Texas yield?

Mr. YARBOROUGH. I yield.

Mr. DOLE. Do I understand correctly that the Senator's amendment is No. 877?

Mr. YARBOROUGH. That is correct.

Mr. DOLE. Has there been any change in the language of amendment No. 877 as it is on our desks?

Mr. YARBOROUGH. No; it is just as it was. Ten million dollars was allocated for relief. It has not been paid. This amendment provides that Cameron and Willacy Counties shall be repaid for their expenses in cleaning up the damage. The taxpayers there are overburdened with the expense. This amendment calls for no new money. The $10 million originally appropriated is still available.

Mr. COOPER. Mr. President, will the Senator yield?

Mr. YARBOROUGH. I yield.

Mr. COOPER. I feel an obligation to say something about this proposal, not only because I am the ranking Republican member of the committee, but also, as Kentucky has had many flood disasters, I have some knowledge of situations like this in my own State.

As I read the Senator's amendment, it provides that as to every kind of damage that occurred because of disaster between July 1, 1967, and December 31, 1970, anywhere in the land, when a county or a State sends in a bill and certifies that it is correct, that is all there is to it; the Federal Government will have to pay it. It would simply remove the Federal administrator from the program. The Federal Government would pay the bill for each county or each city which certified to the amount.

The Senator from Texas (Mr. YARBOROUGH) has always been loyal to his State and his people; but having had experience in my own State, in only one or two counties I am glad to say, I must say that I shall have to vote against the proposal of the Senator from Texas.

Mr. YARBOROUGH. The present Governor of my State has been to Washington time after time to seek reimbursement for the debt that the counties incurred. The previous Governor would not ask for a declaration of disaster. The previous Governor incurred the obligation that was paid at that time. There was a hiatus of 8 days until there was a declaration of disaster.

Mr. BAYH. Mr. President, will the Senator permit me to make one observation?

Mr. YARBOROUGH. Yes.

Mr. BAYH. As I understand what the Senator has said, there was a difference between the amount declared to be the cost of cleaning up debris at the time and the later estimate by OEP. The estimated amount has been paid. What the Senator from Texas is trying to do is to have the counties affected reimbursed for the actual cost.

Mr. YARBOROUGH. The actual cost, as the OEP made its estimate, which came in after the money was spent.

Mr. BAYH. The Senator from Texas is free to handle his amendment as he sees fit, but the Senator from Indiana might suggest that, inasmuch as the grievance that concerns the Senator from Texas, as to which he has evidence concerning the disparity between the estimate and the actual cost in two counties—I do not know how many hundreds of counties might be covered by his amendment now—perhaps he would have less opposition from some Senators who are concerned about opening a Pandora's box if he would limit the amendment to the counties affected by disasters which occurred only during the last 6 months of 1967. This would confine the amendment sufficiently to deal with the two grievances that the Senator brings to our attention, without opening a Pandora's box and applying the amendment to the whole country, about which we have no evidence on the actual expenditures which might be involved.

Mr. YARBOROUGH. Mr. President, I ask unanimous consent that I may amend my amendment on line 4 by striking out "1970" and inserting in lieu thereof "1967."

The PRESIDING OFFICER. The Senator from Texas has a right to modify his amendment, and the amendment will be so modified.

Mr. DOLE. Mr. President, I oppose the amendment. As I understand, the work was done on an emergency basis, and that sometimes is necessary. I also understand that the OEP no longer approves contingency contracts; but many efforts have been made, as the Senator from Texas has pointed out, by the Gov-

ernor and others to justify the increased payments.

They have appealed to the OEP; they have appealed to the director; and in each instance, they have not been able to justify the claim that is now presented to the Senate.

In all disasters since Public Law 875 was enacted in 1950, I am informed by OEP that, State and local governments have been advised to go ahead and perform emergency work that they felt was urgent and to file an application as soon as they could. The work would be inspected and surveyed as soon as possible by the State and Federal governments and eligible work would be approved for reimbursement from disaster funds allocated.

This has been the practical thing to do and has been well received by applicants generally. There have been exceptions—generally where contractors have contracted to do work by contingency contract with the understanding that they would accept as payment the amount the applicant collected from OEP; when contractors have charged greatly in excess of prevailing rates in effect in the area; or when work performed was greatly in excess of emergency repairs or temporary replacements or other ineligible work. Contingency contracts are now prohibited by OEP regulations, but were not prohibited when Hurricane Beulah occurred during September 1967.

There have been instances where damage is so extensive that it requires weeks or several months to make complete inspections, write reports and process an application completely. In such instances, the applicants are briefed concerning OEP policies and criteria and advised to go ahead with emergency work with full knowledge that only eligible work is reimbursable. State and Federal representatives are available to local government for consultation on any problems that arise during emergency work.

Procedures for approval of eligible work and for processing claims for payment are covered by OEP circular 4000.5B. As stated in section IV of that circular, the applicant must submit supporting documentation of costs and a certification of the cost of eligible work.

Prior to payment of such claims, Federal or State representatives inspect the completed work and the cost records are audited.

It appears that the intent of the senior Senator from Texas is that the proposed amendment authorizes expenditures based only on costs certified by State and local governments.

I am told that the facts involved in the Cameron and Willacy County claims were carefully considered by the OEP Director in making his decision. Governor Preston Smith appealed these cases to the Director and presented his justification for increased payments. County and State officials, accompanied by the contractor, presented additional information and records, for the Director's consideration, while the appeal was being processed. OEP engineers and auditors, assisted by Bovay, Inc., and by professional staff of other Federal agencies, evaluated the facts involved and justified reimbursement for all identifiable and eligible work.

If these two claims were reopened upon the basis of the amendment consistent with the intent expressed by the Senator from Texas, OEP would make payments without Federal inspection of the work nor audit of costs. This would result in additional payments to Cameron County of $541,482 and to Willacy County of $138,037 to fully satisfy their claims.

We really have a private relief bill for one construction company, the George Consolidated, Inc. Although the money is to go to Cameron County, in the amount of $541,482, and to Willacy County in the amount of $138,037, in fact, it would go to one construction company.

I believe the amendment as amended is even more unfair than it was originally because now we say to other projects, "You are excluded."

This practice would eliminate all control by the Federal Government in the administration of the Disaster Act since it would nullify all criteria, rules and regulations and authorize payment of all obligations incurred at the pleasure of the State and local governments.

The amendment would open the door to a situation that would allow other applicants who had their certified costs reduced by audit to claim full payment of the costs certified regardless of audit findings or eligibility. It would change the basis upon which the Federal disaster assistance program is founded.

In the history of the disaster assistance program, there have been few appeals of decisions by local applicants and few have ever been appealed to the OEP Director. Only two cases have involved litigation to recover additional sums from the United States. One case has been dismissed with prejudice and the other is still pending. I am informed that OEP anticipates no difficulty in making payments to local applicants through State governments nor in obtaining contractors to perform emergency work in accordance with OEP regulations.

Of course, we have no idea what the actual cost in dollars might be, but it would open the door even with the 6 months limitation to other applicants who had their certified costs reduced by audit, to claim full payment.

This is the issue. The costs have been certified, and I believe the amendment, if adopted, would change the basis upon which the Federal disaster assistance program was founded, and which exists today So I, as the ranking member on the Republican side, cannot accept the amendment.

Mr. YARBOROUGH. Mr. President, this is not a private relief bill. It is a disaster relief bill for Willacy and Cameron Counties. It was occasioned by the delay of the Governor of my State in requesting that those counties be declared a major disaster area. Your humble servant was requesting a declaration of a disaster, but the Governor's delay prevailed, and in that time while we were facing this disaster, with the roads ruined and with the debris all over the streets and things, these counties made this contract to clean up damages.

This is not a case of the enlargement of the contract after an additional claim. This was what it cost from the beginning. They certified it; the Governor of Texas had his own observers survey it, and found it was reasonable; but the OEP went in and made a survey later, and, based on their claim of what the damage should have been, they said, "The county has paid too much."

The taxpayers of that county are in the midst of the poverty belt. The poverty belt of America stretches from Brownsville, Tex., the area where these counties are located, through San Diego, Calif. That area along the Mexican border includes the lowest income people in the United States, because it is arid. You cannot raise anything without irrigation, and the only people there who have irrigation are the wealthy people.

There is less tax base there upon which to build the tax burden than anywhere else in the country. In those counties, you will find, as well as on through this belt of Texas, New Mexico, Arizona, and southern California, that this is a poverty belt, with the lowest income and the lowest educational attainments in the Nation. It is not the fault of the people there, Mr. President. Where I grew up, with 38 inches of annual rainfall, if a man just threw some sweet potato slips and a few black-eyed peas and corn in the ground, he could almost make a living. But these people have a tax base already taxed to the breaking point, and then OEP comes in and says, "You should not have paid this much; we are smarter than you are, and we know."

They are smarter after it has all been cleaned up and repaired. They should have been down there when I was. In one of these counties, the county seat of Willacy County, Raymondville, was isolated by the water, by highway, for 6 weeks. You had to take boats and go in there. For 6 weeks they were cut off; and then they had some OEP man come in later and say, "We are going to survey it now; your damage was not this much."

I think it is a just claim, and a matter for which the law provides. We are not trying to create new law; we are just trying to prevent the OEP from misusing these poor counties of America.

Several Senators addressed the Chair.

The PRESIDING OFFICER (Mr. ELLENDER). The Chair recognizes the Senator from Colorado.

Mr. ALLOTT. Mr. President, we are here because we are all interested in disaster relief. There were some radical changes made in this law in 1967, I believe, or 1969, particularly, when we provided that the Government could go in on private land and clear away refuse and the deposits of floods and disasters.

I have only this to say, as to principle: I think it is bad to go backward and authorize these things that are in the past. If we are going to do that tonight, I think what we ought to do, to be fair, is that I be given time to prepare a proper amendment, because in the floods of 1965, in Colorado, there were millions of dollars of damage done to private

homes and farmers, ruining some of the best farmland we had in the State; and if we are going to be retroactive in this situation, I think we have to do it across the board with everyone in the country.

I would like an opportunity, then, to prepare tonight an amendment to take into consideration the damage to individuals in those floods. Some of the land, in fact a great deal of the land, has never been cleared of the flood refuse since 1965. That provision has been enacted into law since then, but if we are going to be retroactive—which is a principle I disagree with, and I hope the amendment will be defeated—then I think we ought to have time for the rest of us to come in and be retroactive for a long way.

Several Senators addressed the Chair.

Mr. ALLOTT. Mr. President, I have the floor.

The PRESIDING OFFICER. The Senator from Colorado has the floor.

Mr. YARBOROUGH. Mr. President, will the Senator from Colorado yield to me? I believe it will save time.

Mr. ALLOTT. I yield.

Mr. YARBOROUGH. Mr. President, I have just conferred with the authors of the bill, and in view of the lateness of the hour and the opposition, which we did not expect to be as strong, and the other claims to come in also, I would not want to delay the bill beyond tonight, and I will withdraw the amendment and seek other modes of relief. We will offer it some other time, when there is more opportunity for careful consideration.

I withdraw the amendment.

The PRESIDING OFFICER. The amendment is withdrawn. The Senator from Alaska is recognized.

Mr. STEVENS. Mr. President, I call up my amendment, which is at the desk, and ask for its immediate consideration.

The PRESIDING OFFICER. The amendment will be stated.

The legislative clerk read as follows:

The Senator from Alaska (Mr. STEVENS) proposes an amendment, for himself and Mr. GRAVEL, as follows:

On page 79, following line 2, insert the following new subsection.

"(c) In the case of any loan made under section 7(b)(1) of the Small Business Act, as amended (15 U.S.C. 636(b)) as a result of the Good Friday earthquake, which occurred on March 27, 1964, the Small Business Administration shall, at the borrower's option, on that part of any loan in excess of $500 cancel (i) the interest due on the loan, or (ii) the principal of the loan, or (iii) any combination of such interest or principal except that the total amount so canceled shall not exceed $1,800."

Mr. STEVENS. Mr. President, this provision is quite similar to section 7 of the Disaster Relief Act of 1969, which provided for forgiveness of these SBA loans in an amount not to exceed $1,800.

On July 6, the Senator from Oklahoma (Mr. BELLMON) introduced for me a bill pertaining to this subject. I ask unanimous consent that I be permitted to have printed in the RECORD at this point the chart showing some 50 areas which were given forgiveness under the 1969 Disaster Relief Act.

There being no objection, the chart was ordered to be printed in the RECORD, as follows:

State, counties, and parishes	Cause	SBA Declaration Date
NORTHEASTERN AREA		
Maine: All areas		Dec. 31, 1969
NEW YORK AREA		
New York: Cattaraugus		Oct. 3, 1967
New Jersey: Bergen, Essex, Middlesex, Morris, Passaic, Somerset, Union.		June 3, 1968
New York: Sullivan		Aug. 1, 1969
MIDDLE ATLANTIC AREA		
Kentucky: Bracken, Greenup, Jessamine, Mason, Pendleton (with Ohio).		Apr. 25, 1968
Ohio:		
Brown, Scioto (with Kentucky).		Apr. 25, 1968
Athens, Butler, Clinton, Gallia, Hocking, Jackson, Ross, Warren.		May 29, 1968
Kentucky: Allen, Warren		June 25, 1969
Ohio: All areas		July 11, 1969
Pennsylvania: Carbon, Schuylkill		Aug. 8, 1969
Virginia: All areas	Rains [1]	Aug. 21, 1969
West Virginia: All areas	do	Aug. 22, 1969
Kentucky: Harlan County	Flood	Jan. 2, 1970
SOUTHEASTERN AREA		
Florida: All areas	([2])	Oct. 21, 1968
Tennessee: Macon		June 25, 1969
Mississippi: All areas	([3])	Aug. 18, 1969
Alabama:		
All areas	([3])	Do.
All areas affected	Tornado	Mar. 27, 1970

PACIFIC COASTAL AREA		
Alaska: Fairbanks, etc		Aug. 16, 1967
California:		
San Luis Obispo		Jan. 21, 1969
Los Angeles		Jan. 23, 1969
Riverside		Jan. 27, 1969
Fresno, Tulare, Stanislaus		Jan. 29, 1969
Contra Costa		Mar. 3, 1969
Marin County	Flood	Dec. 30, 1969
All areas	do	Feb. 3, 1970

[1] Camille.
[2] Gladys.
[3] Beulah.

Mr. STEVENS. This act extended back to the 1967 disasters, the major disasters, the same provisions that have been made available for Hurricane Betsy, which was the disaster of 1965.

The 1969 act, Mr. President, extended to the Fairbanks flood area the provisions of the forgiveness section. However, the major disaster that we have had in Alaska—as a matter of fact, the major seismic disturbance that has occurred on the North American Continent—occurred on Good Friday in 1964.

This amendment would extend the same privileges to the SBA borrowers, some 1,325 individual homeowners in the Anchorage area, that was received by the victims of the Fairbanks flood in 1967, pursuant to the 1969 act. It is extending the same forgiveness that was made available to the people in 50 areas, including the Fairbanks area, pursuant to the act we passed last year. That provision was written in the House, after the measure had passed this body, and there was no opportunity to attempt to extend equality to the people who suffered as a result of the Good Friday earthquake in Alaska.

I might point out that the 1,325 loans include the loans that were extended to people as far south as California. There were some in Oregon, also. There were 1,325 individual loans issued by the SBA as a result of that Good Friday earthquake.

I seek to have the same forgiveness extended.

Mr. DOLE. Mr. President, I have not conferred with the Senator from Indiana at length with reference to this amendment. I can understand, again, the desire to go backward. In fact, it has been suggested that we go back to the Chicago fire and then include everything from that date. But I recognize the serious tragedy they had in Alaska.

I recognize that we made certain exceptions in the first amendment offered by the Senator from Texas. Does the Senator from Alaska have the estimated cost of this amendment? Does it cover SBA loans, FHA loans and VA loans?

Mr. STEVENS. This covers the SBA loans only, and there are 1,325. A considerable number of those have been repaid. The maximum obligation, if they all received the maximum forgiveness, which is discretionary with the SBA, would be $2.3 million. I am advised that it would be substantially less than that, because a number of them have been paid off, and the SBA has discretion as to how much they forgive.

Mr. DOLE. I want to make the point that by going back to 1964, we leapfrog disasters in the interim. I can recall one in Indiana on Palm Sunday of 1965. I can recall a tornado in Topeka, Kans., in 1966, and there have been many other disasters during that time.

I do not have the same reservation expressed earlier by the Senator from Colorado with reference to retroactivity, but it does appear that there must be some consistency with reference to the application of the provisions. Again, as I said earlier, to be consistent I could not accept the amendment. If the Senator from Indiana wants to accept the amendment, I will not insist on a record vote.

Mr. STEVENS. Mr. President, what I am seeking is consistency. We have a small population in our State, and the flood of 1967 did not touch as many Alaskans as did the earthquake of 1964. Yet, last year the provisions of the forgiveness section were extended to the flood victims. I am merely seeking consistency within our State, so that those people who had SBA loans from the 1964 disaster would receive the same treatment. As I pointed out, some 50 areas in other States—that was in the chart I inserted in the RECORD—have been given similar special relief by virtue of the 1969 amendment, and I feel that this is sheer equity for the people of the area who suffered from the Good Friday earthquake.

Mr. MILLER. Mr. President, will the Senator yield?

Mr. STEVENS. I yield.

Mr. MILLER. May I ask the Senator from Alaska a question? Do I correctly understand that in the 1969 act, a provision was inserted in the House which covered the 1967 disaster in Alaska?

Mr. STEVENS. No. May I interrupt my colleague? The provision covered all disasters in the area back to 1967. Some 50 major disasters were covered by that retroactive provision.

Mr. MILLER. But it did not go back to 1964?

Mr. STEVENS. That is right.

Mr. MILLER. The 1964 disaster, if anything, was a lot worse than the others.

But as I understand the Senator, at the time it was possible to consider this bill in conference, it was locked up so that we could not go back to 1964.

Mr. STEVENS. That is correct.

Mr. MILLER. What the Senator from Alaska is trying to do now is to do what should have been done in the House with the 1969 act. I think that to that extent he has a point.

We can take a completely negative attitude on retroactivity. I do not think most of us do. I think there are times when we can make exceptions, and we have all voted for them. If this were something new that had not been taken up before, I would feel differently about it. But I suggest that there was a defect in the 1969 act, and all the Senator from Alaska is trying to do is to fill the void that was left in the 1969 act, which was an exception—it was a retroactive proposition—and he is doing it on a very austere basis.

I hope that this amendment might at least be taken to conference; and if the House does not recognize that there was a defect, then it will not agree to it. But if the House does recognize that there was a defect, then the Senator from Alaska's objective will be achieved.

Mr. YARBOROUGH. Mr. President, will the Senator yield?

Mr. STEVENS. I yield.

Mr. YARBOROUGH. Mr. President, a parliamentary inquiry.

The PRESIDING OFFICER. The Senator will state it.

Mr. YARBOROUGH. Is the amendment subject to amendment?

The PRESIDING OFFICER. Yes.

Mr. YARBOROUGH. Mr. President, I send to the desk an amendment and ask that this amendment be adopted to the amendment offered by the Senator from Alaska.

The PRESIDING OFFICER. The amendment will be stated.

The assistant legislative clerk read as follows:

On page 65, line 5, after "Act." insert the following:

"Funds allocated for the relief of areas devastated by major disaster occurring between July 1, 1967, and December 31, 1967, shall be expended on the basis of costs as certified by State and local governments and shall not be limited to costs estimated by damage surveys made after ob igations have been incurred."

Mr. YARBOROUGH. I request the Senator from Alaska to accept my amendment. It involves several hundred thousand dollars, far less than a million dollars. It does not involve nearly as much as does the amendment of the Senator from Alaska.

Mr. BAYH. Mr. President——

The PRESIDING OFFICER. Does the Senator from Alaska yield to the Senator from Indiana?

Mr. STEVENS. I yield.

Mr. BAYH. The Senate will work its will on both amendments, but I think it is important for us to understand what we are in the process of doing.

I said earlier, in private conversations, to the Senator from Texas and to the Senator from Alaska that, so far as the Senator from Indiana was concerned, it seemed that on the merits of both amendments, the Senator from Indiana would not object. But I must admit, if we look back at the argument that was made rather cogently by the Senator from Florida relative to how his constituents are going to feel on this, I ask myself how the good people of Indiana are going to feel, because I do not make this retroactive and include the tornadoes in Indiana, and I begin to see a larger question.

I should like the Senate to be advised that when the original bill finally was considered by the House and we finally got pretty well two-thirds of a loaf last year, the Senator from Indiana tried to get retroactivity for the whole package at that time. The House was adamant. What the House does, of course, is their business. We in the Senate need to take that into consideration a little, I think. I have no objection to the amendment of the Senator from Alaska or the amendment of the Senator from Texas, but I must say that I have a list here of 292 disasters that have occurred in the time span we are talking about. I cannot think of a better way to invest our resources than to plow it back into the areas affected by these disasters.

Mr. STEVENS. May I state to the Senator from Indiana that he is correct, some disasters have been missed, but this provision applies only to the amount for the 1964 earthquake. Most are in the same category, in that they have not been repaid. I agree. We made a major mistake regarding the retroactivity, in not picking up the total areas and giving equality. The bill prospectively has equality in it. From now on, we will authorize SBA to forget a certain portion of the loans designed to help homeowners, which is a good idea, but what I am seeking is specific relief to remedy the situation existing in our State, whereby the people of one area got the relief but the people who had a major disaster did not get the relief. This is, to us, a significant thing, because our people are saying, "How is it that Congress extends relief to people suffering from floods but did not recognize our great disaster up here in 1964?"

I think that was the greatest natural disaster on the northern continent insofar as an earthquake is concerned. We have had several disasters since then which were natural disasters but we are not asking to be included. There have been hurricanes, floods, and other smaller disasters. I do not wish anyone to have a disaster, but ours was a major disaster, "the" major disaster on this continent so far as an earthquake is concerned. All we seek is equity, on that basis.

The Senator from Texas has offered his amendment. Now I know what I am getting into, and I would like to ask the Chair, Do I have the prerogative, Mr. President, of accepting the amendment of the Senator from Texas?

The PRESIDING OFFICER (Mr. JORDAN of Idaho). The Senator has the prerogative of modifying his own amendment but he cannot deal with an amendment offered by another Senator to his own amendment.

Mr. YARBOROUGH. Mr. President, a parliamentary inquiry.

The PRESIDING OFFICER. The Senator from Texas will state it.

Mr. YARBOROUGH. Can the Senator modify his amendment by accepting my amendment?

The PRESIDING OFFICER. He can do that by accepting the Senator's amendment, by modifying his amendment to incorporate the amendment of the Senator from Texas.

Mr. STEVENS. Mr. President, I accept the Senator's amendment.

Mr. YARBOROUGH. I thank the distinguished Senator from Alaska.

Mr. STEVENS. Mr. President, I ask that I may modify my amendment accordingly.

The PRESIDING OFFICER. The amendment is so modified.

The question now is on agreeing to the amendment, as modified, of the Senator from Alaska.

Mr. STEVENS. Mr. President, I move adoption of my amendment.

Mr. DOLE. Mr. President, will the Senator from Alaska yield to me?

The PRESIDING OFFICER. The Senator from Alaska still has the floor. Does the Senator from Alaska yield to the Senator from Kansas?

Mr. STEVENS. I yield.

Mr. DOLE. I thank the Senator for yielding. I want to ask, in an effort to be consistent, as indicated earlier, and again I am sympathetic to the views of both Senators from Alaska and also the Senator from Texas, whether the Senator would accept another modification of his amendment to apply it to all disasters since Good Friday, March 27, 1964.

Mr. STEVENS. I will not accept such an amendment. I would be happy to accept an amendment which would apply to any earthquake that was of worse intensity than our 1964 earthquake.

Mr. DOLE. We did not have an earthquake in Kansas, nor did they have one in Indiana, but we had tornadoes and we had casualties in Kansas and Indiana. Millions of dollars worth of damage was done in Kansas. Many loans were made there. There were 292 other disaster areas. If we want to be objective in this matter, we should apply this amendment across the board and not exclude anyone.

Those who were hit by a disaster in Indiana, or Kansas, suffered no less than those living in Alaska, whether it was an earthquake, a tornado, a flood, or whatever.

Mr. STEVENS. I agree. There were two disasters in Kansas out of 50 other areas which we covered in the 1969 amendment. But the major disaster in Alaska was forgotten, unfortunately, although it could have been put back in. Had it occurred here, I would have been arguing here, but it occurred when the matter got to the House and was beyond my control. I feel firmly that equity is equity. The people in Fairbanks got relief from the 1969 amendment. The people who suffered from the major disaster did not receive the same treatment as those who suffered from that same disaster.

Mr. WILLIAMS of Delaware. Is it not true that, regardless of the size of a disaster, to the individual homeowner, to the individual, whether he is in Kansas, New Jersey, or wherever he is, if he has lost his home, that is a major disaster to him of equal proportions, even though his is the only home that was destroyed.

Unfortunately, adoption of the pending amendment, I believe, would create another inequity, on the basis that those who paid their own loans would not get any benefits, but those who were delinquent and did not pay their loans would get benefits from this relief. Would it not only further aggravate the situation by adoption of this amendment? I think it would be most unfair, unless we did it retroactively and included those who paid their loans, wherever they may be.

The next question is, to find the money to pay for it.

Mr. STEVENS. We were not being inequitable in the areas such as New York, New Jersey, or Kentucky in the year 1969. We went back to January—I forget the exact date—but it went back to—oh, July 1, 1967—we crossed that bridge and decided that we would wipe out a portion of the loans to assist the homeowners. The next problem is—the Senator is right—to an individual, a disaster is a disaster, but to a community that suffers total disaster such as at Anchorage, the amount being sent out there to repay the loans is just that much less to enable us to redevelop the area.

That is why section 321 is in the bill. It gives the homeowner a certain portion of the money with which he seeks to buy furniture, and do all the other things with the money he might receive to repay his home, because he has rebuilt it. The whole theory of the bill is what I am arguing. I say that this is equitable, and what the Senator from Texas seeks is equitable. I hope that the Senate will adopt the amendment.

Mr. ALLOTT. Mr. President, I was hoping that the Senator from Alaska would withdraw his amendment as amended. I am extremely sorry that the senior Senator from New Mexico is not in the Chamber at this time because he knows more than anyone else in great detail the actual amount of money that we, as the Government, contributed to Alaska at the time of its great disaster.

Of course, a disaster is only measured in terms of individuals and how it affects individuals. But I will have to say that I do not care how this amendment is handled. If it should by some unfortunate circumstance pass, I intend to ask for a quorum call and to go on and on until I have ample time to prepare an amendment. I do not know how far I am going with that.

I might go back to the 1965 flood in Colorado, or I might go back to the 1921 flood in Colorado, or I might even go back to the Galveston hurricane which I believe was—what?—1898?——

Mr. WILLIAMS of Delaware. Or the Chicago fire.

Mr. ALLOTT. Yes, or the Chicago fire in the 1800's. I use these dates only to illustrate how utterly foolhardy this situation is. I hope that the amendment will be rejected.

Mr. EASTLAND. Mr. President, I wish to state my firm belief that the pending legislation is the most comprehensive and inclusive disaster relief program ever considered by the Congress.

It is the product of years of dedicated effort led by the distinguished Senator from Indiana. It reflects the truly outstanding work done by the staff of Public Works. It is a distillation of the best portions of the Alaska, California, Indiana, Betsy, and other bills. And—it was refined by that unprecedented catastrophe called Camille.

Hurricane Camille, described by the National Hurricane Center in Miami as "the greatest storm of any kind that has ever affected the Nation," took the lives of 265 of our citizens—leaves 55 persons still unaccounted for—injured more than 9,000—inflicted losses on 78,000 families—and—cost us $1½ billion in damages.

Since that terrible storm we have suffered major disasters in 19 States, the most destructive of which were the Lubbock tornadoes and Hurricane Celia.

Sadly—Mr. President—we must anticipate additional catastrophes which will afflict Americans across our land. We cannot prevent the occurrence of these rampages of nature. We can—however—and we must do everything this Government is capable of to lessen the human suffering which always accompanies calamities.

We have the tools we need for this vital mission in the provisions of S. 3619. This legislative package—I am proud to say—supports the restoration of structures—and—of much more importance—it offers the hand of meaningful assistance to the average American man and woman. It provides for the rehabilitation of people as well as for the rebuilding of facilities.

Finally, Mr. President, it would write into law a broad and effective response to disaster—not after the fact—but in advance of these catastrophic events. No longer will we seek legislative cures after our people are hurt and our property destroyed. Now—at long last—we will have in our hands the weapons to fight the fury of natural disaster—and—we will have a program ready to go into immediate and effective action hours—not months—after the storm or the earthquake or the flood subsidies.

I am proud to be a cosponsor of this legislation. In the interest of America and every American I urge the passage of S. 3619.

Mr. HARRIS. Mr. President, I rise in support of S. 3619, the Omnibus Disaster Assistance Act, as reported by the Committee on Public Works. I am a cosponsor of the original version of S. 3619, and I feel the committee has made some important improvements in the legislation.

As the committee report states:

> This bill seeks to coordinate disaster relief and recovery efforts of all appropriate Federal, State and local authorities, and relief and disaster assistance organizations under a single, permanent law, so that when disaster strikes anywhere in the country—as inevitably it will—the full resources of both public and private sectors may be brought to bear to meet the immediate challenge and to undertake the long, and difficult costly task of repair, rehabilitation, reconstruction and replacement.

I know the adoption of this legislation will go a long way toward relieving the burden of those who suffer the destruction and loss caused by a flood, tornado, hurricane, or similar disaster.

I was especially happy to have joined with my distinguished colleagues, Mr. YARBOROUGH, as a cosponsor of his amendment to the omnibus disaster bill, S. 3619. Senator YARBOROUGH's amendment provided that special assistance would be available to victims of natural disasters who are threatened with the loss of their homes as a result of foreclosures, cancellation, or termination of their mortgages or leases because of the effect of major disasters. The amendment authorizes the SBA to provide assistance to such people on a temporary basis in the form of mortgage or rental payments to or on behalf of individuals and families who as a result of financial hardship caused by a major disaster have received written notice of dispossession or eviction from a residence by reason of foreclosure of any mortgage or lien, cancellation of any contract of sale, or termination of any lease.

Mr. President, I wish to commend the distinguished Senator from Texas (Mr. YARBOROUGH) for his work in preparing this important amendment, and I wish to commend the Senate Public Works Committee for recognizing its merits and adopting its provisions as a part of S. 3619. The State of Oklahoma is often annually stricken by one or more destructive tornadoes. Many families have suffered the loss of their homes and all their belongings because of these natural disasters, and I feel the provisions of the

omnibus disaster bill, which will provide special assistance to these people in order to assist them in making their mortgage payments or rental payments, will keep them from suffering total financial ruin and will give them the help needed to put them back on the road to economic recovery and financial security.

Mr. STENNIS. Mr. President, I ask unanimous consent that my name be added as a cosponsor of the bill.

The PRESIDING OFFICER (Mr. JORDAN of Idaho). Without objection, it is so ordered.

Mr. ALLEN. Mr. President, I ask unanimous consent that my name be added as a cosponsor of the bill.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. ELLENDER. Mr. President, I ask unanimous consent that my name be added as a cosponsor of the bill.

The PRESIDING OFFICER. Without objection, it is so ordered.

The question is on agreeing to the amendment as modified.

The amendment was agreed to.

The PRESIDING OFFICER. The question is on agreeing to the committee amendment in the nature of a substitute as amended.

The committee amendment in the nature of a substitute was rejected.

The PRESIDING OFFICER. The question is on the engrossment and third reading of the bill.

The bill was ordered to be engrossed for a third reading and was read the third time.

The PRESIDING OFFICER. The bill having been read the third time, the question is, Shall it pass?

On this question the yeas and nays have been ordered, and the clerk will call the roll.

The assistant legislative clerk called the roll.

Mr. BYRD of West Virginia. I announce that the Senator from New Mexico (Mr. ANDERSON), the Senator from Nevada (Mr. BIBLE), the Senator from North Dakota (Mr. BURDICK), the Senator from Virginia (Mr. BYRD), the Senator from Nevada (Mr. CANNON), the Senator from Connecticut (Mr. DODD), the Senator from Arkansas (Mr. FULBRIGHT), the Senator from Indiana (Mr. HARTKE), the Senator from Iowa (Mr. HUGHES), the Senator from Washington (Mr. JACKSON), the Senator from Massachusetts (Mr. KENNEDY), the Senator from Washington (Mr. MAGNUSON), the Senator from Minnesota (Mr. MCCARTHY), the Senator from Wyoming (Mr. MCGEE), the Senator from South Dakota (Mr. MCGOVERN), the Senator from New Hampshire (Mr. MCINTYRE), the Senator from Montana (Mr. METCALF), the Senator from New Mexico (Mr. MONTOYA), the Senator from Connecticut (Mr. RIBICOFF), the Senator from Georgia (Mr. RUSSELL), the Senator from Missouri (Mr. SYMINGTON), the Senator from Maryland (Mr. TYDINGS), the Senator from Ohio (Mr. YOUNG), and the Senator from Idaho (Mr. CHURCH) are necessarily absent.

I also announce that the Senator from Maine (Mr. MUSKIE) and the Senator from New Jersey (Mr. WILLIAMS) are officially absent.

I further announce that, if present and voting, the Senator from Iowa (Mr. HUGHES), the Senators from Washington (Mr. JACKSON and Mr. MAGNUSON), the Senator from Wyoming (Mr. MCGEE), the Senator from Connecticut (Mr. RIBICOFF), and the Senator from New Jersey (Mr. WILLIAMS) would each vote "yea."

Mr. GRIFFIN. I announce that the Senators from Vermont (Mr. AIKEN and Mr. PROUTY), the Senator from Utah (Mr. BENNETT), the Senator from New Hampshire (Mr. COTTON), the Senator from Colorado (Mr. DOMINICK), the Senator from Hawaii (Mr. FONG), the Senators from Arizona (Mr. FANNIN and Mr. GOLDWATER), the Senator from New York (Mr. GOODELL), the Senator from Florida (Mr. GURNEY), the Senator from Wyoming (Mr. HANSEN), the Senator from California (Mr. MURPHY), and the Senator from Texas (Mr. TOWER) are necessarily absent.

The Senator from South Dakota (Mr. MUNDT) is absent because of illness.

The Senator from Delaware (Mr. BOGGS), the Senator from Maryland (Mr. MATHIAS), and the Senator from Pennsylvania (Mr. SCHWEIKER) are absent on official business.

The Senator from Massachusetts (Mr. BROOKE), the Senator from Illinois (Mr. PERCY), and the Senator from North Dakota (Mr. YOUNG) are detained on official business.

If present and voting, the Senator from Delaware (Mr. BOGGS), the Senator from Massachusetts (Mr. BROOKE), the Senator from Colorado (Mr. DOMINICK), the Senator from Hawaii (Mr. FONG), the Senator from New York (Mr. GOODELL), the Senator from South Dakota (Mr. MUNDT), the Senator from California (Mr. MURPHY), the Senator from Illinois (Mr. PERCY), the Senator from Vermont (Mr. PROUTY), the Senator from Texas (Mr. TOWER) would vote "yea."

The result was announced—yeas 54, nays 0, as follows:

So the bill (S. 3619) was passed as follows:

S. 3619

An act to revise and expand Federal programs for relief from the effects of major disasters, and for other purposes.

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That this Act may be cited as the "Disaster Assistance Act of 1970".

TITLE I—FINDINGS AND DECLARATIONS; DEFINITIONS

FINDINGS AND DECLARATIONS

Sec. 101. (a) The Congress hereby finds and declares that—

(1) because loss of life, human suffering, loss of income, and property loss and damage result from major disasters such as hurricanes, tornadoes, storms, floods, high waters, wind-driven waters, tidal waves, earthquakes, droughts, fires, and other catastrophes; and

(2) because such disasters disrupt the normal functioning of government and the community, and adversely affect individual persons and families with great severity; special measures, designed to expedite the rendering of aid, assistance, and emergency welfare services, and the reconstruction and rehabilitation of devastated areas, are necessary.

(b) It is the intent of the Congress, by this Act, to provide an orderly and continuing means of alleviating the suffering and damage which result from such disasters by—

(1) revising and broadening the scope of existing major disaster relief programs;

(2) encouraging the development of comprehensive disaster relief plans, programs, and organizations by the States; and

(3) achieving greater coordination and responsiveness of Federal major disaster relief programs.

DEFINITIONS

SEC. 102. As used in this Act—

(1) "major disaster" means any hurricane, tornado, storm, flood, high water, wind-driven water, tidal wave, earthquake, drought, fire, or other catastrophe in any part of the United States, which in the determination of the President, is or threatens to be of sufficient severity and magnitude to warrant disaster assistance by the Federal Government to supplement the efforts and available resources of States, local governments, and relief organizations in alleviating the damage, loss, hardship, or suffering caused thereby, and with respect to which the Governor of any State in which such catastrophe occurs or threatens to occur certifies the need for disaster assistance under this Act and gives assurance of the expenditure of a reasonable amount of the funds of such State, its local governments, or other agencies for alleviating the damage, loss, hardship or suffering resulting from such catastrophe;

(2) "United States" means the fifty States, the District of Columbia, Puerto Rico, the Virgin Islands, Guam, American Samoa, and the Trust Territory of the Pacific Islands;

(3) "State" means any State of the United States, the District of Columbia, Puerto Rico, the Virgin Islands, Guam, American Samoa, or the Trust Territory of the Pacific Islands;

(4) "Governor" means the chief executive of any State;

(5) "local government" means any county, city, village, town, district, or other political subdivision of any State, and includes any rural community or unincorporated town or village for which an application for assistance is made by a State or political subdivision thereof;

(6) "Federal agency" means any department, independent establishment, Federal corporation, or other agency of the executive branch of the Federal Government, except the American National Red Cross; and

(7) "Director" means the Director of the Office of Emergency Preparedness.

TITLE II—THE ADMINISTRATION OF DISASTER ASSISTANCE

PART A—GENERAL PROVISIONS

FEDERAL COORDINATING OFFICER

SEC. 201. (a) The President shall appoint, immediately upon his designation of a major disaster area, a Federal coordinating officer to operate under the Office of Emergency Preparedness in such area.

(b) In order to effectuate the purposes of this Act, the coordinating officer, within the designated area, shall

(1) make an initial appraisal of the types of relief most urgently needed;

(2) establish such field offices as he deems necessary and as are authorized by the Director;

(3) coordinate the administration of relief, including activities of the American National Red Cross and of other relief organizations which agree to operate under his advice or direction; and

(4) take such other action, consistent with authority delegated to him by the Director, and consistent with the provisions of this Act, as he may deem necessary to assist local citizens and public officials in promptly obtaining assistance to which they are entitled.

EMERGENCY SUPPORT TEAMS

SEC. 202. The Director is authorized to form emergency support teams of personnel to be deployed in a major disaster area. Such emergency support teams shall assist the Federal coordinating officer in carrying out his responsibilities pursuant to section 201(b) of this Act.

COOPERATION OF FEDERAL AGENCIES

SEC. 203. (a) In any major disaster, Federal agencies are hereby authorized, on direction of the President, to provide assistance by—

(1) utilizing or lending, with or without compensation therefor, to States and local governments, their equipment, supplies, facilities, personnel, and other resources, other than the extension of credit under the authority of any Act;

(2) distributing or rendering, through the American National Red Cross, other relief and disaster assistance organizations, or otherwise, medicine, food, and other consumable supplies, or emergency assistance;

(3) donating or lending equipment and supplies determined in accordance with applicable laws to be surplus to the needs and responsibilities of the Federal Government; and

(4) performing on public or private lands or waters any emergency work essential for the protection and preservation of life and property, including—

(A) clearing and removing debris and wreckage;

(B) making repairs to, or restoring to service, public facilities, belonging to State of local governments, which were damaged or destroyed by a major disaster except that the Federal contribution therefor shall not exceed the net cost of restoring such facilities to their capacity prior to such disaster;

(C) providing emergency shelter for individuals and families who, as a result of a major disaster, require such assistance; and

(D) making contributions to State or local governments for the purpose of carrying out the provisions of paragraph (4).

(b) Emergency work performed under subsection (a)(4) of this section shall not preclude Federal assistance under any other section of this Act.

(c) Federal agencies may be reimbursed for expenditures under section 203(a) from funds appropriated for the purposes of this Act. Any funds received by Federal agencies as reimbursement for services or supplies furnished under the authority of this section shall be deposited to the credit of the appropriation or appropriations currently available for such services or supplies.

(d) The Federal Government shall not be liable for any claim based upon the exercise or performance or the failure to exercise or perform a discretionary function or duty on the part of a Federal agency or an employee of the Federal Government in carrying out the provisions of this section.

(e) Any Federal agency designated by the President to exercise authority under this Act may establish such special groups, interdepartmental or otherwise, as it deems appropriate to assist in carrying out the provisions of law relating to Federal disaster preparedness and assistance, and the funds of any such agency may be utilized for the necessary expenses of any such group so established.

(f) In carrying out the purposes of this Act, any Federal agency is authorized to accept and utilize the services or facilities of any State or local government, or of any agency, office, or employee thereof, with the consent of such government. Any Federal agency, in performing any activities under this section, is authorized to appoint and fix the compensation of such temporary personnel as may be necessary, without regard to the provisions of title 5, United States Code, governing appointments in the competitive service, and without regard to the provisions of chapter 51 and subchapter III of such title relating to classification and General Schedule pay rates, to employ experts and consultants in accordance with the provisions of section 3109 of such title, and to incur obligations on behalf of the United States by contract or otherwise for the acquisition, rental, or hire of equipment, services, materials, and supplies for shipping, drayage, travel, and communication, and for the supervision and administration of such activities. Such obligations, including obligations arising out of the temporary employment of additional personnel, may be incurred by an agency in such amount as may be made available to it by the President.

(g) In the interest of providing maximum mobilization of Federal assistance under this Act, the President is authorized to coordinate in such manner as he may determine the activities of Federal agencies in providing disaster assistance. The President may direct any Federal agency to utilize its available personnel, equipment, supplies, facilities, and other resources in accordance with the authority herein contained. The President may prescribe such rules and regulations as may be necessary and proper to carry out any of the provisions of this Act, and he may exercise any power or authority conferred on him by any section of this Act either directly or through such Federal agency as he may designate.

(h) The President, acting through the Office of Emergency Preparedness, shall conduct periodic reviews (at least annually) of the activities of Federal and State departments or agencies providing disaster assistance, in order to assure maximum coordination of such programs, and to evaluate progress being made in the development of Federal, State, and local preparedness to cope with major disasters.

USE OF LOCAL FIRMS AND INDIVIDUALS

SEC. 204. In the expenditure of Federal funds for debris clearance, distribution of supplies, reconstruction, and other major disaster assistance activities which may be carried out by contract with private organizations, firms, or individuals, preference shall be given, to the extent feasible and practicable, to those organizations, firms, and individuals who reside or do business primarily in the disaster area.

FEDERAL GRANT-IN-AID PROGRAMS

SEC. 205. Any Federal agency charged with the administration of a Federal grant-in-aid program is authorized, if so requested by the applicant State or local authorities, to modify or waive, for the duration of a major disaster proclamation, such conditions for assistance as would otherwise prevent the giving of assistance under such programs if the inability to meet such conditions is a result of the disaster.

STATE DISASTER PLANS

SEC. 206. (a) The President is authorized to provide assistance to the States in developing comprehensive plans and practicable programs for preparation against major disasters, and for relief and assistance for individuals, businesses, and local governments following such disasters. Such plans should include long-range recovery and reconstruction assistance plans for seriously damaged or destroyed public and private facilities.

(b) The President is authorized to make grants of not more than $250,000 to any State, upon application therefor, for not to exceed 50 per centum of the cost of developing such plans and programs.

(c) Any State desiring assistance under this section shall designate or create an agency which is specially qualified to plan and administer such a disaster relief program, and shall, through such agency, submit a State plan to the President, which shall—

(1) set forth a comprehensive and detailed State program for preparation against, and relief following, a major disaster, including provisions for emergency and long-term assistance to individuals, businesses, and local governments; and

(2) include provision for the appointment of a State coordinating officer to act in cooperation with the Federal coordinating officer appointed under section 201 of this Act.

(d) From time to time the Director shall make a report to the President, for submission to the Congress, containing his recommendations for programs for the Federal role in the implementation and funding of comprehensive disaster relief plans, and such other recommendations relating to the Federal role in disaster relief activities as he deems warranted.

(e) The President is authorized to make grants not to exceed $25,000 per annum to any State in an amount not to exceed 50 per centum of the cost for the purpose of improving, maintaining, and updating that State's disaster assistance plans.

USE AND COORDINATION OF RELIEF ORGANIZATIONS

SEC. 207. (a) In providing relief and assistance following a major disaster, the Director may utilize, with their consent, the personnel and facilities of the American National Red Cross, the Salvation Army, the Mennonite Board of Missions and Charities, and other relief or disaster assistance organizations, in the distribution of medicine food, supplies, or other items, and in the restoration, rehabilitation, or reconstruction of community services and essential facilities, whenever the Director finds that such utilization is necessary.

(b) The Director is authorized to enter into agreements with the American National Red Cross and other relief or disaster assistance organizations under which the disaster relief activities of such organizations may be coordinated by the Federal coordinating officer whenever such organizations are engaged in providing relief during and after a major disaster. Any such agreement shall include provisions conditioning use of the facilities of the Office of Emergency Preparedness and the services of the coordinating officer upon compliance with regulations promulgated by the Director under

sections 208 and 209 of this Act, and such other regulations as the Director may require.

DUPLICATION OF BENEFITS

SEC. 208. (a) The Director, in consultation with the head of each Federal agency administering any program providing financial assistance to persons, business concerns, or other entities suffering losses as the result of a major disaster, shall assure that no such person, business concern, or other entity will receive such assistance with respect to any part of such loss as to which he has received financial assistance under any other program.

(b) The Director shall assure that no person, business concern, or other entity receives any Federal assistance for any part of a loss suffered as the result of a major disaster if such person, concern, or entity received compensation from insurance or any other source for that part of such a loss. Partial compensation for a loss or a part of a loss resulting from a major disaster shall not preclude additional Federal assistance for any part of such a loss not compensated otherwise.

(c) Whenever the Director determines (1) that a person, business concern, or other entity has received assistance under this Act for a loss and that such person, business concern or other entity received assistance for the same loss from another source, and (2) that the amount received from all sources exceeded the amount of the loss, he shall direct such person, business concern, or other entity to pay to the Treasury an amount, not to exceed the amount of Federal assistance received, sufficient to reimburse the Federal Government for that part of the assistance which he deems excessive.

NONDISCRIMINATION IN DISASTER ASSISTANCE

SEC. 209. (a) The Director shall issue, and may alter and amend, such regulations as may be necessary for the guidance of personnel carrying out emergency relief functions at the site of a major disaster. Such regulations shall include provisions for insuring that the distribution of supplies, the processing of applications, and other relief and assistance activities shall be accomplished in an equitable and impartial manner, without discrimination on the grounds of race, color, religion, nationality, sex, age, or economic status prior to a major disaster.

(b) As a condition of participation in the distribution of assistance or supplies under section 207, relief organizations shall be required to comply with regulations relating to nondiscrimination promulgated by the Director, and such other regulations applicable to activities within a major disaster area as he deems necessary for the effective coordination of relief efforts.

ADVISORY PERSONNEL

SEC. 210. The Director is authorized to assign advisory personnel to the chief executive officer of any State or local government within a major disaster area, upon request by such officer, whenever the Director determines that such assignment is desirable in order to insure full utilization of relief and assistance resources and programs.

DISASTER WARNINGS

SEC. 211. The President is authorized to utilize or to make available to Federal, State, and local agencies the facilities of the civil defense communications system established and maintained pursuant to section 201(c) of the Federal Civil Defense Act of 1950, as amended (50 U.S.C. app. 2281(c)), for the purpose of providing needed warning to governmental authorities and the civilian population in areas endangered by imminent major disasters.

PART B—EMERGENCY RELIEF

PREDISASTER ASSISTANCE

SEC. 221. To avert or lessen the effects of a major disaster, the President is authorized, without declaring a major disaster, to utilize Federal resources in providing disaster assistance to any State to assist such State or any local government thereof in circumstances which clearly indicate the imminent occurrence of a major disaster.

EMERGENCY COMMUNICATIONS

SEC. 222. The Director is authorized to establish emergency communications in any major disaster area in order to carry out the functions of his office, and to make such communications available to State and local government officials and other persons as he deems appropriate.

EMERGENCY PUBLIC TRANSPORTATION

SEC. 223. The Director is authorized to provide public transportation service to meet emergency needs in a major disaster area. Such service will provide transportation to governmental offices, supply centers, stores, post offices, schools, major employment centers, and such other places as may be necessary in order to enable the community to resume its normal pattern of life as soon as possible.

DEBRIS REMOVAL GRANTS

SEC. 224. The President, whenever he determines it to be in the public interest, is authorized to make grants to any State or local government for the purpose of removing debris on privately owned lands or waters as a result of a major disaster, and is authorized to make payments through such State or local government for the removal of debris from community areas which may include the private property of an individual. No benefits will be available under this section unless such State or local government arranges unconditional authorization for removal of debris from such property and agrees to indemnify the Federal Government against any claims arising from such debris removal.

FIRE SUPPRESSION GRANTS

SEC. 225. The President is authorized to provide assistance, including grants, to any State for the suppression of any fire on publicly or privately owned forest or grassland which threatens such destruction as would constitute a major disaster.

TEMPORARY HOUSING ASSISTANCE

SEC. 226. (a) The Director is authorized to provide on a temporary basis, as prescribed in this section, dwelling accommodations for individuals and families who, as a result of a major disaster, are in need of assistance by (1) using any unoccupied housing owned by the United States under any program of the Federal Government, (2) arranging with a local public housing agency for using unoccupied public housing units, or (3) acquiring existing dwellings or mobile homes or other readily fabricated dwellings, by purchase or lease. Notwithstanding any other provision of law, any existing dwellings, mobile homes, or readily fabricated dwellings acquired by purchase may be sold directly to individuals and families who are occupants of such temporary accommodations at prices that are fair and equitable. Any mobile home or readily fabricated dwelling shall be placed on a site complete with utilities provided by State or local government, or by the owner or occupant of the site who was displaced by the major disaster, without charge to the United States. However, the Director may elect to provide other more economical and accessible sites at Federal expense when he determines such action to be in the public interest.

(b) After the initial ninety days of occupancy without charge, rentals shall be established for such accommodations, under such rules and regulations as the Director may prescribe, taking into account the financial resources of the occupant. In case of financial hardship, rentals may be compromised, adjusted, or waived for a period not to exceed twelve months from the date of occupancy, but in no case shall any such individual or family be required to incur a monthly housing expense (including any fixed expense relating to the amortization of debt owing on a house destroyed or damaged in a major disaster) which is in excess of 25 per centum of the monthly income of the occupant or occupants.

(c) The Director is further authorized to provide assistance on a temporary basis in the form of mortgage or rental payments to or on behalf of individuals and families who, as a result of financial hardship caused by a major disaster, have received written notice of dispossession or eviction from a residence by reason of foreclosure of any mortgage or lien, cancellation of any contract of sale, or termination of any lease, oral or written. Such assistance shall be provided for a period of not to exceed one year or for the duration of the period of financial hardship, whichever is the lesser. The Director shall, for the purposes of this subsection and in furtherance of the purposes of section 240 of this Act, provide reemployment assistance services to individuals who are unemployed as a result of a major disaster.

PART C—RECOVERY ASSISTANCE

SMALL BUSINESS DISASTER LOANS

SEC. 231. (a) In the administration of the disaster loan program under section 7(b)(1) of the Small Business Act, as amended (15 U.S.C. 636(b)), in the case of property loss or damage resulting from a major disaster as determined by the President or a disaster as determined by the Administrator, the Small Business Administration—

(1) to the extent such loss or damage is not compensated for by insurance or otherwise, (A) shall, on that part of any loan in excess of $500, cancel the principal of the loan, except that the total amount so canceled shall not exceed $2,500, and (B) may defer interest payments or principal payments, or both, in whole or in part, on such loan during the first three years of the term of the loan without regard to the ability of the borrower to make such payments;

(2) may make any loan for the repair, rehabilitation, or replacement of property damaged or destroyed, without regard to whether the required financial assistance is otherwise available from private sources; and

(3) in the case of the total destruction of, or substantial property damage to, a home or business concern, may refinance any mortgage or other liens outstanding against the destroyed or damaged property if such refinancing is for the repair, rehabilitation, or replacement of property damaged or destroyed as a result of such disaster and any such refinancing shall be subject to the provisions of clauses (1) and (2) of this subsection.

(b) Section 7 of the Small Business Act is amended—

(1) by revising paragraph (2) of subsection (b) to read as follows:

"(2) to make such loans (either directly or in cooperation with banks or other lending institutions through agreements to participate on an immediate or deferred basis) as the Administration may determine to be necessary or appropriate to any small business concern located in an area affected by a disaster, if the Administration determines that the concern has suffered a substantial economic injury as a result of such disaster;";

(2) by striking from the second sentence

of subsection (b) the following: "meeting the requirements of clause (A) or (B) of paragraph (2) of this subsection,"; and

(3) by striking from subsection (f) the following: "in the case of property loss or damage as the result of a disaster which is a 'major disaster' as defined in section 2(a) of the Act of September 30, 1950 (42 U.S.C. 1855a(a)),".

FARMERS HOME ADMINISTRATION EMERGENCY LOANS

SEC. 232. In the administration of the emergency loan program under subtitle C of the Consolidated Farmers Home Administration Act of 1961, as amended (7 U.S.C. 1961–1967), and the rural housing loan program under section 502 of title V of the Housing Act of 1949, as amended (42 U.S.C. 1472), in the case of loss or damage, resulting from a major disaster, to property, including household furnishings, the Secretary of Agriculture—

(1) to the extent such loss or damage is not compensated for by insurance or otherwise, (A) shall, on that part of any loan in excess of $500, cancel the principal of the loan, except that the total amount so cancelled shall not exceed $2,500, and (B) may defer interest payments or principal payments, or both, in whole or in part, on such loan during the first three years of the term of the loan without regard to the ability of the borrower to make such payments;

(2) may grant any loan for the repair, rehabilitation, or replacement of property damaged or destroyed, without regard to whether the required financial assistance is otherwise available from private sources; and

(3) in the case of the total destruction of, or substantial property damage to a home or business concern may refinance any mortgage or other liens outstanding against the destroyed or damaged property if such refinancing is for the repair, rehabilitation, or replacement of property damaged or destroyed as a result of such disaster and any such refinancing shall be subject to the provisions of clauses (1) and (2) of this section.

LOANS HELD BY THE VETERANS' ADMINISTRATION

SEC. 233. (1) Section 1820(a)(2) of title 38, United States Code, is amended to read as follows:

"(2) subject to specific limitations in this chapter, consent to the modification, with respect to rate of interest, time of payment of principal or interest or any portion thereof, security or other provisions of any note, contract, mortgage or other instrument securing a loan which has been guaranteed, insured, made or acquired under this chapter;"

(2) Section 1820(f) of title 38, United States Code, is amended to read as follows:

"(f) Whenever loss, destruction, or damage to any residential property securing loans guaranteed, insured, made, or acquired by the Administrator under this chapter occurs as the result of a major disaster as determined by the President under the Disaster Assistance Act of 1970, the Administrator shall (1) provide counseling and such other service to the owner of such property as may be feasible and shall inform such owner concerning the disaster assistance available from other Federal agencies and from State or local agencies, and (2) pursuant to subsection (a)(2) of this section, extend on an individual case basis such forbearance or indulgence to such owner as the Administrator determines to be warranted by the facts of the case and the circumstances of such owner."

DISASTER LOAN INTEREST RATES

SEC. 234 (a) Any loan made under the authority of sections 231, 232, 236(b), 237, or 241 of this Act shall bear interest at a rate determined by the Secretary of the Treasury, taking into consideration the current average market yield on oustanding marketable obligations of the United States with remaining periods of maturity of ten to twelve years less not to exceed 2 per centum per annum.

(b) The next to the last sentence of section 7(b) of the Small Business Act is amended by striking out all that follows "exceed" and inserting in lieu thereof the following: "a rate determined by the Secretary of the Treasury taking into consideration the current average market yield on outstanding marketable obligations of the United States with remaining period of maturity of ten to twelve years less not to exceed 2 per centum per annum."

AGE OF APPLICANT FOR LOANS

SEC. 235. In the administration of any Federal disaster loan program under the authority of sections 231, 232, or 233 of this Act, the age of any adult loan applicant shall not be considered in determining whether such loan should be made or the amount of such loan.

FEDERAL LOAN ADJUSTMENTS

SEC. 236. (a) In addition to the loan extension authority provided in section 12 of the Rural Electrification Act, the Secretary of Agriculture is authorized to adjust and readjust the schedules for payment of principal and interest on loans to borrowers under programs administered by the Rural Electrification Administration, and to extend the maturity date of any such loan to a date not beyond forty years from the date of such loan where he determines such action is necessary because of the impairment of the economic feasibility of the system, or the loss, destruction, or damage of the property of such borrowers as a result of a major disaster.

(b) The Secretary of Housing and Urban Development is authorized to refinance any note or other obligation which is held by him in connection with any loan made by the Department of Housing and Urban Development or its predecessor in interest, or which is included within the revolving fund for liquidating programs established by the Independent Offices Appropriation Act of 1955, where he finds such refinancing necessary because of the loss, destruction, or damage (as a result of a major disaster) to property or facilities securing such obligations. The Secretary may authorize a suspension in the payment of principal and interest charges on, and an additional extension in the maturity of, any such loan for a period not to exceed five years if he determines that such action is necessary to avoid severe financial hardship.

AID TO MAJOR SOURCES OF EMPLOYMENT

SEC. 237. (a) The Small Business Administration in the case of a nonagricultural enterprise, and the Farmers Home Administration in the case of an agricultural enterprise, are authorized to provide any industrial, commercial, agricultural, or other enterprise, which has constituted a major source of employment in an area suffering a major disaster and which is no longer in substantial operation as a result of such disaster, a loan in such amount as may be necessary to enable such enterprise to resume operations in order to assist in restoring the economic viability of the disaster area. Loans authorized by this section shall be made without regard to limitations on the size of loans which may otherwise be imposed by any other provision of law or regulation promulgated pursuant thereto.

(b) Assistance under this section shall be in addition to any other Federal disaster assistance, except that such other assistance may be adjusted or modified to the extent deemed appropriate by the Director under the authority of section 208 of this Act. Any loan made under this section shall be subject to the interest requirements of section 234 of this Act, but the President, if he deems it necessary, may defer payments of principal and interest for a period not to exceed three years after the date of the loan.

FOOD COUPONS AND DISTRIBUTION

SEC. 238. (a) Whenever the President determines that, as a result of a major disaster, low-income households are unable to purchase adequate amounts of nutritious food, he is authorized, under such terms and conditions as he may prescribe, to distribute through the Secretary of Agriculture coupon allotments to such households pursuant to the provisions of the Food Stamp Act of 1964 and to make surplus commodities available pursuant to the provisions of section 203 of this Act.

(b) The President, through the Secretary of Agriculture is authorized to continue to make such coupon allotments and surplus commodities available to such households for so long as he determines necessary, taking into consideration such factors as he deems appropriate, including the consequences of the major disaster on the earning power of the households to which assistance is made available under this section.

(c) Nothing in this section shall be construed as amending or otherwise changing the provisions of the Food Stamp Act of 1964 except as they relate to the availability of food stamps in a major disaster area.

LEGAL SERVICES

SEC. 239. Whenever the Director determines that low-income individuals are unable to secure legal services adequate to meet their needs as a consequence of a major disaster, he shall assure the availability of such legal services as may be needed by these individuals because of conditions created by a major disaster. Whenever feasible, and consistent with the goals of the program authorized by this section, the Director shall assure that the programs are conducted with the advice and assistance of appropriate Federal agencies and State and local bar associations.

UNEMPLOYMENT ASSISTANCE

SEC. 240. The President is authorized to provide to any individual unemployed as a result of major disaster, such assistance as he deems appropriate while such individual is unemployed. Such assistance as the President shall provide shall not exceed the maximum amount and the maximum duration of payment under the unemployment compensation program of the State in which the disaster occurred, and the amount of assistance under this section to any such individual shall be reduced by any amount of unemployment compensation or of private income protection insurance compensation available to such individual for such period of unemployment.

COMMUNITY DISASTER LOAN FUND

SEC. 241. (a) There is established within the Treasury a Community Disaster Loan Fund from which the President may authorize loans to local governments for the purposes of meeting payments of principal and interest on outstanding bonded indebtedness, for providing the local share of any Federal grant-in-aid program which is designed to assist in the restoration of an area damaged by a major disaster, or for providing and maintaining essential public services. Such loans shall be made only if the local government has suffered a loss of either more than 25 per centum of its tax base or such a substantial amount that it is otherwise unable to meet such payments, local share obligations, or the cost of essential public services.

(b) Loans from the Fund established by this section shall be without interest for the first two years, shall be made for such periods as may be necessary, not to exceed twenty years, and shall bear interest after

the first two years at a rate prescribed in section 234. The President may defer initial payments on such a loan for a period not to exceed five years or half the term of the loan, whichever is less. Any loans under this section may be made for a local government's fiscal year in which the disaster occurred and for each of the following two fiscal years. Loans for any year shall not exceed the difference between the average annual property tax revenue received by the local government for the three-year period preceding the major disaster and the local government's accrued property tax revenue for each of the three years following the major disaster. For purposes of computations under this section, the tax rate and tax assessment valuation factors in effect at the time of the disaster shall not be reduced during the three-year period following the disaster.

(c)(1) The President may transfer to the Fund such sums as he may determine to be necessary from the appropriations available to him for disaster relief. All amounts received as interest payments or repayments of principal on loans, and any other moneys, property, or assets derived from operations in connection with this section shall be deposited to the Fund.

(2) All loans, expenses, and payments pursuant to operations under this section shall be paid from the Fund. From time to time, and at least at the close of each fiscal year, there shall be paid from the Fund into the Treasury, as miscellaneous receipts, interest on the average amount of appropriations accumulated as capital to the Fund, less the average undisbursed cash balance in the Fund during the year. The rate of such interest shall not exceed any rate determined under section 234 for loans from the Fund. Interest payments may be deferred with the approval of the Secretary of the Treasury, but any interest payments so deferred shall themselves bear interest. If at any time the President determines that moneys in the Fund exceed the present and any reasonably prospective future requirements of the Fund, such excess may be transferred to the general fund of the Treasury or to the appropriations available to the President for disaster relief.

(d) There are hereby authorized to be appropriated such sums, not to exceed $100,000,000, as may be necessary to carry out the provisions of this section.

TIMBER SALE CONTRACTS

SEC. 242. (a) Where an existing timber sale contract between the Secretary of Agriculture or the Secretary of the Interior and a timber purchaser does not provide relief from major physical change not due to negligence of the purchaser prior to approval of construction of any section of specified road or of any other specified development facility and, as a result of a major disaster, a major physical change results in additional construction work in connection with such road or facility by such purchaser with an estimated cost, as determined by the appropriate Secretary, (1) of more than $1,000 for sales under one million board feet, (2) of more than $1 per thousand board feet for sales of one to three million board feet, or (3) of more than $3,000 for sales over three million board feet, such increased construction cost shall be borne by the United States.

(b) If the Secretary determines that damages are so great that restoration, reconstruction, or construction is not practical under the cost-sharing arrangement authorized by subsection (a) of this section, the Secretary may allow cancellation of the contract notwithstanding contrary provisions therein.

(c) The Secretary of Agriculture is authorized to reduce to seven days the minimum period of advance public notice required by the first section of the Act of June 4, 1897 (16 U.S.C. 476), in connection with the sale of timber from national forests, whenever the Secretary determines that (1) the sale of such timber will assist in the construction of any area of a State damaged by a major disaster, (2) the sale of such timber will assist in sustaining the economy of such area, or (3) the sale of such timber is necessary to salvage the value of timber damaged in such major disaster or to protect undamaged timber.

(d) The President, when he determines it to be in the public interest, and acting through the Director of Emergency Preparedness, is authorized to make grants to any State or local government for the purpose of removing from privately owned lands timber damaged as a result of a major disaster, and such State or local government is authorized upon application, to make payments out of such grants to any person for reimbursement of expenses actually incurred by such person in the removal of damaged timber, not to exceed the amount that such expenses exceed the salvage value of such timber.

PUBLIC LAND ENTRYMEN

SEC. 243. The Secretary of the Interior is authorized to give any public land entryman such additional time in which to comply with any requirement of law in connection with any public land entry for lands affected by a major disaster as the Secretary finds appropriate because of interference with the entryman's ability to comply with such requirement as a result of such major disaster.

MINIMUM STANDARDS FOR RESIDENTIAL STRUCTURE RESTORATION

SEC. 244. (a) No loan or grant made by any Federal agency, or by any relief organization operating under the supervision of the Director, for the repair, restoration, reconstruction, or replacement of any residential structure located in a major disaster area shall be made unless such structure will be repaired, restored, reconstructed, or replaced in accordance with such minimum standards of safety, decency, and sanitation as the Secretary of Housing and Urban Development may prescribe by regulation for such purpose, and in conformity with applicable building codes and specifications.

(b) In order to carry out the provisions of this section, the Secretary of Housing and Urban Development is authorized—

(1) to consult with such other officials in the Federal, State, and local governments as he deems necessary, in order that regulations prescribed under this section shall—

(A) carry out the purpose of this section; and

(B) have the necessary flexibility to be consistent with requirements of other building regulations, codes, and program requirements applicable; and

(2) to promulgate such regulations as may be necessary.

PART D—RESTORATION OF PUBLIC FACILITIES

FEDERAL FACILITIES

SEC. 251. The President may authorize any Federal agency to repair, reconstruct, restore, or replace any facility owned by the United States and under the jurisdiction of such agency which is damaged or destroyed by any major disaster if he determines that such repair, reconstruction, restoration, or replacement is of such importance and urgency that it cannot reasonably be deferred pending the enactment of specific authorizing legislation or the making of an appropriation for such purposes. In order to carry out the provisions of this section, such repair, reconstruction, restoration, or replacement may be begun notwithstanding a lack or an insufficiency of funds appropriated for such purpose, where such lack or insufficiency can be remedied by the transfer, in accordance with law, of funds appropriated for another purpose.

STATE AND LOCAL GOVERNMENT FACILITIES

SEC. 252. (a) The President is authorized to make contributions to State or local governments to repair, restore, reconstruct, or replace public facilities belonging to such State or local governments which were damaged or destroyed by a major disaster, except that the Federal contribution therefor shall not exceed 50 per centum of the net cost of restoring any such facility to its capacity prior to such disaster and in conformity with applicable codes and specifications.

(b) In the case of any such public facilities which were in the process of construction when damaged or destroyed by a major disaster, the Federal contribution shall not exceed 50 per centum of the net costs of restoring such facilities substantially to their prior to such disaster condition and of completing construction not performed prior to the major disaster to the extent the increase of such cost over the original construction cost is attributable to changed conditions resulting from a major disaster.

(c) For the purposes of this section "public facility" includes any flood control, navigation, irrigation, reclamation, public power, sewage treatment and collection, water supply and distribution, watershed development, or airport facility, any non-Federal-aid street, road, or highway, and any other essential public facility.

PRIORITY TO CERTAIN APPLICATIONS FOR PUBLIC FACILITY AND PUBLIC HOUSING ASSISTANCE

SEC. 253. In the processing of applications for assistance, priority and immediate consideration may be given, during such period, not to exceed six months, as the President shall prescribe by proclamation, to applications from public bodies situated in major disaster areas, under the following Acts:

(1) title II of the Housing Amendments of 1955, or any other Act providing assistance for repair, construction, or extension of public facilities;

(2) the United States Housing Act of 1937 for the provision of low-rent housing;

(3) section 702 of the Housing Act of 1954 for assistance in public works planning;

(4) section 702 of the Housing and Urban Development Act of 1965 providing for grants for public facilities; or

(5) section 306 of the Consolidated Farmers Home Administration Act.

RELOCATION ASSISTANCE

SEC. 254. Notwithstanding any other provision of law or regulation promulgated thereunder, no person otherwise eligible for relocation assistance payments authorized under section 114 of the Housing Act of 1949 shall be denied such eligibility as a result of a major disaster as determined by the President.

TITLE III—MISCELLANEOUS

TECHNICAL AMENDMENTS

SEC. 301. (a) Section 701(a)(3)(B)(ii) of the Housing Act of 1954 (40 U.S.C. 461(a)(3)(B)(ii) is amended to read as follows: "(ii) have suffered substantial damage as a result of a major disaster as determined by the President pursuant to the Disaster Assistance Act of 1970".

(b) Section 8(b)(2) of the National Housing Act (12 U.S.C. 1706c(b)(2)) is amended by striking out of the last proviso "section 2(a) of the Act entitled 'An Act to authorize Federal assistance to States and local governments in major disasters, and for other purposes' (Public Law 875, Eighty-first Congress, approved September 30,

1950)" and inserting in lieu thereof "section 102(1) of the Disaster Assistance Act of 1970".

(c) Section 203(h) of the National Housing Act (12 U.S.C. 1709(h)) is amended by striking out "section 2(a) of the Act entitled 'An Act to authorize Federal assistance to States and local governments in major disasters and for other purposes' (Public Law 875, Eighty-first Congress, approved September 30, 1950), as amended" and inserting in lieu thereof "section 102(1) of the Disaster Assistance Act of 1970".

(d) Section 221(f) of the National Housing Act (12 U.S.C. 17151(f)) is amended by striking out of the last paragraph "the Act entitled 'An Act to authorize Federal assistance to States and local governments in major disasters, and for other purposes', approved September 30, 1950, as amended (42 U.S.C. 1855–1855g)" and inserting in lieu thereof "the Disaster Assistance Act of 1970".

(e) Section 7(a)(1)(A) of the Act of September 30, 1950 (Public Law 874, Eighty-first Congress, as amended; 20 U.S.C. 241–1(a)(1)(A)), is amended by striking out "pursuant to section 2(a) of the Act of September 30, 1950 (42 U.S.C. 1855(a))" and inserting in lieu thereof "pursuant to section 102(1) of the Disaster Assistance Act of 1970".

(f) Section 16(a) of the Act of September 23, 1950 (79 Stat. 1158; 20 U.S.C. 646(a)) is amended by striking out "section 2(a) of the Act of September 30, 1950 (42 U.S.C. 1855a(a))" and inserting in lieu thereof "section 102(1) of the Disaster Assistance Act of 1970".

(g) Section 408(a) of the Higher Education Facilities Act of 1963 (20 U.S.C. 758(a)) is amended by striking out "section 2(a) of the Act of September 30, 1950 (42 U.S.C. 1855a(a))" and inserting in lieu thereof "section 102(1) of the Disaster Assistance Act of 1970".

(h) Section 165(h)(2) of the Internal Revenue Code of 1954, relating to disaster losses (26 U.S.C. 165(h)(2)) is amended to read as follows:

"(2) occurring in an area subsequently determined by the President of the United States to warrant assistance by the Federal Government under the Disaster Assistance Act of 1970,".

(i) Section 506(a) of the Internal Revenue Code of 1954 (26 U.S.C. 506(a)), relating to losses caused by disaster, is amended by striking out "the Act of September 30, 1950 (42 U.S.C. 1855)" and inserting in lieu thereof "the Disaster Assistance Act of 1970".

(j) Section 5708(a) of the Internal Revenue Code of 1954 (26 U.S.C. 5708(a)), relating to losses caused by disaster, is amended by striking out "the Act of September 30, 1950 (42 U.S.C. 1855)" and inserting in lieu thereof "the Disaster Assistance Act of 1970".

(k) Section 3 of the Act of June 30, 1954 (68 Stat. 330; 48 U.S.C. 1681), is amended by striking out of the last sentence "section 2 of the Act of September 30, 1950 (64 Stat. 1109), as amended (42 U.S.C. 1855a)" and inserting in lieu thereof "section 102(1) of the Disaster Assistance Act of 1970".

(l) Whenever reference is made in any provision of law (other than this Act), regulation, rule, record, or document of the United States to the Act of September 30, 1950 (64 Stat. 1109), or any provision of such Act, such reference shall be deemed to be a reference to the Disaster Assistance Act of 1970 or to the appropriate provision of the Disaster Assistance Act of 1970 unless no such provision is included therein.

REPEAL OF EXISTING LAW

SEC. 302. The following Acts are hereby repealed:

(1) the Act of September 30, 1950 (64 Stat. 1109);

(2) the Disaster Relief Act of 1966, except section 7 (80 Stat. 1316); and

(3) the Disaster Relief Act of 1969 (83 Stat. 125).

AUTHORIZATION OF APPROPRIATIONS

SEC. 303. Except as provided otherwise in this Act, there are hereby authorized to be appropriated such sums as may be necessary to carry out the provisions of this Act.

EFFECTIVE DATE

SEC. 304. This Act shall take effect immediately upon its enactment, except that sections 226(c), 237, 241, 252(a), and 254 shall take effect as of August 1, 1969, and sections 231, 232, and 233 shall take effect as of April 1, 1970.

Mr. BAYH. Mr. President, I move to reconsider the vote by which the bill was passed.

Mr. DOLE. Mr. President, I move to lay that motion on the table.

The motion to lay on the table was agreed to.

The title was amended, so as to read:

A bill to revise and expand Federal programs for relief from the effects of major disasters, and for other purposes.

ORDER FOR PERIOD FOR TRANSACTION OF ROUTINE MORNING BUSINESS TOMORROW

Mr. BYRD of West Virginia. Mr. President, I ask unanimous consent that tomorrow, following the disposition of the reading of the Journal, there be a period for the transaction of routine morning business with statements therein limited to 3 minutes.

The PRESIDING OFFICER. Without objection, it is so ordered.

ORDER FOR SENATE JOINT RESOLUTION 1 TO BE LAID BEFORE THE SENATE TOMORROW

Mr. BYRD of West Virginia. Mr. President, I ask unanimous consent that tomorrow, at the close of the period for the transaction of routine morning business the unfinished business, Senate Joint Resolution 1 be laid before the Senate.

The PRESIDING OFFICER. Without objection, it is so ordered.

ELIMINATION OF REDUCTION IN THE ANNUITIES OF EMPLOYEES OR MEMBERS WHO ELECTED REDUCED ANNUITIES

Mr. BYRD of West Virginia. Mr. President, at this time, merely for making it the pending business for tomorrow evening, I ask unanimous consent that the Senate proceed to the consideration of Calendar No. 1103, S. 437, with the understanding there not be any action thereon this evening.

The PRESIDING OFFICER. Without objection, it is so ordered. The bill will be stated by title.

The ASSISTANT LEGISLATIVE CLERK. A bill (S. 437) to amend chapter 83, title 5, United States Code, to eliminate the reduction in the annuities of employees or Members who elected reduced annuities in order to provide a survivor annuity if predeceased by the person named as survivor and permit a retired employee or Member to designate a new spouse as survivor if predeceased by the person named as survivor at the time of retirement.

The PRESIDING OFFICER. Is there objection to the request of the Senator from West Virginia?

There being no objection, the Senate proceeded to consider the bill.

Mr. BYRD of West Virginia. Mr. President, I ask unanimous consent that not later than 5 p.m. tomorrow the business which will be laid before the Senate at the close of the period for the transaction of routine morning business tomorrow morning be laid aside and at not later than 5 p.m. the Senate proceed to the consideration of Calendar No. 1103, S. 437.

The PRESIDING OFFICER. Without objection, it is so ordered.

ADJOURNMENT TO 10 A.M. TOMORROW

Mr. BYRD of West Virginia. Mr. President, if there be no further business to come before the Senate, I move, in accordance with the previous order, that the Senate stand in adjournment until 10 a.m. tomorrow.

The motion was agreed to; and (at 8 o'clock and 22 minutes p.m.) the Senate adjourned until tomorrow, Thursday, September 10, 1970, at 10 a.m.

NOMINATIONS

Executive nominations received by the Senate September 3, 1970, under authority of the order of the Senate of September 1, 1970:

U.S. CIRCUIT COURT

Max Rosenn, of Pennsylvania, to be a U.S. circuit judge for the third circuit vice David Stahl, deceased.

U.S. DISTRICT COURTS

Cornelia G. Kennedy, of Michigan, to be U.S. district judge for the eastern district of Michigan, vice Thaddeus M. Machrowicz, deceased.

Edwin L. Mechem, of New Mexico, to be a U.S. district judge for the district of New Mexico vice a new position created under Public Law 91–272 approved June 2, 1970.

DEPARTMENT OF JUSTICE

Irving W. Humphreys, of West Virginia, to be U.S. marshal for the southern district of West Virginia for the term of 4 years, vice Cornelius J. McQuade, retired.

BOARD OF PAROLE

Paula A. Tennant, of California, to be a member of the Board of Parole for the term expiring September 30, 1976, vice Charlotte P. Reese, term expiring.

Executive nominations received by the Senate September 9, 1970:

DEPARTMENT OF DEFENSE

Richard J. Borda, of California, to be an Assistant Secretary of the Air Force.

DEPARTMENT OF HEALTH, EDUCATION, AND WELFARE

Wilmot R. Hastings, of Massachusetts, to be General Counsel of the Department of Health, Education, and Welfare, vice Robert C. Mardian.

EXTENSIONS OF REMARKS

U.S. DEFENSE

HON. STROM THURMOND

OF SOUTH CAROLINA

IN THE SENATE OF THE UNITED STATES

Wednesday, September 9, 1970

Mr. THURMOND. Mr. President, in two recent issues of the State newspaper, of Columbia, S.C., contain editorials on defense issues which should be of interest to the Congress.

On Friday, August 28, an editorial entitled "North Atlantic Treaty Must Be Kept in Force" warned our leaders against allowing our defense in Europe to be weakened through preoccupation with problems in Southeast Asia.

On Sunday, August 30, an editorial entitled "Russian Missile Growth Threatens U.S. Defense" pointed out the accelerated pace of Soviet arms development.

Mr. President, I ask unanimous consent that these two editorials be printed in the Extensions of Remarks.

There being no objection, the editorials were ordered to be printed in the RECORD, as follows:

NORTH ATLANTIC TREATY MUST BE KEPT IN FORCE

American preoccupation with the chaos in Southeast Asia is both understandable and essential, but the United States must never lose sight of its even more crucial involvement with the security of Western Europe.

That thought comes forcibly to mind as Vice President Agnew moves about on his important mission to the Far East. While he is properly assuring our allies in that part of the world that the United States intends to keep its commitments to them, let us hope that Washington maintains an even greater determination to stand firm against Communist aggression in Europe.

In specific terms, this means the continuation of America's strong role in the North Atlantic Treaty Organization. There is an alarming tendency, both in this country and abroad, to discount NATO's importance under what seem to be rather stabilized conditions in Europe.

After all, the argument runs, the Russians have not acquired any additional territory in Europe since 1949, and hence the need for NATO's existence may be diminishing. This line of reasoning overlooks the basic fact that Russia's containment with the European "iron curtain" is due primarily to NATO, not to any lessening of Soviet dreams of continental (and ultimately worldwide) domination.

Americans and Europeans alike need to be reminded of Russia's westward expansion at the close of World War II. When the United States and its western allies were demobilizing their vast armies, the Russians stood fast in the territory they had seized from Nazi Germany. Not only did the Soviets hold what they had taken, but they engineered a series of coups in bordering lands and succeeded—through force or the threat of force—in converting them into Russian satellites.

Not until the Soviets had brought Poland, East Germany, Hungary, Bulgaria, Romania, and finally Czechoslovakia into the Communist fold did the free nations of western Europe undertake positive action to halt the aggressive expansion. It was then that NATO was formed to provide a shield against further encroachments into the Atlantic world.

Building upon small mutual security pacts already in existence, NATO developed into a 15-member alliance which rimmed Russia from Norway on the north to Turkey on the south, with the United States and Canada as trans-Atlantic members of the pact. The member nations, in effect, decided to "choose up sides" before the outbreak of any further aggression.

By doing so, they effectively stopped the Russian territorial drive toward the west. But there is danger now that the very success of NATO may prove its undoing. On both sides of the Atlantic there now are persons, in and out of government, who feel that NATO has served its purpose and should be dismantled or at least substantially downgraded militarily.

We would be the last to suggest that NATO's non-military role should not be enlarged. Indeed, the Atlantic Treaty embraces the mechanism for considerably more economic, political, and social cooperation than has yet been achieved.

But NATO's value to world peace lies primarily in its military strength. While the United Nations has floundered, while other pacts such as the Southeast Asia Treaty Organization have languished an lapsed, and while individual nations throughout the world have been subverted from within or without, NATO has remainded an unyielding bulwark against armed Communist aggression in the crucial arena of Western Europe.

Now 21 years old, NATO must not be allowed to lapse into inertia or repose on grounds that it has achieved its mission. Its mission is the same today as it was in the beginning—keeping the Russian bear from swallowing any more European victims.

RUSSIAN MISSILE GROWTH THREATENS U.S. DEFENSES

Defense Secretary Laird's announcement of the latest Soviet missile test was scarcely unexpected. Experts have known for months that the Soviets were close to perfecting multiple re-entry vehicles (so-call MIRVs). Confirmation is bad news all the same.

Worse news still is the probability that this new weapon will be targeted at America's defensive missiles, all that stand in the way of a successful first-strike. Our own anti-ballistic missile system, in its infancy, will be no use until it is deployed. Even then, it will provide the most limited kind of protection, and limited protection is not good enough.

The test of whether a nation dares risk a first strike is the target nation's capacity to retaliate. If enough defensive missiles can be taken out early, damage to the aggressor falls within acceptable limits. It seems clear enough that the MIRVs the Soviet Union tested over the Pacific last week are designed to achieve this result.

Of course, there are imponderables, too. Nobody knows what the Russians consider acceptable damage, to begin with. Then, too, the United States has the Polaris fleet, soon to be equipped with the devastating Poseidon missile. Underwater launch-pads are difficult to eliminate, even with MIRVs.

What is clear enough, though, is the accelerated pace of Soviet arms development. Individual politicians may have their doubts as to the wisdom of a U.S. defense budget of $80 billion—New York Mayor John Lindsay last week called it "wrong for ourselves, wrong for our children, and wrong for the nation"—but Russia's undiminished drive toward preeminence leaves Washington little choice.

There remain, to be sure, the SALT talks, which hold out some small promise of a satisfactory arms limitation agreement. What critics of U.S. defense spending forget, however, is that the American spenders have Soviet counterparts. Until a satisfactory arms limitation agreement can be reached, it is nonsense—maybe even demagogic—to prattle about the wrongness of spending huge sums for national defense.

KLEPPE COMMENTS

HON. THOMAS S. KLEPPE

OF NORTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, September 9, 1970

Mr. KLEPPE. Mr. Speaker, at this time I include the text of my September 1970 newsletter to my constitutents of the west district of North Dakota.

KLEPPE COMMENTS

VIETNAM

When President Richard M. Nixon assumed office in 1969, he inherited a war which had been escalating for eight years with no apparent end in sight. He quickly reversed the past policy of increasing our troop levels by beginning a gradual withdrawal of American troops and Vietnamizing the war.

In the past year, with our withdrawal program under way, we have witnessed an unrelenting attack on the President's handling of the war by his congressional critics. What are the facts concerning Vietnam? Let's look at the President's record since taking office.

When President Nixon took office, our troop level was 535,500.

As of today, the President has reduced our troop level to 399,500, with a promise to further reduce troop levels by May, 1971, to 284,000.

Our combat fatalities are at their lowest level since 1966.

It is clear that President Nixon is pursuing a policy that will lead to American disengagement while allowing the people of South Vietnam to remain free from outside aggression. I have been a consistent backer of our President's search for peace, not only in Vietnam but in avoiding any future "Vietnams." I am against tying the President's hands in the defense of our troops as many in the Senate attempted to do.

Congressional critics of the President's Southeast Asia Policy—those who call for an immediate withdrawal of all American troops—seem unconcerned about the fate of nearly 1,600 American prisoners-of-war. The President has strongly stressed the fact that the welfare of our POWs will be a major topic at the peace table in Paris.

As the President continues to extricate us from Vietnam, some of the very Senators who helped lay the groundwork for our involvement there are now masquerading as "doves" and "peace" candidates. Let the records show that all Americans of good faith are for peace, not just any select group of Senators.

STUDENT UNREST

As we begin a new school year, I am hopeful we will have a peaceful one. I am concerned that Congress still has not passed any significant legislation dealing with disturbance on our college campuses.

The revolutionaries on our college campuses who desire to destroy our educational system are small in number. The vast majority of our students are not bent on revolution and have not lost faith in the system.

While realizing that the students who are working within the system to change it represent the best of our traditions, we must remember that violent protest by the radical minority can never be justified. A line must be drawn between the actions which seriously disrupt a college and those students who wish to pursue their educations. Violence in any form, in any measure, under any circumstances, is not a legitimate means of protest—it can no more be tolerated in the university community than in the community at large.

Far too many of our college administrators, news media, and elected officials have sought to excuse the violent actions of the radical few who seek to destroy the system, while attempting to place blame on the system itself.

We must realize that an attack on our educational system is an attack on the very foundations of truth and learning, two of the very foundations upon which our great nation is based.

Bills I introduced. H.R. 18262, extend present restriction of log exports from Federal forests beyond 1971. H.J. Res. 1313, amending Constitution to lower voting age to 18. H. Con. Res. 681, establish Joint Committee to conduct a study and investigation of Federal Meat Inspection Act, including foreign plants which are approved for shipping meat to the United States.

CRIME

One of the greatest threats to our personal freedoms today is crime. Every person who fears to venture out of his home at night, every woman who dares not walk the streets alone at night in our cities is, in a sense, experiencing a loss of freedom because of the fear of crime. The fear of crime is a very real thing throughout our nation, and justifiably so.

From 1960 to 1969 crime rose 122%. This meant an increase in murder (up 46%), robbery (up 144%), rape (up 84%), and aggravated assault (up 86%). It meant enormous increases in that portion of organized crime which delivers hard drugs to scores of thousands of addicts, many of whom rob and kill to finance their habit. The 162,177 narcotics users arrested in 1968 (compared to 9,836 in 1960), were both criminals and victims of crime.

As a Presidential candidate and as President, Richard Nixon asserted that respect for law is the cornerstone of a free and well-ordered society. Law enforcement in the Nixon Administration has been given top priority. Conditions that create crime, the fear of crime, and the crime itself, were passively accepted for too long in the 1960's. President Nixon has recreated a climate of concern for law enforcement and orderly progress.

To date, the President has proposed thirteen major crime bills. More than eighteen months have passed since this legislation was proposed and the Congress has passed but one bill, the D.C. Crime Bill. This was a much needed piece of legislation that includes court reform, bail reform, and gives our law enforcement agents the much needed tools to combat crime in our Nation's Capital. The twelve other crime bills have remained stalled in Congress for far too long. The time is long overdue to pass this much needed legislation to combat crime. These stronger laws are needed, let's pass them.

Every citizen of this country has the right to justice. Let's consider the rights of those who don't break the law as well as we protect the rights of those who do. Rioters, criminals, and organized groups who flaunt the law and destroy private property must be dealt with strongly.

How I voted. For retaining "freedom of choice" amendment regarding membership in postal unions, in Postal Reform bill. Passed. For S. 2601, District of Columbia Crime Bill. Passed. For H.R. 16916, appropriations for Office of Education. Passed. I later voted for overriding the President's veto. Passed. Against H.R. 16595, authorizing appropriations for National Science Foundation. Passed. For referring H.R. 17548, appropriations for Independent Offices and HUD back to committee for further reductions. Defeated. I later voted against overriding the President's veto. Defeated. For conference report on H.R. 15733, Railroad Retirement Act. Passed. For H.R. 18546 Agriculture Act of 1970. Passed. For H.R. 18434, to revise provisions of Communications Act of 1934, relating to political broadcasting. Passed. For H.R. 18253, to increase availability of guaranteed home loan financing for veterans. Passed. For conference report on H.R. 17619, appropriations for Department of Interior. Passed. For conference report on H.R. 14705, to extend and improve Federal-State unemployment compensation program. Passed. For H.R. 17880, Defense Production Act. Passed.

DISNEYLAND SHOWS THE WAY

HON. JOHN G. SCHMITZ

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, September 9, 1970

Mr. SCHMITZ. Mr. Speaker, last month an invasion of hippies and yippies forced the closing of Disneyland when they became unruly and endangered the lives of other visitors. The park police, aided by the police from several of the nearby communities, moved in without delay and got the situation under control quickly and without injury to anyone. The Santa Ana Register of August 8, 1970, carried an editorial on this which I believe sums up the situation and the lesson to be learned from the intelligent handling of the problem. The article follows:

DISNEYLAND SHOWS THE WAY

The Disneyland flag yet waves o'er the land of free enterprise fun and the home of happiness. And hooray!

Orange County owes much of its progress to Disneyland and to the courage and enterprise of its late founder. But today it has another debt that may possibly be hidden in the wake of the emotional shock waves created by hoodlums at the park Thursday.

Disneyland gave the world a lesson Thursday. It protected its property, provided for the safety of its patrons, exhibited great patience and tolerance and came out not only with its dignity intact but standing even taller for its courageous, intelligent handling of an apparently impossible dilemma.

The fact that the disturbance at Disneyland was checked quickly is a tribute also to well-drilled police agencies who were ready and able to handle a situation far more serious than this one became.

There will be no opportunity for the unruly mob to cry "police brutality" and whip up any sympathy even from those misguided people who might still insist the youthful disruption is merely protest against war.

It will be recorded that those following the pattern of the Communist organizers of the revolution have made a grave strategic blunder in taking on Disneyland.

What ever schemes may have been spawned in these dissidents' minds, they were not calculated to gain any support from otherwise sympathetic people.

The pot-smoking, narcotic-using mob exhibited a complete disregard for innocent people who could easily have been injured, even killed in a wild stampede.

There were little children, elderly people and invalids out for a happy day at Disneyland Thursday, and the hippies would have subjected them to the horrors of a battlefield.

So now they have been stripped of all pretense. They were not challenging the Vietnam involvement; they were not defending an allegedly innocent in some prison cell; they were not challenging the giant Bank of America because "it finances war machines" or any of their other fantasies.

They were nothing more than destructive animals who have been coddled, pampered, excused and tolerated, and they were trampling on the rights of decent individuals to enjoy themselves in peaceful pursuit of happiness.

We wish we could state that the enemy has been repulsed and that peace will ever reign. But Orange County may as well face it—free enterprise and private property will be attacked again and again, and the time for appeasement is over.

The proper function of government is the defense of human life and property. Stern measures by delegated police authority may properly be demanded by those who pay for the service. And it also is proper to defend oneself and his property. And Disneyland has shown the way.

OPENING UP JAPAN

HON. JEFFERY COHELAN

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, September 9, 1970

Mr. COHELAN. Mr. Speaker, as this Congress prepares to move in the direction of protecting some U.S. industries from foreign import, it is important to keep in mind that our exports are of importance in our economic position. A recent editorial in the Wall Street Journal described the new opportunities for trade with Japan.

I think that my colleagues should be aware of these developments and I submit this editorial for their consideration:

OPENING UP JAPAN

It may surprise some people to learn that, in the past half dozen years or so, wages and prices have been rising much faster in Japan than in the U.S. Japanese inflation—consumer prices have risen 45% since 1963, compared with 26% for the U.S.—helps to explain why Japan is progressively opening its huge market to more foreign goods, companies and investment.

The latest move in this direction will make 323 more business categories, including banking, securities, machine tools, department stores and supermarkets accessible to direct foreign capital investment, Japan's important auto industry will be opened to foreign investment in April of next year, instead of October 1971 as originally planned.

It's true that Japan is in part responding to pressures from other countries, and it also may be true that the Japanese are trying to dissuade the U.S. from moving toward protectionism. But Japan also appears to have recognized that more competition will be good for the nation's consumers, as well as for the health of its economy.

In the process Japan is providing fresh opportunities for businessmen of the U.S. and other countries. They are opportunities that could be withdrawn if the U.S. now reacts by heading in exactly the opposite direction.

FEDERAL CIVILIAN EMPLOYMENT, JULY 1970

HON. GEORGE H. MAHON

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, September 9, 1970

Mr. MAHON. Mr. Speaker, I include a release highlighting the July 1970, civilian personnel report of the Joint Committee on Reduction of Federal Expenditures:

FEDERAL CIVILIAN EMPLOYMENT, JULY 1970

Total civilian employment in the Executive, Legislative and Judicial Branches of the Federal Government in the month of July was 2,980,350, as compared with 2,981,866 in the preceding month of June. This was a net decrease of 1,516, due primarily to reduction in temporary census employment, offset by increases in regular seasonal employment and summer employment of the "disadvantaged" under youth opportunity programs.

Executive branch

Civilian employment in the Executive Branch in July totaled 2,942,516. This was a net decrease of 1,596 as compared with employment reported the preceding month of June.

Total employment in civilian agencies of the Executive Branch for the month of July was 1,729,414, an increase of 4,509 as compared with the June total of 1,724,905. Total civilian employment in the MILITARY AGENCIES in July was 1,213,102, a decrease of 6,105 as compared with 1,219,207 in June.

The civilian agencies in the Executive Branch reporting the largest net increases were Agriculture with 4,989, Post Office with 4,232, Interior with 2,903, Department of HEW with 2,364, Transportation with 1,380 and Veterans Administration with 1,229. These increases were partially offset by a decrease in Commerce Department of 14,524 (including a decrease of 6,606 in temporary employees involved in taking the 19th Decennial Census).

In the Department of Defense the largest decreases were reported by Air Force with 5,080 and Navy with 2,703, partially offset by an increase in Army of 2,187.

Total Executive Branch employment inside the United States in July was 2,729,948, a decrease of 2,458 as compared with June. Total employment outside the United States in July was 212,568, an increase of 862 as compared with June.

The total of 2,942,516 civilian employees of the Executive Branch reported for July 1970 includes 2,545,286 full time employees in permanent positions—a decrease of 7,290 from the preceding month of June. (See Table 2 of accompanying report.)

The Executive Branch employment total of 2,942,516 includes some foreign nationals employed abroad, but in addition there were 102,991 foreign nationals working for U.S. agencies overseas during July who were not counted in the usual personnel reports. The number in June was 104,159.

Legislative and judicial branches

Employment in the Legislative Branch in the month of July totaled 30,917, an increase of 50 as compared with the preceding month of June. Employment in the Judicial Branch in the month of July totaled 6,917, an increase of 30 as compared with June.

Disadvantaged persons

The total of 2,980,350 reported by the Committee for July includes 67,104 disadvantaged persons employed under federal youth opportunity programs, an increase of 7,747 over the preceding month of June. (See Table 4 of the accompanying report.)

SUMMARY OF FEDERAL CIVILIAN EMPLOYMENT COSTS FOR FISCAL YEAR 1970—ENDED JUNE 30, 1970

For many years the Committee, in its statement accompanying the monthly civilian payroll cost for June (the last month in the fiscal year), has compared the annual cost with the totals for previous years. The following comparison continues this practice.

The cost of civilian employment in the Legislative, Judicial and Executive Branches of the Federal Government in fiscal year 1970, ended June 30, totaled $27,261,000,000. This was $2,761,000,000 higher than in the preceding fiscal year; and it was an all-time high. At the same time, average employment for all three Branches for the full 12 months of the fiscal year decreased 2,349 compared with average employment in fiscal year 1969.

Payroll for the Legislative Branch in fiscal 1970 totaled $338,000,000, an increase of $51,000,000 over the previous year. Payroll for the Judicial Branch in fiscal 1970 totaled $89,000,000, an increase of $14,000,000 over the previous year.

Executive branch

Within the Executive Branch payroll in fiscal year 1970 totaled $26,834,000,000, an increase of $2,696,000,000 over the previous year. The following tabulation shows Executive Branch payrolls, broken between civilian and military agencies, for fiscal years 1960 to 1970.

ANNUAL FEDERAL EXPENDITURES FOR CIVILIAN PAYROLL IN EXECUTIVE BRANCH—FISCAL YEARS 1960-70

[In rounded amounts]

Fiscal year	Civilian agencies	Defense Department [1] (civilian employment)	Total
1960	$6,804,000,000	$5,760,000,000	$12,564,000,000
1961	7,546,000,000	6,026,000,000	13,572,000,000
1962	7,898,000,000	6,318,000,000	14,216,000,000
1963	8,659,000,000	6,603,000,000	15,262,000,000
1964	9,297,000,000	6,818,000,000	16,115,000,000
1965	10,043,000,000	7,102,000,000	17,145,000,000
1966	10,875,000,000	7,732,000,000	18,607,000,000
1967	11,727,000,000	8,668,000,000	20,395,000,000
1968	12,919,000,000	9,395,000,000	22,314,000,000
1969	13,840,000,000	10,298,000,000	24,138,000,000
1970	15,621,000,000	11,213,000,000	26,834,000,000

[1] Excludes pay for foreign nationals not on regular rolls ($390,000,000 for fiscal year 1970).

Civilian employment in the Executive Branch during fiscal year 1970 averaged 2,958,364 as compared with 2,961,640 in fiscal year 1969. This decrease of 3,276 reflects inclusion in 1970 of an annual average of about 32,300 temporary 19th Decennial Census employees.

The average Executive Branch employment total of 2,958,364 for fiscal year 1970 includes an average of 2,592,549 full time employees in permanent positions; the total of 2,961,640 for fiscal year 1969 includes an average of 2,623,472 full time permanent employees. This was a decrease of 30,923 in average full time permanent employment.

The following tabulation shows average civilian employment for the Executive Branch, broken between civilian and military agencies, for fiscal years 1960 through 1970.

AVERAGE CIVILIAN EMPLOYMENT BY FEDERAL AGENCIES IN EXECUTIVE BRANCH—FISCAL YEARS 1960-70

Fiscal year	Civilian agencies	Defense Department [1] (civilian employment)	Total
1960	1,320,032	1,054,740	2,374,772
1961	1,323,567	1,037,356	2,360,923
1962	1,373,485	1,058,676	2,432,161
1963	1,417,937	1,063,720	2,481,657
1964	1,434,104	1,042,552	2,476,656
1965	1,443,376	1,024,482	2,467,858
1966	1,500,349	1,074,080	2,574,429
1967	1,605,919	1,234,474	2,840,393
1968	1,654,973	1,280,853	2,935,826
1969	1,655,976	1,305,664	2,961,640
1970	1,694,157	1,264,207	2,958,364

[1] Excludes foreign nationals not on regular rolls (averaging 109,237 for fiscal year 1970).

In addition, Mr. Speaker, I would like to include a tabulation, excerpted from the joint committee report, on personnel employed full time in permanent positions by executive branch agencies during July 1970, showing comparisons with June 1969, and the budget estimates for June 1971:

FULL-TIME PERMANENT EMPLOYMENT

Major agencies	June 1969	July 1970	Estimated June 30, 1971 [1]
Agriculture	83,425	83,114	85,300
Commerce	25,364	25,424	26,700
Defense:			
Civil functions	31,214	30,118	31,000
Military functions	1,225,877	1,120,343	1,110,100
Health, Education, and Welfare	102,941	102,958	105,100
Housing and Urban Development	14,307	14,640	16,000
Interior	58,156	59,243	61,100
Justice	35,106	38,648	39,100
Labor	9,723	10,220	10,800
Post Office	562,381	565,700	585,000
State	24,658	23,527	23,400
Agency for International Development	15,753	14,329	14,400
Transportation	60,386	64,597	70,300
Treasury	79,982	86,599	93,500
Atomic Energy Commission	7,047	6,981	6,900
Civil Service Commission	4,970	5,194	5,500
General Services Administration	36,176	36,268	36,800
National Aeronautics and Space Administration	31,733	30,454	30,600
Office of Economic Opportunity	2,856	2,349	2,500
Panama Canal	14,731	14,593	14,900
Selective Service System	6,584	6,656	6,500
Small Business Administration	4,099	3,984	4,100
Tennessee Valley Authority	11,987	12,718	13,300
U.S. Information Agency	10,500	9,959	10,100
Veterans' Administration	147,606	149,136	150,200
All other agencies	26,200	27,534	28,900
Contingencies			15,000
Total	2,633,762	2,545,286	2,597,200

"SALTING THE PEACE DOVE'S TAIL"

HON. JOHN J. RHODES

OF ARIZONA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, September 9, 1970

Mr. RHODES. Mr. Speaker, in a recent editorial, the Los Angeles Times discusses how the SALT negotiations ap-

pear to be moving toward a limited but highly significant arms agreement. This is indeed encouraging, but, as the Times points out, we must judge the intentions of the Soviets not only by any possible arms limitation agreement, but also by their behavior in the Middle East and their willingness to negotiate a mutual reduction of force in Europe.

As we are all interested in the progress of the SALT talks, I request consent that "SALTing the Peace Dove's Tail" be printed in the RECORD.

SALTING THE PEACE DOVE'S TAIL

(ISSUE: If U.S.-Soviet agreement on a missile freeze is indeed achieved, will it be a reliable guide to Russian intentions?)

Far more rapidly than anyone thought possible when negotiations got under way last fall, the United States and the Soviet Union appear to be moving toward a limited but highly significant strategic arms limitation agreement.

The so-called SALT negotiations, the second round of which ended in Vienna last week, have been shrouded in unsual secrecy. Conference sources report, however, that the American representatives presented an "outline" under which both countries would freeze strategic weaponry at roughly present levels.

The proposal is said to envision the placing of an overall numerical ceiling on each nation's arsenal of intercontinental ballistic missiles, missiles fired from submarines and long-range bombers. Each government would have some latitude in dividing its total among the various types of strategic delivery systems.

The Soviet response, it seems, is encouraging. As a result, there is considerable optimism that the two great powers may actually be able to agree on a draft treaty when the talks resume in Helsinki in November.

Considering the crying need in this country for a resetting of our national priorities, an arms control agreement of the sort indicated is to be devoutly desired from the American viewpoint. Students of Soviet affairs are prepared to believe that the Kremlin interest is genuine, too.

The Soviet investment in armaments is, after all, far more lopsided than our own. Military spending is running at about the same level as ours—but from a gross national product only half as large.

Unfortunately, however, the fact must also be faced that a successful outcome to the SALT negotiations will not necessarily produce a safer world.

The Soviet's intentions must be judged not only by their posture on a missile freeze but also by their behavior in the Middle East and their willingness to negotiate a mutual reduction of force in Europe.

Reports that the Russians moved SAM-3 missiles to the Suez Canal, after promising Washington that they would not do so, constitute a disturbing reminder of the Kremlin's capacity for duplicity.

TRIBUTE TO THE HONEST WORKMAN WHO TAKES PRIDE IN WHAT HE DOES

HON. GERALD R. FORD

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, September 9, 1970

Mr. GERALD R. FORD. Mr. Speaker, the usual product of a national columnist is a commentary on a major news development or a behind the scenes report of what goes on in private political circles. It was refreshing, therefore, to read Andrew Tully's "Capital Fare" column of August 20, 1970, and discover a tribute to labor—a tribute to the honest workman who takes pride in what he does and renders an honest day's work for his pay. America has much need of men like Will Dennison, as he is described in Andy Tully's column. It is men of this breed who built America and made it great. It is appropriate, therefore, that Andy Tully's tribute to Will Dennison, admirable workman, be given wider dissemination. The Andy Tully column follows:

KNOCK ON OUR DOOR ANYTIME

(By Andrew Tully)

WASHINGTON.—Perhaps the subject will be contemptuously marked trivial in this capital of the cosmic, but for that very reason a personal note seems mandatory as a salaam to Wilfred Dennison of Oxon Hill, Md., one of the last of a splendid breed. Dennison is testimony that a few of us have not capitulated to the mod theology that an honest job is an ignoble gesture to the system.

Will Dennison is a small building contractor. He toils in a business that does not enjoy universal affection among householders, especially in this unhappy-go-lucky age. The individual forced by circumstance to hire help for the driving of a nail or the laying of a brick habitually dons the air usually worn only for a stroll to the guillotine.

Thus, when the conversion of an unused porch into a room to accommodate the roughousing of two boys became imperative, I faced the ordeal with craven foreboding. Nothing good could come of the project, and the cost would strain the pocketbook of a Kennedy.

I greeted Will Dennison with icy reserve, not to say hostility. He was a contractor; that was enough. True, he arrived with credentials notarized by a favorite neighbor, but are even friends expert on such an arcane subject?

But there was nothing else for it. The job had to be done to reduce the rate of attrition on the rest of the house. Gloomily, the contract was awarded to Will Dennison of Oxon Hill. And, almost at once, something wonderful started to happen.

I had received cynically Will's pledge that the work would start on a certain date. To my astonishment, he and his helper, Bill Ashby, arrived on the appointed day—not to sit around over cups of coffee and think about the project, but to have at it.

Down came the porch screens, to be piled neatly in the driveway. Within a few days, the porch had been extended and the studding put in place. The Dennison-Ashby team not only seemed to know what they were doing, they eschewed drawing me into any discussion of the procedure, an unheard-of attitude in this time of the whimpering constructionist. They listened respectfully to my impractical suggestions, but never sought them out.

More, they proved themselves veritable Renaissance Men of the building trade. When the roofer failed to appear, they did the shingling and guttering. They painted. The carpeting man declared coldly he could not cover the floor until fall; Dennison and Ashby put it down. They brought in two of the best bricklayers in the Western Hemisphere, youthful Bob Sealock and Ernie Miller, also of Oxon Hill, whose contribution was a work of art.

But, tarry. Besides all these wondrous things, Dennison and Ashby performed every little "while-you're-here" odd jobs the mistress of the manse could conceive. They fixed a closet door in a bedroom, a battered screen door, the master's desk. They altered a bookcase and moved it into the addition. They even bolted into place a new basketball basket.

"I can't charge you for this stuff," said Dennison. "I'm not in that business."

Finally, incredibly, they finished the job on time—indeed, a few hours ahead of the deadline. And before they left—I hope for some earthly reward in a cool and quiet tavern—they cleaned up and raked up and swept up every last sawdust-grain trace of their stay.

Will Dennison and Bill Ashby and Bob Sealock and Ernie Miller will never make it in this world we've made. They're too square. But they can knock on this door, anytime.

WILL YOUNG AMERICA DESTROY ITS HERITAGE?

HON. JOHN E. HUNT

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Wednesday, September 9, 1970

Mr. HUNT. Mr. Speaker, amidst predictions of continued violence and disruptions as the Nation's colleges and universities open their doors for the fall semester, I believe the editorial reprinted below contains a message that all students who are in school to learn should heed. It is no mystery that a very small but organized and vociferous militant minority can raise havoc and, as experience has taught, has been able to cause enough commotion to appear to speak for all students in the academic community.

I commend the following editorial to your attention which appeared in the Indianapolis Sunday Star of July 19, 1970:

WILL YOUNG AMERICA DESTROY ITS HERITAGE?

Although less than 10 per cent of American youth has been participating in the violent, senseless protests about their own colleges and universities, there is a growing danger that the noisy, militant leaders of America's young revolutionaries will lure more and more students to their cause.

The vast majority of students are serious-minded young people striving to get an education. They have, so far, refused to enter into "the gory glee" of hell-raising on the campus. But no leadership among the silent majority of students has arisen to challenge the revolutionaries.

The president of the student body at a large state university was elected by a vote of 1,013 to 323. Only 1,300 of 23,000 students voted in that election. They simply weren't interested in the militant program of the radical leaders. However, the student who was elected president claims that he represents the entire student body and demands a voice in board of regents meetings despite the fact that 90 per cent of the students wanted no part of his program.

Unless the students who believe they go to college to get an education rather than to start a revolution begin very shortly to organize and challenge the revolutionaries on the campus, they may find they have waited in silence while their precious heritage of freedom and opportunity has gone down the drain in a blazing, destructive, senseless revolution led by leaders who don't know what they want or what they would do with it if all their demands were granted. They want a noisy voice in everything but beyond that they know not what they are shouting about.

A sober observation about America's youth recently came from England where the editor of the London Daily Telegraph declared that no generation of young people ever had as great a heritage of freedom and opportunity as today's American youth.

Under the caption "Revolt of the Pampered," the editor of the Telegraph wrote:

"America is a victim of its national myth. It entered history proclaiming the rights of man. Its Constitution is aimed at fostering freedom at all costs. Its young have been brought up largely on an educational theory which attaches supreme importance to self-expression. Is it odd that it should lead the world in rebellion or that its volunteer forces should sometimes lack the virtue of unrelenting discipline? Yet the marvel does defy explanation. Why should America's student youth, living in a country that enjoys freedom and prosperity in unprecedented degrees, turn all its righteous anger not against the despotisms that rule most of the rest of the world, but against America itself?"

A TRIBUTE TO HENRY A. BARNES

HON. JOHN M. MURPHY

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, September 9, 1970

Mr. MURPHY of New York. Mr. Speaker, the late Henry A. Barnes was deeply concerned with traffic safety on our highways and streets. In fact, he devoted his life to the smooth and safe flow of vehicular and pedestrian traffic. No more fitting tribute could be paid to Henry Barnes than to proclaim September 16, the anniversary of Mr. Barnes' death, as National Traffic Safety Day.

"The meek may inherit the earth—but not in New York."

Henry Barnes, who served as New York's traffic commissioner, used this modified maxim to explain why he has gone out of his way to acquire a reputation as a Pier Six brawler. His tough tactics, combined with a judicious use of public relations, were a key element in his effort to end this city's traffic jam which, although one of the Nation's worst, is not untypical of the problem in other cities.

Before he could do anything about the traffic jam, Mr. Barnes was convinced he had to cut through the city's tangled bureaucracy. And in his quarter-century of battling both city traffic and bureaucrats, Mr. Barnes learned that neither problem will yield to a mild-mannered man.

So within weeks of his arrival in town in 1962, he was jousting not only with city officials but with UN diplomats, doctors, Fifth Avenue merchants and women drivers. He even took on vinegary Robert Moses, a city planner, park developer and bridge builder who long ago began using Mr. Barnes' formula for dealing with governmental redtape.

With city officials, Mr. Barnes fought for the money he says he must have if he was to unclog New York streets. "They won't give me the money because I'm a nice guy; if anything it'll be because I'm not," he said.

He was right. He succeeded in jacking up his department's operating budget some 10 percent.

Before New York hired him away from Baltimore, the Maryland city in an 8-year period had been persuaded to boost his operating funds by 400 percent. His traffic efforts in Baltimore were impressive enough that New York offered him $27,500 a year. But his reputation as a traffic man goes back as far as 1937 when he became traffic engineer in Flint, Mich.

Ten years late Mr. Barnes went west to Denver to head its traffic department. There he introduced Denver pedestrians to the "scramble" system, now common in many U.S. cities. It allows pedestrians to cross in any direction they choose while all traffic lights are red for a few seconds. The system, which Denver promptly labeled "the Barnes dance," also frees motorists making left-hand or right-hand turns from competing with pedestrians who no longer are allowed to cross on green lights.

IDEAS FOR NEW YORK

So when Mr. Barnes arrived in New York, at age 55, he had a reputation for getting things done. Besides scrappiness and a flair for publicity, he also soon demonstrated he had ideas for what ailed New York. Convinced the city is failing miserably to get the best possible performance out of its network of streets, Mr. Barnes came up with a plan which had helped in Baltimore: Electronic traffic signals hooked into computers.

In essence, the electronic system adjusts the timing of lights to accommodate the changing volume of traffic on a grid of streets. It does this by feeding into a computer data on the flow of traffic in the area and also the amount approaching the area. A Bureau of Public Roads official notes:

You sometimes get cars waiting at a red light while there's no traffic going through the green light.

An electronic system seeks to spare the motorist this frustrating experience as often as possible.

The results can be startling, Mr. Barnes maintained. In Baltimore it normally took motorist 45 minute in peak hours to negotiate 4 miles of one congested artery. After Mr. Barnes installed an electronic system, the trip took 17 minutes. Moreover, each lane of traffic handled three times as many cars per hour as formerly.

How much did Mr. Barnes accomplish in New York?

When Mr. Barnes arrived the city's traffic department was on a 5-day-week and a 9-a.m.-to-5-p.m. day. He immediately put the department on a 7-day week and a 24-hour-a-day operation. He also found there were only two radio-equipped vehicles in his entire department. Today there are over 100.

Mr. Barnes liked to man a radio himself—in the department car in which he is driven to work daily. Cruising along Queens Boulevard, he would spot a signal light which is out of synchronization. "This is Car One," he would intone into the radio microphone, as he reported the deficiency. He noted with satisfaction that 2 minutes later the dispatcher has rebroadcast the report of the faulty light to the maintenance superintendent for the district. "He's probably on his way there right now," said optimist Barnes.

For the first time, at a few busy intersections, New Yorkers were experiencing "the Barnes dance." Mr. Barnes has even tinkered with lower Broadway, the scene of ticker tape parades for public heroes from Charles Lindbergh to John Glenn to the Mets. He made it one-way, and unsnarled traffic on the thoroughfare to a considerable extent.

As any local motorist will testify, New York has never been able to keep up with the seemingly routine task of painting traffic lines on its streets. The Barnes remedy: New paint machines which did in 3 hours what used to take 3 days.

Almost anything a traffic man does will get him into trouble with someone. Consider a Barnes suggestion to let buses roll on city expressways. This riled Robert Moses, credited as the man chiefly responsible for New York's network of parkways. He suggested the newcomer from Baltimore was ignorant about parkways and should "stick to his dances." He said parkways were for leisurely traffic—not buses.

Mr. Barnes purred in the public prints:

I agreed heartily, some of the most leisurely driving in the world takes place on the parkways here—about 5 miles an hour in peak periods. Cars bumper-to-bumper and fender-to-fender, and they will be as long as Mr. Moses insists on the outmoded concept of trying to move cars, not people.

Once the feud began, both men tore into each other with zest. At one point Mr. Barnes sharply criticized traffic planning for the New York World's Fair, a project Mr. Moses headed:

I suspect the first man to start home from the fair in 1964 may well pass the last man on his way to the fair in 1965.

ATTACK ON DOCTORS

Doctors and diplomats also felt the Barnes lash—for allegedly abusing their parking privileges. Mr. Barnes said that in 8 years doctors had received 50,000 tickets but had drawn suspended sentences on 35,000 of them because county medical societies had backed the doctors' statements they were on emergency calls when ticketed. But Mr. Barnes suggested the truth was doctors' wives frequently had the cars when they were ticketed. This moved the president of the New York County Medical Society to observe there are more than 1,000 woman doctors in New York. "I am sure they all wear high heels and park near Macy's while on calls," retorted Mr. Barnes.

Mr. Barnes also launched an attack on women drivers in general:

When a woman driver puts out her hand you never know whether she's feeling to see if the window is open, drying her nail polish or making a turn.

All these blasts, of course, drew public attention to traffic, which was just what Mr. Barnes had in mind.

The Barnes technique of presenting himself as a volatile high explosive apt to go off at any time in anyone's face succeeded in improving things here in New York.

To illustrate the problems Mr. Barnes faced, consider the city's need for off-street parking, Mr. Barnes said:

We're besieged constantly by pressure groups wanting off-street parking facilities in their areas.

And he admitted that politically the boroughs of Brooklyn and the Bronx outvote Manhattan, "so we've put more off street parking facilities there than in Manhattan where the parking problem is the worst."

GRASS AGAINST GARAGES

He also was fully aware of the political dynamite in building an offstreet parking lot or garage anywhere "if you have to move a single family or a single business." So he looked for city property he might convert to parking areas and hit upon the idea of underground garages in city parks. New Yorkers miss this innovative pipe-puffer. They even miss the "Barnes Dance."

TRAVIS PORT SQUADRON—BEST IN AIR FORCE

HON. ROBERT L. LEGGETT

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, September 9, 1970

Mr. LEGGETT. Mr. Speaker, in a few days in San Francisco, the 60th Aerial Port Squadron of Travis Air Force Base in my congressional district will officially be presented the U.S. Air Force Award as "the outstanding aerial port squadron in the U.S. Air Force."

Col. Charles A. Neundorf and Chief M. Sgt. John Breen are certainly to be congratulated for their outstanding logistics management.

I would include in the RECORD at this point a story from the Vacaville, Calif., Reporter which points up the world record accomplishments of the "60th of Travis":

TRAVIS PORT SQUADRON—"BEST IN AIR FORCE"

TRAVIS AFB.—Selection of Travis Air Force Base's 60th Aerial Port Squadron as "the outstanding aerial port squadron in the Air Force" was announced this week by General Jack J. Catton, commander of the Military Airlift Command (MAC).

The command earlier picked the Travis port as best in MAC, enabling the squadron to be judged in Air Force world wide competition, where it was named winner in the outstanding aerial port category. Presentation of the USAF award will be a highlight of the National Defense Transportation Association convention to be held next month in San Francisco.

The 22nd Air Force commander, Major General William G. Moore, Jr., said, "May I join MAC by extending my personal congratulations and appreciation to the 60th Military Airlift Wing and the 60th Aerial Port Squadron for this outstanding accomplishment."

Brigadier General John H. Germeraad, the wing commander, congratulated members of the aerial port squadron and other personnel of the 60th Military Airlift Wing who contributed to the achievement. The squadron is commanded by Colonel Charles A. Neundorf, who recently succeeded Colonel Clayton J. Johnson.

A succession of achievements in both 1969 and 1970 led the base's aerial port unit to its latest award. Long accustomed to handling the bulk of passenger and cargo traffic routed through military airports in the continental United States, the squadron notched an all-time high in passenger volume for the month of July, 1969, when a total of 127,321 people were processed through the Travis port.

The distinguished visitors lounge alone served 18,836 travelers, including dependents of servicemen killed overseas, released prisoners of war, USO entertainers, and dignitaries including Vice President Spiro T. Agnew, Julie Nixon Eisenhower, and Secretary of State William P. Rogers.

In the area of cargo airlift, pallet utilization on Logair missions was nearly doubled, increasing from 60 to 99 per cent. The wing unit was chosen for tryout of a program known as "First In, First Out," or FIFO system of shipment priority. This led to the pilot data conversion for the new system and a recommendation for its adoption at other aerial ports.

The squadron earned a MAC PRIDE award for the expiditious handling of more than 6000 tons of hazardous cargo, and during the same period reduced delays on passenger flights to one for every 3000 aircraft handled.

A sub-unit of the squadron, its combat operations section gained recognition for enhancing the command tactical image and building interservice teamwork. The unit directed airdrops for 2,600,000 pounds of cargo, and completed 623 personnel jumps without a single parachute malfunction.

HUBERT H. HUMPHREY ANSWERS QUESTIONNAIRE ON FIREARMS LEGISLATION

HON. ROBERT L. F. SIKES

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, September 9, 1970

Mr. SIKES. Mr. Speaker, those who favor repeal of the reporting requirements under Federal gun control laws for .22 caliber ammunition—and there are many of us—take comfort in a response by former Vice President Hubert Humphrey to a questionnaire to candidates on firearms legislation in his State. A 1970 questionnaire submitted by the Committee for Effective Crime Control in Minneapolis contains these questions on firearms legislation:

1. Do you favor firearms registration?
2. Do you favor the requirement of an owner's license to possess a firearm?
3. What restrictions, if any, would you place on the ownership of handguns by law-abiding sportsmen and citizens?
4. What restrictions, if any, would you place on ammunition for firearms?
5. Do you favor repeal or amendment of the Gun Control Act of 1968? Why?
6. What additional firearms legislation, if any, do you believe should be enacted on the federal level?
7. If you wish, please add comments on your record or comments of a general nature.

Mr. Humphrey, now a candidate for the Senate, answered in the following manner:

Hubert H. Humphrey (Democrat) (Waverly, Mn. 55390).

RESPONSES:

"1. No. 2. No. 3. None. 4. I am in favor of repeal of the registration of rifle and shotgun ammunition and I believe that that repeal should now be extended to ammunition for the .22 rifles. 5. I have indicated that I favor certain amendments to the Gun Control Act of 1968 in my answer to question 4. However, I believe that before we give serious consideration to either a major amendment or repeal of the Gun Control Act of 1968, that we need more experience in operating under the act to determine its advantages and deficiencies. 6. and 7. In the past, particularly during the emotional period following the tragic deaths of Martin Luther King and Senator Robert Kennedy, many restrictions and limitations were proposed on the use and ownership of guns and ammunition. I supported some of these at that time. Since then, based on reflection and careful consideration of present existing federal legislation and more recent data, I have come to certain other conclusions.

First, I must stress that I am now and always have been vigorously opposed to any sort of federal confiscation of firearms possessed or owned by law-abiding citizens and sportsmen.

I would not support any federal legislation that could lead to confiscation.

I would insist that safeguards against confiscation be written into any federal law dealing with arms in America. With that ironclad proviso understood, if elected to the Senate, I would carefully consider and examine with an open mind several options concerning hand-guns only.

If it could be demonstrated to me conclusively that some form of registration law for hand-guns only would reduce the coincidence of crime in America, I would consider voting for such legislation.

If the weight of evidence indicated that local option "permit-to-carry" hand-gun laws would more rationally serve to reduce crime in America, I would support that alternative.

If the weight of evidence showed that hand-gun registration law would not effectively reduce crime, I would be content to let present laws stand, with the exceptions that I have noted in answering the prior questions.

Finally, as my friends all know, I am an avid and an active sportsman. I was raised in the midst of bird country in South Dakota—Doland—and grew up with guns and hunting. Likewise, I enjoy trap and skeet shooting. My wife, three sons and son-in-law are all hunters. We, like so many others, do not want any law or legislation which would deny us the opportunity to own and use our guns for purposes of recreation, hunting, or sports club shooting.

This is a distinct about-face for the former Vice President. It will be recalled that he was a strong advocate of harsh antigun laws during his tenure as Vice President. It is refreshing to note that he has now joined forces with those who believe law-abiding Americans have a right to possess firearms.

SKILLFUL JOB BY NIXON

HON. JOHN B. ANDERSON

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, September 9, 1970

Mr. ANDERSON of Illinois. Mr. Speaker, with the concern of the Nation and of the world on the situation in the Middle East, we are all grateful that steps, no matter how tenuous, have been taken toward peace. We are all hopeful that the Arabs and the Israelis will abide by the ceasefire and that meaningful talks will take place.

In a "Skillful Job by Nixon," the Des Moines Register recognizes the role

played by the President in bringing these nations to the conference table. I include this editorial in the RECORD:

SKILLFUL JOB BY NIXON

"Though it should not be forgotten that any common thinking between the United States and Russia on the Middle East is the artificial and fragile product of a local war that is getting out of hand, the evidence of Russia's present readiness for a settlement is too strong to miss the chance of trying to build on it," said the London Economist last week.

One reason for believing the Soviet Union is serious about Mideast peace is the fact that the orthodox Israeli Communist party, Rakach, as well as another Communist group in Israel, came out in favor of the cease-fire.

The continuing hostility between China and Russia, the pressing demands for internal economic reform in Russia and, most important, the danger of nuclear war with the U.S., apparently have led the Russians to an "understanding" with America on the Mideast.

No one should be euphoric about this arrangement, which is tenuous, and which may not lead to real peace. But it is a large improvement over the situation which existed before, and President Richard M. Nixon deserves credit for a skillful piece of diplomacy in bringing the countries to this stage.

Nixon kept his nerve and his poise during weeks of inordinate pressure on him from Israel and American Zionists to provide more warplanes to the embattled Israelis. He stood fast, while evidence accumulated that the Russians were stepping up their arms aid to Egypt and increasing the number of Russian military advisers. He did not lose his sense of balance when the evidence was clear that Russian soldiers were taking part in the defense against Israeli air attacks.

Nixon prides himself on his experience and understanding of foreign affairs. On the basis of the performance of his Administration in the Mideast crisis so far, we believe this pride is justified. Nixon, Secretary of State Rogers and White House Adviser Henry Kissinger together evidently made a good appraisal of Russian positions and actions. Their use of intelligence reports and diplomatic contacts showed a mastery of the art of foreign relations.

In accomplishing the cease-fire and bringing the warring parties to the verge of negotiations, Nixon has not abandoned Israel to the wolves. He holds in reserve the capacity and willingness to provide Israel with the weapons which will maintain the balance of power in the Mideast. This has been the Administration's stand all along.

But he has been able to check the bombing and the artillery fire across the Suez canal for a time at least to make another try for peace.

ABM SYSTEM TESTED

HON. JEFFERY COHELAN

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, September 9, 1970

Mr. COHELAN. Mr. Speaker, last week with predictable fanfare, the Department of Defense announced the ABM system worked. When the entire statement was analyzed a clearer picture emerged—one ICBM aimed over the test island was intercepted, well no, passed close enough to be considered intercepted. Unfortunately, the announcement left some conspicuous voids.

First, the "one on one" situation of the test will not be replicated in the strategic situation that is anticipated for use of the ABM—numerous missiles and decoys. The forte of the ABM is supposed to be the ability to discriminate between real warheads and the decoys and chaff. As I have pointed out on numerous occasions, the entire system—the two sets of missiles—Sprites and Spartans—the two sets of radars and a yet to be completed computer and computer program that is to coordinate this weapons system—is not near operational status.

Second, should the system become operational—something that is extremely doubtful—the system could be overwhelmed by the existing Soviet arsenal, a fact admitted by none other than the Secretary of Defense Melvin Laird.

The continuation of the debate over the ABM even with the new variation of "bargaining chip"—still bespeaks a considerable amount of unnecessary expenditures. I have never opposed continued testing of the system, but I have been consistent in my opposition to premature deployment.

My position is based not only on my intensive personal studying of the issues but my early involvement in the early 1960's when as a member of the Research Subcommittee of the Armed Services Committee, I investigated the Nike-Zeus program, an early predecessor of the current ABM. At that time, there was extreme pressure to go ahead with deployment of the Nike system and only through pressure from the Congress, reinforcing elements within DOD that such a rash decision was avoided.

Central to all decisions about strategic weaponry, and the ABM in particular, as the underlying assumptions about the current strategic balance. Most strategic planners agree that the current stability is based on mutual deterrence—mutual fear if you will. The central assumption is that one nation would not launch a preemptive first strike—unless that strike would not allow the opponent to sustain it and deliver a second strike that would inflict unacceptable damages on the initiator of the conflict. Currently both the United States and the U.S.S.R. operate under the assumption that each has a second strike capability. The current balance of terror is still the underlying reason for the strategic balance.

To go ahead with complex defensive systems or with quantitative increases in offensive missiles leads to costly and increased expenditures with little increase in security. Indeed this could result in the perception assymmetry.

It is for this reason that I have followed the SALT talks with the hope that some rationality in strategic weaponry can be interjected. Still it is difficult, if not impossible, to see how the deployment of the ABM is a bargaining chip—when it is more logical to assume that the Soviets would be impressed with a system that works.

The New York Times had a recent editorial on the test of the Spartan missile. I commend it to the readers of the RECORD:

SALESMANSHIP FOR SAFEGUARD

The Pentagon announcement, replete with photographs, of the first interception of an intercontinental ballistic missile (ICBM) by the Spartan antimissile missile undoubtedly gave some newspaper readers this week the impression that an important forward step in nuclear defense had been taken. The feat appeared to constitute new evidence that the controversial Safeguard antiballistic missile (ABM) system would work. Unfortunately, there is no warrant for the impression that the development is either new or dependable proof of the Spartan's effectiveness.

An almost identical diagram, showing an ICBM fired from Vandenberg Air Force Base in California being intercepted over the Pacific appeared on page one of The New York Times on July 20, 1962, above a news story which said:

"WASHINGTON, July 19.—The Army's Nike Zeus defense missile intercepted the nose cone of an Atlas intercontinental ballistic missile today high over Kwajalein Island in the Pacific. It marked the first time that an intercontinental missile had been intercepted by a United States antimissile missile."

This was a real "first," eight years ago. Yet, even then, it was not especially remarkable. Earlier that year, Defense Secretary McNamara had told a Senate committee that the interception could be virtually guaranteed because "it is such a simple test." Ultimately, after the Nike Zeus had intercepted target re-entry vehicles in ten out of fourteen tests, it was abandoned as inadequate. It could not discriminate between warheads and decoys in a mass attack.

Safeguard, by contrast, is being deployed before adequate test. That is one of its more controversial aspects. The long-range Spartan antimissile, which has had eleven successes in fifteen shots, is better than Nike Zeus, but no more able to distinguish warheads from decoys. The more important, short-range Sprint antimissile—designed for high-speed close-in interception after the atmosphere has separated decoys from warheads—has had only 22 successes in 41 tests.

True, nobody has ever doubted that Spartan and Sprint antimissiles can eventually be made to work. The technical controversy about Safeguard centers on whether the system as a whole will achieve what has been claimed for it. Several former Presidential science advisers have warned of the danger of "catastrophic failure" of the whole system the first—and only—time it is used in anger. Neither the giant computers nor, more important, the "software" data to be fed into them have been constructed or tested in the immensely complex task of large-scale missile defense.

The radar, opponents assert, is above ground and vulnerable to direct attack as well as to blackout from nuclear explosions. Moreover, any ABM system can be overwhelmed if the missiles shot at it in salvo outnumber the antimissiles it can fire in response, a danger that will grow in the era of offensive missiles with MIRV multiple warheads.

In any case, the more important arguments against Safeguard are not technical at all. A more stable Soviet-American nuclear balance and a safer world can be achieved if, instead of building light ABM systems on both sides, the two superpowers agree to abandon ABMs entirely—a course mentioned by both sides in the preliminary rounds of the strategic arms limitations talks (SALT), but not pursued vigorously by either. Even if such an agreement cannot be reached, there are serious reasons to doubt that Safeguard deployment will be a wise or effective step. The Kwajalein test last week, despite its Pentagon build-up, answers none of these doubts.

COMMUNIST PARTY, NOT JUST ANOTHER POLITICAL PARTY

HON. JOHN G. SCHMITZ

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, September 9, 1970

Mr. SCHMITZ. Mr. Speaker, Angela Davis, an admitted member of the Communist Party of the United States of America—CPUSA—and darling of the liberal press, is now on the FBI's 10-most-wanted list. She is charged with first degree murder in the vicious killing of Judge Harold Haley. Miss Davis' action has once again brought to light the true nature of the Communist Party so aptly characterized by Whittaker Chamber's in his superb book "Witness."

The Communist Party despite occasional pious statements to the contrary, is a terrorist organization.

Many older Americans have forgotten what the party actually is and many young Americans were never taught about it in the first place. Most of us have not seen the numerous slaughters which have taken place at the hands of the various Communist parties. We have not witnessed, except ocasionally through some reference in the press, the massacres of Crimean Tartars, the Volga Germans, the Kulaks, the Polish officer corps in Katyn Forest, the Hungarian Freedom Fighters, the Chinese people, the Tibetan people, the North Vietnamese people in 1954–57, the South Vietnamese people currently underway, or any of the other appalling acts of Communist carnage. Dr. Stefan Possony, senior fellow at the Hoover Institute, estimates that there have been at least 100 million deaths, directly or indirectly attributable to the Communist drive for global conquest. Today the terror is with us at home.

To protect the citizens of the United States from the fate which has befallen so many others, we need two different but complementary systems. We need a strategic defense system opposing the military might of the material and directing base of the Communist parties, the Soviet Union. We also need an internal systerm opposing the military party of the Soviet Union, the CPUSA. Neither defense system is adequate without the other.

Since many Americans have forgotten what the Communist Party is, I am reproducing here several of the findings of the U.S. Congress adduced after 4 years of the most intensive study and consideration. These findings are written into law and form the base of the Subversive Activities Control Act of 1950.

SEC. 781. Congressional findings of necessity.

(1) There exists a world Communist movement which, in its origins, its development, and its present practice, is a world-wide revolutionary movement whose purpose it is by treachery, deceit, infiltration into other groups (governmental and otherwise), espionage, sabotage, terrorism, and any other means deemed necessary, to establish a Communist totalitarian dictatorship in the countries throughout the world through the medium of a world-wide Communist organization.

(2) The establishment of a totalitarian dictatorship in any country results in the suppression of all opposition to the party in power . . . and results in the maintenance of control over the people through fear, terrorism and brutality.

(4) The direction and control of the world Communist movement is vested in and exercised by the Communist dictatorship of a foreign country.

(9) In the United States those individuals who knowingly and wilfully participate in the world Communist movement, when they so participate, in effect repudiate their allegiance to the United States, and in effect transfer their allegiance to the foreign country in which is vested the direction and control of the world Communist movement.

(15) . . . The Communist organization in the United States . . . and the nature and control of the world Communist movement itself, present a clear and present danger to the security of the United States and to the existence of free American institutions, and make it necessary that Congress . . . enact appropriate legislation . . . designed to prevent it from accomplishing its purpose in the United States.

Many of the most essential provisions of law which followed this congressional finding have been knocked down over the years by misguided Supreme Court decisions. Disintegration of our society has closely paralleled the undermining of all our internal security laws. It is essential that we erect these barriers again in our own defense. There is presently a bill in the Senate Judiciary Committe, S. 12, cosponsored by Senator MURPHY, which would go a long way toward filling the gaps which have been created in our internal defense system. Without strong public sentiment manifested for this bill, it will never be passed.

RHODESIA IS ALIVE AND WELL

HON. ODIN LANGEN

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, September 9, 1970

Mr. LANGEN. Mr. Speaker, there are unfortunately many misconceptions about Rhodesia. In recent weeks I have attempted to dispel some of these myths. Rhodesia is not "a threat to world peace." She plans to conquer no one nor declare war on any State. She is not trying to subvert the governments of other Nations. She is neither backward nor isolated as some wrongly believe. To shed additional light on this subject, I am inserting at this time into the RECORD a newsletter by the Friends of Rhodesian Independence. Their observations make for some interesting reading:

ANTI-RHODESIA SANCTIONS TOTAL FAILURE—NEW NATION BOOMING AND FUTURE SECURE

For nearly five years Rhodesia has been the object of intense persecution intended to bring down her independent government. Several British frigates have patrolled the East African coast during that time to enforce the sanctions. Britain even refuses to honor Rhodesian postage stamps—a petty and clearly illegal position equal to her vindictive and bald piracy in regard to Rhodesian property.

A few examples of the total failure of sanctions are easily provided:

In 1969 total earnings from employment of Rhodesia's 235,000 Whites and 4,800,000 Blacks rose by 9% from 461 million to 502 million Rhodesian dollars. (An American dollar is worth 70 Rhodesian cents.)

Average annual earnings of Blacks increased by 3.5% last year and for Whites, Asiatics and mixed races increased by 5%. The disparity points to the low profitability of agriculture and mining—the two industries hurt most by sanctions; thus it is evident that sanctions have hurt most the race they were supposedly invoked to assist!

In 1969 the Gross National Product of Rhodesia jumped 14%—the best jump of any year since 1956.

For the first time since sanctions were imposed in 1965, Rhodesian exports increased in 1969—by a full 23% over 1968.

Insulation from the failing economy of the West has resulted in far slower inflation and lower interest rates than are to be found in the United States.

Almost anything can be purchased in Rhodesia, usually at prices under those in the U.S. Unlimited quantities of gasoline are available. Most goods for sale are manufactured in Rhodesia, including such unlikely items as potato chips, dog food and matches. The country is virtually self-sufficient.

WILD WEST IN MINI-SKIRTS

Rhodesia today resembles nothing so much as the American West of a hundred years ago. There are fantastic reaches of virgin land; incredible untapped natural resources; new cities springing up and wild beasts and friendly natives aplenty. Fitting in perfectly with this vast potential of wealth is a highly intelligent and determined race of pioneers ready to fight to the death for their land.

This is the greatest resource of all in Rhodesia: its people. Mostly of English stock, they have retained the best of their heritage and represent the best of their race. They are a handsome Nordic breed; a self-willed, good-living, friendly people who would not tolerate a low standard of living for themselves any more than their stylish women would wear a low hemline.

Their kids are healthy, disciplined, well-scrubbed and wear pert uniforms and short hair to school. The decadent influences which are destroying a generation in America, England and other Western nations are harder to find in Rhodesia. Drugs and pornography are suppressed.

The Rhodesians are both ready and able (one would say almost eager) to defend their way of life; make no mistake about it. The clear and present danger to their survival has honed in them a proper will to survive; this is their greatest asset and their enemies' greatest obstacle.

Should Rhodesia be invaded, the invader would be confronted by at least 60,000 trained, tough fighting men capable of forcing the highest price for their land. About half of this defense force would be Black. And of course thousands of South African and Portuguese volunteers and, for that matter, volunteers from all over the world, including America, would rally to the defense of this noble little country. Any invader had better have at least a quarter of a million well-trained and equipped troops. The dreams of such sinister outfits as the tax-exempt Carnegie Foundation for International Peace that the job can be done for less are a delusion of wishful thinking.

Hastings Banda, leader of Malawi, one of the Black African states friendly to Rhodesia, says, "There is not a single state in Africa which can raise an army to face the army of South Africa—even to face the army of Rhodesia alone." This is a fact dismal to the communists and liberals but which they may as well accept. Rhodesia is definitely on the map to stay, even if the bigoted establish-

ment press and the corrupt governments of the West refuse to acknowledge it.

In fact, it is generally agreed that, if it wished, Rhodesia could eliminate its neighboring communist state of Zambia in a two-week campaign. But Rhodesia already has more than its share of Blacks.

THERE ARE PROBLEMS

Rhodesia, of course, has problems but they are not the ones that the liberals eagerly hawk to the suckers who believe the mendacious "free press" in America. Perhaps Rhodesia's most minor problem is a shortage of capital—but a slower pace of development can only, over the long run, help a sound expansion. Her rulers had best be careful about who they accept capital from and should count their blessings in that Rhodesians, thanks to sanctions, have the opportunity to retain control of their natural resources and industries.

Externally a great problem has recently come to light with the large-scale incursion of Red China into central Africa. This important news has been totally suppressed in America. The Chinese Reds are not only training Black guerrillas in Tanzania, allegedly to be used to drive the White man from Africa, but they are building a 1,500-mile railroad from Dar-Es-Salaam (Tanzania) to Ndola (Zambia). The highly efficient Rhodesian intelligence service estimates that at least 10,000 Chinese have already been brought into Tanzania and Zambia to work on this project and more are arriving every day. Rumor has it that as one compensation for building the railroad the yellow Reds are to receive a land grant of one mile on both sides of the track.

This, as well as much additional evidence of Chinese interest in central Africa, poses a serious problem not only to White Rhodesians but also to all Black Africans, for the Chinese can have only one aim in view—settlement of their surplus population through colonization. And this—if they are successful—will certainly mean extermination of those who occupy land they covet. Chinese have no earthly use for Black labor.

GREATEST PROBLEM

By far the most pressing problem facing Rhodesia is, of course, race. This is a problem bound to get worse as times goes by. It is not that relations between the races are bad; they are, in fact, quite good—far better, for example, than in the United States. The problem is really for the future and can be appreciated by comprehending the relative disparity in population increase. Because of the very generous and humanitarian treatment of the Blacks by the Whites the African population is increasing by 3.4% per year whereas the White population is increasing by less than 1%. White immigration is unlikely to solve the problem for the short run and cannot for the long run and although taxes today are much easier on Rhodesians than they are on Americans (Rhodesian taxes were *lowered* last year) eventually a welfare problem can develop which will even make the gargantuan American dole seem puny by comparison.

THE ENEMY WITHIN

A problem in some respects even greater than the race problem is the possibility of Rhodesia's capture by the international bankers. The *Herald*, Salisbury's big daily, is owned by the Argus group, the London-based publisher whose Leftist-oriented papers (with one exception they own the English-language papers in South Africa) compare to the worst that America has to offer.

But the *Herald* is not as important in the Leftist scheme as are certain international financiers. Operating in flamboyant style in Rhodesia is the Anglo-American Corporation, one of H. F. Oppenheimer's innumerable fronts. The enigmatic Oppenheimer is playing for big stakes. A confirmed Leftist who financially backs Leftist and world government causes, Oppenheimer is one of the top international capitalists in the world. His vast wealth includes a monopoly on the S.A. diamond mines, 41% of all gold mining in S.A. and great holdings in all other minerals found in the rich deposits of southern Africa, as well as virtually every other industry of the area.

Cheap labor is what Oppenheimer craves and he finds a liberal, do-good pose convenient for this as well as to mask his sinister international connections. Oppenheimer and his breed are no friends of Rhodesia and if they gain the upper hand—or even a great amount of influence, such as they have attained in S.A. under Vorster, Rhodesia's survival will be made more difficult. Not all Rhodesians recognize this threat; indeed, they welcome the capital that Oppenheimer has to invest. He is presently buying up many of the mines that were closed by the sanctions, presumably at reasonable prices. No wonder that, as a loyal elder in the international council, he approves of sanctions. What better way can there be to lower the prices of mines and raise the price of their products? The practical Rhodesians realize that marketing "illegal" minerals is no problem for the man who controls the markets. And the fact is that Rhodesian chrome, lead, copper, etc. mines are operating at full blast. The only practical effect of sanctions in regard to chrome, for example, is that sanctions have increased its price by $10 per ton. Oppenheimer cannot be unhappy at that.

THE BIG PICTURE

The most vivid impression that many Americans will derive from the Rhodesian panorama is that if Americans in general were as aware of the threats to their survival as are the Rhodesians, America could certainly survive. In fact, it is not at all improbable that Rhodesia and South Africa—composed of men and women who *realize* that they are fighting a war for their survival—will outlast an America composed in good part of the unaware and apathetic. An event which could trigger the final fall of America, Britain, France and most other nations in the world—an international money crisis—would find Rhodesia and S.A. relatively secure in their splendid isolation, their currencies backed by gold and their economies unneeding of what the rest of the West has to offer. In such an extremity—which seems only a matter of time—Rhodesia and South Africa would emerge as a major power bloc.

TOURS ARE IMPORTANT

It is well for people of the United States to have an understanding of Rhodesia and South Africa free of the lying bias of the "free press" and the opposite is also true. The best way this can be accomplished is through the National Coordinating Committee, Friends of Rhodesian Independence, which has now announced that it is expanding its program of tours. One may read endlessly of the friendliness and generosity of the Rhodesian people; of the breathtaking and stupendous magnificence of Victoria Falls; of the thrill of seeing hundreds of wild game *au natural* in the 5,000-square mile Wankie Park; of the clear Rhodesian nights and wonderful climate; but only by a visit there can one really comprehend its reality. As for the Rhodesians, visits from sympathetic Americans are wonderfully invigorating, giving rout as such visits do to the lies spread by their own few hawkers of despair. They will tell you how much their American friends do for their morale. As a more practical matter, tours provide some American exchange, which is much sought after for purposes of trade.

WHAT MY COUNTRY'S FLAG MEANS TO ME

HON. DURWARD G. HALL

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Wednesday, September 9, 1970

Mr. HALL. Mr. Speaker, recently, Mr. and Mrs. Bob Dee, publishers of the Greenfield, Mo., Vedette newspaper, conducted an essay contest on the subject, "What My Country's Flag Means to Me." The readers of the newspaper were invited to enter the contest. When the essays were received, they were printed in the Vedette and the winners selected by a vote of the paper's readership.

I commend Mr. and Mrs. Dee for their desire to encourage respect for our national emblem, and to use their newspaper as an outlet for the people of Dade County to express their own personal feelings.

The following six essays were judged to be the winners in the Greenfield Vedette essay contest:

[First Place Under 18—Miss Deann Hargis, Greenfield, Mo.]

The American Flag is an emblem of a living country for which I have great respect and reverence. It represents the highest ideals of individual liberty, justice and equal opportunity for all. Not only does it represent these, but also freedom, independence, security, protection, education, progress and prosperity.

It makes me proud to see that people respect and care as much about the flag as I do by displaying the flag at their homes and business places on holidays. That is just a few of the things the flag means to me.

Deann Hargis, Age 14, Greenfield, Mo.

[Second Place Under 18—Miss Melinda Blankenship, Dadeville, Mo.]

The flag stands for America the place where I live. The place where I can go to school and Sunday school. Where I can learn the colors of the flag are read white and blue and all of those colors are very pretty to me.

Melinda Blankenship, Age 6, Dadeville, Missouri.

[Third Place Under 18—Miss Dixie Hawks, Lockwood, Mo.]

When I think of what our country's flag means to me, I always think of Francis Scott Key, when he was composing the Star Spangled Banner, that "Long may it wave, O'er the Land of the Free, and the Home of the Brave."

We are living in times when we are having protest, strikes and riots, and our laws are weak, but I am proud that we have a law that is strict when our flag is disgraced.

To our Service men I say Thank you to fight for our country so our flag can keep flying, and when they lay down their lives for our country, they can feel proud that our National flag of red, white, and blue is presented to their family.

Dixie Hawks, Greenfield Freshman.

[First place over 18—Mrs. Maurine Davidson, So. Greenfield, Mo.]

To me our Flag means America from her humble beginning of brave men and women who gave her birth, to present America in her strength and glory. It is our heritage from those who fought, bled and died to keep us free. It is a lump in my throat and tears of pride and joy everytime I hear, "The Star Spangled Banner" or see the flag unfurled. It is anger and pity for any one who desecrates or fails to defend it. It is thankfulness to God for permitting me to

live under it's protective broad stripes and bright stars.

Maurine Davidson, over 18.

[Second place over 18—Mrs. Clyde Birch, Greenfield, Mo.]

The Stars and Stripes portray the hopes, dreams, toil and bloodshed that bought the freedom I enjoy today. In them I see the wisdom of Thomas Jefferson, the compassion of Abraham Lincoln, the valor of the Unknown Soldier. I see Faith seeking expression in a new world, Hope crossing the ocean in an emigrant ship. I see a land of plenty ready to share with a hungry world, a land of freedom willing to fight for a shackled mankind.

Our country's flag symbolizes the best that imperfect man has been able to accomplish in the history of this imperfect world.

Mrs. Clyde Birch (over 18).

[Third place Miss Connie Hawks Lockwood, Mo.]

Our country's flag is representative of the ideals which have made America the greatest nation in the world.

Our flag serves as a symbol to all men. For a foreign man it may be the symbol of a helping hand. To an enemy it may be the symbol of fear of the world's strongest armies. To the American the flag is a symbol of the privileges granted to all Americans.

With every privilege is a duty. The greatest privilege our flag offers is that of being a free citizen in a free society. Thus it becomes my personal duty to see that the flag is shown no form of disrespect. The flag grants each American the opportunity to be a good citizen. When we Americans forget the ideals represented by our flag we will no longer be free citizens in a free democracy.

Connie Hawks, Age 21.

COMMITTEE FINDS NO IMPROPRIETIES IN ORIGINAL AWARD OF CONTRACT TO GENERAL ELECTRIC

HON. R. LAWRENCE COUGHLIN

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, September 9, 1970

Mr. COUGHLIN. Mr. Speaker, a procurement competition conducted by the National Aeronautics and Space Administration for the design and construction of two applications technology satellites in April of this year resulted in the announcement of the award to the General Electric Co., Valley Forge, Pa. The other competitor, the Fairchild-Hiller Corp., Germantown, Md., protested this award.

Because of the unusual situation resulting from this protest, the Senate Permanent Subcommittee on Investigations inquired into the basic facts about the source selection, and the General Accounting Office also completed a study on the matter. The GAO concluded that established award selection procedures were not followed and that the procedures actually followed were defective.

In response to GAO's recommendation that the proposed award be reconsidered—even though no improprieties were found—Dr. Thomas O. Paine, NASA Administrator, appointed a top-level committee of NASA officials to reconsider the selection of GE for the ATS procurement.

This specially appointed committee, after considering the award, has reversed the selection and decided the contract should be awarded to the Fairchild-Hiller Corp., strictly on the subjective basis of what it feels are technical superiorities.

In taking this action, the committee clearly refuted false and erroneous charges raised by Fairchild-Hiller that price leaks and other irregularities took place. Specifically, NASA's ATS Procurement Review Committee states that the so-called technical transfusion issue had no effect and that neither firm appeared to have a significant edge as an innovator.

The committee further points out that 1 week's difference in submission time of proposals, while it may have permitted Fairchild-Hiller to reduce its bid by perhaps a few hundred thousand dollars, was not critical. It concluded, in fact, that neither company's proposed bid provided a valid discriminator in the selection of a contractor, because of the small difference in estimated costs proposed by each company.

At the same time, the review committee also states in its report of August 26, 1970, "that it is highly improbable that a cost leak of Fairchild information to GE actually occurred because of the normal security procedures employed by NASA, the very limited time in which a leak could have taken place, and the inherent difficulty of making last-minute revisions in matrixed cost proposals."

The NASA review committee, moreover, upheld the prior analysis that cost savings to NASA proposed by GE are real and are based on sound and acceptable accounting methods.

I think it appropriate that the record show clearly and irrevocably that these charges leveled against the General Electric Co., are unfounded and baseless. A respected and valued member of the industrial community, GE has participated successfully in more than 50 percent of the space programs of the United States. It has compiled an enviable and deserved reputation that should not be impugned in the heat of competition.

I feel that the accusations, while raised in good faith, were triggered in the disappointment of a lost contract bid. It is regrettable that this entire incident occurred.

The attack on GE was unwarranted. The review committee substantiates this. And the record should show this.

WHY CRIME SKYROCKETS

HON. ROBERT H. MICHEL

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, September 9, 1970

Mr. MICHEL. Mr. Speaker, while there have been some indications that the rate of increase in crime has been lessened, the harsh facts are that crime is still one of our major domestic problems. Now that the District of Columbia crime control bill has been approved, it is to be hoped that the Congress will soon take affirmative action on the balance of the administration's crime fighting proposals.

An editorial appearing in the August 30, 1970, edition of the Peoria Journal Star entitled "Why Crime Skyrockets" does an effective job in rebutting some of the excuses and rationalizations which are offered from some quarters when discussing reasons for the scandalous crime rate in this country. I ask that the editorial be placed in the RECORD at this point:

WHY CRIME SKYROCKETS

(By C. L. Dancey)

A good many people are no longer entranced by the lovely logic used to persuade them that the "crime problem is really a poverty problem," or that "the real problem is that our correctional institutions are lousy."

There are folks who want to look at everything they can find except the criminal, himself.

People generally know perfectly well that the problem of poverty is not a modern phenomenon. They know that "lousy correctional institutions" are not an invention of the Mid-Twentieth Century. They have been around—and much worse—for a long, long time.

And sky-rocketing CRIME is a modern phenomenon.

The increase in cancer has been traced to the increase in cigaret smoking. What similarly accounts for the increase in crime? What has changed comparably?

The change that has accompanied the zooming crime figures is well known to all of us and has made headlines hand-in-hand with rising violence for years.

It has been the series of legalistic ruling that have increasingly crippled police action, and increasingly crippled effective prosecution, and increasingly crippled meaningful sentences in the courts.

The "sociological" or whatever-it-is preoccupation of the courts has reverberated from the U.S. Supreme Court in Washington to the changed practices of the Police Magistrates in Peoria.

When a crime is committed, the police today have a much tougher time because they have had to be more concerned with such complications as whether a lawyer is present before they can ask a question and their own tippy-toe conduct than with finding out the facts.

When they do get evidence, they have a tough times getting the case prosecuted. State's attorneys are swamped. The "modern" rulings make it twice as difficult for them to make a case because these rulings force them to run through a maze of obstacles while opening broad highways and great freedom of action to the defense.

When they do prosecute, they have a tough time getting a conviction in court because so many trials have become a game of seeking technical gimmicks out of the vast selection provided in past court decisions whereby a fellow can escape justice without bothering about the facts as to guilt or innocence.

Then, when there is a conviction, it is hard to get a penalty that amounts to anything.

The Supreme Court flinches from its solemn duty when that duty is harsh—and finds any gimmicky excuse in sight to overturn the death penalty, for example.

The lower courts flinch, in turn, from those matters where duty is harsh and express and act with more sympathy to the present predicament of the criminal before

them in court than to the actual and innocent past victim of the crime—or future victims, either one. (After all, the crime itself takes place outside the judge's presence, and doesn't "touch" him as deeply as the caught criminal now "in trouble.")

This isn't a pleasant way to look at the situation, and we live in an era where many people insist that we have become so enlightened and so clever that we can always find a pleasant way to solve problems.

But, it seems to us, the "contrived explanations" about the "root causes" of crime simply are not theories or conclusions that are consistent with the physical evidence.

The increased handicaps and complications placed in the way of police, prosecution and punishment as related to the accompanying rise in crime IS consistent in terms of fitting the physical evidence.

It is basic in law, we thought, that relating the theory of the crime to the physical evidence is the best test of truth—not the ingenuity or oratorical skill of the lawyer in closing argument.

How about applying such principles to these theories of what causes the increase in crime—and applying them in a re-examination of many of the new "principles" and practices that have been instituted?

Most of them, it seems to us, were introduced to solve imaginary problems that didn't exist, while exacerbating the massive problems that DO exist and ARE growing!

Let's make our theories follow the physical evidence for a change.

VINCE LOMBARDI

HON. JOHN W. BYRNES

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, September 9, 1970

Mr. BYRNES of Wisconsin. Mr. Speaker, we are all saddened at the loss of Vince Lombardi, especially the people of the Green Bay area who knew him so well.

As is well known, Vince Lombardi took over the Green Bay Packers at their lowest ebb and rebuilt them into the most successful professional football team in history.

However, as is pointed out in the following editorial from the September 3 issue of the Green Bay Press-Gazette, the people of Green Bay remember and appreciate Vince Lombardi for more than his football genius:

THE LIVING LOMBARDI LEGEND

The untimely death of Vince Lombardi in the prime of his career as a professional football coach and business administrator takes from the sports scene one of its most dynamic and colorful personalities.

Although his death was not unexpected because of the well-founded but unofficial reports of his deteriorating physical condition following two operations, it still came as a shock. Those who have followed Mr. Lombardi's career certainly felt that here was a man of indomitable will who just would not be felled by a physical ailment. And yet his final illness came with devastating and relentless suddenness and to a man who had so prized physical fitness in himself as well as others.

The details of Mr. Lombardi's success in his chosen vocation are well enough known to require no detailed repetition here. Above and beyond that record, however, was the motivating force, the man's philosophy, which must be equally remembered for its impact on those around him as well as those who did not directly come within that sphere. That philosophy centered on man's striving for perfection within himself. Mr. Lombardi saw failures along the road toward that goal as prods to success, but he recognized success as having its own built-in obstacles toward the effort and dedication necessary to prevent backsliding.

Mr. Lombardi was a hard taskmaster on the football field because he saw no other way to win. He could understand human failures while demanding perfection. He often was less critical when failures occurred than when success was achieved through less than the complete use of an individual's talents whose complete fulfillment he saw as an obligation. The one human failure he could not forgive was shirking from dedication to reach a goal, even one which seemed beyond human reach.

"Football teaches that work and sacrifice, perseverance and competitiveness, selflessness and respect for authority are the things one must possess if he is to achieve," he frequently said. He saw those qualities also as necessary in man's day-to-day life and as national goals. In evaluating today's national problems he said that "the struggle America faces today is a struggle for the hearts and souls and minds of men" in that "we must walk the tightrope between the consent we must receive and the control we must exert" in accepting the exercise of authority rather than its condemnation.

It was during his coaching tenure in Green Bay that Mr. Lombardi put to the test his belief that loyalty, teamwork, Spartanism with sacrifices and what he called "heart power, not hate power" were the touchstones to success. The result: in nine seasons as head coach, Mr. Lombardi led the Packers to five league championships and two Super Bowl championships. What is sometimes forgotten about him in those successes in football is that he also participated as a leader in many fund-raising efforts for charitable, health and educational organizations. He brought to such participation the same all-out effort which marked his coaching genius.

Green Bay has good reason to be thankful to Mr. Lombardi for taking the Packers from the bottom of the NFL to the heights which may never be matched again by any team in the continuity of their success. In turn, Green Bay provided him with a glittering opportunity to put into practice all of the tenets of his philosophy which he had shaped during his many years as a high school, college and professional coach, primarily as an assistant.

A legend in life, Mr Lombardi will go down in the history of professional football as one of its greatest coaches and administrators. Just as significant will be the influence he had beyond the football field in his constant emphasis on and the need for man to exercise to the fullest the virtues of loyalty, effort, dedication, appreciation for the dignity of the individual and respect for authority properly and validly exercised.

The man has died but the Lombardi legend will live.

CARLISLE SENIOR HIGH SCHOOL BAND A CREDIT TO THE UNITED STATES

HON. GEORGE A. GOODLING

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, September 9, 1970

Mr. GOODLING. Mr. Speaker, on a previous occasion I took the floor of the House of Representatives to advise this body that the Carlisle Senior High School Band of Carlisle, Pa., had, in late July, won the high distinction of being declared the champions of the World Music Competition held at Kerkrade, Netherlands.

This superior performance of the Carlisle Senior High School Band has won the applause and commendation of hosts throughout the land, and I would like to insert into the CONGRESSIONAL RECORD an extract from the Evening Sentinel, Carlisle, which summarizes the accomplishments of this band during its performance at Kerkrade.

In addition, I would also like to insert into the CONGRESSIONAL RECORD copies of telegrams sent to the band by President Richard Nixon and Governor of the State of Pennsylvania Raymond P. Shafer.

The Carlisle Senior High School Band is a credit to the United States, the State of Pennsylvania, the city of Carlisle, and to the youth of America. Hats off to a superb musical organization.

The material follows:

CARLISLE HIGH BAND WINS FIRST PLACE

The award-winning Carlisle Senior High School Band has won many laurels over the past years, but an announcement received here over the weekend appears to be the climax to any award yet earned by the local group.

Directed by Clyde M. Barr, the CHS Band walked off with three first places, two with honors, in thier divisions at the World Music Festival in Kerkrade, The Netherlands, over the weekend.

This is the competition to which the band has directed its attentions during almost a year of planning, and for which they initiated a successful $70,000 fund campaign.

The band participated in the contest at Kerkrade both Saturday and Sunday and the news of the top awards brought far-reaching acclaim throughout the entire Carlisle district.

EARN HIGH POINTS

On Saturday, the CHS band earned 325 of 360 possible points for its initial first place with honors in the concert division. Before the band left last week, the concert division was felt by many to be the weakest portion of the band's repertoire.

In obtaining 214½ of 240 points, the band received first place in the parade division yesterday.

The second first place with honors was garnered by the high school band when it earned 175½ of 180 points in the show division. The show division is like a football half-time program.

A festival judge told Kurt Wilson, news correspondent with the band, that the show division total is the highest number of points ever recorded in the world music festival's history.

THE WHITE HOUSE,
Washington, August 5, 1970.

Mr. CLYDE M. BARR,
Band Director, Carlisle Senior High School, Carlisle, Pa.

DEAR MR. BARR: The Carlisle Senior High School Band's brilliant success at the World Musical Festival must surely be as gratifying to you and to all of the citizens of Carlisle as it is to me. The triumphs that matter are never easy ones, and you and your students deserve a warm round of applause from all of us for your achievements against the strongest competition. I would like to add my congratulations to the many others you and the Band will be receiving in the days ahead.

With every good wish to you and to each member of the Band.

Sincerely,

RICHARD NIXON.

COMMONWEALTH OF PENNSYLVANIA,
GOVERNOR'S OFFICE,
Harrisburg, August 22, 1970.

The Carlisle High School Marching Band,
Carlisle, Pa.

GREETINGS:

Your outstanding success in international competition has been brought to my attention and I want to extend congratulations on winning three top prizes!

Your fine performances in the music festival and concert tour have brought much credit to Carlisle and to our Commonwealth. You have also brought much credit to your generation and have helped to show the world that, like you, the vast majority of young Americans are useful and productive citizens.

I know that the many months of preparing for the trip and then seeing it come to fruition, followed by the distinguished honors you have received, are things you will always remember with pride and satisfaction.

Welcome home.

RAYMOND P. SHAFER,
Governor.

THE RAPE OF THE GOOD EARTH

HON. JOHN L. McMILLAN

OF SOUTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, September 9, 1970

Mr. McMILLAN. Mr. Speaker, I take great pleasure and pride in having an opportunity to insert in the CONGRESSIONAL RECORD a copy of a sermon recently delivered by Dr. S. George Lovell, pastor of the First Baptist Church, Conway, S.C.

I know that all the Members of the House are interested in soil conservation and we continuously use our best efforts to protect our soil.

Of course, we are interested in environment and pollution which ties in with soil conservation.

I hope every Member of the House will take a few minutes of their valuable time to read the sermon delivered on May 14, 1970, by one of the most distinguished Baptist ministers in the United States.

Dr. Lovell has traveled widely throughout our country and is well prepared to speak on this subject.

The sermon follows:

THE RAPE OF THE GOOD EARTH

It is reported that one of our astronauts from outer space, looking at the bleak, waterless, lifeless wasteland of the moon and then looking back at the green-blue verdant beauty of the earth said to his companion, "It is sad to think that that lovely planet with all its life-giving beauty is being raped, ravished, and ruined by the insatiable greed of sinful man."

This is Soil Conservation Sunday throughout the land and the churches have been called upon by the Soil Conservation Service to call to the attention of our people that life on this planet can be destroyed not only by the quick flash of a nuclear blast but also by much slower and much more cruel methods: the slow starvation of a human race that didn't have gumption enough to conserve, build up and pass on to unborn generations the stuff on which all life depends: the "good earth."

In recent months the attention of the nation has been called to the necessity of saving our environment. College students, high school students and other interested citizens throughout the land a few weeks ago held rallies over the country in observance of "Earth Day." This renewed interest in the earth has been brought urgently to our attention by experts on the subject who tell us that unless we reverse the trend of pollution, erosion, and destruction of our environment, we have only about thirty more years to survive. We are grateful to those people of insight and dedication who are trying to arouse public interest in the salvation of the earth. After all, from what the astronauts tell us, this is about all we have to live on. There is nothing "out there" that even gives promise of sustaining human life. We are prisoners on this little planet called earth; it is getting more crowded every day and more polluted too, and we had better take serious action to save it—now. Or else, there won't be any need for a nuclar war. In a few years we will all be dead in our own garbage.

Now I know that sounds over-stated and you can accuse me of being an alarmist if you want to. I am but passing on to you what is being said by knowledgeable people who ought to know what's going on. The Soil Conservation Service has ben saying this for years but nobody paid much attention. Now, there seems to be at least a disposition to hear and I hope, to heed. It is a case of survival.

There are some who say "It could never happen here." Well, all we can say is, it has happened in the past. It has happened to people who were as highly civilized as we are. And they were warned and did not heed. And we don't seem to be able to learn from history.

Have you ever wondered why the great cities and vast populations of the Bible Lands no longer exist? Why the archeologists are not digging up these cities from beneath the dust and rubble of a thousand ages? In 1939 the United States government asked this question and sent one of our leading soil scientists to find out. Dr. Walter C. Lowdermilk and his party found Mesopotamia, the rich cradle of civilization, literally covered with ranges of silt and garbage piled beside the ancient irrigation ditches. Great cities were buried deep beneath the blown sand and eroded soil. An entire civilization, dead and buried by the greed and shortsightedness of its own citizenry. There were broken remnants of abandoned irrigation systems, dried and caked beds were all that were left of deep flowing streams, and where there had been verdant forests there was now only barren desert and rocky waste. In this great valley which had once supported thirty to fifty million people in affluence and plenty, now only four or five million people live in poverty. From his findings, Dr. Lowdermilk reported the conclusion that man's failure to be a good steward of God's gifts to mankind was the direct cause of the waste and desolation that he had witnessed.

From Mesopotamia we went to Israel. How wonderful the report of the spies Joshua and Caleb must have sounded to Moses and the Children of Israel when that country was first described to them as "a land flowing with milk and honey." The great cedars of Lebanon which were felled to construct Solomon's Temple are evidence of the soil's fertility. The grapes that grew so large that it took two men to carry one cluster is probably an exaggeration of the overly enthusiastic spies, but it does point out that this land was exceedingly fertile. This is not so now. The great forests are gone and in their place are barren, rocky hills. Only recently has Israel made an effort to re-forest the hills. Dr. Lowdermilk reported that this land of "milk and honey" was so devastated by man that over half the original topsoil had been washed into the sea and that it could, in fact, only support about one-third the population of Roman days.

Of course, the process did not take place overnight. It took centuries to do it, but it was finally done. The process was well under way in Jeremiah's day when he reported:

(Jeremiah 12:10–11)

"Many shepherds have ravaged my vineyard
and trampled down my fields,
They have made my pleasant field a desolate wilderness,
Made it a wasteland, waste and waterless,
to my sorrow.
The whole land is waste, and no one cares."

Before Dr. Lowdermilk left the Holy Land, he was asked to make a radio broadcast in Jerusalem in which his findings would be summarized. Pondering what he might say he wondered if Moses might not have added an eleventh commandment had he been forewarned of the calamity to befall the Promised Land. So he opened his broadcast with these words: "If Moses had anticipated what we have seen in this land, the wastage and pollution of the good earth, due to the greedy and suicidal agricultural practices of the people, he doubtless would have been inspired to deliver an eleventh commandment and it would have been like this: "Thou shalt inherit the holy earth as a faithful steward, preserving its resources and productivity from generation to generation; thou shalt protect thy fields from soil erosion and thy hills from over-grazing by thy herds, so that thy descendants may have abundance forever. If you shall fail in this stewardship of the land, your fertile fields shall become sterile stones and gullies and your descendants shall decrease and live in poverty and vanish from the face of the earth."

When we listen to Jeremiah and Dr. Lowdermilk we understand that this raping and ravishing of the good earth has been going on for many, many years in the past. Before our very eyes are dried bones and bleached skeletons of once great civilizations who could not learn the lesson of Stewardship and suffered the consequences. The question is: Are we any smarter, any wiser? I doubt it. The evidence indicates that we are not.

Let us take a look at the present. Nearly every major newspaper and magazine and broadcasting network in the nation has publicized in recent days the disturbing news that the good earth is over-populated, over-polluted, and heading for destruction. The air is full of soot, the rivers are full of suds, the land is full of garbage, the oceans are full of leaking oil and sewage, plants and animals are full of DDT and the human race is full of stupid, greedy people who couldn't care less.

We have used pesticides indiscriminately, and have succeeded mainly in creating a new breed of resistant pests, interfering with the reproductive process in animals on earth, and most dangerous of all, killing off our marine life from which 70% of our oxygen supply is obtained. We have killed Lake Erie, and are in the process of killing Lake Michigan. And I know any number of lakes and streams where I was brought up, where any barefoot boy with earthworm and a bent pin on the end of a string could catch prize fish and today those same lakes and streams would kill an earthworm if he stuck his foot in it. I know lakes where preachers used to baptize great numbers of converted people but today the only people baptized there are those who are ready immediately for heaven. And if you don't believe in the "Population Explosion" go to the Little Pee Dee on Saturday afternoon.

A little ago our young people gathered at Coastal Carolina on Earth Day and decided to clean up the highway from here to Myrtle Beach. It was at best a gesture, but a good one, to call attention to the garbage with which we threaten to cover ourselves. They picked up several truckloads of beer cans and other garbage. That was just a few weeks ago. Already the garbage is back, just as thick as ever. The ruin and rape of this earth still

goes on by stupid people who can't seem to get the message, who don't understand that we are destroying our only home.

Let us take a quick look at the damage already done in this country by soil erosion alone. Gone forever are fifty million acres that were once fertile fields; another 100 million acres have lost from fifty to seventy-five per cent of their topsoil. This is an area big enough to support sixty million people. It is hard to imagine what a hole that would make in our country; if that amount of acreage were removed completely from one locality it would consist of the combined areas of Michigan, Ohio, Indiana, Missouri, Kentucky and South Carolina. We are losing enough topsoil to cover 150 million acres a foot deep. We are losing annually the equivalent of 12,500 forty-acre farms. And I don't need to tell you how important that topsoil is—for it is the topsoil which is literally the "stuff of life." What we call "dirt" is one of the most intricate and delicately balanced mechanisms in existence. In it are all the chemicals necessary to animal and human health, and they are present in just the right amounts. Our civilization rests literally on nine inches of topsoil to which Nature, if left alone, would add one inch about every four hundred years. Yet how quickly and how greedily men sacrifice thousands of years of God's handiwork for a few years of profit. For a quick buck, we have stripped our forests, polluted our streams, poisoned our air, destroyed our topsoil. This is sin. This is the worst kind of sin. And the Bible warns us: The wages of sin is death. We will reap what we sow.

What then is the answer? I think the answer to this sin is the same as the answer to any sin: we had better repent—which means—change our minds and hearts and get right with God. We had better bring this thing into the arena of the spiritual. It is basically a theological problem, based on man's total disregard of his responsibility to God and his fellowman. The sin is the sin of Greed. I think people know well enough the methods to be used to save the soil: crop rotation, terracing, contour plowing, and strip-farming, re-forestation, permanent grass, water conservation, winter cover, etc. But knowing what to do and then doing it is another thing. I think we know now what has to be done to save the earth, but whether we are willing to pay the cost and take immediate loss for long-term gain, I don't know. I can't be sure man has enough religion to save himself. Knowing what to do is worthless unless people are motivated to do it. The necessity for positive action finds emphasis in the words of Jeremiah: "The whole land is laid waste and no one cares."

Jeremiah put his finger right on the sore spot: No one cares. Unfortunately, it is a grim prophecy which has become a frightening reality in the United States of America. The answer then is basic: Can our people be persuaded to love God and His earth and His kingdom more than they love selfish gain and greedy profit? Is man to live by the principle of grasp and greed or the principle of give and serve?

Jesus put his finger on it long ago when he said to his disciples something they have ignored and refused to hear: "Seek ye first the Kingdom of God and His righteousness and other things will be given you." What happens to this world will be determined in the long run by our attitude toward it. Will we use it and its resources for our selfish gain or for the glory of God? That is basic. That is the choice Jesus thrust bluntly on his disciples. Today the choice must be made and in a hurry. Will we exploit this earth for our pleasure and comfort and power which will last for a little while and let future generations look out for themselves, or will we conserve God's good gifts and pass them on to the next generation improved and enriched? That is the question—and it is a religious question.

The prophet Jeremiah described the spiritual poverty of Israel by painting this graphic picture of the land that had been made desolate and laid waste by people who did not care. The time has come for serious Christians to ask themselves some serious questions.

Do you really care? What comes first in your life? Is it self first—and God and His Kingdom on earth second? If that is the way it is, then no wonder the earth is being destroyed. Is it possible for us to reverse that order—like Jesus told us it must be done? Is it too late for us to be Christians now? Have we waited too long? Or can we at last put God and His Kingdom on earth first—and in so doing become the Saviors of the world?

Jeremiah said: "If, in spite of this warning, you do not heed, then for very anguish I can only weep and shed tears." You are destroying your only home and I cannot help it.

THE STATE OF THE CRISIS IN THE MIDDLE EAST

HON. CHARLES A. VANIK

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Wednesday, September 9, 1970

Mr. VANIK. Mr. Speaker, on August 14 and again on September 2, I called upon this administration to demand that the Soviet Union and the Egyptians dismantle the missiles which have been placed in unprecedented numbers along the cease-fire zone.

The administration at first refused to recognize Israel's evidence of the cease-fire violations by the Egyptians and Soviets. During those critical 2 weeks when the United States refused publicly to acknowledge those blatant violations, Egypt with the help of the Soviets continued to install batteries of missiles in place while America stood silent on this critical issue.

Now, having acknowledged these violations, the administration refuses to demand the dismantling of the missiles and instead, simply calls upon the Soviets and the Egyptians to halt further construction. Unfortunately, this indecisiveness on the part of the administration has caused the Egyptians and Soviets to move more boldly than they might otherwise have been able to move and have created the highest concentration of missiles on earth.

Israel has a gun at her head with the new balance of power created by these newly placed missiles. It seems to me that the only way that the vital peace talks can again be started is by the dismantling of these missiles. Israel has been placed at such a disadvantage that she would indeed be foolish to agree to continue the talks under these coersive circumstances. The decision by our Government to sell replacement phantom jets to Israel does not respond to the missile crisis precipitated after the cease fire.

I insert at this point in the RECORD an assessment of the strength of the missiles placed by the Soviets and the Egyptians during the cease-fire in violations of that agreement. The article is as follows:

[From the Washington Post, Sept. 6, 1970]

MASSIVE DEFENSE FOR EGYPT SHOWN IN U.S. PHOTOS

NEW YORK, September 5.—Secret U.S. reconnaissance pictures show that the Russians and Egyptians have taken advantage of the Middle East cease-fire to provide Egypt with the most massive antiaircraft system ever created, it was reported today.

Time magazine said although the United States conceded last week that the Egyptians had violated the cease-fire by bringing more missiles into the 32-mile-wide standstill zone, it did not disclose that these Soviet surface-to-air missiles (SAMs) constitute "only the first line" of defense.

"While Israeli Phantom fighter-bombers remain confined to the other side of the Suez Canal, the Soviets and Egyptians have installed a vast complex of radar-directed antiaircraft missiles and artillery behind the cease-fire zone," Time said.

The magazine said the actual count was not known, but American officers believe the number of missiles involved is "in the hundreds, but less than 1,000."

In addition to "36 SAM-2s sneaked into the cease-fire zone," Time said SAM-2s and the more sophisticated SAM-3s, some manned by Russian crews, "are deployed in scattered batteries in a 50-mile-thick belt that arches from the Alexander on the Mediterranean southward some 180 miles to the Gulf of Suez," Time said.

"Missile batteries have also been set up around major Egyptian airfields," the magazine said.

Time said Pentagon experts were frankly impressed by the arsenal of Soviet missiles and quoted one officer as admitting: "The U.S. couldn't match it. We don't have the equipment."

The magazine said there also was evidence that some of the missile batteries were being fortified with concrete revetments to protect them against bombing.

"Furthermore," the magazine said, "in order to confuse Israeli intelligence analysis, Soviets and Egyptians have bulldozed scores of dummy sites that can quickly be converted into active missile installations."

ANNIVERSARY OF THE INVASION OF POLAND ON SEPTEMBER 1, 1939

HON. JOHN J. ROONEY

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, September 9, 1970

Mr. ROONEY of New York. Mr. Speaker, on several occasions I have called the attention of this body to the significance of the observance of the anniversary of the Nazi invasion of Poland on September 1, 1939. Unfortunately, this House was not in session on this date which is of tremendous importance to all Americans because it commemorates the day upon which World War II was launched. To those of us who are grateful for a wide circle of Polish-American friends, it is even more important, for it marks the day when independence and freedom were snatched away from the Polish people. It marks, too, the day upon which Hitler's forces began a systematic program of murder and destruction so vicious and so ruthless it has never been surpassed in the history of mankind.

The people of Poland joined their military forces to battle against this invasion by the Nazi war machine but the

military power of Hitler was more than a match for them. Even though they were placed in virtual servitude, the Polish citizens continued to fight back against their oppressors. They fought clandestinely with what meager weapons they could obtain. They fought openly with thousands of their finest soldiers going into battle side by side with the military forces of those nations allied against the Nazis.

The glorious record in which Polish fighters distinguished themselves will stand forever as an example of courage and heroism. The free world will always be indebted to the Polish Army for the role played in the Battle of Britain, at Narvik, in Africa, in France, in Belgium, in the Netherlands, and in Italy.

But, Mr. Speaker, as we join with Polonia worldwide in honoring the memory of the gallant Poles who fought and died to preserve their freedom and the freedom of the world, we should give careful thought to the welfare and fate of the Polish people today.

Today our sympathies are again stirred as we think of the plight of the freedom-loving people of Poland. Tragic as was the period of enforced slavery under the Nazis, the similar bondage suffered under Soviet domination has been equally painful.

Mr. Speaker, we cannot escape being mindful of the deep debt of gratitude we Americans owe to the Polish people for their magnificent contribution made to our life and to our culture. From the glorious deeds of our Revolutionary War heroes of Polish birth to the day by day acts of public service and devotion of our country by the thousands of American citizens of Polish birth or heritage, we are indeed indebted to them.

Let us use the opportunity we have today to show our Polish friends the depth of our friendship and the extent of our concern for them. Let us take immediate and forceful action to restore every possible item of their lost independence. Whether it be in making final determination of Poland's western frontier or the expansion of our economic and cultural relationships, let us demonstrate with positive action our affection for the people of Poland.

The least we can do is to assist our friends in Poland to resolve her borders which I have long advocated. Twenty-five years after the Nazi surrender in 1945, Poland's western boundary on the Oder-Niesse line is truly an accomplished fact. I am completely convinced that the time has come to establish permanently the western boundaries of the Polish nation. I feel that to permit the uncertainty of these boundaries to continue, we force the Polish people to prolong the acceptance of unwanted dependency upon the whims of Moscow. I feel strongly that the United States can no longer delay but must force the acceptance of the Oder-Niesse line as soon as possible. This conviction is held by many Polish leaders with whom I have talked. The great Polish American Congress, which is constituted of the leadership of our patriotic Polish-American organizations, took positive action this August to seek the accomplishment of this important objective. Public opinion polls and statements of responsible West German leaders leave no doubt that the majority of West Germans are reconciled with the necessity to recognize the Oder-Niesse boundary as a precondition to political and economic stabilization of Europe.

Let us convince our Polish friends of the sincerity of our affection and our respect for them by employing the utmost of our diplomatic and political resources to achieve this goal. Let us prove to the people of Poland that the bonds of Polish-American friendship are far stronger and more enduring than are their ties with the Soviet Union.

As we seek the finalization of Polish borders, we should give also our utmost support to the current efforts being made by the governments of West Germany and Poland to normalize their political and economic relationships. A successful realization of these objectives would enhance the political stability of Europe and go far to improving the well-being of both Poland and West Germany.

Mr. Speaker, with the urgent need for the discharge of these obligations now before us, we in this body would do well to remind ourselves of the great contribution which the Polish people and the Polish fighters have made to our enjoyment of freedom and independence. We would do well to rededicate ourselves to the task of seeing to it that the people of Poland likewise can enjoy to the fullest these blessings of self-determination and freedom from fear or oppression. This is particularly essential for the new generation of Poles born since 1945 in the territories restored to Poland by the victorious allies.

FARMERS' STORY

HON. THOMAS S. KLEPPE

OF NORTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, September 9, 1970

Mr. KLEPPE. Mr. Speaker, Representative CATHERINE MAY of Washington, through her membership on the House Agriculture Committee, has been closely related to the agricultural problems of our Nation. She has spoken often and well for the producer of our country. I want to share with my colleagues the comprehensive approach that was taken by Representative MAY which has been editorialized in the Grand Forks Herald. I commend it to all of my colleagues for their study:

FARMER'S STORY

The farmer isn't getting his story across to the city people, according to Rep. Catherine May, R, Wash. But no one can say that she isn't trying to do her bit for the farmer.

A congresswoman may seem an unlikely spokesman for the farmer, but Mrs. May is an eloquent one. A former teacher and radio personality in Washington, she recently addressed a meeting of the American Agricultural Editors' Association in Washington. Here are some excerpts from her speech:

"The farmer is the real protector of consumers, but the farmer has not been able to get his story across to the public. Urban people are simply unaware that the farmer is just as concerned as they are about the widening spread between the basic price of food at the farm and what it is when the shopper fills her shopping cart.

". . . When you look at the record of our farm production and how the farmer has increased his productivity the average American should be thankful—and proud of our farmers. The result of this productivity is that the average American family is spending only 16.5 per cent of its income after taxes for food today. A year ago this was 17 per cent, and 20 years ago it was 22 per cent. . . .

"The ability of American agriculture to feed and clothe the 300 million people who will inhabit the United States by the year 2000 can be assured only if the farmer receives a return sufficient to use efficient modern equipment, meet his labor costs, and use the necessary fertilizers and other aids. In other words, we have to pay 1970 prices for what he needs in 1970 to go on farming.

"Few people realize that a minimum investment of $100,000 is necessary just to acquire the land and machinery, and other items to farm efficiently. A $200,000 investment is necessary if the farmer is to house, feed and clothe a family of four and provide an education for two children. . . .

"Consumers are going to have to face up more to their responsibilities to the farmer—the responsibility of looking beyond the price tag to understand a little better where their food actually came from before it got into the can, and the how and why of its costs and availability."

Mrs. May feels that if people in the city and suburbs come to understand the farmer's economic and productivity picture, they will agree that the farmer is the real consumer's protector. And she is doing her best to get that story across.

TRIBUTE TO TOM L. EVANS

HON. RICHARD BOLLING

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Wednesday, September 9, 1970

Mr. BOLLING. Mr. Speaker, 8 days ago my close friend and campaign manager for more than 20 years, Tom L. Evans, died in Kansas City, Mo. Tom Evans was a truly extraordinary man whose contributions to his fellow men and to his city, State, and Nation will never adequately be reported. Tom preferred to do good quietly. He not only did not seek credit for his work but he actually avoided that credit. To others went the accolades. To him doing the job was the only thing that mattered.

I include herewith the obituary which appeared in the Kansas City Star of September 2 and the editorial which appeared in the Star on the next day:

CLOSE TRUMAN FRIEND DIES

Tom Lynn Evans, longtime friend of Harry S. Truman and former owner of the Crown Drug company and KCMO broadcasting company died of cancer last night at Baptist Memorial hospital. He was 74 years old yesterday.

The founder of Crown drug stores began his career dishing up sodas and running errands in the old Frank Barnes drugstore at Twenty-sixth street and Prospect avenue. The popular establishment was near the 10th ward Democratic headquarters, Mike Pendergast's club.

It was in that neighborhood in those days of Democratic Goats and Rabbits here—not Democrats and Republicans—that Evans and young Harry Truman became friends. In later years Evans was to work tirelessly raising money for Mr. Truman's county presiding judge, Senate, and vice-presidential campaigns.

It is said that when Mr. Truman became a U.S. senator he asked his friend to take over his job as Jackson County presiding judge and tend to some important unfinished business.

Evans refused, and Mr. Truman remarked many times later, "It's the only thing I ever asked of Tom Evans that he wouldn't do for me."

Several years later Mr. Truman called Evans to Chicago to help him not get nominated for the vice-presidency. Senator Truman, Evans, and several others were in a strategy session when the Senator received a very important telephone call.

Mr. Evans thought the voice on the other end of the line might be F. D. R.'s, because when the Senator returned he announced he would seek the vice-presidency.

"Now you fellows go out there and see to it that I don't get beat," Truman ordered.

Mr. Evans, who served as Truman's campaign manager that time, later recalled raising $33,390 for the campaign, of which $11,961 was sent to the Democratic national committee and $16,228 was spent on the vice-presidential race.

In the years when Truman was President, Mr. Evans freely roamed throughout the President's private quarters and was referred to as the "mystery man" with whom the President often swam in the afternoons.

Although he was never a political appointee, Mr. Evans remained an intimate friend of Mr. Truman's and visited with the former President in his Independence home almost weekly the last few years.

Mr. Evans was active in raising funds for the Truman Library and in planning the building. He was treasurer of the Harry S. Truman Library Institute, a board that raises money to aid students who wish to come to study Mr. Truman's private papers.

A native of Larned, Kans., young Evans fulfilled his boyhood goal of becoming a pharmacist, then continued to hold his certification, explaining recently, "You never know when I'll have to go back to soda jerking."

Mr. Evans, Clive C. Payne, John S. Watkins, and C. Morris Watkins joined together in 1923 to found the Crown Drug Company. The Watkins brothers pulled out for smaller operations after a few years, but Mr. Evans remained with the operation until his retirement as chairman of the board in 1950.

He was married to Mamie Lou Webster, a childhood sweetheart who worked across the street from the old Barnes drugstore in a hemstitching company. Their home is at 6820 Ward parkway.

Well known for his superb fund-raising talent, Mr. Evans served in various Democratic campaigns, civic promotions, and bond elections.

He was chairman of campaigns for U.S. Rep. Richard Bolling in 1949 and 1963 and chairman of the finance committee of the Democratic party here in 1948.

Mr. Evans was a former board member of the Gas Service company, the Hotel President, the Red Cross, the Kansas City Crime commission, St. Joseph hospital, and the Gallup Map and Stationery company.

He was chairman of the executive committee of KCMO.

He was a member of the Kansas City club, the Saddle and Sirloin club, the Advertising Sales and Executives club, the Chamber of Commerce, and the Mission Hills country club.

He recently received a 50-year membership pin from the Ivanhoe Masonic lodge.

He leaves, besides his wife, a son, Richard W. Evans, 317 West 115th terrace; a daughter, Mrs. Ella Mae Buchanan, 208 West 116th; a sister, Mrs. Ethel Bair, Long Beach, Calif., and six grandchildren.

Services will be at 10:30 o'clock Friday at the Stine & McClure chapel; cremation. Friends may call from 7 until 8:30 o'clock Thursday night at the chapel. The family requests no flowers and suggests contributions to the American Cancer society or the M. D. Anderson Hospital and Tumor Institute, Houston.

THE MANY SIDES OF TOM EVANS

As a teen-ager on Kansas City's East Side, Tom L. Evans thought he would be content with the quiet, comfortable life of a drugstore pharmacist. But that would never have been enough for one of his varied, forceful talents—even if he hadn't met a young political aspirant named Harry Truman at Mike Pendergast's Tenth Ward Democratic club. It was the beginning of a lifelong friendship that led Tom Evans to high places, but always in a behind-the-scenes capacity.

Business success he won long before the Truman political career soared. A driving pharmaceutical salesman, he became a founding partner in the Crown Drug chain which at one time included 500 stores. Later came the venture into radio and television, building KCMO into a major radio-TV operation here.

His vigorous skill at fund-raising kept him in constant demand for civic and political causes. His most notable efforts were for Mr. Truman as county presiding judge, U.S. senator and vice-president, plus a key organizational role in the launching of the Truman library in post-White House days.

But through the years his efforts turned in many directions, working for the 1947 citizens bond drive, for the Red Cross, Chamber of Commerce, the crime commission and charities. He once described himself as "a man who has to plunge all the way into anything I do" and he was several times hospitalized as much by overwork as any specific ailment.

Many times he was offered, or mentioned for, public posts, from a high Washington assignment to mayor, city manager and councilman. He accepted only one—ward chairman. During the Truman presidency when he moved in and out of the White House almost as a family member, observers labeled him a "mystery man," unable to accept that he was simply an old and trusted friend with whom Mr. Truman liked to talk things over—a valued asset to presidents or anyone.

IN THOREAU'S FOOTSTEPS—MOUNT KATAHDIN

HON. WILLIAM D. HATHAWAY

OF MAINE

IN THE HOUSE OF REPRESENTATIVES

Wednesday, September 9, 1970

Mr. HATHAWAY. Mr. Speaker, I would like to call attention to an article entitled "Call of the Wild—In Upstate Maine," which appeared in the Sunday, August 16 edition of the New York Times.

Modern technology, coupled with a sophisticated urban orientation has created an atmosphere of fast-paced production and achievement for modern man. This is all well and good, for by this achievement, our country has been able to meet the needs of its citizenry.

But the pressure of such production and achievement has brought about a desensitization in the life of man and he now searches for a place, a haven somehow "natural," untouched by his civilization.

I am proud to say that Nathaniel Nitkin has found just such a haven in the State of Maine. There is something awesome and at the same time peaceful in Mr. Nitkin's description of the primitive wilderness he found there.

In this complicated, complex, and often times contrived existence, there is something very relieving about realizing that man has something left that is unspoiled and beautifully natural. I commend Mr. Nitkin's article to my colleagues:

CALL OF THE WILD—IN UPSTATE MAINE

(By Nathaniel Nitkin)

NESOWADNEHUNK, MAINE.—Only moose could have made those fresh tracks on Russell Pond Trail in Baxter State Park. While we peered through the tall spruces, we heard the loon's haunting cry, voicing the lonely wilderness.

Our base at Katahdin Stream Campground had an alarm clock: Every day, a whitetail deer patrolled the camp at sunrise. A black bear swaggered through York's Twin Pine Camps with a militant chip on his shoulder, but we declined the challenge. A beaver scouted Nesowadnehunk Stream in daylight. We saw predators flying at such a furious pace that we can report only tail ends of bobcat, red and gray fox, pine marten and coyote. A few of the Newfoundland caribou transplanted on Mount Katahdin's tableland are seen now and then by campers.

"Most of them walked back to Canada," a local Mainer asserts.

Here in the wilderness of northern Maine, where we had come to climb the 5,268-foot Mt. Katahdin—the highest mountain east of the Mississippi—footpaths connect streams and ponds teeming with wild brook trout of distinguished lineage. Some of the trails probe dark, cool woods; others ascend Katahdin and its satellites.

Everywhere noise is at a low key; brooks babble faintly over stones and swaying evergreens sweeten the air.

The southern edge of this 201,018-acre park, which is about 75 miles north of Bangor, is approached by taking the highway that pierces Maine's heartland, Interstate 95. Leave the pike at the Medway interchange and drive State Route 157, to Millinocket. Beyond this lumber town, the high-speed road becomes a country lane and, after 20 miles, a hard-surfaced tote road branches off to enter the park.

Manitou Katahdin dominates Baxter. This mountain, raised from the earth's womb millions of years ago, is time-worn to its granite roots. The Ice Age sculptured the couloirs, cirques, ravines, crags and ridges that give the mountain its character.

MONARCH AND ITS RETINUE

This monarch rates a retinue of satellite mountains, the prominent peaks being Double Top, The Brothers and Traveler Mountain. North beyond Katahdin's northwest basin lies Wassatoquoik Valley, an amphitheater beneath spruces, and streams and ponds.

But south and north of Katahdin are worlds apart. To the south, the mountain slopes gently at first, then soars in a dizzy arc, leveling at a plateau, The Tableland, from which arise Baxter Peak and its consort Pamola. Baxter's north face is craggy. It forms a ladder of sheer precipices rearing toward Pamola

Years ago, I climbed Mt. Katahdin with a cocker spaniel for company, but a few ill-bred dogs committed every crime an undisciplined mutt can and the park is now off-limits to dogs.

The original tote road branching off State Route 157 was a trail enlarged to car width; it began at Tongue Pond and wove its way through the woods. You had to guide your car over bumps, around roots and rocks, and feel rear wheels dig into soft ground. Today the road is shorter, hard packed and less wearing on automobiles. Nevertheless, it is still little more than a glorified path, with clearings on sides here and there so that when cars meet, the one nearest a clearing has to pull off to let the other pass.

This road passes Abol Campground—Henry David Thoreau's Aboljacknagesic—and then the larger and older Katahdin Stream Campground. Beyond these public campsites, dirt tote roads branch off toward private sporting camps such as York's Twin Pines at Daicey Pond and Bradeen's at Kidney Pond, and two more public campgrounds on the park's western border, Nesowadnehunk and Sourdnahunk. It is advisable to telephone a reservation from Millinocket.

The angler will find sporting camps whose backyards are trout-rich ponds; you may fish anywhere—if you have a Maine license and use a flyrod.

The isolated ponds are most promising. They are at trail's end, deep in the woods where a pair of legs is the only serviceable transportation. One such is Lost Pond, whose path begins at Daicey Pond. Other good waters are Deer, Draper, Grassy, Lily Pad, and Rocky Ponds. The private camps are on Daicey and Kidney Ponds. The best times for pond fishing are sunrise and evening. Morning and afternoon, try your luck in white-water streams.

GOOD SPOT FOR LUNKERS

Anglers will be interested to know that the bottom of Big Niagara Falls is a good spot for lunkers, the average trout measuring 12 inches. It is no place for novices. You cast streamers or wet flies from a high boulder and work the lure into pools where wild and wily squaretails hide. The Falls are on the Appalachian Trail, about a mile south of York's Twin Pines at Daicey Pond.

In the south end of Baxter Park, two trails scaling Katahdin are the Hunt-Appalachian Trail, and the Abol Trail that parallels Thoreau's ascent. These footpaths are rough, rugged, and strenuous.

The secret is to toughen up on the spot. Whether you pitch tent or are a sporting-camp guest, lock your car and forget you have one. Go on paths and explore the wilderness. When you feel your legs grow supple, follow the Appalachian Trail south past Daicey Pond, past Big and Little Niagara Falls to West Branch Penobscot. And return afoot.

WORKING YOUR WAY UP

Next tackle some of Katahdin's retinue of lesser mountains. The trail up Sentinel Mountain begins near York's Twin Pines. Another good hike goes up Double Top, 3,600 feet high; the path starts at Bradeen's Camps at Kidney Pond.

Now you are ready for Katahdin.

The Hunt Trail begins at Katahdin Stream Campgrounds. It is five miles long as the crow flies, if the crow soars to an altitude of one mile. Start as early as 7 A.M. if you can, but not later than 8 A.M. to be back at camp before nightfall. Add dry woolens and windbreaker in your rucksack to survive biting Arctic nor'westers above timberline.

It never matters how many times we scale Katahdin. Each climb is always a fresh adventure. I have been up there 10 times and still look forward to more. I know men and women who have been up and down Katahdin so many times that they have lost count.

The Hunt Trail is recommended for first time up. It is the northern terminus of the Appalachian Trail. The first mile is deceptive. The trail is broad and rises gently through a cathedral of tall hemlocks and spruces. Here you'll see whitetail deer gliding through woods. A red squirrel may follow you, scolding loudly.

Katahdin Falls is the first break. It crashes and booms over an Ice-Age-created hanging valley. On windy days, spray veils the lookout ledge, making it slippery.

FRANTIC STRUGGLE FOR EXISTENCE

The trail narrows and steepens sharply. Standing hemlocks give away to a shorter variety that carpets the rocky soil with deep green. The soil thins, and roots tumble over one another in the frantic struggle for existence.

Whenever you pause, you see land stretching for miles until lost in the blue haze of horizon. Lakes and ponds listen through a woodland bed without end. It seems to be a vast primeval forest.

Up you climb, up and up, until suddenly trees surrender to the wind and become twisted dwarfs as you near the timberline.

Above is a tremendous desolution of boulders, stark and naked, like a harsh planetscape from a Chesley Bonestell painting. These giant boulders make or break the climber; he has to scale over flat-faced rocks, squeeze through cracks, squirm up chimneys and zigzag around the most impossible stones. The rockscape ends in a couloir with a sharp-edged ravine rearing up, almost vertically, to the Tableland.

The Tableland is a dry tundra of stones and moss and arctic plants such as grow only in Ungava (Labrador) and Greenland. Following the trail, you'll pass Thoreau Spring, which is dry in summer. The mountain blueberries carpeting the plateau are delicious. A hike across Tableland and up a hill leads to Baxter Peak.

Although it is a temptation, the hiker should not linger too long at the peak for he must be back at camp before nightfall. The area is like an Arctic wilderness.

The other trail, the Abol, begins near Abol Campground. It was Thoreau's trail, as he wrote:

"This course would lead parallel to a dark seam in the forest, which marked the bed of a torrent and over a slight spur . . . at last we reached an elevation sufficiently bare to afford a view of the summit, still distant and blue, almost as if it were retreating from us . . . the mountain seemed a vast aggregation of loose rock as if some time it rained rocks and they lay where they fell. . . ."

Whenever I camp at Baxter for a spell, I prefer Wassataquoik Valley. It is where the Maine woods are greener, where the streams sparkle brighter, where a fresher breeze blows, where wildlife is wilder.

Maine fishermen are always ready to drive to Baxter and plunge into Wassataquoik when trout season officially opens.

To reach Wassataquoik, they take Togue Pond road from State Route 157 beyond Togue Pond to Roaring Brook Campground. There they lock their cars and backpack seven woodland miles to Russell Pond Campground. This strenuous hike is the reason there's a lot of elbow room in Wassataquoik.

CAMPGROUND AT ROAD'S END

There is another more accessible site, an auto campground. Follow the Katahdin tote road all the way north and east to South Branch Pond's side road. The campground is at road's end.

Wassataquoik Stream and its tributaries rate high as trout waters. South Branch Ponds should also be good. However, check with the district ranger about restricted Nesowadnehunk waters. Every one of these pools is fly-fishing-only waters.

Moose and deer forged the network of Wassatoquoik trails and because of that, hiking on them is much easier than at the south end of the park. These paths lead to unsurpassed lake and mountain scenery.

There is a well-marked connection path between Russell Pond and South Branch Ponds and other footpaths lead to Wassataquoik Lake, Six Ponds, Katahdin's great Northwest Basin . . . and to the Lookout.

The Lookout is less than two miles from Russell Pond. From there you see, in a full circle, mountains, ravines, gullies, couloirs, wooded valleys, ponds, streams, and lakes forging an unspoiled wilderness.

THROUGH POGY NOTCH

To the north, you look through Pogy Notch flanked west by Pogy and South Branch Mountains and on the east by the long, rolling peaks of Traveler Mountain. Northwest, you'll catch a glimpse of Chamberlain Lake at the south end of Allagash National Wilderness Waterway. West is Wassataquoik Lake and southward, the peaks of Katahdin. Eastward lie the twin mounds of Sable Mountain.

On all trails you will see glacial droppings ranging from tiny pebbles to giant boulders that the Ice Age Labrador Glacier brought from the Far North. Between them grow lichens and tiny alpine plants.

South of Wassataquoik, Chimney Pond Campground is special for those mountaineers who like to scale precipices. For, from Chimney Pond, Pamola's mighty crags rear almost perpendicularly to its peak, and then the climber goes along Knife-Edge to Baxter Peak.

As a final fling, when you leave the park, drive a short distance westward of State Route 157 to the lookout parking lot atop Nesowadnehunk Deadwater. There you'll see the full majesty of Manitou Katahdin with all its peaks, ravines and ridges.

REBIRTH OF AMERICAN SHIPPING AND SHIPBUILDING

HON. EDWARD A. GARMATZ

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES

Wednesday, September 9, 1970

Mr. GARMATZ. Mr. Speaker, as we all know, there is pending in the other body a bill which is designed to give a new birth of vitality to the American merchant marine. The program which President Nixon submitted to the Congress and which was the subject of extensive hearings before my committee passed the House on May 21, 1970, by the overwhelming vote of 307 to 1. There is no doubt but that something had to be done to reverse the decline in American shipping. This new legislation should go a long way in that direction.

However, what has occurred in recent years that has gone almost completely without public recognition is the emergence of new personalities in the American shipping field. These newcomers are men of courage, ingenuity, and resourcefulness. They have committed their companies to vast sums of private capital at times when others felt that the industry involved too many risks and uncertainties. One such man is Ran Hettena, president of Intercontinental Bulktank Corp. and director of Overseas Shipholding Group, Inc. In paying tribute to the contribution which Mr. Hettena and his company are making to the rebirth of American shipping and ship-

building, it gives me great pleasure to insert in the RECORD today a speech made by Mr. Hettena following the recent launching of the SS *Overseas Alaska* at Sparrows Point Yard of Bethlehem Steel Corp. in Baltimore, Md.:

SPEECH BY RAN HETTENA

In some ways a ship launching is like a wedding party. At this point in the proceedings the bride has stayed behind to change, and the rest of us have come here to exchange congratulations and reminiscences.

One reminiscence that occurs to me—and possibly to some of you who joined us here at our earlier tanker launchings—is that the atmosphere a few years ago was more suggestive of a hasty elopement than of a dignified formal wedding.

What was most notably missing on those earlier occasions were the bridesmaids—those many sisters and cousins of the *Overseas Alaska* that we saw today in various stages of construction at Bethlehem Steel Corporation's Sparrows Point yard.

This occasion, then, gives me some pleasure, not only because we of Overseas Shipholding Group are launching one of our own ships—our 35th—which brings OSG's total deadweight tonnage to 1,100,000—but because U.S. shipbuilding is showing many other signs of vitality.

Since we were among the first to see the need for—and the economic viability of—new tanker tonnage, this spreading activity is particularly gratifying.

One of the things that is most worthy of note is that some sectors of the American Merchant Marine have recently displayed health and vigor within the framework of existing laws. New initiatives by the President and by Congress should further promote U.S. flag shipbuilding and operation. We welcome these initiatives, for it is clear that American flag shipping could not survive—let alone prosper—in competition with lower world costs without some form of protection or subsidy.

We hope, however, that existing and proposed incentives will not obscure an equally important fact: There already exists a vital and profitable role in U.S. commerce for private, unsubsidized shipping, notably, in our view, in the tanker trades. Today's launching is part of our testimony to that belief—a testimony backed by many millions of dollars of venture capital.

Our investment plans encompass more than the *Overseas Alaska*. This is, in fact, our fourth launching at this yard since 1968. Our fifth Bethlehem-built tanker, the *Overseas Arctic*, scheduled for delivery a few months from now, will bring our U.S. tanker fleet to 9 vessels aggregating about 414,000 DWT and representing an investment of $110,000,000. Our nine tankers constitute about one-fifth of all new U.S. tanker tonnage (including oil company ships) delivered in the last ten years. The effect of our tanker expansion program has been to reduce the average age of our tonnage to about 5 years, compared with 17 years for all U.S. tankers.

Now, how did we get there?

On January 1, 1966 there were approximately 18 million deadweight tons of new tanker construction under contract with the shipyards of the world. Of this 18 million, only 36,000 tons—represented by a single vessel—was under contract in the United States. These figures surely carried a clear message: Our industry did not believe that modern, efficient tankers could pay their own way in the U.S. trade.

Nevertheless, early in 1966, we entered into negotiations with Bethlehem Steel for the first of three 37,000 DWT tank ships. And even before we took delivery, we had completed contract arrangements for two additional 62,000 DWT vessels.

Following our course—and possibly influenced by it—many other owners began placing orders for new tankers. Since January, 1968, twelve tankers aggregating 567,000 deadweight tons have been delivered by American yards, and as of May 1 of this year there were another 21 tank ships of 1,541,000 DWT on order. Thus, the last two-and-one-half years have seen a remarkable upsurge in what many people regard as a declining industry. All together, some 33 tankers, aggregating about 2 million deadweight tons and an investment of well over a half a billion dollars, have been delivered or ordered.

Let me note in passing that our friends at Bethlehem Steel have contributed mightily to this upswing. Last year they delivered 6 tankers totalling 227,000 DWT or about 60% of the year's new tanker tonnage.

What accounts for this reversal in a long-term downward trend? In our case it came through a reexamination of the conventional wisdom. Being in the shipping business, we naturally wondered about the economic foundation of the view that new tankers could not operate profitably. We undertook some quantitative analyses and projections.

The results were quite surprising, not only to us but also to some government people. I recall the surprise—almost the disbelief—of a well informed Congressman when we disclosed our plan to build unsubsidized vessels. Happily, however, Maritime Administration officials became convinced that our outlook was sound and deserving of their support.

For our study showed with some certainty that a U.S. tanker shortage was in the making. Assuming a conservative growth curve, we found that by 1968 the minimum non-peak demand for tanker tonnage would be barely met by maximum utilization of existing vessels. And by 1968, more than two-fifths of the U.S. tanker tonnage would be over 22 years old with the overall average age exceeding 17 years.

Offsetting this inexorable aging process, as I have said, was the prospective addition of only one, lone 36,000 ton vessel.

What conclusions reasonably flow from such data? Since transportation costs make up only a small fraction of delivered petroleum prices, the need for tankers was not likely to abate. Therefore, newer, larger, and more economical vessels would obviously find themselves in a favorable competitive position. For in a competitive environment, the key to a successful shipping operation lies in frequent and sustained increases in vessel productivity through new construction and utilization of new technology. Such productivity jumps are precisely what is needed to counteract the effects of rising wages and other costs.

As I have already indicated, other shipping companies have come to similar conclusions and taken similar actions. We welcome them aboard.

Another influence, which undoubtedly carried great weight, was the rapid development in the last few years of Alaskan oil exploration. The new tanker requirements deriving from this development supplement our earlier projections. For in 1966, at the time of the calculations to which I have referred, commercially significant oil deposits had not yet been discovered on the North Slope.

There was, to be sure, an important trade from Cook Inlet. We are proud of the fact that our *Overseas Rebecca* initiated the transportation of Alaska crude from Cook Inlet to the U.S. West Coast, and is still the largest vessel in this service. During the first half of 1970, we had three tankers in the Alaskan trade, transporting some 70,000 barrels a day of crude oil, or about one-third of total Alaskan petroleum movements.

These figures will rise substantially when North Slope oil begins to flow to market. And so, we expect, will our participation. The *Overseas Alaska* and *Overseas Arctic* are intended for this service and will help us maintain our leadership in it.

It will be some years, of course, before Alaska's oil transport requirements reach their peak, and our vessels have therefore been designed for flexible adaptation to other routes. The 62,000 ton tankers are capable of navigating the Panama Canal fully loaded and can be accommodated at all important oil ports on both coasts.

As many of you are aware, some environmental problems will have to be overcome before the resources of Alaska's oil-rich North Slope can be fully utilized. Without doubt these problems will be solved because America needs this oil. For if we assume only a 3 per cent growth rate in our petroleum consumption—a very modest figure indeed—the United States will require by 1980 over 14.2 million barrels of crude oil per day. If we further assume that existing import controls will be continued, foreign and domestic crude sources will be able to deliver only about 12 million B/D. This will leave a shortage of at least 2.2 million B/D. Many estimates of this shortage run much higher.

Unless our society is resigned to economic stagnation from our inability to increase energy supplies, we will seek, and we will find, sound and economical means for bringing Alaskan oil to market without upsetting the ecological balance. And however this is done, more modern and efficient tankers will be needed.

Granting these premises, and knowing as we do that both domestic and international shipping must expand in an increasingly industrialized world, we look forward with confidence to a bright future for the business in which we are engaged.

Today's launching of the *Overseas Alaska* is a token of that confidence.

We thank you for joining us today.

THE ROLE OF OUR UNIVERSITIES

HON. WILLIAM L. SPRINGER

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, September 9, 1970

Mr. SPRINGER. Mr. Speaker, I know that all of us have been concerned about the universities of this country in the coming school year, and whether or not universities themselves should be taking public positions on military, economic, and social problems. Many of us have wondered whether or not teaching, scholarships and learning are the real missions of the universities.

I know in my own polls that I make in the university areas, I get a wide divergence of opinions on all military, social, and economic problems. It is extremely difficult for me to believe that the president of the university speaks for the university. There simply is not that kind of unanimity in a society as sophisticated as is found on most university campuses.

I attach herewith a letter written by Lawrence Fertig, a trustee of New York University, to Dr. James M. Hester, president of the university, and the reasons therefore. I feel sure many of my col-

leagues would like to read this thoughtful letter, which appeared in the August 16 issue of the Chicago Tribune:

AN N.Y.U. TRUSTEE TELLS WHY HE QUIT

(NOTE.—Following are excerpts from a letter which appeared in the National Review magazine.)

Dr. JAMES M. HESTER,
President, New York University.

DEAR JIM: This is a very difficult letter for me to write, because I have long admired your dedication to New York University. But I now find myself in profound disagreement with so many of the recent policies and statements of your administration that I feel obligated to state my position to you and the other members of the board of trustees.

I realize that my objections to N.Y.U. policies would apply to many universities in the United States. The situation at N.Y.U. is not unique. In the face of actions and attitudes on the part of faculty and students which seem at times hysterical, and often anti-intellectual, members of the governing boards of trustees have, in my opinion, remained too silent. Theirs is the ultimate responsibility for conducting the affairs of the university. In too many cases they have not met that responsibility.

To illustrate one basic disagreement, I direct your attention to the ruling by the university senate that the Reserve Officers Training Corps be banished from the campus of New York University. Many students and faculty wish to continue the R.O.T.C. as a voluntary organization, and are willing to give up academic credits for such a course. In refusing to permit even a no-credit, voluntary arrangement, N.Y.U. let it be known that it does not wish to be closely associated with the defense of the United States. This is to me a serious matter.

RECALLS OXFORD OATH

There is a frightening parallel between such action by American colleges and the now famous [or rather infamous] Oxford Oath prior to World War II, when the students of Oxford University asserted that they would refuse to fight for king and country. Adolf Hitler knew how to interpret such weakness. He set his war machine in motion because he believed that Britain would never fight. We can only devoutly hope that the totalitarian dictators in Europe and Asia today will not follow a similar course of action.

Another matter which I find extremely disturbing is your recent statement on Viet Nam and Cambodia. You acted for New York University and invited some 37 college presidents to sign a document in behalf of their own institutions. This letter to President Nixon criticized United States policies in Viet Nam and Cambodia and strongly urged speedy withdrawal.

By no stretch of the imagination could the signatories of this letter be considered as individuals apart from their institutions. The weight of the document could be ascribed only to the fact that everyone signing it represented the university which he heads. In fact, the New York Times, in its report, said "the signers represented many of the nation's largest academic institutions . . ." Thus New York University, among others, is on record as taking an official position on a military and political matter of national importance.

Now, I do not believe that a university—any university—has a right to become embroiled in public issues of political, military or economic importance. The university is not a monolithic institution with a single point of view. It is a community of scholars dedicated to research and teaching. It encompasses many, many points of view.

I assure you that many members of your board and thousands of your faculty and students do not agree with your point of view. When you speak for the university you speak for everyone in it. I submit that you cannot speak for those who disagree with your point of view.

As individuals, of course, members of the administration, faculty and student body have the right to express themselves on any matter. But not the university—for no one can commit the institution itself to a public policy that does not relate clearly and directly to the curriculum or to educational facilities at the university.

WARNS OF DANGER

Consider for a moment the grave danger involved when New York University takes a public position on a highly controversial matter. It arouses resentment among large segments of the public, of officials in Washington and in state offices. You may, of course, believe that on a particular matter public opinion will support you, but such a judgment is irrelevant.

Once the university begins to take a public position on military, economic or social problems it can no longer claim immunity from violent reactions on the part of those who disagree with its policies. Thus the very foundations of the university are undermined.

As an activist political organization the university may not be entitled to tax exemption. Above all, by taking an activist role in public affairs the university leads the American people to believe that its role is not scholarship, the transmission of learning and the search for truth, but rather activism for special causes.

In view of my fundamental disagreement with policies now being pursued, I am compelled to herewith submit my resignation as a member of the board of trustees, a position I have held for 18 years. I assure you I do so with deep regret, and in the hope that New York University may yet continue to build on its reputation of the past as a leading institution of higher learning devoted to free discussion and the pursuit of truth.

Sincerely,

LAWRENCE FERTIG.

NEW YORK.

INVESTIGATE JUDGE TEHAN

HON. H. R. GROSS

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, September 9, 1970

Mr. GROSS. Mr. Speaker, the involvement of Federal Judge Robert E. Tehan of Milwaukee, in the affairs of an Indiana real estate firm have interested me in the past and, I believe, deserve close scrutiny by the Justice Department.

Recently, Mr. Owen W. Crumpacker, an Indiana lawyer familiar with the case, wrote to Attorney General Mitchell requesting such an investigation of Judge Tehan's activities, and I now join him in that request.

I include for insertion in the RECORD at this point Mr. Crumpacker's letter to the Attorney General and a memorandum outlining the history of this case:

CRUMPACKER, ABRAHAMSON & REED,
September 8, 1970.

Hon. JOHN N. MITCHELL,
Attorney General of the United States, Justice Department, Washington, D.C.

DEAR MR. MITCHELL: By this letter, I am requesting an investigation by the Department of Justice into the conduct of Federal Judge Robert E. Tehan of Milwaukee, Wisconsin, in connection with the illegal distribution of substantial funds belonging to the Woodmar Realty Company of Hammond, Indiana, and other acts of malfeasance.

In excess of $500,000 was disbursed through checks drawn on the Gary National Bank at his instance. All of the checks were countersigned by Robert E. Tehan as Special Judge of the United States District Court for the Northern District of Indiana, Hammond Division. Judge Tehan presided in the Hammond Federal Court for 11 years by virtue of an assignment given him by the Chief Judge of the 7th Circuit Court of Appeals.

The proceedings, a reorganization, had already pended 17 years when he was assigned to this case. Specifically, between March 15, 1968 and May 16, 1969, Judge Tehan countersigned approximately 275 checks on a trustee's account in the Gary National Bank. All of the Woodmar Realty Company's cash assets were disbursed by virtue of these checks. Distribution was made pursuant to a fraudulent scheme originated by the original trustee's attorney, Carl A. Huebner. Huebner was disbarred by the Indiana Supreme Court on April 29, 1954, having been found guilty on 82 specifications of misconduct, all relating to frauds perpetrated upon courts.

The one-half million dollars in cash was what was left of $2,341,970 in real estate which the Woodmar Realty Company owned when the proceedings were instituted on January 13, 1941. Not a single creditor or stockholder received a dime.

Judge Tehan has been identified as the federal judge who received attention on the floor of the United States Senate on April 16 of this year for neither paying federal income taxes nor filing returns for eight years prior to his appointment to the federal bench. Senator John Williams called for either his retirement or his impeachment. In culminating the Huebner scheme, which carried political overtones in scandal-ridden Lake County, Indiana, Judge Tehan deliberately flaunted and refused to obey two mandates of the Court of Appeals. His flagrant misconduct in this regard confirms the fact that his disregard for law prior to his appointment continues in the discharge of his judicial duties.

The fears that the Woodmar Realty Company held in 1959 and 1960, when mandate suits were filed to compel him to act, were called to the attention of the Senate Judiciary Committee in 1961 in a request for an investigation into Judge Tehan's conduct in this case, but no action was taken. The failure to investigate encouraged Judge Tehan to become more bold.

Trust assets have been distributed, knowingly in many instances, in payment of forged and non-existent claims—without hearings or proof. For example, two of Huebner's colleagues received $65,000 through 62 checks made payable to various and sundry persons appearing on a mailing list. They were endorsed by the two colleagues who are attorneys and deposited in an "escrow account". The real recipients of the funds are not disclosed by the court records.

Unless these matters are investigated and appropriate action taken, the corrupt conduct of Judge Tehan, as demonstrated by the records, will continue to grow into even more gross abuses—if that is conceivable.

As a member of the Bar of the United States Supreme Court, who has represented the Woodmar Realty Company during the 28 years that its assets were in Federal Court custody, I will be very glad to assist in whatever way you deem it appropriate.

Very truly yours,

OWEN W. CRUMPACKER.

MEMORANDUM

(In the Matter Of The Woodmar Realty Company, A Corporation Debtor, United States District Court, For The Northern District of Indiana, Hammond Division, Reorganization #3151 (Honorable Robert E. Tehan, Of Milwaukee, Presiding))

A distinguished jurist once commented that the history of the Chandler Act (corporate reorganization) contains many sordid chapters.[1] The Woodmar Realty Company reorganization by a Hammond, Indiana, Federal Court reveals "so dreadful a story of judicial dereliction"[2] that it is impossible to find a sequel. *On January 13, 1941,* when reorganization proceedings were instituted, the Woodmar Realty Company owned in excess of a square mile of subdivided, fully improved, business and residential lots valued at $2,341,970[3] in the southeast section of Hammond, Indiana, a city of 120,000. After twenty-eight years of "reorganization"[4] and on May 19, 1969, *Milwaukee Federal Judge Robert E. Tehan,* undertook to enter an order almost sounding the death knell of the Woodmar Realty Company by ordering the residual assets *after fees and expenses,* consisting of $48,903.81 in cash, deposited in the Federal Registry at South Bend. Judge Tehan was assigned to the Woodmar case by *Chief Judge F. Ryan Duffy of the Court of Appeals for the Seventh Circuit* in December of 1957 after the case had been pending almost seventeen years. Under Judge Tehan's order the forty-four patient stockholders, consisting of elderly widows or children of the incorporators, received nothing.

The founder of the Company and its first President, Roscoe E. Woods, died on the witness stand in the Federal Court in Hammond on May 29, 1951 during hearings on fee petitions filed by the Court-appointed fiduciaries. He was succeeded as President by his widow, Helen M. Woods, who is now eighty years of age and still attempting to earn a living as a real estate broker in Hammond.

The complete loss of $2,341,970 in assets through the twenty-eight year administration of a Federal Court trust is difficult for Mrs. Woods and the surviving stockholders to understand. This is particularly true in view of the fact that after prolonged hearings in 1951 and 1952, they successfully forced removal of ten out of eleven court appointed fiduciaries and forced the denial of their fee claims totalling approximately $287,000 and, later, won their first two appeals. In reversing the then District Judge Luther M. Swygert, the Court of Appeals for the Seventh Circuit in Chicago held, in February of 1957, that the Woodmar Realty Company was a party in interest in the proceedings and, notwithstanding the existence of a court appointed trustee, had the right to defend the trust assets against hostile, adverse, special improvement bond lien claims.[5] Again, in November of 1960, the Court of Appeals, by a two-to-one decision, the then Chief Judge F. Ryan Duffy, also of Milwaukee, dissenting, reversed Judge Tehan's refusal to approve 105 settlement stipulations between Woodmar and the holders of defaulted City of Hammond special assessment bonds. The Appeals Court's opinion stated that there were in fact but two adversaries, the lien claimants and the Woodmar Realty Company, and that, after the disposition of the lien claims, the balance of the depleted fund would become the property of Woodmar.[6] Woodmar could settle or litigate.

Had Judge Tehan complied with the opinion and mandate of the Court of Appeals, the Woodmar stockholders would have received a minimum of approximately $80,000 through the 105 settlements alone. The trustee had $460,677.70 on hand at that time. The four creditors claimed only $7,600.60 and three were willing to compromise. According to the trustee's "auditing study", the total sums potentially allocable to all of the 300 lien claimants was $400,659.11. The 105 settlement stipulations got rid of one-third of the lien claims and three of the four creditors at a total cost to the trust of, roughly, $38,000.[7]

Before their removal in 1952, the court appointed trustee, Charles L. Surprise, and the trustee's attorney, Carl A. Huebner, had sold all of Woodmar's lands consisting of 1585½ improved lots and 12 unsubdivided blocks. A substantial portion of the lots were bought in at bargain prices by a building corporation formed by the trustee's sales agent, S. C. Ennis & Company, and two other fiduciaries, attorney Donald C. Gardner and his client, Richard F. Zilky, in violation of criminal provisions of the Bankruptcy Act.[8]

Woodmar's early success in defeating the $287,000 in fiduciary fee claims (or 3/5 of the then cash assets of $491,988.56) and a distribution scheme with reference to the residue, which rewarded the improvement bondholders[9] and ignored stockholders, was largely attributable to featured news coverage of the hearings in the local press. While selling Woodmar's real estate in the Federal Court, the trustee, Charles L. Surprise, and the trustee's attorney, Carl A Huebner, along with several members of the court appointed bondholders' committee, and its counsel, became involved in a million dollar fraud perpetrated against the City of Hammond.

The Porter Circuit Court at Valparaiso, Indiana, in 1948, voided $958,000 in judgments taken against the City of Hammond on defaulted outlawed, special improvement bonds issued in the 1920's. Surprise, Huebner, Gardner, Zilky, and other managers of the Woodmar Reorganization were simultaneously picking up the City of Hammond special improvement bonds at a few cents on the dollar and filing so-called "class" suits against the City. They, likewise, filed claims in the Woodmar reorganization on the same defaulted outlawed improvement bonds. The trustee, Surprise, and his attorney, Huebner, did not contest the validity of the lien claims including those they filed or those filed by the bondholders' committee.[10] The findings of the Porter Circuit Court were introduced in evidence in the Federal Court at the fee hearings.

As a result of frauds perpetrated on the City of Hammond and the state courts, the trustee's attorney in the Woodmar case, Carl A. Huebner, was disbarred by the Indiana Supreme Court.[11] C. Ballard Harrison and Donald C. Gardner, also Federal Court appointed fiduciaries, suffered the same fate. Trustee Surprise, Carl A. Huebner, Gardner and Harrison (Assistant U.S. Attorney in Hammond), were indicted by a Lake County, Indiana, Grand Jury in 1948. They retained their fiduciary status in the Woodmar reorganization until December of 1952 when the fee hearings were given notoriety in the local press.

Notwithstanding the decimation of the fiduciaries by the state courts, the Woodmar stockholders' successes in the Federal reorganization were momentary. On the "temporary" resignation of Carl Huebner, as trustee's attorney, the court appointed a Gary attorney, Herschel B. Davis, to act with Carl Huebner's brother and law partner, Arnold. When the trustee, Surprise, was removed, the court appointed a new trustee, Walter McLean, who re-employed Davis. The original distribution scheme, conceived by the first trustee's attorney, Carl A. Huebner, was revived, with minor alterations, by Davis, with the assistance of a former fiduciary, attorney Floyd R. Murray.

Following Woodmar's first successful appeal, the reorganization was assigned to District Judge W. Lynn Parkinson at Lafayette, Indiana, who promptly proceeded to permit Woodmar to defend the trust against the special improvement bond claims—the first adversary hearing on a claim in 16 years. He also entered orders authorizing Woodmar to settle lien claims. Trustee McLean, and his attorney, Davis, were ordered to step out of the way. Judge Parkinson was elevated to the Court of Appeals in August of 1957 before he could enter findings.

When Milwaukee Judge Robert E. Tehan conducted his first pretrial conference in the case in Hammond on January 23, 1958, he was confronted with a simple problem.[12] The parties agreed that he could decide the claim already submitted on the record made before Judge Parkinson in July of 1957. The proceedings remained in abeyance, however, while Carl A. Huebner unsuccessfully sought readmission to the Indiana Bar[13] and Woodmar filed three mandate suits in the Court of Appeals to get action from Judge Tehan. Judge Parkinson mysteriously disappeared in September of 1959. His body was found in Lake Michigan in early January of 1960. Judge Tehan's first rulings followed. On January 19, 1960, he entered an order disapproving the 105 settlement stipulations (although none of the parties objected to them) and on February 11, 1960, he vacated the orders previously entered by Judge Parkinson authorizing settlement negotiations. All Woodmar's request for hearings on lien claims were denied. Judge Tehan's orders rejecting the settlements were reversed on appeal but he wouldn't comply with the mandate of the Court of Appeals. Not another city of Hammond improvement bond lien claim was permitted to be either settled or tried. The distribution scheme, discarded by Judge Parkinson pursuant to the mandate of the Court of Appeals in the first appeal, was resurrected by Judge Tehan. Trustee McLean and Herschel Davis resumed full activity.[14] After a series of "pre-trial conference" and "summary judgment" orders and opinions, entered intermittently over another six years, the plan was "in all things approved" by an order entered on February 10, 1966.

The execution of the distribution plan pursuant to Judge Tehan's order has created further problems. From the time that Chief Judge Duffy assigned Judge Tehan to the Woodmar case in 1957, through May 19, 1969 when $48,903.81 was deposited in the Federal Registry at South Bend, not a single alleged special improvement bondholder lien claimant appeared (or was required to appear) in court to prove up a lien. Over two-thirds of the lien claimants, who either filed proofs of claim on improvement bonds, or upon whose behalf or in whose name proofs of claim were filed, were either dead or nonexistent (corporate claimants) at the time trustee McLean and Judge Tehan signed distribution checks payable to persons or corporations appearing on a mailing list furnished by the trustee's attorney, Davis, and put them in the mail.

A significant example is shown by *the check drawn by the trustees and Judge Tehan payable to Darwin S. Luscher, Claim No. 62, in the amount of $1,746.83 dated March 15, 1968.* The check was deposited subsequently, to the account of Darwin F. Luscher in a Seattle bank over the signature of one Janet Fields. *The Woodmar Realty Company had furnished Judge Tehan and Attorney Herschel B. Davis with convincing evidence that Claim No's. 62 and 325 in the name of Darwin S. Luscher were forgeries* and that the trustee's then attorney, Carl A. Huebner, did the forging. The Indiana Board of Law Examiners following an eight-day hearing in the Supreme Court Cham-

Footnotes at end of article.

bers in Carl A. Huebner's re-admission case, found that he was continuing to practice in willful violation of the disbarment order entered on April 29, 1954, by the Supreme Court. Among other reasons for denying re-admission, the Board found *"The evidence in this hearing* now shows further that the Applicant signed or *forged the name of Darwin F. Luscher, in the style of Darwin S. Luscher,* on two separate claims in the Woodmar bankruptcy, photostatic copies of such claims being State's Exhibits Nos. 22 and 23." (Woodmar Claims No's. 62 and 326) Woodmar's counsel, in August of 1959, forwarded copies of the records and documents of the Board of Law Examiners with reference to the forgery of the Luscher claims to Judge Tehan and Herschel B. Davis with the request that the violations be reported to the United States Attorney in accordance with Sections 3057 of the Bankruptcy Act.[15] Neither Judge Tehan nor the trustee's attorney acted upon or acknowledged receipt of the letters and documents.[16]

Who actually received the distribution checks cannot be ascertained from the court records. For instance, trustee McLean drew a check, *countersigned by Judge Tehan,* payable to Northwestern Investment Company in the amount of $1,092.65. As Judge Tehan was repeatedly advised, this company had been formed in 1939 by C. Ballard Harrison, who acted as its president, as a device for speculating in defaulted improvement bonds with the then deputy county treasurer, Robert Wilhelm.[17] The corporation had been dissolved for many years. Edmond J. Leeney and Floyd R. Murray, who also represented Donald C. Gardner in the criminal proceedings in the state courts, got the check from the trustee's attorney, Davis, and endorsed and deposited it in a new opened "Leeney-Murray escrow account" in the Mercantile Bank of Hammond. *Leeney and Murray received, endorsed and deposited an additional sixty-one checks totaling $65,000 in the same escrow account.*

In approving the distribution plan and *awarding Herschel B. Davis $120,000 in fees,* Judge Tehan overruled both Woodmar's and the City of Hammond's objections, and refused to permit the introduction of any evidence or cross-examination of Davis. He called on attorney Edmond J. Leeney who made the following oral recommendation from the jury box:

"Well, Your Honor, I haven't read Mr. Davis' petition, except to know that the number of days, I think, that were put in all together were about 800. I am pretty much familiar with what work he did from time to time, and I know that at one time Mr. Murray and I were carrying the burden here when a previous judge would not permit him to do anything in the case, and that from then on Mr. —— when Mr. Davis —— as Your Honor took over, Mr. Davis was permitted to go ahead and the Trustee, and I know that all during the time it has been Mr. Crumpacker's aim to defeat all these claims." (Transcript, October 22, 1965).

Earlier in the proceedings, Mr. Leeney's co-counsel, Floyd R. Murray, advised the court:

"If the Court makes an order distributing this money by the bond, this Court is not going to know who the holders of half of these bonds are at the time the order is made, I don't believe, because in the rolls I foreclosed I don't know the holders of half of them, and I made considerable effort to locate them." (Transcript Vol. 12, pages 2400-2401).

Now that the Woodmar stockholders are finally released from the Federal Court trusteeship, *after 29 years,* they intend to find out who actually got the net cash from the sale of their valuable lands.

The $2,341,970 valuation of January 18, 1941 was actually ultraconservative. The rapid increase in the market value of the lots in the 1940's and 1950's was ten-fold. This circumstance was an important factor in the prolongation of the Federal Court control of the Woodmar Realty Company. The fiduciaries, though publicly criticized in *the local press* and hampered by state courts in the late 1940's and early 1950's, enjoyed a bonanza in land transactions while *Woodmar's hands were tied.*

APPENDIX

In September of 1956, the then Chief Judge of the Court of Appeals for the Seventh Circuit in Chicago, F. Ryan Duffy, of Milwaukee, consulted with District Judge Luther M. Swygert with regard to Judge Swygert's disqualifying himself in the Woodmar case. In the Fall of 1957, Judge Duffy refused Woodmar's request that Judge W. Lynn Parkinson be reassigned to the case. Judge Duffy assigned Judge Robert E. Tehan of Milwaukee instead. Both Judge Duffy and Judge Tehan maintained offices in the Federal Court building in Milwaukee, Judge Duffy commuting to Chicago, Chief Judge Duffy headed the panel in the Court of Appeals in each of the first four original actions in Mandamus filed against Robert E. Tehan in the Court of Appeals by the Woodmar Realty Company, original causes 12883, 13118, 13121 and 13123. Judge Tehan represented himself (successfully). Judge Duffy wrote an impassioned dissenting opinion when the Court of Appeals reversed Judge Tehan's orders respecting the settlement stipulations. In his dissenting opinion, Judge Duffy mis-uses the "Judicial Notice Doctrine", "Judicial Notice", by an Appeals Court, has always been looked upon with suspicion by lawyers who, properly, are confined in their presentation to matters contained in the record—"not judicially noticed" dehors the record. In June of 1961 in affirming Judge Tehan's dismissal of the removal petition, the Court of Appeals acted upon "judicial notice" instead of what was plainly and distinctly alleged in the removal petition itself.

[3] Report of Trustee Concerning Financial Condition Of Debtor as of Jan. 18, 1941.

[4] A Chapter 10 Proceeding is designed to rehabilitate a corporate debtor. It can have no other purpose. S.R. 11783, p. 44.

[5] In re: Woodmar Realty Co. (C.C.A. 7, 1957) 241 F. 2d 768.

[6] In re: Woodmar Realty Co. (C.C.A. 7, 1960) 284 F. 2d 815 (The 300 lien claims were similar in nature in that they were based on various City of Hammond improvement bonds issued in the 1920's to contractors for installation of pavement, sewers, etc. *They were not Woodmar's contractual obligations.* They were payable through assessments against Woodmar lots *and lots of other owners also benefited.*)

[7] A sample settlement, Nondus Thrapp, is as follows: "That upon approval of this stipulation and the assignment, the Court shall enter an order directing the Trustee Walter A. McLean to issue a draft on the Trustee's account in the Gary National Bank in the amount of $75.00 payable to Nondus Thrapp, Granite Falls, Washington."

[8] After Hon. Luther Swygert, Donald C. Gardner's associate in eleven state court foreclosures on City of Hammond improvement bonds was appointed to the District Court bench in October of 1943, the plan of reorganization consented to by Woodmar's stockholders in May of 1941 was abandoned. The fiduciaries found it more lucrative to sell the land themselves. S.R. 11783

[9] In Major part, *the court-appointed fiduciaries* who had secretly purchased the default bonds to benefit by the reorganization. Non-disclosure of ownership was necessitated by *the fee forfeiture provision* of the Bankruptcy Act. (par. 249)

[10] They ignored the 90 day bar date for filing claims entered by Judge Slick on Jan. 24, 1941 (R. 11783, p. 20) and failed to file objections to lien claims pursuant to the order of Nov. 22, 1941.

[11] One of the 82 specifications of charges for which Carl Huebner was disbarred was perjury in the Woodmar case on May 10, 1951 before Judge Swygert in connection with his purchase of $3,000 in 1441 improvement bonds for $200 from Folber-Patterson agency in Fort Wayne.

[12] At a pre-trial conference in Lafayette, Indiana, attorneys Floyd R. Murray and Edmond J. Leeney volunteered to try, as a "test" lien claim, the intervening petition of Ruth Julius, et al. Judge Tehan agreed to follow the law of the case as established by Judge Parkinson.

[13] *Indiana Senator Vance Hartke* recommended former Woodmar Judge Luther M. Swygert to the Court of Appeals. At a confirmation hearing before a Senate sub-committee, Judge Swygert stated he signed a written recommendation for Huebner as "an act of compassion". (Transcript of Senate Hearing of September 22, 1961).

[14] *Participation* by Trustee McLean and, particularly, Trustee's attorney, Herschel B. Davis, was a necessity, from Judge Tehan's standpoint, to consummate the plan to distribute Woodmar's assets to holders of City of Hammond Improvement bonds. He dismissed Woodmar's *petition* to remove McLean and Davis, *again without permitting a hearing on the merits.*

[15] The Criminal Code provides: "Section 3057. *Bankruptcy Investigations.* (a) Any referee receiver, or trustee having reasonable grounds for believing that any violations of the bankruptcy laws or other laws of the United States relating to insolvent debtors, receiverships or reorganization plans has been committed, or that an investigation should be had in connection therewith, shall report to the appropriate United States Attorney all the facts and circumstances of the case, the names of the witnesses and the offense or offenses believed to have been committed. Where one of such officers has made such report, the others need not do so. (b) The United States attorney thereupon shall inquire into the facts and report thereon to the referee, and if it appears probable that any such offense has been committed, shall without delay, present the matter to the grand jury, unless upon inquiry and examination he decides that the ends of public justice do not require investigation or prosecution, in which case he shall report the facts to the Attorney General for his direction." Title 18, U.S.C., Chap. 203, Section 3057.

[16] Judge Robert E. Tehan's disregard for Criminal Laws adopted by Congress is reflected by articles appearing in the Chicago Tribune under date of April 18 and 19, 1970 wherein it is reported that he didn't file Federal Income Tax Returns or pay Federal income taxes during 8 years while a member of the Wisconsin Legislature before being appointed Federal Judge (1949)

[17] Robert Wilhelm was in charge of collections and payments of defaulted City of Hammond improvement bonds.

Letters from Floyd R. Murray to client Russell Julius disclosing *The Common Practice of Bribery* in the Hammond Office (Woodmar's Exhibit No. 60) were introduced in evidence before Judge W. Lynn Parkinson and the record was submitted to Judge Tehan. Wilhelm was removed as Postmaster in Hammond following 1947 and 1948 disclosures of his activities in the bond fraud case.

THE SIXTH DISTRICT SPEAKS OUT

HON. WILLIAM G. BRAY

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, September 9, 1970

Mr. BRAY. Mr. Speaker, for some years a public opinion poll has been an annual feature with me and I find it extremely helpful and useful. Tabulation has now been completed on the thousands of cards returned to me. Up until the first of September cards continued to come in at the rate of 50 to 100 per day and even now they still continue at a slower rate. At final count, upward of 25,000 Sixth District residents had responded to the poll and today, the first day of the session following the recess, I wish to submit the returns. The following table gives the results, in percentages, of those who answered "Yes" or "No" to each question:

	Yes	No
1. Do you think President Nixon has charted a good course to end the Vietnam war?	81	19
2. Should the voting age be lowered to 18?	38	62
3. Do you favor continuation of draft deferments for college students?	42	58
4. The administration estimates 5 years and $110,000,000,000 needed to deal with pollution. How should this be financed? (percentages do not add to 100; many checked 2 or more):		
(a) Tax credits to private industry?	33	
(b) Special tax on business and individuals?	12	
(c) Cut other Federal programs where possible?	42	
(d) Some equitable combination of all the above?	55	
5. Do you favor the expulsion of students in tax-supported schools who, by intimidation or violence, upset norma academic routine, disrupt university life and cause destruction of property?	94	6
6. In the fight against crime, would you favor:		
(a) Making bail bond more difficult for repeated offenders?	97	3
(b) The "no knock" principle in serving search warrants?	50	50
(c) Legislation insuring speedier trials?	97	3
7. What should we do in the future if a nation friendly to us is threatened?		
(a) Whatever aid is needed, including troops	27	73
(b) Arms and equipment only, except if United States is attacked	52	48
(c) Arms and equipment only	13	87
(d) Stay completely neutral	8	92
8. This is admittedly a troubled and unsettled time for the world and for our country. Nevertheless, does your basic belief in the American Republic, its institutions and our way of life remain firm and steadfast?	98	2

A FEW BRIEF OBSERVATIONS ON WHAT THE RETURNS DISCLOSE

Several thousand of the returned cards included comments written on the cards, or letters written to go with the card itself. These comments were very revealing and together with the tabulation, provide an interesting view of the present thinking of the Sixth Congressional District.

First. On Vietnam, a heavy majority believes that President Nixon is taking a proper course in Vietnam. Only 9 percent failed to answer "Yes" or "No." A few of the letters said all troops should be withdrawn immediately. Many were critical that the President was not pursuing a more vigorous course, including bombing North Vietnam and the harbor at Haiphong, but these generally approved the overall present stategy.

The Washington—District of Columbia—Post for September 5, 1970, summarized the present situation in Vietnam which possibly reflects the reason for this approval. I quote directly from the story, headed "Battle Deaths Off Since Cambodia":

Since the June 30 U.S. pullout from Cambodia, 34 per cent fewer GIs have been killed in South Vietnam than in the two months immediately preceding the April 28 incursion. Furthermore, compared with July and August of 1969, American combat deaths during the same two month period this year reflected a 61 per cent decrease.

Since Cambodia, the number of enemy ambushes is also reportedly down by about 85 per cent.

At the moment, authorized U.S. troop strength in South Vietnam is about 402,300. This is 141,000 below the peak in May 1969.

By October 15, at least another 18,300 are to be withdrawn . . . the actual reduction may exceed the target by 1 or 2 per cent as it has in the past.

Second. Lowering the voting age was decidedly opposed. The 18-year-old vote was passed by the Congress and signed by the President but is still to be tested for its constitutionality in the courts. I asked the question primarily because if the courts do hold that such a law is unconstitutional, then the matter will probably come up again on a consitutional amendment. This will need a three-fourths majority of the individual States. Then Indiana may be faced, sooner or later, with this question. If the poll results represent Indiana's general feeling, then our State will probably vote about the same as Oregon, where voters recently defeated a referendum to lower the voting age.

Third. Continued draft deferments for college students were firmly defeated. The mood of the comments on this question seemed to be "who serves, if not all serve?"

Fourth. Comments accompanying the pollution question clearly demonstrate there is a strong and growing interest in this matter. Special interest was shown and has been shown even before the poll by youth. Also, during the last few months, I have met with youth groups and received a large number of letters and petitions from school classes.

There is no doubt about it, pollution is everyone's business. But it is a serious business. Prof. Norman F. Ramsey, of Harvard University, recently wrote:

College students, while throwing empty beer cans along the side of the road from their maladjusted and fume-producing automobiles, indignantly blame the military-industrial complex for its indifference to the human environment because the establishment pollutes the atmosphere with its factories and power plants and permits the manufacture of automobiles with internal combustion engines.

Returns indicated that the same difficult question plaguing Congress as to who shall pay for pollution remedies is also bothering the public. The answers were not wholly conclusive, but apparently the public would not object to an additional tax for the purpose if equitable distribution of the financial burden was made.

Fifth. Sixth District voters are heartily sick of campus disruption. The comments on campus violence were bitter in the extreme. Only 10 percent failed to answer this question with a "Yes" or "No" and this indicates the depth of concern.

Apparently college officials are becoming aware of this feeling, and there are a number of school administrators adopting a very hard line against future demonstrations. With colleges back for the fall term, one college president after another is taking a strong stand against more trouble. More often than not, reading some of these men's statements, I cannot help but think of Captain Bligh reciting His Majesty's Naval Regulations on Mutiny to the crew of HMS *Bounty*. There is no doubt such actions on the part of college presidents will meet with strong public approval.

Sixth. Crime is and will continue to be a major issue until our land is safe, at all times, in all places, for everyone. There was no doubt at all about tightening bail bond procedures; many commented there were too many examples of persons on bail committing even more serious crimes.

Speedier trials received much mention; "Justice delayed is justice denied" is certainly true. The present court backlog is a blot on our legal system, and I noted frequent reference regretting that although two new Federal judges were recommended for Indiana, Congress blocked this increase.

Opinion on the "no-knock" principle was evenly divided, but by far the largest percentage of "No Opinion" was on this question. Thirty percent failed to check "Yes" or "No." Admittedly, this provision, recently incorporated into a new District of Columbia crime bill, did not have exposure to be a truly national question at the time.

In essence, it permits police, after obtaining a court order, to enter a residence without knocking. This was bitterly attacked; one minister in the District of Columbia told his congregation they should shoot if this happened to them. However, when the bill was before the Senate, Senator TYDINGS of Maryland, a man known as a liberal Democrat, pointed out that arguments against no-knock, on the grounds it was unprecedented, were false:

This fiction cannot stand up to facts, to the record, plain for all to see; not only do a vast majority of the states clearly permit no-knocking in the limited circumstances set forth in the conference report (on the bill); not only has this practice been approved by the Supreme Court of the United States—but also this very body, the U.S. Senate, approved what was basically the same no-knock provision without a single dissenting vote in S. 2869 in December 1969, and in the Senate-amended S. 2601, in March 1970.

To the charge that no-knock meant increased danger of shoot-outs, Senator TYDINGS replied:

Shoot-outs, violence, death, occur more frequently when the police signal their presence and purpose, and give a dangerous suspect time to get a weapon—not when the police can take the dangerous suspect by surprise before he can arm himself to shoot. We need only reflect on the recent, publicized case of the local bank robber, Billy Austin Bryant. Bryant killed two FBI agents at the door of his wife's apartment after the agents identified themselves as police.

Seventh. In spite of Vietnam, we are not an isolationist country; returns on the future-foreign-policy question make this clear. A surprisingly large 27 percent approved of aid, including troops, to a friendly country under attack; an overwhelming 92 percent decisively rejected any absolute neutrality. Between these fell the majority seeing the need for arms and material but no troops unless and until the United States itself is attacked. Many, I must note, checked both a "No" against neutrality, and a "Yes" on "no troops unless the United States is attacked" question. This should be heeded by any aggressor. We are not withdrawing from the world.

Eighth. In many respects, the final question was the most important of all. Only 2 percent failed to answer. This question was phrased and aimed to get at the very core of public sentiment.

There are, indeed, few times in our past history when internal strife was coupled with external threats to such a degree. And, I venture, probably at no time before have we ever had such vicious rending and tearing at our social fabric by so many of our own fellow citizens.

I had been apprehensive that these constant, swinish attacks against our country had possibly begun to erode our faith in the freedom and dignity of man, to which our country is committed by origin and heritage and deed, and of which our country is also the last great citadel of strength.

In the words of Lincoln, I had wondered "whether that Nation, or any Nation so conceived and so dedicated, can long endure."

It has seemed that everyone with an ax to grind first whetted it, then took great delight in crashing it full into the very trunk and roots of the tree of the Republic. For some time now it has been actual open warfare, with no holds barred, and the ultimate aim has been crucifixion, collectively, of our 200 million citizens on a cross of guilt and shame.

But, by the highest affirmative of any question on the poll—98 to 2—these false premises and accusations have been rejected. Indeed, like a flash of lightning and crack of thunder following utterance of a hideous and unspeakable blasphemy—a good parallel, I think—the doubters and would-be destroyers have been put on notice that their carping is in vain.

We must remember that the greater we become, the higher our standard of living, the stronger we are in preserving this freedom and dignity, the greater the efforts of our enemies at home and abroad to destroy us.

So for the balance of my remarks, I am taking this last question, using points and issues raised in the letters that commented upon it, and shaping it around what our answer, today, could be to one of our greatest statesmen and patriots.

Who? To a man who become when our Republic was young, and who has remained, ever since, an example of our most eloquent and outstanding spokesmen for faith in, and preservation of, the Federal Union: Daniel Webster.

"NEIGHBOR, HOW STANDS THE UNION?"

It is legend, it is folklore, but it is one of the most moving and stirring of all those tales which live in the misty fringes of American annals. Go, it is said, to Daniel Webster's grave; stand by it; call him by name: "Daniel Webster—Daniel Webster."

And if you listen, the wind will blow and the trees will toss their branches about, and the voice that once thundered thundered through the halls of Government will speak:

Neighbor, how stands the Union?

When you answer, you will respond to the man whose speech in defense of the Union in the Senate on January 26, 1830, has been called by the historian Samuel Eliot Morison:

The greatest recorded American oration, thrilling to read even today in cold print, when the issues with which it deals are long since settled by men who followed in 1861 the standard that Webster raised in 1830.

Curious footnote to history, here; Morison goes on to add, about the speech's concluding sentences, in his monumental "Oxford History of the American People," that:

That peroration, declaimed from thousands of school platforms by the lads of the coming generation, established in the hearts of the Northern and Western people an emotional, almost religious conception of the Union. It became something that men were willing to fight for. One of its earliest readers was a dreamy youth on the Indiana frontier named Abraham Lincoln.

And no doubt Lincoln remembered the closing words of Webster when he heard of the attack on Fort Sumter:

Liberty and Union, now and forever, one and inseparable!

So answer him carefully, says the legend, for if he does not like or is disturbed by your reply, he will rise out of his grave. But if you can answer him in this fashion:

Daniel Webster, the Union stands as she should, rock-bottomed, iron-bound and copper-sheathed!

Then he will reply "Thank you, neighbor, all is well" and the wind will cease and the trees no longer toss their branches, and Daniel Webster will be at peace.

Abraham Lincoln solemnly warned us that we cannot escape history. We can can we escape our responsibilities and our duties to those who have gone before, no more than we can escape these same responsibilities and duties to those who will come after us. We can betray neither betray neither the past, nor the future, by what we do in the present. So what would we say, today, to Daniel Webster's spirit? Just how does the Union stand?

"BEWARE OF FALSE PROPHETS—INWARDLY THEY ARE RAVENING WOLVES"

We have plenty such; let us look at two prime examples; remember, they are our fellow Americans. The first, by the chairman of the department of history at the University of Rochester:

Today, for the first time, the country faces a massive breakdown, manifested in every section, class and stratum, in faith in its ideals, institutions and prospects.

And this, by the chairman of the Urban Coalition Action Council:

I believe that virtually all of us have failed in our duty as Americans. . . . And while each of us pursues his selfish interest and comforts himself by blaming others, the nation disintegrates.

Now, to me, this sort of noxious swill is political and social carrion-eating of the most repulsive degree. Having pronounced their own form of last rites over what they see as the prostrate corpse of the American Republic, they then turn on this same inert body and proceed to rend it with ghoulish enthusiasm. This is a repulsive enough sight to their fellow citizens, and, as is becoming rapidly evident, it is having the same effect abroad. For instance:

From Die Welt, printed in Hamburg, Germany; an article entitled "Hating America—the World's Favorite Pastime":

Ironic that anti-Americanism should be nurtured by American self-criticism! . . . Self-criticism in the U.S.A. has begun to look like self-laceration. America as the model, as the hope of the world? That idea, alive fifteen years ago, now makes people laugh in most American universities and throughout much of the upper class. . . . The self-hate of many Americans is giving West Europe's cultural intelligentsia grounds for new arrogance.

From the London Spectator; an article entitled "The Last Best Hope":

The famous plug for the American experiment made by Abraham Lincoln is today in the minds of a great many Americans an example of a false prophecy. . . . But I am too old to change my belief that the United States *is* the last best hope of earth (underscoring in original). . . . I don't quite see American society collapsing or the United States fragmented really if not formally by 1976 when it will celebrate its two-hundreth birthday.

From Commentary magazine, September 1970; a review by a British college professor of Cornell Professor Andrew Hacker's book "The End of the American Era":

For (Hacker) the United States is in the grip of a disease which is fatal and which has reached a terminal stage. . . . Hacker believes there has been a collapse of the national psyche. . . . Critiques of America like Hacker's strike me as dubious—as narrowly self-regarding. . . . I still believe that Andrew Hacker and other American pundits see their difficulties too narrowly and too masochistically. . . . Future prospects for the United States and for the West generally are somewhat forbidding, but no darker than often in the past, and a great deal brighter than for the hundreds of millions of the wretched of the earth in other continents. What we need is to be alarmed enough to face our collective responsibilities, but not to be scared out of our wits.

So, having lost their faith in their homeland, they have become fearful, these men, which is the logical next step in the deadly and disastrous process that has torn down nation after nation, culture after culture, civilization after civilization. Without faith, there is nothing to sustain them against the ominous terrors of the dark and the unknown that seem to close in upon them. And their enemies watch and wait, happily contemplating the day when this loss of faith, and growth of fear, has shattered

the core and will of those they would destroy and the gates will open to the barbarian without a struggle.

It was not in the open fight we threw away
the sword,
But in the lonely watching in the darkness
by the ford.
The waters lapped, the night-wind blew,
Full-armed the Fear was born and grew,
And we were flying, ere we knew,
From panic in the night.
Thank God I—I also—am an American!

Herodotus, Father of History, was born 500 years before Christ. In his writings we find this observation, made 25 centuries ago yet as new and as timely today as it was to him then:

This, however, I know: that if every nation were to bring all its evil deeds to a given place, in order to make an exchange with some other nation, when they had all looked carefully at their neighbors' faults, they would be truly glad to carry their own back again.

So, then, what does this figure mean, when 98 percent steadfastly vow, in the face of all that has gone before, of that which is hurled at them now, and in full knowledge of what is yet to come, that their faith in our Republic, its institutions, and its way of life is firm and steadfast?

It means we can proudly and nobly answer Daniel Webster. If I were called upon to speak for my fellow citizens, I would phrase my words something like this:

"Judge us for yourself, Daniel Webster, but before you do, hear us out, view our record.

"The fiery furnace of our Civil War melted the factional metals of North and South in the same crucible. When it had cooled, when the dross was skimmed away, from this crucible came an alloy of national duty and responsibility and will of a strength and brightness and temper never seen before, and never to be seen again, among the nations of the globe.

"The continent was tamed and cleared; the new Nation arose. Amidst all this, from somewhere, there came a new heart and soul for our Republic. To its shores came the homeless, the persecuted, the outcast, the despairing, of the Old World. They fled misery and despair; they sought—and found—hope.

"Open of heart, generous at times to a fault, but tough in mind and resolute in spirit—we needed these qualities, and more, when the grinding burden of world power was suddenly thrust upon us in 1917. But we did not shrink from it.

"Your Union was sorely tried in the thirties, when depression stalked the world and ground men into the dust. We vowed it would never come again, for us or for our posterity. It hasn't, and it won't.

"Then, when our hopes of 1917–1918 were destroyed, when aggression and terror wheeled again across the world, we met the challenge like men and wasted no tears over what might have been. And when it was over, and the flags of battle were furled, we freely poured out billions of our treasure to our war-torn allies and, yes, to our former enemies, to build once more their ravaged lands and lives.

"We have turned our backs on the false gods of the Left—Communism; and the false gods of the Right—Fascism. Ours is a government of laws, not men. But since men, and not angels, nor prophets, make these laws, and administer them, they are by their very nature imperfect, as all things made by mortals must be.

"Yet we strive, always, upward. You knew, and knew well, the same type of turmoil we now face within our borders. In your time, as in ours, the most violent attacks on our Republic, on our Union, came from our own fellow citizens. We respond to our tormentors and detractors as you did to yours, in your very words: 'Liberty *and* Union, now and forever, one and inseparable!'

"And we still have our faith, Daniel Webster! We believe, and we always will, in the heritage that you and others gave us. We strive to so bear ourselves that generations to follow will believe in us, as well. Let the mighty stream that is the real force for good in our Republic never be choked with the debris of doubt and despair; let it never dry at its source, let it never cease to flow!

"And, again, like you, we will repeat your words when you spoke at the dedication of the Bunker Hill Monument; we will repeat them like a catechism, like a vow, not out of pride, not out of chauvinism, but out of trust, confidence and hope: 'Thank God! I—I also—am an American!'

"So, Daniel Webster, what is your judgment upon the Union?"

And I know what his answer would be:

"The Union stands as she should, rock-bottomed, iron-bound and copper-sheathed. Thank you, neighbor. All is well!"

EDGAR HIESTAND

HON. BARRY M. GOLDWATER, JR.

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, September 9, 1970

Mr. GOLDWATER. Mr. Speaker, on August 19, the world as I know it was diminished by the passing of my friend and former Congressman, Edgar "Eck" Hiestand of California. He served the people of California and the United States and served them well; he continued to work for them after he retired.

During his tenure in Congress, Eck was known as an individual of integrity, responsibility, and unlimited energy. He was a moving force in the formation of "The Response Committee" in 1958, along with 14 other House Republicans. They were low in seniority, but high in party enthusiasm and theirs was an effective voice in the House. In an organized fashion, they countered Democratic charges against the GOP from the House floor.

Eck served on the Banking and Currency Committee and worked hard to prevent the deterioration of our economy; we could have used his knowledge and wisdom during the past decade.

During his later years, Eck cofounded the San Fernando Valley Business and Professional Association, of which I am proud to be a member. He also traveled extensively around the State, speaking to literally hundreds of various civic groups, seemingly without ever tiring.

Eck was a friend to all who knew him and first and foremost, he was a friend to America. He will be sorely missed.

ECONOMIC OPTIMISM MAY BE PREMATURE

HON. AL ULLMAN

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Wednesday, September 9, 1970

Mr. ULLMAN. Mr. Speaker, as election time draws near, the administration's economic predictions grow increasingly cheerful. Spokesmen cite a recent cooling in the rate of inflation as the basis for such optimism. Recently, the Vice President even went so far as to say that all the talk about a recession was merely a myth.

While everybody these days is eager for good economic news, there is still much room for public skepticism. Inflation cannot be simply talked away. The facts indicate that the administration's optimism is, to say the least, premature. In a recent speech in Madison, Wis., the Chairman of the Council of Economic Advisers, Paul W. McCracken, indicated that he recognized the realities of the economy when he said we may be faced with "an unduly protracted period of excessive slack and unemployment."

The long-term inadequacy of the administration's restrictive fiscal and monetary policies to deal with the current inflationary trend is pointed out in a recent article by the business and finance editor of the Washington Post, Hobart Rowen. The article shows how the predicted reordering of national priorities has not been accomplished and why this failure has served to contribute to a stale economic outlook. Needed cuts in defense spending have not resulted in subsequent shifts into peacetime expenditures.

All the administration's forecasts have not yet put the economy back together again.

The article follows:

LOOKING AT THE ECONOMY WITHOUT ROSE-COLORED GLASSES

(By Hobart Rowen)

Leafing through the accumulation of Nixon administration speeches and statements last month on the condition of the economy, the returning vacationist finds one dominant theme: self-congratulation. The economic downturn, the Nixon men say with satisfaction, is at an end; inflation has been cooled (or, at least, the rate of inflation is subsiding); labor efficiency is increasing; and there is probably a broad upturn in the offing.

The Vice President, in a guest column in this newspaper, went so far as to say that recession talk was a myth, and that things were now happily breaking the administration's way. One newspaper, reprinting Mr. Agnew's economic commentary, headlined it: "Spiro Says Everything's Coming Up Roses." But it is clear from the government's own statistics—and even from a close reading of some of the speeches—that there is not yet very much to crow about. It seems a reasonable assumption, with an election in the offing,

that the White House has been pressing hard to put a rosy hue on skimpy evidence.

For example, White House aide George Shultz (who knows better) got a great deal of mileage out of one month's statistics showing slightly reduced wholesale price pressure, and Assistant Commerce Secretary Harold Passer then read too much into the July set of so-called "leading" indicators.

Everybody—not just the administration's politicos—is eager for good economic news. But the stubborn fact is that after adding in every favorable crumb of statistics for the past month, the economy is still running 4 per cent below its capacity, unemployment is still 5 per cent (and threatening to go higher), and the rate in inflation at the consumer level is still an unacceptable 5 per cent.

Paul W. McCracken, Chairman of the Council of Economic Advisers, has done his best—in a reasoned, academic way—to make the administration's case that the adjustment has been mild and that there is "some evidence" that a mild expansion "may be resuming." But he has been candid enough to say, as well, that the task ahead is very great because economic performance continues to be far below potential—and the nation's basic capacity to produce continues to grow.

If the nation fails to boost demand sharply, McCracken said recently in a speech at Madison, Wis., we may be faced with "an unduly protracted period of excessive slack and unemployment." What McCracken was trying to convey (and this was not highlighted in any of the daily press reports of his speech) was that a below-par economy is in prospect for all of 1971, with unemployment still ranging around 5 per cent or higher, not dipping toward 4 per cent until 1972.

That's a new "game plan"—if you remember the administration's first "game plan," a gentler hand was going to contract inflation with unemployment never even hitting the 5 per cent mark in 1970; the average, in fact, would be held to 4.3 per cent.

But inflation proved to be tougher to handle than Mr. Nixon and his advisers thought, and the policy screws were turned tighter than had been planned. So the "progress" that is hailed in the canned statements by the Vice President, Treasury Secretary David Kennedy and Commerce Secretary Maurice Stans is mostly wishful thinking. The patient's temperature may have been reduced from, say, 103 degrees to 102 degrees (and he hasn't passed away). But the evidence of infection persists. The economic doctors are aware that the patient is not back to normal weight. They hope there will eventually be full recovery. But it will take time—and in the process, a further physical toll.

Curiously, the administration has ascribed to the two-year decline in defense activity a share of the blame for the economic decline—especially a "displacement" of 1,000,000 jobs. This has been a recurrent theme of administration propaganda ever since the President's June economic speech.

There's no denying that war-connected spending has been cut sharply, and the Nixon administration deserves more credit for this than its political opponents want to give it. Military prime contracts, for example, are at their lowest level in nearly five years, or since just after the Johnsonian escalation of the Vietnam war.

This typifies, the administration is fond of saying, a "re-ordering of national priorities." Okay, that's fine: but if the priorities have been re-ordered, why haven't the men and the unoccupied facilities been shifted into nonwar activities? In other words, what the administration is using as an excuse for the downturn is really a critique of its own lack of planning. There could have been offsets to lowered defense outlays. "When they blame reduced Pentagon contracting for unemployment," says a Democratic critic, "it's like a guy giving up candy and then complaining that he's skinny."

What is really needed at this point is less attention to the latest statistical wiggle, and action to promote a faster rate of real growth for the economy. There appears to be little prospective impetus from stronger capital goods expansion (in fact, the latest official government survey now points the other way), or from a consumer spending binge (individuals seem disposed for the time being to save more). And the Federal Reserve is still fearful enough of inflation to resist McCracken's behind-the-scences pressure for more stimulus from monetary policy. The main expansionary thrust is coming from a growing federal deficit.

If things continue this way, the economy for a long time will be essentially flat—it will do no more than creep upward sluggishly, with a growing multibillion gap between actual and potential production. The most one can hope for is that the election will come and go quickly; then, perhaps, the occasional irreverent public comment or criticism that formerly punctuated the administration's outpourings may return. At the moment, the internal skeptics—who are still present—raise their doubts in private.

ORDEAL IN THE DESERT

HON. JONATHAN B. BINGHAM

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, September 9, 1970

Mr. BINGHAM. Mr. Speaker, the lead editorial in today's New York Times, which follows, precisely summarizes my own views toward the barbarous hijacking of commercial aircraft by Arab terrorists, and I commend it to my congressional colleagues and other readers of the RECORD:

ORDEAL IN THE DESERT

United Nations Secretary General Thant spoke for the conscience of civilized man yesterday in denouncing the Arab hijackers for their "savage and inhuman" actions. U Thant, certainly no enemy of the Arab world, voiced a universal demand when he called for "prompt and effective measures to put a stop to this return to the law of the jungle."

With every passing hour, the world's consciousness of the enormity of the commandos' crimes rises. Regardless of political convictions, no sane person can view with anything but revulsion the fact that some 200 innocent people are being held hostage in a burning desert, facing the possibility of being cold-bloodedly murdered if various governments refuse to bow to blackmail.

If these helpless people were to die tonight, the wave of indignation throughout the world against the Arab cause in general and the Palestinians in particular would be unprecedented. The Egyptian newspaper Al Ahram was vastly understating matters when it said that the "attack on international civil aviation does not encourage world feelings of solidarity with the Palestine cause." A similar view was expressed yesterday by a spokesman for the ten Arab countries whose representatives met with Secretary Rogers. Only savages unworthy of membership in the community of civilized nations could carry out the threat the Arab guerrillas have used as their blackmail weapon. Any such execution of innocent people would constitute a massive political blow to the entire Arab position, quite apart from its unspeakable barbarity.

Al Ahram's disapproving comment makes plain that the more reasonable elements in the Arab world understand the situation, and perhaps even regret the encouragement and aid they have given in the past to these extremists and their hijacking efforts. But precisely because the commando groups have received such wide Arab financial and military support, the world community looks first to the Arab states as those responsible for the lives and liberty of all the plane passengers now undergoing their desert ordeal.

LEGAL REMEDIES FOR CAMPUS DISORDERS

HON. JOHN M. ASHBROOK

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Wednesday, September 9, 1970

Mr. ASHBROOK. Mr. Speaker, in the July 19 issue of the Chicago Tribune, Reporter Ron Koziol detailed the activities and progress being made by the Americans for Effective Law Enforcement, Inc.—AELE—a citizens' group founded in 1967 to aid in combating the rash of violence and crime which has been on the increase in recent years. Headed by Prof. Fred E. Inbau of the Northwestern University Law School, AELE, which considers itself a "spokesman for the law abiding in American society," lists an impressive number of educators, public officials, and other concerned citizens who have attacked the breakdown in law enforcement with specific information, recommendations, and programs of value to both the individual citizen and law enforcement officials.

As noted by Reporter Koziol, AELE distributed thousands of its position paper, "Violence on the Campus: Legal Remedies" which outlines legal remedies available to nonviolent students, their parents, faculty, taxpayers, alumni "and to others who recognize the need to do something themselves in order to protect their respective lawful interests." Other projects of AELE include the drafting of model law enforcement legislation, information of various aspects of the crime problem, information to public officials and judges on scientific crime prevention methods, to name but a few.

With speculation rife as to whether there will be a "hot time" on campuses this fall, the above-mentioned position paper, "Violence on the Campus: Legal Remedies" published by Americans for Effective Law Enforcement, Inc., is especially timely for those concerned with the peaceful pursuit of educational goals. With the Koziol article of, I insert at this point in the RECORD AELE's position paper No. 3 on legal remedies for campus disorders:

CHICAGO BASED GROUP SPEAKS FOR THE "LAW-ABIDING SOCIETY"

(By Ronald Koziol)

Americans for Effective Law Enforcement, Inc., a Chicago-based citizens' group is dedicated to speaking "for the law-abiding society."

The group, whose president is Fred E. Inbau, a Northwestern University Law School professor, began operating in 1967. Its impact

as a voice for millions of citizens concerned with crime problems has been felt throughout the country.

SUPPORTED BY OGILVIE

It was Inbau who, with former Chicago Police Supt. O. S. Wilson, conceived the idea of the organization in 1966. Gov. Ogilvie was among the early supporters and served on A.E.L.E.'s board of directors.

Among its more notable achievements has been the preparation of a model state statute for electronic surveillance by law enforcement agencies. The model code was distributed to state attorneys general throughout the nation and to many legislators.

According to Inbau, 27 states are considering adopting the model statute.

Early last year, a position paper entitled "Violence on the Campus: Legal Remedies" was prepared and distributed to thousands of college and university administrators.

The paper outlines legal remedies available to nonviolent students, their parents, faculty, taxpayers, alumni "and to others who recognize the need to do something themselves in order to protect their respective lawful interests."

The remedies suggested by A.E.L.E. were based upon the assumption that the legal rights of nonviolent students and other individuals are abridged when violence and disorders occur on college campuses.

The paper has become so popular that recently a more detailed memorandum was drawn up by A.E.L.E. for use by school administrators in preparing court cases against campus disrupters.

LIST PURPOSES

Purposes of A.E.L.E., as listed by Inbau, are as follows:

1. Representation of the law-abiding public in criminal cases before state and federal courts in cases involving issues of national importance in criminal law enforcement.

2. Drafting of model legislation to aid in effective law enforcement and public protection.

3. Preparation of booklets and newsletters to inform the public of the crime problem and its ramifications, the difficulties and needs of police, shortcomings in criminal laws and deficiencies in the courts.

4. Dissemination of information to public officials, judges and the public regarding potentials and limitations in scientific crime prevention methods.

5. Defense of persons, in criminal or civil cases, who have been charged or sued because of their justifiable efforts to maintain law and order.

As with many citizens groups, much of the work is done on a voluntary basis. Inbau and other lawyers have prepared many of the legal papers in their spare time and with no compensation.

Now the group is soliciting funds to further its efforts. The W. Clement and Jessie V. Stone Foundation of Chicago has offered a $70,000 grant to A.E.L.E., contingent upon the group's raising another $130,000 itself from other sources this year and next.

New chapters have been organized in recent months in Colorado, Oregon, Oklahoma, Washington, D.C., and Ohio. The response to A.E.L.E. in Colorado has been so satisfactory that the group's first annual workshop and dinner will be held July 27 in Denver, Inbau reports.

Study groups are scheduled in law enforcement, criminal justice in the courts, violence on street and campus and speaking out for the police. Speaker at the dinner will be Sen. John McClellan [D., Ark.].

VIOLENCE ON THE CAMPUS: LEGAL REMEDIES

Over the years a great deal has been said and written about the legal rights of dissenters in our society. Trends of violence in acts of dissent now call for appropriate consideration of the legal rights of those who are victimized by dissenters who resort to illegal means to express their dissent. Particularly urgent today is the matter of the legal rights of the majority of students in our various colleges and universities—the students who are adversely affected in many ways by the violent tactics of the small minorities within the educational community.

Americans for Effective Law Enforcement, Inc. outlines in this position paper the possible legal remedies available to non-violent students, their parents, faculty, taxpayers, alumni, donors and to others who recognize the need to do something themselves in order to protect their respective lawful interests. A legal memorandum, with citations to court decisions, is available upon request to A.E.L.E.

The remedies A.E.L.E. suggests are based upon the assumption that the legal rights of non-violent students and other individuals are abridged when violence and disorder are perpetrated on college campuses. The suggested legal remedies deal primarily with 1) perpetrators of violence and disorder and 2) persons whose positions of authority require them to maintain order, but who fail to take proper and adequate action to maintain or restore order.

The classes of individuals and groups against whom legal action may be taken in order to protect the legal rights of non-violent students are as follows:

POTENTIAL DEFENDANTS

1. The private or public corporation that constitutes the legal entity of the college or university.

2. The board of directors or overseers of the college or university corporation.

3. The administration of the educational institution.

4. The faculty members who permit the violence or who participate in it.

5. The students who engage in violence.

6. The non-students who participate in violence on the campus.

7. Certain governmental bodies and officials: (a) The public body that supports the institution by taxes or that administers the affairs of the college, and (b) the public body or officials having the responsibility to enforce the criminal law in the geographical area in which the institution is located.

Following is a list of persons or groups who might have the right to institute legal proceedings to safeguard the interests of non-violent students:

POTENTIAL PLAINTIFFS

1. The non-violent students themselves who are adversely affected by violence on the part of others; and the parents of non-violent students.

2. The taxpayers whose taxes support the educational institution.

3. The contributors of funds to the institutions, whether private or public.

The forms of the available legal action by any of the above three parties against any of the first seven on the list are as follows:

I. LEGAL ACTION AGAINST THE EDUCATIONAL INSTITUTIONS

A. Private educational institutions

1. Almost all private educational institutions are corporations. If such a corporation fails to fulfill its corporate purposes, a suit might be instituted to revoke its corporate charter.

2. More directly, students and possibly parents of the students whose education has been adversely affected because of improper management of the institution might sue for breach of contract or for breach of a fiduciary obligation.

3. Donors of funds or heirs of donors of funds given to the institution might file suit for a return of the funds. The basis for the suit would be a failure to use the funds for the use designated at the time of the gift or because of a failure to manage the institution properly, this being an inherent condition of the gift. By the same line of reasoning, outstanding pledges of funds could be revoked. Also, wills naming the institution as a beneficiary are subject to revocation.

4. Where special discriminatory treatment is accorded select students, suit might be filed under various federal civil rights acts.

5. Any person who has suffered bodily injury or property damage because of campus disorders might sue for compensatory damages, and in some instances the parents of injured students may also have a claim based upon such injuries.

B. Public educational institutions

1. The possible courses of action available against public institutions include those set forth above, as well as a taxpayer's suit based upon a theory of a misuse or waste of public funds.

2. The failure to revoke state scholarships of disorderly students could also be a basis for a taxpayer's suit because such failure to act is a waste of public funds.

II. LEGAL ACTION AGAINST THE BOARD OF DIRECTORS

A. Private educational institutions

1. Individual members of a Board of Directors, or the overseers of a college corporation, are liable personally for mismanagement of the corporation's affairs. Assuming that a Board of Directors does not take proper steps to assure an orderly functioning institution, the individual Board members could be personally liable to injured persons for failure to provide adequate safeguards for personal security. Surely, by now, Directors must realize that today's disorder problems cannot be handled with yesterday's techniques. Possibly a mandatory injunction could be entered against a Board of Directors requiring them to take action to insure the personal safety of non-violent students and faculty.

2. The loss of federal funds due to disorders or to the violation of federal laws could be the basis for a suit to remove the Board or members thereof for mismanagement.

3. The failure to (1) curtail the salary of a professor who is not fulfilling his teaching obligation because of personal beliefs in support of dissident students, or who is encouraging riots, and (2) the failure to sue persons responsible for damages to the institution's property could also be the basis of derivative suits against a Board, the corporation, and the offending persons by individuals with the requisite legal standing.

B. Public educational institutions

In addition to the foregoing suggested remedies, officials of public institutions are public officers subject to applicable state statutes governing their conduct. If a sheriff, chief of police, county treasurer and other public officials can be charged with and tried for misfeasance, malfeasance or nonfeasance of duty, there is no reason why a member of the Board of Directors of a state institution cannot be so charged and tried.

A taxpayer's suit asking for removal of a Board member or the Board could be filed based upon the foregoing theories.

III. LEGAL ACTION AGAINST THE INTERNAL ADMINISTRATORS OF EDUCATIONAL INSTITUTIONS

The legal remedies available against the internal administrators of an educational institution are very similar to those available against a Board of Directors. They too could be sued individually for failure to provide a safe place to obtain an education, for failure to secure adequate working conditions for a willing faculty, for failure to protect college property, for waste of the institution's assets, and for mismanagement in general.

Both private and public administrators are subject to such legal actions.

IV. LEGAL ACTION AGAINST FACULTY MEMBERS

A faculty member who engages in or encourages illegal acts is in breach of his employment contract, and he can be fired or disciplined. Moreover, he would be criminally and civilly liable for his illegal conduct.

V. LEGAL ACTION AGAINST VIOLENT-ACTING STUDENTS

Disciplinary actions and expulsions may be imposed upon violent-acting students. Criminal sanctions as well as civil remedies are available against students performing such illegal acts as occupying buildings, bodily removing the institution's personnel from buildings, unlawful restraint, extortion, arson, bombing, assault, disorderly conduct, and criminal trespass. Students who resort to violence can be disciplined or expelled. Non-dissenting students can sue the violent students for tortious breach of contract—their contract with the college to provide an education—or for the curtailment of an advantageous relationship, in that they are deprived of their instruction and learning.

Suits for personal injury, battery, assault, false imprisonment and slander might also be maintained against the dissenters.

Suits for injunction might be filed against the dissenters on the theory that their illegal activities such as blockage of ingress and egress to buildings, noise which disturbs classes and residential areas, and trespass, constitute public nuisances.

The active interference with the rights of others could be actionable under the Federal Civil Rights Act.

Finally, federal and state scholarships, as well as those funded with private donations could be revoked.

VI. LEGAL ACTIONS AGAINST NON-STUDENTS

The criminal and civil remedies available against non-students who engage in illegal activities are basically the same as those available against students. In addition, federal criminal statutes prohibiting travel in interstate commerce to promote disorders might be the basis for criminal prosecutions.

VII. LEGAL ACTIONS AGAINST LAW ENFORCEMENT OFFICERS AND GOVERNMENTAL BODIES

Responsibility for campus freedom from lawlessness also rests upon the law enforcement officers and agencies in the community in which the educational institution is located.

A college or university campus is not a sanctuary for lawlessness! Regardless therefore, of whether the institution calls for law enforcement assistance or not, if a criminal offense is committed in the presence of a law enforcement officer or within his plain view, he is not only permitted to make an arrest and file a criminal charge, but he is also under a duty to do so.

Among the various powers that a prosecuting attorney may exercise in campus violence situations is the presentation of the matter to a grand jury for investigation and the return of indictments against the offenders, and particularly the instigators of the violence. The subpoena power of the grand jury is a very effective procedure for ferretting out the underlying facts.

Law enforcement officers, including prosecuting attorneys, who do not fulfill their lawful obligations with regard to campus disorders are subject to the same kind of civil and criminal liability that exists with respect to other derelictions of duty.

A governmental body, such as the city or county, may be liable civilly for injuries resulting from a failure to enforce the law.

CONCLUSION

Because of variances in the laws of the fifty states, some of A.E.L.E.'s suggested legal remedies might not be available in all states. For example, to the extent that the doctrine of sovereign immunity (a state cannot be sued without its consent) exists, suits against public colleges and public officials might not be permitted. Also, the doctrine of charitable immunity (a charitable organization cannot be sued) might prevent suit in some jurisdictions against private educational institutions. In each particular case where legal action is contemplated, a careful research must be made of the law of the jurisdiction before the filing of any lawsuit.

GOVERNMENT-CONTROLLED RADIO IN AMERICA

HON. JOHN G. SCHMITZ

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, September 9, 1970

Mr. SCHMITZ. Mr. Speaker, when the Federal Communications Commission first announced its extraordinary, so-called "fairness doctrine" several years ago, experienced and knowledgeable American conservatives immediately predicted that this would be the means used to remove forthright expression of their point of view from the Nation's airwaves, by direct Government repression.

What they warned of has become reality with the Federal Communications Commission's decision of July 7, effective September 1, denying renewal of the broadcasting license of Radio Stations WXUR and WXUR-FM in Media, Pa., owned by Faith Theological Seminary.

The FCC has ruled that every radio station "must seek affirmatively to encourage and implement the presentation of contrasting viewpoints. Indeed, where discussion of controversial public issues involves personal attacks, licensees are required to furnish a copy of the pertinent continuity—or a summary, if the continuity is not available—to the person or group attacked, with a specific offer of the station's facilities for a response."

This must be done at the station's own expense, and totally without regard to even the most fundamental convictions and the dictates of personal conscience of the owners and operators of the station. As stated, the doctrine may sound fair. But in practice, it means that every time America is praised over the air, equal time must be given to condemn it; every time crime is condemned over the air, equal time must be given to praise it; every time Christ is mentioned over the air, equal time must be given to deny Him. And that is exactly how the Federal Communications Commission interpreted the "fairness doctrine" in the WXUR case.

They found this station to be in violation of the "fairness doctrine" first of all because—and this is a direct quote from appendix A of the text of the decision which I obtained from the Commission:

Broadcasters on WXUR took the consistent position that the Vietnam War is a war solely against Communist aggression; that the United States should do everything in its power to achieve a triumphant military victory; that the war and especially the bombing of North Vietnam should be escalated; and that individuals who suggest a policy other than total military victory are appeasers playing into the hands of the Communists.

The particular broadcasts in which these pro-American, anti-Communist viewpoints were given are carefully listed, and due note is taken of the fact that the anti-American, pro-Communist contrary viewpoint was not given equal time to reply.

When reading incredible nonsense like this, one has the urge to make up a sign for the honorable Commissioners in large black letters and hang it over their desks, reading: Gentlemen, we are at war—and to ask if they would have given Hitler equal time on American radio in World War II.

The first cited example of station WXUR's failure to adhere to the "personal attack" principle is given as follows:

Attacks were made upon Rutgers University Professor Eugene Genovese's loyalty to the United States. Professor Genovese was accused of being a communist in the following language: "Everybody knows that he is a self-confessed Marxist, and he tries to make a distinction between being a Marxist and being a communist, but of course the communists don't make that distinction in *Political Affairs* and the *Communist Worker* of New York."

How it can be termed a personal attack on a man to call him what he calls himself—namely, a Marxist—surpasses all understanding.

These excerpts will give the flavor of the rank absurdity of this decision. But it is worse than absurd, for these men have the power to shut down a radio station for broadcasting the views described, and they have just used that power for the first time so openly. It is most unlikely to be the last time they use it.

Vice President AGNEW clearly has spoken for a majority of the American people in condemning persistent left-wing bias in our news media. Its existence is a fact obvious to all, though those with a direct personal interest in the major media dare not admit it. Under these circumstances, the "fairness doctrine" can only work against those few stations and programs which seek to counterbalance this bias with a voice of reason, commonsense, and loyalty to the basic values of our country. Before the word "fair" loses all its rightful meaning, we ought to make a greater effort to be fair to America.

MAN'S INHUMANITY TO MAN—HOW LONG?

HON. WILLIAM J. SCHERLE

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, September 9, 1970

Mr SCHERLE. Mr. Speaker, a child asks: "Where is daddy?" A mother asks: "How is my son?" A wife asks: "Is my husband alive or dead?"

Communist North Vietnam is sadistically practicing spiritual and mental genocide or over 1,500 American prisoners of war and their families.

How long?

FREEDOM—OBLIGATION OR PRIVILEGE

HON. GEORGE A. GOODLING

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, September 9, 1970

Mr. GOODLING. Mr. Speaker, freedom is a term that is difficult to define accurately, for it has a multitude of dimensions.

A very fine editorial on the subject of freedom appeared in a recent issue of the Mechanicsburg News, a popular newspaper in my congressional district. This article was written by Col. John E. Bex, USAFR, editor of the Minuteman, Department of Pennsylvania, Reserve Officer Association. Colonel Bex had the distinction of being one of six Air Force Reserve colonels selected and called to active duty in August of last year as members of the class of 1970 Air War College.

I have been advised that the Air Force News Services thought so highly of Colonel Bex's article that they selected it for the July 4, 1970, editorial, and it was reproduced in base papers throughout the world. Because this piece presents a penetrating examination of the nature and meaning of freedom, I insert it into the RECORD and commend it to the attention of my colleagues:

FREEDOM—OBLIGATION OR PRIVILEGE

(By Col. John E. Bex)

Since everyone loves freedom, it is something of a mystery why, throughout the long span of human history, all peoples have not been free, instead of so few. It must be at least in part because they have sometimes valued other things more. Burke said, "Depend upon it, that the lovers of freedom will be free." All too often in the demanding choice between freedom versus comfort, ease and seductive temptations, it is the latter that won out. It is part of the deepest essence of freedom that it can never really be presented as a gift to anyone. It must be won and earned—and continually rewon. Each generation must wage its own struggle for freedom against all the current enemies of freedom, large and small, new and old, open and disguised. This struggle is neither easy nor simple, but there is no other way.

James Madison warned us: "Since the general civilization of mankind, I believe that there are more instances of the abridgment of the freedom of the people by gradual and silent encroachments than by violent and sudden usurpation." The enemies of freedom do not wear labels describing them as such, but generally profess to love freedom more than anyone else.

Freedom which amounts to anything means obligations, duties, eternal vigilance—and a wide-awake, critical examination of all the gaudy alternatives. It means responsibility and self-control, and this alone is enough to make some men abandon it with shameful eagerness. We will keep our freedom only as long as we are deeply convinced in our heart of hearts that it is more precious than any of the things for which we may be asked to surrender it, perhaps piece by piece.

The glory and outstanding contribution of America to whatever there is of civilization on this planet, Earth, certainly lies as much in its ideals of freedom as in its uniquely high standard of living. But the combination of the two is far from being a mere historical coincidence. Economic freedom has proved itself to be one of the most creative forms in existence.

In one respect, freedom is a privilege as well as an obligation. In America, we are still in a relatively good position to make the everlasting fight to maintain our freedom against all encroachments. Elsewhere, many people are born into a world where the conditions of struggle for freedom are more difficult, sometimes almost unimaginably so. Thus, we still enjoy an unusual privilege and good fortune, a privilege such that perhaps only those who have lost it can appreciate its true value.

One thing is certain—that only those who understand and accept the obligations of freedom will long enjoy its privileges. No one understood the obligation and privileges of freedom better than Benjamin Franklin, who said, "They that can give up essential liberty to obtain temporary safety, deserve neither liberty nor safety." Old Ben said this in 1773. Today, his words are more significant than ever before.

EXIT COMMISSIONER LEARY—A "GOOD COP"

HON. JOHN M. MURPHY

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, September 9, 1970

Mr. MURPHY of New York. Mr. Speaker, New Yorkers were saddened and disappointed this week by the resignation of a distinguished law-enforcement officer, Police Commissioner Howard Leary. The resignation is shrouded in mystery, and Commissioner Leary's leaving has raised profound questions about the cause of law, order, and justice in New York City.

It appears that Commissioner Leary resigned because he had become frustrated by city hall interference in the daily operation of the police department. During his tenure he was prevented from firmly handling protesters, and was bypassed in investigating wild-eyed charges of police corruption. At practically every turn he was second-guessed by city hall amateurs, and police morale and confidence suffered. Despite striking evidence to the contrary, city hall poohpoohed a police report of a plot to assassinate police officers—even after the bombing of police headquarters and the ambush of several patrolmen.

The commissioner finally realized that politics, rather than public safety, ruled city hall's approach to police matters, and he resigned. He could not operate without the full support of the mayor and his staff.

There are serious implications in the New York story for the forces of law and civil order throughout the country. Police are professionals whose job it is to insure the safety of all citizens. They must protect our right to live free of fear, and they must apply the law with an even but firm hand. When the police are repeatedly frustrated in meeting their responsibility, the society-at-large suffers. Indeed, it is endangered.

New York is in the grips of a severe wave of crime and violence—a wave that includes the violent extermination of police officers. Only the unswerving support of the police by the city government can hope to reverse the tide and restore security to the streets.

Sadly, for New York, this support has not been forthcoming, and a dedicated and extraordinarily competent professional policeman has resigned.

The following editorial and story by Edward Kirkman and Paul Meskill of the New York Daily News gives an excellent summary of the events leading to the resignation. I commend it to my colleagues as a negative lesson—a lesson in how to hamstring a police department until only uncertainty, confusion, and resignation result while the public right to safety continues unfulfilled:

EXIT COMMISSIONER LEARY

Police Commissioner Howard Leary has resigned under circumstances that are, to say the least, somewhat mysterious.

The top cop copped out in a phone call Friday to Mayor John V. Lindsay. He apparently intends no public explanation of his action.

It is fair to speculate, however, that Leary had had a belly full of ham-handed interference by Lindsay and his cohorts in the operations of the Police Department.

Through the four-plus years of his regime, Leary has suffered through innumerable instances in which bright young lads from City Hall—more interested in preserving Lindsay's image as a shining liberal knight than in law enforcement—have shackled police attempting to deal professionally with public disorders.

More recently, Lindsay handled allegations of police corruption in a manner that constituted a slap in the face for Leary and an insult to the entire department.

Leary's departure cannot help but further sap the morale of New York's Finest at a time when a cabal of troublemakers is doing its evil best to drive a wedge between the cop on the beat and the citizens he protects.

Mayor Lindsay still can retrieve the situation by choosing as Leary's successor a real pro, and then giving him a free hand to combat crime of whatever variety wherever it may occur.

The next move is up to His Honor and, for the sake of all New Yorkers, it had better be a good one.

BID TO MUFFLE COP PLOT LED LEARY TO QUIT

(By Edward Kirkman and Paul Meskil)

The "last straw" that brought about Police Commissioner Howard Leary's resignation was a City Hall attempt to play down reports of a plot to murder policemen, sources close to Leary said yesterday.

The murder plot was charged by a high police official last week after the unprovoked shootings of two Queens patrolmen and a Bronx patrolman. Lindsay made a hasty visit to Police Headquarters the morning after the story appeared and conferred with Leary and other top police brass, including borough patrol and detective commanders.

According to headquarters sources, Lindsay sought to put a damper on the conspiracy reports. Leary was said to have resented this, the sources said. Leary, who had visited wounded policemen in hospitals, had known about the asserted plot for several months, it was said.

"He felt the mayor was playing politics with a very dangerous situation," one source added.

POSSIBLE PLOT DISCUSSED

The day before Lindsay called at headquarters, Leary and his chief aides discussed the alleged plot with FBI agents and a detective commander from Philadelphia, where seven cops had been shot in three days.

The Lindsay visit came on the heels of an-

other City Hall move that Leary bitterly resented—the mayor's order to turn all investigations of city employees, including police, over to City Investigation Commissioner Robert Ruskin. This terminated the Police Department's traditional policy of probing charges of corruption within its own ranks.

STUNG BY ACCUSATION

Stung by Ruskin's accusation that the Police Department was lagging behind other city agencies in complying with Lindsay's original edict, issued last May and repeated two weeks ago, Leary confided to friends that City Hall was trying to make him look bad.

In an interview that was not to be released while he remained in office, Leary flatly charged that Ruskin was leaking information on alleged police corruption to the press in order to "cover up major scandals in other departments."

Although Leary was brought here from Philadelphia by Lindsay to run the world's biggest municipal police force, friction between the two men began a few weeks after Leary took office in 1966 and increased through the years.

"No commissioner can work for a man who's running for the presidency," Leary told a reporter outside City Hall a few months ago. The reporter asked if he was preparing to resign.

"Hell, no," Leary replied.

The reporter said there were rumors that Lindsey would dismiss Leary if he didn't resign soon.

"You go in there and ask him if he'll fire me," Leary said, pointing to City Hall. "He can't have my neck, because I've got his—right here."

REFUSED DEMAND BY MAYOR

The smouldering feud flared in May when Lindsay denounced "a breakdown of the police as the barrier between the public and wanton violence," following an attack by construction workers on antiwar demonstrators in Wall Street and at City Hall.

Lindsay demanded a Police Department investigation "to fix responsibility at the command level for the failure of police" to hold back the hard hats. He also demanded "prompt disciplinary action" against all cops "who failed to perform their duty." But Leary refused to act against policemen who were at the demonstration.

Leary was still in seclusion as the chore of picking his successor got under way at City Hall yesterday.

RESPONSE TO COUGHLIN POLL ON KEY ISSUES IS HEAVY

HON. R. LAWRENCE COUGHLIN

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, September 9, 1970

Mr. COUGHLIN. Mr. Speaker, the results are now available for a poll I conducted of citizens of Pennsylvania's 13th Congressional District on many of the important issues that confront us as a Nation. I inaugurated the districtwide poll last year and I am as pleased with this year's response as I was with the 1969 returns.

Since my poll was not a limited one, I think the results are significant and feel it is appropriate to insert them in the CONGRESSIONAL RECORD.

To try to reach as many of my district's citizens as possible, I had questionnaires printed—not at Government expense—and mailed to some 190,000 households and boxholders.

In answering the questionnaires, many constituents took the time to jot notes on them while others wrote letters to detail their views. The heavy and articulate responses indicated their depth of concern and their desire that Congress act responsibly and responsively in meeting problems both domestic and foreign.

I thought it revealing that there is widespread distress over the problems of crime and drug abuse. This was evidenced on questions on ranking domestic spending priorities and on specific new weapons to fight crime.

In ranking domestic spending priorities, those responding cited crime-drug abuse as first, a move up from last year's poll. This was followed, in this order, by poverty-hunger, environment, education, cost of living-elderly and housing-urban problems.

On questions of new weapons to combat crime, nine out of ten who responded favored pretrial detention of dangerous repeat offenders and mandatory jail sentences for repeat major or violent offenders. Sixty-three percent approved of court orders for "no-knock" entry if danger of injury to officer or destruction of evidence. Because of the emotional nature of these specifics, I used language embodied in the bills in phrasing the questions.

On the vital issue of Vietnam, 53 percent favored the present policy of Vietnamization and U.S. troop withdrawal. Many of these commented that they wanted troop withdrawal accelerated or opposed our move into Cambodia.

The questionnaire results showed strong sentiment for reduced Government expenditures-balanced budget in the fight against inflation, for cutting agriculture subsidies and space expenditures, and for direct negotiation between Israel and the Arab states.

The majority also favored reforming penalties for use of marihuana, favored postal reform that would permit union representation, favored trying the President's new "workfare" program for welfare reform, and favored mandatory retirement for all Federal Government employees including judges, U.S. Senators and Congressmen.

Somewhat less than half want the United States to continue testing and development of MIRV and other weapons systems. Almost three out of 10 said our course of action should be based on Soviet moves.

A total of 28,934 individual responses were recorded before the June 30, 1970, deadline. These were tabulated carefully under statistical procedures to guarantee that errors were kept to a minimum.

The results are:

1. Please rank the following 1, 2, 3, 4, 5 and 6 in terms of domestic spending priorities:

Cost of living—elderly	5
Housing-urban problems	6
Education	4
Environment	3
Crime-drug abuse	1
Poverty-hunger	2
Other (specify)	7

2. In Vietnam, do you favor? (one only)

	Percent
Present policy of Vietnamization and U.S. troop withdrawal	53
Immediate pullout regardless of consequences	24
Increased military pressure on North Vietnam	17
None of above (specify)	6

3. What should our involvement be in Southeast Asia? (one only)

	Percent
None whatsoever	42
At present levels or as treaty obligations require	36
Any commitment to deter Communist expansion	22

4. Which of the following are necessary to fight inflation? (more than one, if any) (Totals more than 100 percent, because more than one answer possible)

	Percent
Voluntary guideline wage-price restraints	28
Government imposed wage-price controls	34
Reduced government expenditures—balanced budget	65
Tight money—credit	14
Other (specify)	9

5. In which of the following should we spend less money? (more than one, if any) (Totals more than 100 percent, because more than one answer possible)

	Percent
Antipoverty programs	21
Agriculture subsidies	65
Defense programs	39
Space exploration	50
Foreign aid primarily for humane purposes	23

6. What course of action should the United States pursue in the Middle East? (one only)

	Percent
Big Power-imposed solution	4
Noninvolvement	24
Work for direct negotiation between Israel and Arab States	72

7. What course should the United States follow with regard to MIRV and other new weapons systems?

	Percent
Continue testing and development	46
Cease all work at once	16
Base course of action on Soviet moves	29
None of above (specify)	9

8. In fighting crime, should we permit?

(a) Pre-trial detention of dangerous repeat offenders

	Percent
Yes	90
No	6
Undecided	4

(b) Court order for "no-knock" entry if danger of injury to officer or destruction of evidence

	Percent
Yes	63
No	27
Undecided	10

(c) Mandatory jail sentences for repeat major or violent offenders

	Percent
Yes	92
No	5
Undecided	3

9. (a) Are you satisfied with our welfare system?

	Percent
Yes	4
No	90
Undecided	6

(b) If "no," do you favor trying the President's new "workfare" program?

	Percent
Yes	68
No	19
Undecided	19

10. Do you favor post office reform providing for a government corporation or authority and permitting union representation?

	Percent
Yes	66
No	19
Undecided	15

11. Do you feel that penalties for use of marijuana should be reformed?

Yes	64
No	27
Undecided	9

12. Do you favor a mandatory retirement age for all Federal Government employees including judges, U.S. Senators and Congressmen?

	Percent
Yes	64
No	28
Undecided	8

PARTY REFERENCE

	Percent
Republican	64
Democrat	17
Non-partisan	18
Other (specify)	1

AGES OF THOSE RESPONDING

	Percent
18 to 21	2
21 to 35	30
35 to 50	36
50 to 65	23
65 and over	9

HOW TO GET FROM THERE TO HERE IN 71 YEARS

HON. JOHN D. DINGELL

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, September 9, 1970

Mr. DINGELL. Mr. Speaker, pursuant to permission granted, I insert in the CONGRESSIONAL RECORD the text of a four-act play from Outdoors Unlimited, the official publication of the Outdoor Writers Association of America, Inc., volume 31, No. 6, dated August 1970. This play, a four-act farce, sets out in considerable detail the failure of the Corps of Engineers for some 70 years, and now our law-and-order Attorney General Mitchell's failure, to enforce the 1899 law which clearly requires all U.S. attorneys to "vigorously prosecute" any person or firm found to be in violation of the act.

The move to clean up the pollution in this Nation will not begin until Mr. Mitchell is willing to enforce the laws fairly, fully, and equally against all pollution violators, regardless of their name, status, position, power, economic size, et cetera.

The text of the play follows:

HOW TO GET FROM THERE TO HERE IN 71 YEARS: OR, THE TALE OF OUR TIMES, A FOUR-ACT PLAY

"How to Get from There to Here in 71 Years' is a summary of events, pieced together from contents of press releases, correspondence and policy statements received at OWAA headquarters between July 10 (when the Bass Society's action was filed), and Aug. 1. Obviously, there's a moral here, perhaps several—we'll leave it (or them) up to the reader's own reactions.—Don G. C., Editor.

ACT I, SCENE 1. TIME: 1899

Setting: Congress

Following legislative adoption, the Federal Refuse Act of 1899 becomes the law of the land. The Act prohibits the dumping of "refuse" into the nation's navigable waters except under permit of the U.S. Army Corps of Engineers.

"Refuse" is interpreted under the Act to include "all foreign substances and pollutants" other than liquid municipal sewage from streets and sewers in a liquid form. The Act provides for fines of from $500 to $2,500 for each incident or day of violation.

The Act also specifically requires U.S. Attorneys to "vigorously prosecute" any person or firm, etc., found to be in violation of the Act.

ACT I. SCENE 2. 1899–1970

Setting: Nowhere

The Refuse act remains the law of the land, but a strange and inexplicable fog of non-enforcement obliterates it from use or public knowledge.

ACT II, SCENE 1, 1899–1966

Setting: In a Cesspool, at Night

With increasing industrialization, and an expanding population, pollution steadily increases—in the rivers, in the lakes, in soils and in the air. Voices of warning and protest are scattered, weak, unheard or ignored. An official of the National Waterworks Manager's Association, in public hearing, characterizes the rivers as "the natural carriers of the nation's wastes".

ACT II, SCENE 2. TIME: 1967–1969

Setting: Same Cesspool, Dawn

Suddenly there is general public realization that pollution is for real and for earnest; that it endangers health, life and the very productiveness of the earth's environment. Lake Erie's death from pollution is reported; tests find many waters highly contaminated and unfit for use.

Protest voices swell until their thunder shakes the seats of government; national, state and local. Studies are made, new legislation introduced, new boards and commissions and administrations set up to cope with strangling and multitentacled monster of pollution.

In 1968, Representative Richard L. Ottinger of New York files suit against the U.S. Army Corps of Engineers to require the agency to enforce an 1888 anti-pollution law against the Penn Central railroad. As a result, the Penn Central is indicted, pleads guilty and is fined $4,000 for four counts of pollution the Hudson River with oil.

ACT III, SCENE 1, MAY 3, 1970

Setting: Springboard

Representative Henry S. Reuss, Chairman of the House Conservation and Natural Resources Subcommittee, writes a letter to U.S. Attorney General John Mitchell, expressing the subcommittee's concern about an apparent "executive branch policy to limit enforcement" of the 1899 Refuse Act.

ACT III, SCENE 2, JULY 10, 1970

Setting: Shotgun Range

Fishing is barred on four Alabama streams due to pollution, and the Bass Anglers Sportsman Society of America, Inc., files action under the Federal Refuse Act of 1899. Affidavits are filed in three federal districts charging 214 manufacturers, municipalities and businesses with violating the 1899 Act.

The Society's press release contains the following statement: "According to Col. Harry A. Griffith, of the Corps of Engineers office at Mobile, no permits have been issued to persons, firms or corporations in the state of Alabama to permit dumping of 'refuse' into navigable streams."

It emphasized that "under the . . . 1899 Act, individuals who find industrial refuse being discharged into a navigable waterway without a Corps permit may inform the appropriate U.S. attorney, whose duty it is to 'vigorously prosecute' all offenders".

ACT III, SCENE 3, JULY 11, 1970

Setting: Merry-go-round

Chairman Reuss of the House subcommittee releases the text of the reply from the Attorney General's office in response to his inquiry on enforcement of the 1899 Federal Refuse Act. The reply reads, in part:

"* * * it would not be in the genuine interest of the Government to bring an action under the Refuse Act to secure a criminal sanction against a company which admittedly is discharging refuse into the navigable waters of the United States, but which, pursuant to a program being conducted by the Federal Water Quality Administration, is spending significant amounts of money to secure the abatement of that pollution."

In releasing the letter, Reuss states: "The law doesn't exempt polluters who spend money to clean up their mess. These polluters should have been doing so long ago and not have waited until the pressure of public concern for our environment forces them to abate their pollution . . . The Justice Department should obey the law. Further, if the polluter intends to continue such discharges, the law requires that he obtain a Corps permit to avoid further prosecution."

ACT III, SCENE 4. TIME: JULY 15, 1970

Setting: Sledgehammer Shop

Representative Ottinger issues statement sharply critical of Attorney General Mitchell's stand on not enforcing 1899 law (which he reports was patterned after the 1888 law applied in his successful 1968 action against Penn Central). In his statement Ottinger referred to this as applying "a double standard of law enforcement . . . On the one hand Mr. Mitchell calls for maximum enforcement of laws against individuals. On the other, he says he will not enforce the law against corporate polluters. It is this kind of uneven enforcement that breeds disrespect for the law."

ACT IV, SCENE 1. TIME: JULY 30, 1970

Setting: Fence-walking Scene

The office of the Army Chief of Engineers issues the following statement under the heading: "Corps of Engineers Announces New Permit Requirements" . . .

"The Corps of Engineers today announced new permit requirements under the Refuse Act (33 USC 407) concerning all discharges into navigable waters. Permits will be required for all industrial discharges into navigable waters and their tributaries. New permits will be required where existing permits were granted without adequate consideration of the quality of the effluent. Permits will also be required for current discharges into navigable waters where no permits have been granted.

"Applicants for new permits are now required to identify the character of the effluent and to furnish pertinent data such as chemical content, water temperature differentials, toxins, sewage, quantity of solids involved and the amount and frequency of discharge . . .

"While permits will be required for all future discharges into navigable waters and their tributaries, the Corps of Engineers will initially concentrate on major sources of industrial pollution not covered by existing permits . . ."

The Curtain quivers violently, uncertain as to whether to fall; and, if so, on whom or what.

REMARKS OF ALBERTIS S. HARRISON

HON. WATKINS M. ABBITT

OF VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, September 9, 1970

Mr. ABBITT. Mr. Speaker, the problem of crime in America is now one of the greatest issues facing our people. All over our land law-abiding citizens are greatly concerned and puzzled over the alarming increase in crime and the general lack of respect for law and order.

There has always been a criminal element in our society and there always will be. Our people recognize this but what concerns them most is the fact that most of the rampant disorder in America does not spring from the basic criminal element. In recent years there has arisen in our country a tendency toward glorification of dissent. Those who do not agree with things as they are have been given from some quarters encouragement to take to the streets and to vocally express their opposition. Others have sought through unruly public demonstrations to give a militant air to their dissent—all of which has created an increasing problem for police.

I have spoken out many times on this problem and earnestly feel that something should be done to tone down the volatile air of dissent and militancy which I am afraid will wreck this Nation if it is allowed to continue unchecked.

This is a problem which is attracting much concern by all levels of law enforcement. Those who are charged with enforcing our laws and protecting the general public are growing increasingly concerned over the difficulty they face in discharging their responsibilities.

It is becoming obvious that far too much of the time of law enforcement authorities and our national leadership is being spent in trying to see that the rights of the offenders against society are preserved with considerably less time devoted to protecting the interests of the vast majority of our citizens who are law abiding. Somewhere this improper ratio has got to be stopped or else the whole problem of maintaining law and order is going to become much worse.

On August 8, 1970, at the annual banquet of the Commonwealth's Attorneys Association of Virginia Beach, Va., Associate Justice Albertis S. Harrison, Jr., of the supreme court of appeals of Virginia delivered a splendid address dealing with this overall problem. Judge Harrison, a former Governor of Virginia, is a devoted student of the law and, as a former Commonwealth's attorney, has had firsthand knowledge of some of the problems which are now being encountered by law enforcement officers. His remarks are so timely and so meaningful that I would like to commend them to the reading of the Members of the House.

Judge Harrison is an outstanding jurist in addition to having served as Commonwealth's attorney of Brunswick County, Va.; he served for many years in the Virginia State Senate and later as Virginia's attorney general before becoming Governor in 1962. His administration as Governor was marked by a great deal of progress in the Old Dominion and his general approach to problems in our State was one that left a lasting impression upon our citizens.

Judge Harrison knows his subject well and he has delivered some very cogent reminders of the basic foundations of our society and lays stress upon the dangers which we have encountered by departing therefrom.

I commend him for his outstanding address and feel that it will be of benefit to all those who read it.

The address follows:

EXTRACTS FROM REMARKS BY MR. JUSTICE ALBERTIS S. HARRISON, JR., TO THE COMMONWEALTH'S ATTORNEYS ASSOCIATION, VIRGINIA BEACH, VA., AUGUST 8, 1970

Your President was good enough to ask me to speak and he did not assign a subject. His only admonition was to keep it short and preferably light. By light I assume he meant funny.

I doubt if I can inject the desirable humor. Over such a long period of years I have made so many speeches. All of the good stories that I know have been told, stolen and retold, and I don't want to tax you again with the dull ones.

I have no intention tonight of discussing Miranda, Escobedo, Aguilar, Spinelli or Wiles. And I shall not attempt to tell you how to prepare a proper affidavit for a search warrant, for the simple reason that I don't know.

It would be most unusual if any man, addressing the members of an organization whose prime responsibility was law enforcement, did not comment on the shocking increase in the growth of crime in the United States. This growth has now exceeded 148% in ten years, and grows at the rate of about 157% a year. If this trend is not arrested it will soon be beyond the control of courts and law enforcement agencies.

I have no hesitancy in saying that our gravest domestic problem is the rapid spread of crime. Both the victims and the practitioners are people of all ages, income brackets and backgrounds.

A few minutes ago I mentioned several cases that may be a contributing factor. Unquestionably the decisions of courts, both federal and state, have made the job of the prosecutor infinitely harder. But courts alone are not altogether to blame.

I would say that the greatest single contributing factor to the increase of crime is the general disregard of law. People no longer have a high respect for constituted authority or the law.

In my varied career, I have held many positions, elective and appointive. I would say that to be the Governor of Virginia is the highest honor that can come to a Virginian, and to serve on the Supreme Court of Appeals of Virginia is certainly a position to be coveted by any Virginia attorney.

I served as Attorney General of Virginia and that position is one of great responsibility and is a desirable post for a lawyer. Membership in the State Senate carries a nice title, entree to everything official that occurs in Virginia, and affords one an opportunity to serve his state and community.

However, of all the positions that I have held I can honestly say that at the time I served as Commonwealth's Attorney this position was then looked upon by the people of my county as one of high honor and tremendous responsibility. The Commonwealth's Attorney in rural sections was referred to as "The Commonwealth". He was regarded as a man of stature and his position and title were respected. He represented law and order. He stood between the lawbreaker and the law-abiding citizen.

To be called a hard prosecutor was a compliment. It meant that the Commonwealth's Attorney was diligent and persistent in his efforts to protect society from the criminal. You did not lose votes by being a hard prosecutor. You lost support and respect when you began to lose cases whether through lack of preparation, ability or poor judgment.

When I was Commonwealth's Attorney of Brunswick County the Sheriff was a man named Charles Turnbull. His reputation was that he never carried a gun and never had to use a gun or force to make an arrest. The reason was that people respected the law and the man who represented the law. Children then stood in awe of a policeman, the uniform he wore and the badge that he carried. They were taught this by their parents.

At that time the surest way for a criminal to get himself convicted and to receive a stiff sentence was to resist arrest. The juries understood that no one would serve as a policeman or a sheriff if he had to fight every man that he arrested, and be constantly subjected to abuse and vilification.

Today the reverse is true. Even on college campuses and elsewhere, policemen are called "pigs", referred to in the vilest manner possible and subjected to obscenities and abuse.

In many cities policemen have to travel in pairs for protection. Any arrest is followed by a charge of police brutality. It is a pattern.

All of this has caused an erosion of the law. Some as a consequence of civil disobedience, and this has occurred on both sides of the civil rights issue. It has spread to matters other than the civil rights program. It has spread to the campuses of our colleges and universities where we have witnessed riots, arson, occupancy of buildings, destruction of property, forceful detention of college presidents and administrative officials and other lawless acts.

We have witnessed teachers striking in disobedience of court orders and injunctions. We have seen postal workers—under a legal obligation not to strike—boldly and contemptuously disobeying the law. We have seen ministers, college professors and public school teachers constituting themselves a part of a mob, carrying placards and otherwise creating disorder, turmoil and strife. Normally these would be the people that would instruct the youth of this country on the necessity of the rule of law if our constitutional government is not to be destroyed.

Those that run the colleges and schools of this country should well know that if every group that has grievance is going to start violating court decrees and laws, then there will be a complete breakdown of law and order. When this occurs anarchy, or a totalitarian state, are the alternatives. As precious as is our republican form of government, the Constitution and the Bill of Rights which assure it, no people will long tolerate a condition in which their lives and property are in constant jeopardy. Rather than submit and live in constant fear, the people will turn to any alternative that would hopefully restore order and protect lives. When this happens, we lose those guarantees of liberty—freedom of speech, of the press, of assembly—and other freedoms which now afford protection to the small minority that are creating this discord and chaos in our nation.

The law profession has a duty and a responsibility, and also the competence, to point out the seriousness of the consequences of the erosion of respect for law. No one can deny that much of the crime of this coun-

try can be attributed to social conditions. illiteracy, unemployment, poor housing, and in some cases discrimination. No one can quarrel with the efforts that are being made, and the billions that are being spent, to alleviate these conditions.

But no one should believe for a minute that these conditions, that are by no means peculiar to this country, can be cured overnight.

And no one should believe that these conditions will ever be alleviated except in a lawful and orderly manner, and by a society that is free from fear and violence, and is productive.

I would that I were capable of giving you a blueprint of remedies and cures for lawlessness. I can only suggest some.

A tremendous effort should be made to relieve the congestion of our courts, to bring about speedy trials. And this means a speedy disposition at the appellate level also. This year I wrote an opinion in a case which involved a man arrested January, 1968, tried and convicted six months later, July, 1968. We finally affirmed in April, 1970. It is outrageous that 2½ years should elapse between arrest and final conviction. I question the value of such a trial to society or to the offender. Any deterring effect that the conviction may have had on others was lost, because by the time we got around to affirmation the public had forgotten about the incident, and had probably lost interest in the disposition of the case.

Somewhere along the line we are going to have to cut down the time between arrest, prosecution and appellate disposition. If we do not have enough prosecutors, or their offices are understaffed, they should get help. The field of criminal law is expanding rapidly and your job is becoming not only more important but tougher. It is no longer a job for a young man who simply wants to get a few years of court experience. We need able prosecutors, men who are willing to make a career out of it. And we need better training for prosecutors. The Attorney who represents the Commonwealth of Virginia in any case, criminal or civil, should be the equal of his opposition. And he should be compensated accordingly.

Furthermore, and of equal importance, the public must realize that the job of the prosecutor is a prestigious job and he should be accorded that status. The Commonwealth's Attorney of a county or city in Virginia should have the same stature as the Queen's Counsel of a criminal court in England. He represents a sovereign state and as such he should earn, demand and receive the respect and status that is his due.

I would like to see the Commonwealth's Attorneys of this state become a bit more vocal and articulate. I am not certain that you do as good a public relations job as you should. I would urge that you speak up and expose the flaws and failures in our criminal-justice system. You are the ones who are on the firing line, and you are the ones who are in the best position to know what is wrong and what is right, what should be preserved and what should be changed. What I am suggesting that you do may not make you popular, but it is more important that you be respected and effective than popular.

But before the trend of lawlessness and disrespect of law and order can be ended, we must have greater citizen awareness and involvement. The modern day citizen, though professing shock and concern over the growth of crime, too often turns his back and walks away from situations for fear of becoming involved.

Courts, prosecutors and law enforcement officers cannot do the job alone. There must be responsible action by the citizenry. They must render aid to law enforcement officers. And they must support them. In this matter they will need leadership—leadership that should be provided by the Bench, the Bar, Bar Associations and like organizations. Parents must recapture some of the authority that they have surrendered to schools. Many parents have abdicated to public and private schools the discipline of their children and their training to become citizens.

The very young need home instruction in the importance of respecting law. True, our young children today are more sophisticated and smarter. They have greater opportunities and more exposure. But some are raised in broken homes, some in homes where for economic reasons both parents work and are absent for the greater part of the day, and some are raised with a complete lack of discipline and no regard for constituted authority. They hold no awe of a policeman—not even a Commonwealth's Attorney.

If that respect for law and authority is not instilled in the home and in the churches and in the schools, it will be reflected in the action of that child when he goes on to college and in after life.

We agree that the penal institutions should make every reasonable effort to rehabilitate those prisoners who are confined in our institutions, and to the end that they be released better educated, better qualified, and, hopefully, better disciplined. However, as law enforcement officers, you know that every criminal is not susceptible of rehabilitation, and despite all the modern facilities, psychologists, psychiatrists, social workers and educational opportunities afforded, there will unfortunately remain a large percentage of prisoners who cannot be rehabilitated. For this group there is no alternative to stiff sentences and confinement. The threat they pose can only be met by their removal from society and confinement in penal institutions.

Recent decisions of our courts have been too prone to protect the rights of these individuals at the expense of law-abiding citizens. We can hope that the pendulum will swing back. We strive for even-handed justice to be administered to all, and to the end that the people of this country can walk the streets of our cities, travel the roads of our countryside and enjoy the privacy of their homes, undisturbed and unmolested.

Lastly, and by no means an afterthought, no court should tolerate tactics of trial disruption. In recent months we have witnessed those tactics by lawyers, those being tried, witnesses and spectators. They have used contemptuous and obscene language and other techniques deliberately designed to break the judge and frustrate the judicial process. We have seen lawyers who gave the appearance of being active participants in this deliberate disruption. And some prosecutors have also been guilty of courtroom misconduct. A few times judges have overreacted. A courtroom should be a temple of justice. A trial should be conducted to the end that truth be sought and found. Anything that occurs which interferes with this purpose and object should not be tolerated. Trial disruption, to a greater extent than anything else, will bring courts, lawyers and the judicial process in ill-repute with the public. When a people lose confidence in their courts and the administration of justice, they have lost confidence in their government and in their country.

These things about which I have been talking will not be easy to accomplish. This transition back to respect for law will not occur overnight, but occur it must if we are to survive in an orderly society, and due process is to continue to mean what it was intended to mean in our foundation documents.

You and I, because of the positions we occupy, have a greater responsibility to do something about it. We also have a better opportunity to make a contribution and we should possess the qualifications to provide the leadership.

INTERNATIONAL AIR PIRACY

HON. HAMILTON FISH, JR.

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, September 9, 1970

Mr. FISH. Mr. Speaker, over the past weekend a new dimension in international terror has hit the airlines of the world, with the organized aerial piracy of air carriers owned by Israel, Switzerland, and two from the United States. Then today a British flight joined the group of captured planes.

Over the weekend we saw a Boeing 747 destroyed on the Cairo airport, with hundreds of Americans narrowly escaping with their lives. Even as I speak, more Americans are being held hostage in Jordan, their very lives being threatened by Arab commandos.

Thus, aerial hijacking and holding hundreds of innocent victims as hostages for political reasons, has developed. These are not sporadic hijackings of airliners to Cuba by misguided individuals, but a unified and organized effort at international terror. The ends are political. The means are blackmail and terror.

Aerial hijacking is not new. It started, with a few disaffected individuals taking aircraft to Cuba—that haven of rebellion just 90 miles off our Florida coast. These hijackings, because of the safe return of plane and passengers, have become a topic of television comedians. Firm action was not taken.

In recent months we have also witnessed rebels in South America taking hostages as a base to demand the release of political prisoners. Only the totally unaware would not have feared that the combination of the two ideas, aerial hijacking and the taking of political hostages, would not have been combined. Over the weekend they were.

Over the months while our FAA have carefully counted over 240 hijackings while taking little or no affirmative action. Rather our attitude appears to have been—if we placate the bandit, the criminal, the hijacker, we are protecting the lives of our citizens. This weekend has proved the fallacy of this thinking.

For events have proved that only the passengers of the Israeli El Al flight were being properly protected by their government, which has armed guards on their planes. These armed guards have foiled the hijack attempts.

On a recent El Al flight to Israel I noted one of these guards aboard the plane on which I traveled. He was a quiet young man, who never slept and stayed close to the door to the pilot's cabin. He was not visibly armed. But he did not sleep, and never moved far from the entrance to the cockpit.

Mr. Speaker, I hope we now realize two things. First that it is a fallacy ever to believe that the best protection is a supine acceptance of any demand of a criminal. Second, that our attitude over the years toward aerial hijacking has encouraged the Palestine guerrillas in achieving the success against American lives and American property they enjoyed this weekend.

I believe, too, we can learn something from the experience of Israel. Armed guards work. The Israeli Government did more to protect their planes and their passengers than we have done.

Therefore, Mr. Speaker, I believe it is time the United States places armed guards on every one of our international flights. This is but one important security precaution to be undertaken in aircraft and airports.

As a second step, I believe it is time this Nation takes steps to prevent American carriers from landing in any country which harbors Arab terrorists, aerial hijackers, or treats aerial hijacking as a minor offense.

I recommend these steps, for if the United States does not take these or similar steps, it is clear the danger to American life and American property will grow. This wave of organized air piracy, with its avowed end of political blackmail will grow. Negotiations with bands of armed bandits will become the rule rather than the exception.

As the extension of the Palestine guerrilla movement into the international airways is an act of international aggression. Therefore, I am also urging the administration to take this matter to the United Nations Security Council for their immediate action. International condemnation of these most recent attacks, I feel, is essential by the community of civilized nations.

For too long have we treated the crime of aerial piracy as a joke. Late as it is, now is the time to act and act firmly.

FINANCIAL STATEMENT

HON. ANDREW JACOBS, JR.

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, September 9, 1970

Mr. JACOBS. Mr. Speaker, I insert a statement of my financial assets and liabilities:

Equity in conditional sales contract of real estate, 208 E. 29th St., Indianapolis	$2,665.39
Store building, 227–235 E. Ohio St., Indianapolis (market value by tax assessment)	40,440.00
GI endowment insurance (cash value)	5,132.60
U.S. Government retirement fund (amount paid in with interest)	24,000.00
1966 Oldsmobile, F–85 (82,000 miles)	625.00
Coin collection	550.00
Checking account at U.S. House of Representatives Sergeant at Arms (September 1970, balance)	666.90
Savings account (Indiana National Bank)	760.57
Household and office furnishings	1,500.00
Entitlement to Korean war 10-percent disability compensation, waived while in public office	(1)
1 Great Dane dog (C–5)	(2)
Indebtedness	(3)

[1] Exact future value unknown.
[2] Priceless.
[3] None.

NEIGHBORHOOD SCHOOL CONCEPT IS UNDER ATTACK IN TEXAS

HON. O. C. FISHER

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, September 9, 1970

Mr. FISHER. Mr. Speaker, if Federal functionaries have their way about it, the neighborhood school concept as it has been known and practiced since the Republic was established, is on its way out. It is under Federal attack today.

I am speaking of those schools where there is no semblance of segregation or racial discrimination.

The tragedy is that the schoolchildren of all races are the ones who suffer. Their education becomes of secondary consideration, as Health, Education, and Welfare bureaucrats bulldoze their way into local schools with court-backed demands that more racial balance be achieved. This brazen policy ignores the effect on education, the inconvenience, the cost, and the disruption that is caused.

It happened in Texas recently when HEW lowered the boom on 26 school districts, claiming the racial mixtures did not conform with the whims of the Washington braintrusters. San Antonio, San Angelo, and Odessa schools came under attack, along with others, though no segregation or racial discrimination was involved. Not long ago the Justice Department joined in a lawsuit to force the closing of an elementary school in Sonora, Tex. because only Mexican Americans lived in the community served by the school and were, therefore, the only students in attendance. The affected students suffer the consequences.

A Federal lawsuit forced the Carver elementary school in San Angelo to close its doors, very much against the desires of Negro families who reside in that particular community. The net result is a massive disruption in the schools. I defend the right of those parents to send their children to their local school. The victim: the students, the parents, and the taxpayers.

Moreover, where busing is required in order to comply with an HEW mandate and a court order, it may often happen that the local district is not financially able to purchase or rent buses, hire drivers, and assume other expenses. And public busing may or may not be readily available.

A typical problem occurred incident to the closing of the San Angelo Carver school. It was described to me in a letter from Hon. Curt Steib, attorney for the local school board, three paragraphs of which follow:

Commencing with August 25, 1970, we ran into massive opposition from the parents of the school children involved, particularly the black patrons of the school system residing within the former Carver Elementary School attendance zone. Of course these parents were not voicing anything new; we had made the same arguments to the Justice Department and to the HEW. By action to the Federal Government we were forced to close a perfectly good neighborhood school which had been within walking distance of the students, forcing them to attend schools as far as one and one-half miles away. The most dangerous hazard was the Bryant Boulevard, a multilaned through-way. Further aggravating the situation with the fact that the Concho River had to be crossed and as you know there are not crossings of the river at every block.

Actually public transportation for these school children could probably have been arranged. I personally checked with the City Manager's Office, and it would have been possible to reroute a city bus which now picks up the junior high school students to deliver these elementary school students to the Stephen F. Austin School. The problem encountered there was one of finances. The City of San Angelo charges school children a reduced bus fare, but nevertheless it is 20 cents per student one way. This means that in order to get one child to school the parent would be out 40 cents per day in transportation. Moreover, where these students previously could run home for lunch, the geographical distance involved in the new school assignments made this impossible. Thus, the parents were required to add an additional 35 cents per student to purchase their lunch at the school cafeteria. The economic position of the parents involved is such that 75 cents per child per day for transportation and meals constitutes a distinct hardship.

For a time it appeared as through we were headed toward a school boycott. Fortunately this was avoided. The citizens of San Angelo provided a temporary car pool to get the children to school. School officials appeared before the city commission and made arrangements for city buses to carry the children to school. Until funds could be provided these were financed by private donations.

WHERE DOES HEW GET SUCH AUTHORITY?

Mr. Speaker, people are asking: Where does this appointive agency of the Government get such dictatorial authority? Well, in the first place the Secretary of Health, Education, and Welfare, who makes guidelines and policies on the subject, is appointed by the President. The compulsory busing of students in order to obtain a better racial mixture was the brainchild of the preceding administration. The present administration is pursuing the same course.

It will be recalled that the 1964 Civil Rights Act did what many of us then opposed and then warned was unwise—it delegated to HEW the unprecedented authority to withhold money provided by Congress for aid to education, if HEW should decide a school is not desegregating in a manner that suits the notions of that agency.

But in the same law the Congress provided:

Desegregation: shall not mean the assignment of students to public schools in order to overcome racial imbalance.

The Congress has reiterated this policy several times, but HEW persists. The Supreme Court in 1954 held invalid all school segregation laws. But that decision did not touch on the subject of integration and the matter of racial mixtures in the schools. In fact, last June the Supreme Court postponed any decision on the use of busing to integrate classrooms. The court may act on that issue in October, according to the press.

In the meantime, last July the Congress approved a provision in the annual HEW appropriation bill, as follows:

SEC. 209. No part of the funds contained in this Act may be used to force any school or school district which is desegregated as that term is defined in title IV of the Civil Rights Act of 1964, Public Law 88-352, to take any action to force the busing of students; to force on account of race, creed, or color the abolishment of any school so desegregated; or to force the transfer or assignment of any student attending any elementary or secondary school so desegregated to or from a particular school over the protest of his or her parents or parent.

SEC. 210. No part of the funds contained in this Act shall be used to force any school or school district which is desegregated as that term is defined in title IV of the Civil Rights Act of 1964, Public Law 88-352, to take any action to force the busing of students; to require the abolishment of any school so desegregated; or to force on account of race, creed, or color the transfer of students to or from a particular school so desegregated as a condition precedent to obtaining Federal funds otherwise available to any State, school district or school.

HEW MAKES ITS OWN LAWS

Mr. Speaker, the public is understandably confused. There is no consistency in the application of HEW's plans for forcing racial mixtures in the schools. Indeed only the South is being victimized; no lawsuits are being filed elsewhere to force compulsory busing. No school in the areas picked by HEW for the crackdown can know what to expect, and what specific mixing formula may be imposed.

It will be recalled that President Nixon, as a candidate in October of 1968 during the presidential campaign was quoted as saying:

No child, black or white, should be deprived of an education . . . I oppose any action by the Office of Education that goes beyond a mandate of Congress. A case in point is the busing of students to achieve racial balance in the schools. The law clearly states that "desegregation" shall not mean the assignment of students to public schools in order to overcome racial imbalance.

This makes sense, but to be meaningful the President's position on the subject must be implemented by his appointees in HEW. Up to this time that has not been done.

LOCAL SELF-GOVERNMENT IS UNDER ATTACK

Mr. Speaker, the importance of this issue, and its adverse effect on the education of schoolchildren cannot be overemphasized. All school systems should, of course, be improved, as conditions permit. But the destruction of the neighborhood school concept, as is now being attempted, is to move in the wrong direction. Why should children, of all races, be bused away from their own local schools, transported for long distances, for the sole purpose of mixing races? The President has said he opposes it; the public opposes it, and yet it is systematically and ruthlessly being imposed. Children go to school for the purpose of learning, and busing does not teach.

I have said the public is against this busing policy. The most recent Gallup poll shows that nine out of 10 parents oppose compulsory busing, and want to retain their own neighborhood schools. In an opinion poll which I conducted in my own district recently 93.5 percent of the registered voters who reported said they wanted no part of compulsory busing.

Has it come to pass that the powers that be in the Central Government no longer trust the people to govern themselves, make their own decisions concerning the operation of their own local schools—which are supported by local tax money? Are people becoming mere puppets in a gigantic Federal power structure? It seems that way, but we must continue the fight.

DEMOCRATS IN DISARRAY

HON. BARRY M. GOLDWATER, JR.

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, September 9, 1970

Mr. GOLDWATER. Mr. Speaker, in the September 7 issue of "Monday," a weekly put out by the Republican National Committee, Chairman ROGERS C. B. MORTON has some very interesting comments about the majority party. It makes one wonder about the credibility of the Democratic Party as a viable organization and I feel that this article should be inserted in the RECORD. It reads as follows:

DEMOCRATS IN DISARRAY

AFL-CIO President George Meany's charges last week that the Democrat Party has "disintegrated" and is being taken over by "extremists" of the Left is but the most recent in a series of pronouncements by prominent Democrats which illustrate what deep trouble the Democrat Party is in.

For example:—Last year in an article in Look magazine, former JFK aide, Theodore Sorensen, labeled the Democrat Party "soft and stale," "a tired second-rate defender of the status quo" and warned against putting up an ideological wall "so high that only the inflexible purists of the so-called New Left would be eligible for entry."

Iowa Sen. Harold Hughes, a key figure in the Democrat Party reform movement, has been quoted as saying: "The people of America as well as the Democrat Party need to know that the Democrat Party is in damn bad shape."

In a speech to the Democrat National Committee last year, South Carolina Gov. Robert McNair noted that there was "grave apprehension" at the direction the Democrat Party was taking and warned: "I do not think our people are ready for a political party of extremism."

Most recently, Minnesota Senator Walter Mondale confessed his Party is "in a mess" and maybe "we need to lose some elections until we see new directions."

What does all this mean? It means that some Democrats are beginning to sense their Party's irrelevance and are in the process of trying to put Humpty Dumpty back together again. But the people will not be fooled. Rank and file Democrats have not left their Party, their Party has left them. And all the law and order speeches by Hubert Humphrey and anti-radical talk by Senator George McGovern aren't going to do any good.

The average Democrat has had it with his Party's permissiveness toward everything from big government spending to crime in the streets. He is fed up with those in his Party who have temporized with campus violence and naked Communist aggression in Southeast Asia. He is sick of those who have nothing but bad things to say about America.

Fortunately for the disaffected Democrat there is an alternative: the Republican Party. Our Party is the Party of hope. The Party that has not given up on America; the Party that still has a deep and abiding faith in this great nation and her institutions. To all those Democrats who simply cannot stomach their Party anymore we extend a hand and say come on over to our side.

KNIGHTS OF LITHUANIA AWARD

HON. JOHN S. MONAGAN

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Wednesday, September 9, 1970

Mr. MONAGAN. Mr. Speaker, I should like to bring to the attention of the House the August 23 presentation of the Knights of Lithuania award medal to our distinguished colleague, the gentleman from Illinois (Mr. PUCINSKI). This presentation was made at the closing banquet of the 57th national convention of the Knights in Chicago.

As the 1966 recipient of this award, I am pleased to congratulate Mr. PUCINSKI and to welcome him to the group of previous Knights of Lithuania award winners, who are also Members of Congress, DANIEL J. FLOOD, RAY J. MADDEN, and PETER W. RODINO, JR.

I should like also to congratulate the Knights of Lithuania for their great public service. The plight of the Lithuanian people must not be forgotten. The Knights of Lithuania will not allow it to be forgotten.

In 1966 when I received this award, I stated that it would be a tragedy if the noble literary, artistic, and cultural traditions of the Lithuanian people were to be destroyed. I commend the Lithuanian people for their spirit, for their ability to preserve their love of their past and their people in the face of overwhelming Soviet propaganda efforts. That spirit still exists today. Organizations like the Knights of Lithuania have kept it alive, and they must be commended for this.

For this reason I include here the excellent remarks made by my friend, the Reverend John C. Jutt of Worcester, Mass., a dynamic protector of human freedom, in introducing the recipient of the Knights of Lithuania award medal, Congressman ROMAN PUCINSKI.

The text of these remarks follows:

CONGRESSMAN ROMAN C. PUCINSKI—THIRTEENTH RECIPIENT OF THE KNIGHTS OF LITHUANIA AWARD MEDAL

In the last few years, Soviet Russian propaganda has succeeded in making the Western World think that its attitude toward religion has changed and that its prime efforts are dedicated to the task of procuring world peace. It is indeed unfortunate that some of our leaders, even in Congress, have been hoodwinked by this propaganda and have been lulled into a false sense of security as regards the intentions of the Soviet Union.

As a result, countries like Lithuania continue to be subjected by the Soviet to atrocities and to injustices which cry to heaven for vengeance. This is evident from a memorandum letter signed in 1969 by 40 priests of the Archdiocese of Vilnius in Lithuania and sent at the risk of grave punishment to the

Soviet authorities. This letter clearly demonstrated the contradictions of the Soviets who affirm constantly that religious freedom is guaranteed by the Soviet Constitution and yet do everything in their power to hinder religious practice and punish priests for the faithful fulfillment of their priestly duties.

While it is discouraging for us to see leaders in our own Government fall for Soviet propaganda, yet it is indeed heartening to know that certain others refuse to be taken in and continue relentlessly to fight against Soviet communism because they recognize it for what it really is: a diabolical system strongly bent on achieving its goal of world domination by the proletariat through a minutely detailed program of effective action, be it violent or non-violent. One of these latter men is our honored guest for this evening, the Honorable Roman C. Pucinski.

Our honorable guest was born on May 13, 1919 on the northwest side of Chicago. Educated in the public schools of Chicago, he attended Northwestern University and studied law at the John Marshall Law School in Chicago. For 20 years before being elected to Congress, he was a staff reporter and writer for the Chicago Sun-Times.

When World War II broke out, he enlisted into the service as a private but soon was flying daring bombing missions, 48 in all, over Japan. This brave service earned for him the Distinguished Flying Cross and Air Medal with Clusters.

First elected to the 86th Congress, he, representing the very district in which he was born and brought up, has since been a highly respected Member of the House of Representatives. As a Congressman, he has served on a number of important House Committees and continues to do so with honor and distinction.

During World War II when the Communists committed a mass murder of over 15000 Allied army officers, Congress appointed a Select Committee to investigate it. Our honored guest was appointed Chief Investigator. He learned of the crimes committed by the Soviets and as a result, he wrote the first indictment against the Soviet Union for these crimes.

His attendance at Lithuanian affairs and functions, be it Lithuanian Independence Day on February 16 or the Tragic Days of June or Captive Nations Week the third week in July, in and around the Chicago area, and the addresses delivered at each one convinced those present that he was well aware of and deeply concerned about the atrocities being committed by the Soviets upon the Lithuanian nation. He did not hesitate to condemn in vehement terms the Soviets for the perpetration of crimes which have enslaved the Lithuanian people to a tyranny which deprive them of their human dignity. This inhumane treatment of the peaceful and liberty-loving Lithuanians convinced him that his stand in foreign affairs, mainly that the Soviets cannot be trusted under any circumstances, is a solid stand and moved him to plead with the Western World in defense of Lithuania's God-given right to freedom and independence. Concrete steps must be taken by the free peoples of the world to free Lithuania from Soviet domination and occupation. This has been and continues to be his stand in behalf of suffering Lithuania.

House Concurrent Resolution 416, passed three years ago by Congress, is of tremendous importance to Lithuania because execution of its terms would bring about the defence of her right to freedom by the President of the United States before the United Nations and the holding of free elections under the direction of the United Nations. The people of Lithuania would decide for themselves the type of government under which they would wish to be ruled. Congressman Pucinski voted for its passage and is one of those who insists that the terms of it be fulfilled. His strong support gives us hope for its eventual fulfillment.

No matter how small or inconspicuous a nation may be in the world of nations, every nation enriches the culture of the world with its own specific culture. The study of that culture permits a better understanding of the problems, hopes and goals of that country. On March 4, 1970, our honored guest testified before a Congressional Committee of the necessity of safeguarding the culture of all ethnic groups here in America. Fully realizing that the culture of Lithuania and other countries behind the Iron Curtain has added to the cultural betterment of America, he introduced a bill (H. Con. Res. 14190) which calls for the establishment of Centers for Ethnic Studies and Culture in all elementary schools, high schools and colleges. This wholehearted interest and understanding of the ethnic problems in this country merit for him our sincerest gratitude and deepest appreciation.

Because of his firm conviction that the leaders of Soviet Communism cannot be trusted, because of his fearlessness in condemning Soviet Russia as a persecutor and enslaver of freedom-loving nations, because of his constant defence of Lithuania's right to freedom, a concern which is most gratifying to all Lithuanian people, because he fears not to take advantage of his high position to give aid to Lithuanians in their efforts to restore Lithuania's independence, because on frequent occasions he has demonstrated himself to be a FAITHFUL FRIEND of LITHUANIA in her struggle for freedom, it is indeed now a high honor and a distinct privilege for me to present at this time, with the approval and in behalf of the officers and members of the Knights of Lithuania Youth organization, the KNIGHTS OF LITHUANIA AWARD MEDAL, to that sincere and resolute defender of Lithuania's God-given right to be and live as a free nation among the free and independent nations of the world, the highly esteemed and illustrious Congressman from the 11th Congressional District of Illinois, the Honorable Roman C. Pucinski.

NUMISMATIC VIEWS FROM THE HILL

HON. LEONOR K. SULLIVAN

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Wednesday, September 9, 1970

Mrs. SULLIVAN. Mr. Speaker, during the recess of the House of Representatives, it was the pleasant assignment of the city of St. Louis to serve as host city for the 79th anniversary convention of the American Numismatic Association, a fine organization with a proud tradition of service to the millions of Americans who enjoy the hobby of coin collecting. It was my privilege, as chairman of the subcommittee which has jurisdiction over coinage legislation in the House Committee on Banking and Currency, to address the convention delegates at their opening business session on Wednesday, August 19.

The subject of my talk was "Numismatic Views From the Hill"—an effort to explain the general policy of our subcommittee on legislation dealing with coinage matters or national medals, and some of the reasons for the seeming impasse on Senate Joint Resolution 158, the Coinage Act amendments bill, in which numismatists are so deeply interested because of its provision for a new $1 coin which would bear the likeness of the late President Dwight D. Eisenhower.

In view of the steady stream of telephone calls and inquiries to my subcommittee from the offices of Members of the House interested in the status of this legislation, I know that all of the Members have been receiving numerous letters rrom constituents about the bill and would, therefore, be interested in the information about its progress which I gave to the members of the American Numismatic Association. Since the text of this talk has appeared in some of the numismatic publications and may therefore, lead to further correspondence to the Members of the House on Senate Joint Resolution 158, I believe it would be useful to the Members to have my remarks at the convention available to them in the CONGRESSIONAL RECORD. Under unanimous consent, I submit it for inclusion in the RECORD, as follows:

NUMISMATIC VIEWS FROM THE HILL

(Opening address by Congresswoman Leonor K. Sullivan, Democrat, of St. Louis, Mo., chairman, Subcommittee on Consumer Affairs, House Committee on Banking and Currency, at 79th anniversary convention of American Numismatic Association, Chase-Park Plaza Hotel, St. Louis, Mo., Wednesday, August 19, 1970, at 10:30 a.m.)

It is indeed a pleasure for me, as the chairman of the subcommittee in the United States House of Representatives which has jurisdiction over coinage legislation, to have this opportunity to meet for the first time with the men and women who form the most prestigious organization of coin hobbyists in the world. I have been serving on the House Committee on Banking and Currency since 1955—from the start of my second Term in the Congress—and thus have participated directly in the writing of coinage and currency legislation for nearly 16 years. However, it was not until the formation of the Subcommittee on Consumer Affairs in 1963, that I was given primary responsibility in the House Committee for such legislation.

Many coin collectors have been puzzled as to why legislation affecting the operations of the Mints should be under the jurisdiction of a Subcommittee on Consumer Affairs. Perhaps it makes semantic sense from the standpoint that without coins, consumers would be at a great disadvantage in doing their purchasing of "consumerables". But that isn't the reason. The reason is even more remote than that. Prior to 1963, the Committee on Banking and Currency had no specialized subcommittees except on housing legislation—which is one of our most important committee responsibilities, and also one of the most technical.

While the late Congressman Brent Spence of Kentucky was chairman of the parent committee, he tried, insofar as possible, to have all hearings on legislation conducted by the full committee so that all of us as Members of the Committee would have an equal opportunity to acquire full information on every one of the far-reaching bills our committee was responsible for shaping for House action.

WHY COINAGE AND MEDALS BILLS GO TO THE CONSUMER SUBCOMMITTEE

This includes such a great variety of issues of a highly complex nature—the housing legislation I referred to earlier, bills dealing with the status of national economic preparedness for defense purposes, all banking legislation, all of the international financial institutions such as the World Bank and related agencies, also export controls, the Export-Import bank, the regulation of credit,

and so on—that as the scope of our legislative responsibilities expanded, and the technical nature of the bills grew in proportion, it became more and more difficult for all of the Members of the Committee to devote the vast amount of time necessary in order to understand all of the details in sufficient depth to be able to explain clearly to the rest of the House the facts and disputes and alternatives on every major piece of legislation. And this was our system when Congressman Wright Patman of Texas became chairman in 1963.

He immediately set up interest-area subcommittees which would have continuous jurisdiction over clearly defined types of bills, so that each subcommittee would become expert in a field of specialization. One deals exclusively with international trade; another with international finance; another with domestic finance; one with small business legislation; one with housing; one with bank insurance and my subcommittee, which has jurisdiction over consumer bills referred to our Committee, chiefly in the area of consumer credit.

A question then arose about jurisdiction over the Mint. The problem was solved by Mr. Patman on a rather informal basis by asking me if I would accept this responsibility as an additional part of our subcommittee jurisdiction, and my saying—yes. So if any of you have wondered why coinage legislation, and other bills dealing with the Mint, come to a subcommittee on *consumer* affairs, that's the simple explanation—a casual decision at the time all of the divergent areas of responsibility of the Banking Committee were being compressed into seven narrowly defined and specialized subcommittees. The jurisdiction could just as easily have gone to any of the other six subcommittees as an extra chore.

POLICY ON COMMEMORATIVE COIN BILLS

Once having been given the responsibility for coinage matters, we have tried to exercise that responsibility—responsibly. I hope members of this organization will agree that we have succeeded in that respect, although I am sure that many—if not most—of you have not been pleased with at least one of our basic policies. That policy, adopted early in our existence as a subcommittee, was to put aside—pigeonhole—all bills proposing the minting of commemorative coins. We have adhered to it ever since.

In 1963, when we first adopted the no-commemorative-coins policy, we were heading into a crisis of monumental proportions in the circulation of coins for commerce. The mints just could not keep up with the demand for coins. A new Mint in Philadelphia had been authorized by the Committee on Public Works but years would elapse before that facility could be in operation. The existing mints went on a three-shift, around-the-clock schedule, and still the coinage demand could not be met.

The Kennedy half-dollar appearing in 1964 was often thought to be a commemorative—which it was never intended to be—and all half-dollars disappeared from circulation. In 1965, we went to the clad coins, but still no half-dollars showed up in circulation. I am sure most of you know that history. During most of this period, however, commemorative coins were just out of the question.

From a standpoint of coin production, there is no question *now* that the mints *could* handle the striking of some commemorative coins, if such coins were to be authorized by Congress. So for the first time, really, since becoming subcommittee chairman in 1963, I feel that it would be appropriate for us to consider once again the question of future commemorative coins. I do not have a closed mind on this subject, even though my actions as a legislator and as a subcommittee chairman up to now may have given that impression.

COMMEMORATIVE COIN ISSUE SHOULD BE REVIEWED AGAIN

During the hearings of our Committee on the coinage bill, I asked if the Treasury has come to the conclusion that the time has arrived to consider the minting of new commemoratives. At that time, the answer was still no. Nevertheless, I will be happy to schedule hearings on this issue once the present crushing legislative burdens on the Banking Committee have eased up—perhaps early in the next Congress. I know how widespread is the interest among members of this association in seeing imaginative new coinage issues. With the approaching bicentennial of our independence in 1976, the former Director of the Mint, that dynamic lady from Nevada, Miss Eva Adams—who was instrumental in persuading me to speak at your convention today—urged upon us some time ago, prior to leaving office, that the bicentennial celebration of our founding be observed numismatically by the issuance of appropriate new coins. I believe her successor, Mrs. Mary Brooks, would also like to see this done.

But that is far different from the kind of commemorative coins which plagued the Congress in the '30's. Then commemorative half-dollars were authorized for almost any state or locality or organization which requested one in celebration of what they considered an important anniversary. It was under this policy of such generosity that the commemoratives turned into what a predecessor of mine in the Congress from St. Louis, the late Congressman John Cochran, in one of the most scorching committee reports I ever read, flatly described as a racket.

NEW GUIDELINES BEING DEVELOPED ON NATIONAL MEDAL BILLS

When we adopted as our subcommittee policy in 1963 a firm opposition to privately-sponsored commemorative coins, we adopted, at the same time, an open and very generous policy on the approval of bills proposing national commemorative medals. The American Numismatic Association, I am happy to say, was among the organizations which received our approval for sponsorship of a national medal, under Public Law 401 of the 89th Congress, commemorating the 75th anniversary of your formation, and I am sure it is a medal which each of you who owns one treasures for its significance to you and to your fine organization. But now our policy on commemorative medals is under critical review because of the fears of commercial manufacturers of medals of unfair competition by the Federal Government.

Hence, we are in the process now of trying to set up guidelines to Members of Congress on the types of commemorative medals bills we are likely to approve in the future and those we will pass over. With the great expansion of activity by private firms manufacturing such medals, we do not want to have the Treasury, in effect, competing with private business in an area which private business can adequately service.

What precipitated this critical review of our policy on bills for national commemorative medals was the approval several years ago of a Senate bill authorizing a national medal marking the 200th anniversary of Dartmouth College, followed by the introduction last year of a bill for a similar medal honoring the 100th anniversary of Ohio Northern University. We delayed action for many months on the Ohio Northern medal because it was the first bill in the commemorative medals field which ran into any opposition whatsoever—usually these bills are passed by Congress by unanimous consent, under procedures which permit a single Member of the House to block action. Eventually, the Ohio Northern University bill did pass, and become law, but it may be the last Public Law for a medal for a college or university—unless there is shown to us such direct and intimate national significance in a particular college's centennial or other anniversary that the legislation would comply with our projected guidelines. Apparently there are a great many colleges at or near the century mark.

A national commemorative medal should be restricted to some event or anniversary of *truly* national significance and importance. This new policy—once spelled out in sufficient detail and clarity—would rule out, probably medals similar to some of those we have previously approved. I am not sure that the bill I successfully introduced for the bicentennial of St. Louis in 1964 would qualify now. But in making up our guidelines, I certainly would want, and will welcome, any suggestions emanating from this Association. How do you feel about national commemorative medals?

THE EISENHOWER DOLLAR

In the meantime, uppermost in the minds of many of you, I am sure, is the prospect for passage of pending legislation providing for the minting of a new $1 coin honoring the late President Dwight D. Eisenhower. My mail is full of inquiries on this matter, and I know Chairman Patman of the parent Committee is also inundated with mail on this subject. As you probably know, Mr. Patman is deeply opposed to the use of silver in the new coin—and so am I. If we could resolve the controversy over the use of silver in the new coin, the Coinage Act Amendments bill would sail through to passage in a legislative instant. Both Houses of Congress have agreed there should be a $1 coin; both Houses have authorized the minting of such a coin of cupro-nickel content—as a circulating coin. The *House* overwhelmingly rejected the use of silver in *any* of our coins hereafter, except in a limited number of proof sets, in the votes we held on this issue last October; the Senate, in October and again last March insisted that a specified number of $1 coins be made of 40% silver—it specified 300 million such silver coins when it voted on this matter last October, but dropped down to 150 million when it again considered the matter in March. In the interim period, the Senate conceded that just turning out 40% silver $1 coins for general circulation would be an exercise in futility as far as achieving their circulation was concerned—they just wouldn't circulate. So in March, it proposed that the 150 million be sold by the Treasury as premium-priced commemoratives, with 20 million of them to be hand-made proof coins to be sold at $10 each, and the rest to be sold as uncirculated coins at $3 or $5 each.

COULD WE USE THE SILVER NOW BEING SOLD TO SPECULATORS?

Many of you feel that the controversy between the two Houses over the use of some silver in this coin is rather picayune—after all, aren't we selling silver out of the Treasury right now at so-called "bargain" prices to anyone who wants to buy it, hoard it, speculate in it, sell it abroad, and so on?

Why not, we are asked, take some of that same silver and put it instead in a coin to be sold by the Treasury at a premium and thus use the moneymaking powers of the Treasury to make some money for the taxpayer? If that were the mechanism used, if might not have been such a bad idea. But that is *not* what the Senate proposal entails. We would not, under the Senate bill, be using in coins the silver now being sold to the public each week by GSA.

The weekly sales of silver to the speculators and hoarders and exporters would not be restricted *in any way* by the the Senate coinage bill. On the contrary, the so-called compromise between silver producers and silver users on the use of silver in the $1 coin which led to the language in the Senate bill envisions *extending* the sale of 1½ million ounces of silver each week to the silver traders for an *additional three weeks* beyond the

present scheduled deadline of October 15—thus increasing by 4½ million ounces the amount of Treasury silver scheduled to go into hiding by these silver traders, pending an anticipated future price increase in the precious metal. That's the sweetener in this compromise to the silver *users*. It was the prospect of being able to acquire this additional 4½ million ounces of government-owned silver which prompted the silver users to withdraw their opposition to the further use of silver in coinage.

SILVER FOR DOLLAR COIN WOULD COME LARGELY FROM DEFENSE STOCKPILE

Well, then, where would the silver come from to make 150 million silver dollars under the Senate bill? Most of it would come from an interesting source—from the *defense stockpile* of silver created by the House Banking Committee in 1967 as part of the legislation terminating the required redemption of silver certificates with silver bullion.

I am not at all convinced that we should deplete our stockpile—a stockpile created against future defense requirements—for the purpose of minting silver coins which will never be used as circulating coins. The only defense which the Administration has given us for agreeing now to a reduction of 25½ million ounces in the 165 million ounce stockpile we created in 1967 is that secondary recovery of silver from used photographic chemicals has been more successful than anticipated. But we have held no hearings on the possible consequences of reducing the defense stockpile of silver by 15½ percent, and the only information on record on this has been a vague letter to us in response to a question I raised at our hearings on the bill to extend the Defense Production Act.

OPEN BIDDING ON TREASURY SILVER A MISTAKE

As for the Treasury's policy since May, 1969, of permitting the sale of its remaining silver to all comers with no questions asked as to the ultimate use by buyers of this precious national resource at these weekly auctions, I think it has been a grievous blunder, as was the companion decision by the Treasury the same day to permit those who caused, or contributed to, the coin shortages of 1964–65, to cash in on the subsequent rise in silver prices by melting their hoarded coins.

These were not coin *collectors* who profited by melting coins; they were coin hoarders, and silver speculators. Everything about the misuse of our coinage policies in order to broaden the base of speculation in silver has been distasteful to me. I have felt for a long time that, if silver is no longer available in sufficient volume to use it generally in coinage, and if its industrial and national defense uses are so vital, then we should carefully husband our limited supplies of government silver as a national resource for the benefit of all of the pepole of this country, rather than continue to dump it on the market for gambling purposes.

This, I believe, is the main use to which government silver has been put during the past 14 months in a highly volatile speculative commodity market.

40,000 CONTRACT OPEN INTEREST IN SILVER FUTURES

I noticed the other day that there are nearly three-quarters of a billion dollars worth of silver futures contracts outstanding in New York—an open interest of 40,000 contracts of 10,000 ounces each. This would involve an amount of silver equal to more than 10 years production of our silver mines in this country. Obviously, most of this open interest is not hedging by silver producers and by silver users on their future prices; this is clearly a speculator's market based on guesses as to what will or might happen to silver prices this fall once the government stops dumping 1½ million ounces a week into the supply.

Therefore, much as numismatists might want shiny new $1 coins for their collections, I can tell you that your interest in this legislation is miniscule compared to the interest in the same legislation of the buyers and sellers of silver futures contracts.

HOUSE AMENDMENT WOULD PERMIT SILVER IN PROOF SETS

An amendment of mine to the Coinage bill would have given the Treasury the full power to use some silver—or any metal or combination of metals—different from the circulating coins—in the production of multiple coin *proof sets*, provided, however, that access to these sets is assured to every coin collector who wants to buy a set. This amendment was subsequently deleted in the Senate, in favor of the silver industry's proposal requiring the use of stockpile to produce many millions of silver coins.

To the extent that any of you as coin collectors are anxious to help the silver mines achieve a higher price for their product, my position on this matter, and that of Mr. Patman, too, would not be a very satisfactory one. But if our national needs for silver for electronics components, submarine batteries, photographic film, missiles, and similar requirements are to be met only by having the government eventually buy back at a much higher price the same silver it is now pouring out to speculators here and overseas, and particularly after our stockpile had been depleted by 15½ percent, as the Senate proposes, in order to give you some shiny silver coins, and give coin dealers some new specimens to use as stock in trade—then I think the coin collector as a citizen and taxpayer would be badly served indeed.

NO PARTISAN POLITICS IN EISENHOWER COIN ISSUE

On the other hand, as long as Members of Congress continues to receive letters from constituents pleading with them to authorize a silver "Ike" coin—and implying that there is some Democratic politics against having Republican President Eisenhower honored on a coin—the silver producers and the plants manufacturing silver cladding for coins may well win this fight, as they have already in the Senate.

The latest legislative move on this in the Senate Banking Committee has been to hook on the silver coinage proposal as a rider on the One Bank Holding Company bill, which is a measure close to the heart of Congressman Patman, hoping in that way to get him to agree in conference to the use of silver in coinage in return for other things he wants in the bank regulation bill. There is also a resolution pending before the House Rules Committee to bring S.J. Res. 158 before the House and agree to the Senate Amendments. So anything could happen on this legislation when we return to Washington after Labor Day.

The latest legislative move on this in the Senate Banking Committee on the silver coinage proposal as a rider has been to hook on the One Bank Holding Company bill which is a measure close to the heart of Congressman Patman, hoping in that way to get him to agree in conference to the use of silver in coinage in return for other things he wants in the bank regulation bill. There is also a resolution pending before the House Rules Committee to bring S.J. Res. 158 before the House and agree to the Senate Amendments. So anything could happen on this legislation when we return to Washington after Labor Day.

But I want to lay at rest any fears that there is a Democratic strategy against having President Eisenhower's likeness on the proposed $1 coin. It was at my instigation in Committee that we nailed down in the House bill the requirement that the proposed $1 coin feature President Eisenhower in the design. There was absolutely no politics in that. Republicans and Democrats alike in the Congress admired and respected the late General of the Armies, and President. We all know that he could have been a Democratic nominee for President years ago, if he had been agreeable to that. The actual amendment to place Ike's likeness on the $1 coin was offered in Committee by Congresswoman Florence Dwyer of New Jersey, ranking Republican on my subcommittee, after I obtained from the spokesman for the Treasury an acknowledgement in our hearings that although the Secretary had the power to decide the design of the new coin himself, he felt Congress should designate the person to be honored, and he said he felt that it should be Mr. Eisenhower. We all did. That is the background. So there will be an "Ike" dollar regardless of its mineral content.

LEGITIMATE NUMISMATIC INTEREST

I am anxious to help the legitimate coin hobbyist to find new avenues, through our national coinage, to enjoy a fine hobby, and I have no objection to the sharp-eyed collector spotting a valuable coin and profiting from it, if he'd rather have the cash than the coin, or wants the cash to buy other coins he might prefer. But I don't think our coinage policies should be determined on the basis primarily of providing unique merchandise for enterprising dealers, or windfalls to futures spectulators in silver. Am I wrong?

The views of individual members of this association, and of the association itself, are valuable to me to have, and I invite your comments. I do like to know, however, whether the individual writing to me is in the *business* of coins or a person who is essentially a hobbyist who may occasionally make a lucky strike, but whose main interest in coins is pleasure rather than profit. The profit motive is a thoroughly respectable one—a valid one. But no hobby endures for the pleasure of its practitioners if its policies are determined only by those whose interest is chiefly pecuniary.

Since this organization has endured for 79 years, and has grown greatly in stature as well as in membership, I am sure your deliberations and recommendations are based on what you feel is good for the *hobby* of coin collecting, rather than on the short-run gain of those who serve it as a business. In that spirit, I look forward to receiving your counsel on all legislative matters relating to numismatics, and I hope that we can cooperate effectively in enacting legislation to make the hobby ever more enjoyable and educational for all who share in its pleasures. Thank you.

CAMPUS BILL OF RIGHTS

HON. PAUL FINDLEY

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, September 9, 1970

Mr. FINDLEY. Mr. Speaker, Lindenwood Colleges for men and women in St. Charles, Mo., last year began a promising experiment in academic freedom, individual rights, and safety of persons on campus. It was based on a statement worked out jointly by the students, faculty, administration, trustees, and directors of the colleges, a statement which provided a framework for campus relations aimed at free exchange of ideas, re-

spect for the dignity and safety of the individual.

With universities and colleges across the country opening for the fall term under a cloud of uncertainty and anxiety, the success of the Lindenwood experiment commends the statement for the consideration of other campuses.

Worked out under the leadership of President John Anthony Brown, the statement amounts to a bill of rights of American higher education. Dr. Brown was formerly assistant to the president of Temple University and later academic vice president and dean of the faculties of George Washington University, Washington, D.C. In addition to heading Lindenwood Colleges, he is president of the Independent Colleges and Universities of Missouri.

Here is the text of the Lindenwood statement:

JOINT STATEMENT OF POLICY ON ACADEMIC FREEDOM, INDIVIDUAL RIGHTS, AND THE SAFETY OF PERSONS AND PROPERTY AT THE LINDENWOOD COLLEGES

I. PREAMBLE

We the students, faculty, administration, trustees, and directors of The Lindenwood Colleges, declare that this is our institution and set forth this statement of governance of our colleges as it relates to academic freedom, individual rights and the safety of persons and property.

Academic freedom may be delineated as the freedom to teach and the freedom to learn. To make certain that these freedoms do indeed exist, that the transmission of knowledge and pursuit of truth take place in an environment where critical judgment and intellectual independence may be exercised without fear, Lindenwood College [1] and Lindenwood College II [1] have undertaken to provide, to the best of their ability, appropriate opportunities and conditions in the classroom, on the campus, and in their relations to the larger community. In support of these objectives, the following policies are established as guides and regulations for the exercise of the rights of citizenship by members of the Lindenwood Colleges Community.

II. FREEDOM OF EXPRESSION AND INQUIRY

All members of The Lindenwood Colleges are free to examine and to discuss all questions of interest to them and to express opinions publicly and privately. They are free to support causes by orderly means which do not disrupt the regular and essential operation of the colleges. At the same time, it must be made clear to the academic and larger community that in their public expressions or demonstrations, all members of the academic community speak only for themselves; such expressions do not necessarily imply approval or endorsement by The Lindenwood Colleges.

III. PROTECTION OF FREEDOM OF EXPRESSION

A. *General Statement.* To make possible the advocacy of causes by orderly means, The Lindenwood Colleges must assure their members that they will be free from actions which endanger individual safety and which, by physical force or disruptive noise, would prevent the exercise of their freedom to speak. All members of The Lindenwood Community are under a strong obligation to protect its processes from these tactics. The administration of The Lindenwood Colleges has the particular responsibility, with appropriate consultation and regard for due academic process, to institute disciplinary proceedings against those who adopt such tactics. Any member of The Lindenwood Colleges who deliberately uses such tactics shall be subject to various levels of disciplinary action including in serious cases suspension or dismissal. The ranking officer of the colleges taking such action shall immediately file a detailed report with the Council of The Colleges for its review.

B. *The Classroom.* The professor in the classroom and in conference shall encourage free discussion, inquiry, and expression. Student performance shall be evaluated solely on an academic basis, not on opinions or conduct in matters unrelated to academic standards.

1. Students shall be free to take reasoned exception to the data or views offered in any course of study and to reserve judgment about matters of opinion, but they are responsible for learning the content of any course of study for which they are enrolled.

2. Any member of The Lindenwood Colleges who disrupts activities in the classroom by such methods as physical obstruction to the entrance, destruction of property, physical attack on the professor or other students, or tactics of harassment that prevent the normal functioning of the class shall be subject to various levels of disciplinary action including in serious cases suspension or dismissal. The ranking officer of the colleges taking such action shall immediately file a detailed report with the Council of The Colleges for its review.

C. *Guest Speaker Policy.* The Lindenwood Colleges are dedicated to freedom of inquiry in the search for truth. Each college is thereby committed to encourage the presentation of all those responsible points of view and claims of truth which presume to be knowledge and which compete for the assent of man. The Lindenwood campus shall therefore be open to all public speakers, and all shall be welcome, subject only to the full responsibilities of sponsorship by recognized student (III. E.), faculty and administrative organizations within the campus community and to the availability of facilities. In order to ensure an orderly scheduling of facilities, to provide adequate preparations for the public guest speaker, to ensure public safety, and to meet the obligations of group sponsorship, the event must be registered with the Office of the Dean of Students. It is further understood that The Lindenwood Community functions as an arena of freedom where ideas must stand on their merit alone and that The Lindenwood Colleges do not necessarily endorse the ideas therein presented.

1. Public guest speakers who are duly registered by the Office of the Dean of Students shall be accorded the same freedom of expression and inquiry (II) and the protection therefore, (III. A.) accorded to any member of The Lindenwood Community.

2. Any member of The Lindenwood Colleges who does not properly register a public speaker will be in violation of college guest speaker policy and will be subject to disciplinary action by the judicial board of the appropriate college.

3. Administrative officers of The Lindenwood Colleges reserve the right to direct any public speaker who is not duly sponsored or registered to leave the campus property, or when public safety is threatened, to terminate a meeting and to request participants to disperse.

4. Orderly presentation of contrary views is a right only as long as it does not interfere with the right of others to hear the duly registered speaker.

D. *Student Communications Media.* Official student communications are basic to an atmosphere for free and responsible discussion and for intellectual exploration on campus. They bring student concerns to the attention of the faculty and the institutional authorities and help formulate student opinion on various issues. Because of their financial and legal dependence, they are under the jurisdiction of the officers of The Lindenwood Colleges. The role of publisher is delegated by the officers of the college to the Publications Board, a body composed of students, faculty and administrators. The board appoints editors, may recall them, and may serve as a review board. Editors are free from any advance approval of copy and are guaranteed sufficient editorial freedom and financial autonomy to maintain their medium's integrity of purpose as a vehicle for free inquiry and free expression in the academic community. Student editors have the same responsibility toward their publisher and public as do all journalists, e.g., the avoidance of libel, indecency, undocumented allegations, attacks on personal integrity, and harassment or slanderous innuendo.

Editors of student publications are protected from arbitrary suspension and removal because of student, faculty, administrative or public disapproval of editorial policy or content. The failure of the Publications Board and its appointed editors, however, to maintain the level of responsibility described above may lead to suspension of publication. Editors deliberately misusing their freedom in the judgment of the Publications Board may be dismissed. When, in the judgment of the Publications Board, further disciplinary action is warranted, the matter will be referred to the appropriate disciplinary jurisdiction.

All student publications must explicitly state that the opinions therein expressed are not necessarily those of either of the Lindenwood Colleges.

E. *Recognition of Campus Association and Organizations.* Recognizing that members of the campus community arrive with a variety of established interests and that they develop new interests as members of the community, The Lindenwood Colleges guarantee the freedom to organize and to join associations for the pursuit of common concerns.

1. A committee composed of all student members of the Council of The Colleges officially recognizes student organizations on behalf of the colleges. The committee establishes its own criteria for the granting and revocation of official recognition consistent with the general policies of the colleges. However, organizations which draw their membership solely from one college shall obtain official recognition from the student government of that particular college.

2. No organization shall be required to submit a list of members as a condition of campus recognition.

3. While student organizations are encouraged to seek faculty participation in their activities, they shall not be required to do so as a condition of institutional recognition.

4. Affiliation with an extramural organization will not of itself disqualify a campus organization from institutional recognition.

5. Only such persons as hold *bona fide* membership in the community of The Lindo so as a condition of institutional recognized college organizations.

6. Each association and organization bears responsibility for the conduct and financial support of its program(s).

F. *College Records.* The Lindenwood Colleges, by virtue of their obligation to provide evidence of student's performance in and completion of courses and other official college programs, must maintain records of integrity and completeness. In the process of serving the student's personal and the college's general needs, additional files relating to disciplinary action and extracurricular participation necessarily accumulate. The colleges, through the officer specifically charged with maintaining these records, act

[1] Each or both hereafter referred to as The Lindenwood Colleges or The Lindenwood Community.

as custodian and will allow their use only by authorized employees of the colleges and then with care for their confidentiality. The following safeguards are provided:

1. The Lindenwood Colleges will not maintain records of a student's membership in organizations.

2. The student's transcript will contain only information about academic accomplishment and status. This shall be interpreted to include the recording of institutional action, such as dismissal or suspension for reasons of academic standards, health, or disciplinary action, which may affect a student's eligibility to re-register at The Lindenwood Colleges.

3. Specific records of disciplinary action and other information as may be accumulated in a student's folder, not in support of the transcript, will not be retained beyond graduation from The Lindenwood Colleges. For students who have terminated prior to graduation or transferred from The Lindenwood Colleges, the information will not be retained longer than five years.

4. Other information that may be accumulated as part of a student-placement file such as interview statements and letters of reference, shall not be released to any individual or agency, public or private, without the expressed written request and consent of the student.

Except for authorized action (as in 3 above), any member of The Lindenwood Colleges who removes, destroys, improperly reveals the contents of, or alters the records, files, or personal property of a student, faculty member, or administrative officer shall be subject to dismissal from The Lindenwood Community and/or civil action.

G. *College Property and Student Privacy.* The colleges reserve the right to enter student rooms for maintenance purposes. The colleges respect the student's individual rights and will make every effort to notify the student of the maintenance problem in advance and give the student an opportunity to be present. Inspection of student rooms for any other purposes shall be made only after a warrant has been issued by an officer of the colleges with responsibility for student affairs in consultation with a student officer from the residence hall. The warrant will state the reason for the inspection, approximate time for the inspection, who is to conduct the inspection, and who requested the inspection. Validation of the warrant shall be indicated by the signature of the issuing officer, and the inspection, whenever possible, shall be conducted in the presence of the student officer who has participated in the warrant procedures.

H. *Recruitment by Service and Employment Agencies.*

1. Any *bona fide* Equal Opportunity Employer—governmental or private—will be permitted to use The Lindenwood Colleges Placement Office facilities.

2. No member of The Lindenwood Colleges has the right to disrupt the activities of the Placement Office, which provides a service to those who wish it, and no member of the college community will be allowed to interfere with the freedom of those who voluntarily seek its service.

I. *Presence on Campus of Persons Not Affiliated with The Lindenwood Colleges.* Visitors are welcomed on the campus during the time when the buildings are normally open. Guests or acquaintances who plan to be on campus beyond the hour of closing, or beyond the time when their host or hostess retires for the night, must be registered and be in quarters properly assigned to them.

Visitors shall be subject to policies and procedures stated within (I–VI). Visitors not under direct jurisdiction of The Lindenwood Colleges are expected to accept campus policies and will be asked to leave the campus if they refuse to do so. Violators of civil law will be prosecuted.

IV. MEMBERS OF THE LINDENWOOD COLLEGES AND OFF-CAMPUS FREEDOM

A. *The Rights of Citizenship.* Members of The Lindenwood Colleges who are citizens of the United States, as well as members of an academic community, enjoy the same freedom of speech, peaceful assembly, and right of petition that other citizens enjoy. All members of the academic community are subject to the obligations which accrue to them by virtue of this membership.

B. *Institutional Authority and Civil Penalties.* Members of The Lindenwood Colleges who are in violation of civil law may request institutional officials for advice, but The Lindenwood Colleges are in no way obligated to provide sanctuary or additional assistance. Members of The Lindenwood Colleges who violate the law are subject to the penalties prescribed by civil authorities, but the authority of The Lindenwood Colleges will not be used merely to duplicate the function of general laws. Only when the interests of Lindenwood as an academic community are distinct and clearly involved will the special authority of the colleges be asserted.

The member of The Lindenwood Community who violates institutional regulations in the course of off-campus activity, such as those relating to class attendance, shall be subject to no greater and no lesser penalty than would normally be imposed under different circumstances.

V. CAMPUS SECURITY: ADDITIONAL UNDERSTANDINGS

A. *Possession of Firearms and/or Explosives.* Possession of firearms and/or explosives on the premises of The Lindenwood Colleges is absolutely prohibited. Violation of this regulation by a member of the college community shall lead to immediate dismissal.

B. *Request for Identification.* Members of the Lindenwood Community are authorized to request persons to identify themselves when, in their opinion, identification is necessary for the protection of academic freedom or individual rights, the security of personal safety or campus property. Request for proper identification shall be conducted according to two guidelines:

1. Members of the Lindenwood Community are authorized to request identification after first revealing their own identification.

2. Authorized members of the community may thereafter request that the individual or person presumed to be a student of The Lindenwood Colleges present his personal I.D. card. Students of The Lindenwood Colleges shall comply with this request. Should the student believe the request is unreasonable, a complaint may be filed with an appropriate administrative or student officer, but he shall comply with the initial request.

Failure on the part of an individual to comply with request for identification shall result in the following:

1. The authorized member of the community will automatically assume that the individual is not a student of The Lindenwood Colleges. At his personal discretion, the authorized agent may make appropriate charges against the individual with college or civil authorities.

2. If the individual is later found to be a student of The Lindenwood Colleges, he will be subject to disciplinary action, under appropriate regard for academic due process (VI).

C. *Guidelines for Controlling Disruptive Tactics.* (Those tactics described in III. A.)

1. At all times, members of The Lindenwood Colleges Community will attempt to maintain a sense of proportion as to the magnitude of any threat that is facing The Lindenwood Colleges.

2. In dealing with disruption, institutional officials will first make a deliberate attempt to respect and honor reason and persuasion before choosing any other mode of action which is normally antithetical to the nature of an institution of higher learning. However, failure to receive a prompt and "in kind" reply will necessarily obligate institutional officers to choose a different mode of action.

3. Institutional officials will not negotiate under conditions of duress as determined by the ranking official of the colleges. If disruptive tactics are not promptly halted after a short period in which reason and persuasion are sincerely attempted, an institutional official will inform the student that he is officially suspended from The Lindenwood Colleges. Appeal of this decision will be recognized by institutional authorities only after the disruptive tactics in question have been terminated. Scheduling of an appeal hearing will be at a time designated by institutional officials, but there must not be unreasonable delay. The appeal hearing will be conducted in executive session by The Council of the Colleges. Any member of The Council of the Colleges who was or is alleged to be involved in the disruption under question will be automatically disqualified from hearing the case.

4. Should disruption not be terminated after the student is informed of his suspension from The Lindenwood Colleges, civil authorities will be called for assistance. The specific procedure for transferring jurisdiction to civil authorities will be at the discretion of institutional officials.

VI. DISCIPLINARY STANDARDS, JUDICIAL JURISDICTION, AND SANCTIONS

A. *Procedural Standards in Disciplinary Matters.* In developing responsible student conduct, disciplinary proceedings play a role substantially secondary to example, counseling, guidance, and admonition. At the same time, The Lindenwood Colleges have a duty and the corollary disciplinary powers to protect their educational mission through the setting of standards of scholarship and conduct for the students. In exceptional circumstances when the preferred means fail to resolve problems of student conduct, certain procedures will be taken to protect both the academic community and the student as detailed in the judicial code of the college.

B. *Judicial Jurisdiction in Cases involving infractions of Academic Standards.* Review of violation of academic standards shall come under the jurisdiction of the Appeals Board of The Lindenwood Colleges (See Student Handbook—Academic Responsibility Code).

C. *Judicial Jurisdiction in Cases of Social Misconduct.* The jurisdiction is defined according to procedures established by the judicial code of Lindenwood College and the judicial code of Lindenwood College II.

D. *Disciplinary Sanctions.* Ultimate sanctions which may be imposed by The Lindenwood Colleges are two:

1. Academic Sanctions: Clearly, the ultimate academic authority The Lindenwood Colleges have over their members is the sanction of *dismissal* from the community.

2. Civil Sanctions: Officers of The Lindenwood Colleges will seek civil sanctions against members of The Lindenwood Community as a last resort. Civil sanctions will be sought against individuals who are not members of The Lindenwood Colleges who violate The Lindenwood Community through disruptive tactics.

VII. RATIFICATIONS AND AMENDMENT

A. This document shall become effective upon ratification by the Board of Directors of Lindenwood College and the Board of Trustees of Lindenwood College II.[2]

B. Revisions of this document may be instituted by the Council of The Colleges subject to ratification by the Board of Directors of Lindenwood College and the Board of Trustees of Lindenwood College II.

[2] Ratified by the Board of Directors of Lindenwood College on May 29, 1970, and by the Board of Trustees of Lindenwood College II on June 15, 1970.

KNX NEWS RADIO

HON. EDWARD R. ROYBAL

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, September 9, 1970

Mr. ROYBAL. Mr. Speaker, on September 10 KNX/News Radio will celebrate its 50th year of broadcasting to the people of Los Angeles.

Starting in the back bedroom of a private home KNX has grown into a giant complex valued at $2 million with its new headquarters located only a stone's throw from its first home in Hollywood.

In 1936 the Columbia Broadcasting System purchased the station and began to beam some of America's most memorable radio programs to our community. Some of the best remembered are the "Carnation Hour," "Lucky Strike Hit Parade," the "Paul Whiteman Show," "Beuhla," and the "Lux Radio Theatre."

At this time I would like to congratulate KNX Radio on its golden anniversary. Over the past 50 years KNX has displayed a real commitment to public service broadcasting.

Its recent transformation into a 24-hour news radio station has enhanced its function as a disseminator of relevant news and commentary.

I salute KNX in its effort to keep the populace of southern California fully informed about the rapidly changing events affecting our daily lives and wish them the best of luck during their next 50 years of broadcasting.

QUAD-CITIES ACT TO DEAL WITH AIR POLLUTION

HON. FRED SCHWENGEL

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, September 8, 1970

Mr. SCHWENGEL. Mr. Speaker, the Quad City Area Regional Air Pollution Control Board has done an excellent job of implementing an air pollution control plan. The board is certainly to be commended for their efforts. A brief history of the board and its activities follows:

HISTORICAL DEVELOPMENT OF THE QUAD CITY AREA REGIONAL AIR POLLUTION CONTROL BOARD

Examining the physical proximity of Scott County, Iowa, and Rock Island County, Illinois, one could only come to the conclusion that the boundary that separates them, the Mississippi River, would not provide an adequate buffer zone to deter the transmission of air pollutants originating on either shore. The Quad City Area, as these two counties are often collectively referred to, has a population of over 350,000 and over 400 significant manufacturing establishments.

Several years ago a committee composed of representatives of the various Chambers of Commerce in the Quad City Area began work on a bi-state program for the control of air pollution. This effort arose out of the realization that air pollution in Scott County, Iowa, and Rock Island County, Illinois, could not be dealt with on a piecemeal basis by the 32 municipal governmental units having jurisdiction in those counties. The committee felt that the only successful program for air pollution control would come from one local control agency which would have identical enforcement powers in both Rock Island County, Illinois, and Scott County, Iowa.

The result of this committee's efforts was an air pollution control charter drawn up and signed by the local governments of Scott County, Davenport, Bettendorf, and Riverdale on the Iowa side; and Rock Island County, Moline, Rock Island, Milan, East Moline, and Silvis on the Illinois side. By signing this charter, these political subdivisions delegated their authority to control air pollution to a central air pollution control board, now known as the Quad City Area Regional Air Pollution Control Board.

The Charter is an agreement which seeks "to maintain purity of the air resources consistent with the protection of the normal health, general welfare, and physical property of the people. . . ." To accomplish these objectives, the Charter provides for a Policy Board, a Technical Advisory Committee, an Air Pollution Control Agency, and an administrative Director. The Charter further authorizes the Board to adopt identical rules and regulations for the control of air pollution among the political subdivisions and authorizes the establishment of a central air pollution control agency to administer these rules and regulations. The result is direct air pollution control, not only among different political subdivisions, but different political subdivisions in two states.

After the Charter was signed in September of 1969 each political subdivision appointed a member and an alternate to serve on the Board. Thus, the Board directly represents the political subdivisions. The ten-man Board then appointed a Technical Advisory Committee, made up of mainly professional people having fields of specialty in medicine, law, agriculture, conservation, and meteorology, to mention a few. The Board then sought to have the states of Iowa and Illinois legally recognize the authority of the Charter. The states did so by the passage of the appropriate enabling legislation.

Once the Technical Advisory Committee was appointed and state recognition was confirmed, the Board recruited an Air Pollution Control Director. The Director assumed his duties in May of 1970. In July, 1970, the Board with the advice and assistance of the Technical Advisory Committee and Director adopted an administrative program to control air pollution and a time schedule for implementation of local air pollution control rules and regulations.

The administrative program includes an installation permit system, an industrial survey system, and an abatement enforcement and control program system. The installation permit system is a preventative air pollution control measure requiring the evaluation of process and equipment plans before physical installation can take place. The industrial survey system will provide statistical information regarding the amount and types of pollutants being emitted from the various pollution sources in the Quad City Area. The abatement, enforcement, and control program system will provide for servicing complaints and seeking out pollution violators and will also promote development of structured cooperative air pollution control programs with industry.

The local rules and regulations adopted by the Board must, as required by the Charter, be at least as strict as the strictest of the state rules and regulations promulgated by Iowa and Illinois. However, the local rules and regulations may be more strict in order to meet local needs. Therefore, at the least, the local laws will incorporate the best laws of the states of jurisdiction.

The Charter, a political first for this area and probably for the nation, is in essence a contract among political subdivisions of two states. In this way, it differs from other interstate air pollution control contracts which are basically contracts between the political governments of the states themselves and do not provide a delegation of authority to a central agency for direct enforcement of air pollution control.

Thus, the local governments of the Quad City Area have solved the problem which plagues similar areas througout the country. They are providing for a centralized air pollution control agency to serve areas of residence and industrial activity which are physically bound but separated politically. They have realized that their approach is the only approach which will assure the achievement of air quality goals established for the region.

One may expand this point further, and realize that the entire regional border between Iowa and Illinois will have a similar problem of air pollution control. The problem is more significant if one considers that developers find the shores of major water arteries such as the Mississippi very attractive sites for industrial activity.

BILL COWGER REPORTS

HON. ROGER H. ZION

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, September 9, 1970

Mr. ZION. Mr. Speaker, the August 1970, newsletter of my colleague, BILL COWGER, has come to my attention. I should like to commend this informative effort to my House colleagues:

REPORT FROM CONGRESS

(By BILL COWGER)

THE ECOMONY

It now appears that the economic picture is improving. According to Dr. Arthur Burns, Chairman of the Federal Reserve Bank Board, available money is increasing for capital improvements and for personal loans. There has recently been a slowdown in retail prices which indicates that inflation is coming under control. Even though unemployment has risen, it is not alarming when you consider that we are changing from a war time to a peace time economy. President Nixon has been reducing our commitments abroad and the Congress has been cutting defense spending. This will, very naturally, result in a transition period of some unemployment. Please notice in the following table of unemployment rates from 1960 to 1970 that during peace time the rate goes up. 1960 was the last year of the Eisenhower Administration. During the three years under President John F. Kennedy, unemployment increased. The rate went down starting with the escalation of the Vietnam war. It is now creeping upward as we de-escalate American involvement in Vietnam.

UNEMPLOYMENT RATES

	Percent
1960	5.5
1961	6.7
1962	5.5
1963	5.7
1964	5.2
1965	4.5
1966	3.8
1967	3.8
1968	3.6
1969	3.5
1970	4.7

The Federal Budget for fiscal 1970 has gone $2.9 billion in the red. This was the ninth time in ten years that the federal government has spent more money than it has collected. Only in 1969 was there a budget surplus. During the last year of the Johnson Administration, the budget was overspent by $25 billion.

WHITE HOUSE VISIT

I recently had an opportunity to visit with President Richard M. Nixon in his oval office at the White House. We discussed the warm welcome that he had received in Louisville and the enthusiastic crowds that met him at the airport and in the downtown business district. I also was able to make an appointment to meet with him at a later date to discuss my around-the-world factfinding tour of Southeast Asia and the Middle East.

NEW EISENHOWER STAMP

Thursday, August 6, a regular 6-cent stamp honoring President Dwight D. Eisenhower was put into circulation by the Post Office Department. This stamp, which will be printed by the billions, will augment the Eisenhower commemorative stamp issued in October, 1969.

In addition to the satisfaction of seeing one of the truly great Americans of all time appropriately honored, I had the pleasure of receiving an album of the new Eisenhower stamps from Postmaster General Winton M. Blount.

AWARD CEREMONY

Recently I represented the Secretary of the Department of Commerce, Maurice Stans, in presenting an "E Star Award" to the Catalysts and Chemicals, Inc., of Louisville, Kentucky. This company has twice been honored for increasing their sales of United States products abroad. Shown from left to right are Dr. Ronald E. Rietmeier, President of Catalysts and Chemicals, Tom Ferguson, U.S. Department of Commerce, Paul Grubbs, Kentucky Commissioner of Commerce, and John T. Acree, Jr., President of the Kentucky Chamber of Commerce. (Picture not reproduced in RECORD).

MIDDLE EAST BRIEFING

At a recent briefing with Assistant Secretary of State, Joseph J. Sisco, the U.S. peace proposal for the Middle East was discussed. I exchanged with Secretary Sisco my own experiences in Israel, Lebanon and Egypt. The United States proposal for a ninety-day cease fire has received support from around the world. Secretary Sisco is our ranking negotiator in the Middle East.

POLICE ASSISTANCE ACT

At the recent annual meeting of the U.S. Conference of Mayors in Denver, Mayor John V. Lindsay of New York City introduced the resolution endorsing my anti-crime bill. Earlier this year, I introduced and sponsored the Police Assistance Act of 1970 (H.R. 15706) which has now gained the endorsement of mayors and police officials across the country. Mayor Lindsay is pictured above when he appeared last year before our Task Force on Urban Affairs. The Mayor has been a strong supporter of direct federal funding to the cities. (Picture not printed in RECORD.)

VIETNAM

Most of the recent fighting in Vietnam has been in the I Corps area near DaNang, Hue and the DMZ. The 101st Airborne Division has the responsibility for the protection of the area from the Au Shaw Valley, East to Hue and the coast. Pictured on the right is Major General John J. Hennessey, Commander of the famous Screaming Eagle Division. During my recent visit to this battle area, we inspected advanced fire bases that were in almost daily contact with the enemy. (Picture not printed in RECORD.)

TELEPHONE SERVICES

By calling 585-5444, you can receive my regular recorded message from Congress. As often as necessary I report on the legislative schedule of Congress, making mention of the important bills that are up for debate. We receive many repeat calls from Louisvillians who regularly use this number to find out what is going on in Washington. 585-5444 may be called day and night.

CAMBODIANS VISIT

My last newsletter showed a photograph taken in Phnom Penh, Cambodia with a group of college students and professors. Recently three of the Cambodian professors visited me in Washington. They are on a tour of the United States seeking assistance for their country in its fight against communism. They are not asking for U.S. troop intervention, but need material help to turn back the North Vietnamese invaders. (Picture not printed in RECORD).

DISTRICT OFFICE

My Louisville Congressional office is managed by Mr. Claude H. Harris. Located at 140 South Fifth Street, the office is available for calls on a 24-hour basis, seven days a week. We record phone requests at night and on the weekends after regular office hours.

In Louisville we have seven staff assistants who handle a tremendous case load of requests involving business with the Federal government. Not always do we work miracles, but we always try.

THE NEWSLETTER

The paper and printing of this report is not paid for at the expense of the government. Personal funds and contributions from those who wish to be kept informed of Congressional activities make this newsletter possible.

Each year thousands ask: Congressman, help me!

Constituent service is one of the main tasks of a Congressman. Requests come in all "shapes and sizes". Some are complex, others are simple.

To show you the silent side of Congressional service we have prepared a sample of some of our recent cases:

DEAR CONGRESSMAN: Following the death of my husband I was advised by the Social Security office in Louisville that I would receive monthly benefits. I have waited all these months and still have not received a check.

The Congressman called the Social Security office and it was determined she not only was entitled to begin receiving monthly benefits but she also received a sizable sum covering the amount due for the past months.

DEAR MR. COWGER: My husband died suddenly and my son is in Vietnam. I cannot work as I have small children at home. Please have my son discharged from the Army.

Congressman Cowger advised the soldier the proper procedure to follow in applying for a discharge. The request for discharge was approved by the Department of the Army.

DEAR CONGRESSMAN: The VA is going to take my small pension away from me. Please help. I have been injured and am also getting benefits from Social Security.

The Congressman asked the Manager of the Regional Office of the VA to assist the gentleman in completing the income forms necessary to determine the monthly amount payable. Based on that information payments were resumed.

DEAR CONGRESSMAN COWGER: For the past couple of years I have been attempting to get payment for material supplied to a foreign government. We have not received any money.

Congressman Cowger began correspondence with the American advisory group and after getting all the necessary documents, payment was made to the supplier.

DEAR CONGRESSMAN: In January, I filed for my income tax refund. All these months have gone by and I have never received my check.

Congressman Cowger asked the District Director of Internal Revenue to make an investigation. It was determined an error had been made in processing and the check was mailed to an incorrect address. The check was immediately remailed.

DEAR CONGRESSMAN COWGER: My husband is presently serving in Vietnam and now my son has received orders to report there. Please help me; one is enough to worry about in that place.

The Congressman advised the young man to apply for a reassignment under the Department of Defense policy of only one member of a family serving in Vietnam at a given time. He submitted his request to his commanding officer and his request was approved.

NATIONAL GALLERY OF ART CALENDAR OF EVENTS, SEPTEMBER 1970

HON. JAMES G. FULTON

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, September 9, 1970

Mr. FULTON of Pennsylvania. Mr. Speaker, it is a pleasure to place in the CONGRESSIONAL RECORD the Calendar of Events of the National Gallery of Art for the month of September 1970.

Once again, the National Gallery has planned an outstanding series of events and exhibits, and I urge my colleagues and the American people to visit the Gallery and take advantage of their excellent program of events.

The material follows:

CALENDAR OF EVENTS

MARY CASSATT 1844-1926

The National Gallery's fall exhibition schedule opens September 27 with an exhibition of one hundred works by Mary Cassatt, including oils, pastels, and graphics. It will be the largest exhibition ever held of the work of this important American impressionist and will include a number of paintings never before shown in the United States as well as seldom-seen pictures from the Cassatt family and several European collections.

This exhibition, to be shown only in Washington, is the sixth in a series of retrospectives which the National Gallery has organized honoring important American artists, the first of the series to honor a woman. The exhibition will be on view in the Central Galleries, on the ground floor, through November 8. A fully-illustrated catalog ($4.75), with an introduction and notes by Adelyn Breeskin, preeminent authority on Mary Cassatt, will be available.

The National Gallery also has commissioned a full color 2 x 3 foot poster in a limited edition, featuring *The Boating Party*, a painting in the collection of the National Gallery. The poster is available for $5.00 during the exhibition, $10.00 afterward.

"ART AND MAN"

The first installment of "Art and Man," a multi-media program under the direction of the National Gallery of Art and published by Scholastic Magazines, will be mailed nationally to subscribers in junior and senior high schools the week of September 20.

"Art and Man" explores, through eight monthly packages, the humanities and their relationship to contemporary problems. Each package contains copies of the color-illustrated magazine *Art and Man*, as well as a record, a filmstrip, a poster, or a portfolio of reproductions.

Subjects for the first year are: *The American Wilderness, Rembrant and His Age, Afri-*

can Art, Art and the Machine, Florence and the Renaissance, Art and War, Cities to Live In, and The First Americans (The American Indian).

"CIVILISATION"

Evening showings of "Civilisation," which have had to be doubled to meet the demand, will end September 7. The entire series will be shown again beginning September 13. Each week, through December 12, one film of the thirteen-part series by art historian Kenneth Clark will be shown daily at 12:30 and 1:30 p.m. No tickets; admission on a first-come basis.

SUNDAY EVENING CONCERTS

The Gallery's 29th season of Sunday evening concerts in the East Gardens Court will begin on September 27 with the first of six programs entitled "Beethoven and his Contemporaries" in commemoration of the Beethoven Bicentennial. *The concert hour has been changed to 7 o'clock.*

LABOR DAY WEEKEND FILM

Sir Laurence Olivier's film version of Shakespeare's *Henry V* will be shown in the auditorium at 2:30 p.m. on Sunday and Monday of Labor Day weekend; running time is 2 hours 17 minutes.

CHANGE OF GALLERY AND CAFETERIA HOURS AFTER SEPTEMBER 7

Regular hours begin September 8: weekdays and Saturdays, 10:00 a.m. to 5:00 p.m., and Sundays, 12 noon to 10:00 p.m. Cafeteria hours after September 7: weekdays, 10:00 a.m. to 4:00 p.m.; luncheon service 11:00 a.m. to 2:30 p.m.; Sundays, dinner service 1:00 to 7:00 p.m.

Summer hours (weekdays and Saturdays, 10:00 a.m. to 9:00 p.m.; Sundays, 12 noon to 10:00 p.m.) will be in effect through Labor Day, September 7.

MONDAY, AUGUST 31 THROUGH SUNDAY, SEPTEMBER 6

Painting of the week[1]

Henri Rousseau. *The Equatorial Jungle.* (Chester Dale Collection) Gallery 84. Tues. through Sat. 12:00 & 2:00; Sun. 3:30 & 6:00.

Tour of the week

Selections from the Nathan Cummings Collection. Central Gallery. Tues. through Sat. 1:00; Sun. 2:30.

Tour

Introduction to the Collection. Rotunda. Mon. through Sat. 11:00 & 3:00; Sun. 5:00.

Sunday film

Henry V. Auditorium 2:30.

MONDAY, SEPTEMBER 7, THROUGH SUNDAY, SEPTEMBER 13

Labor day film

Henry V. Auditorium, Monday 2:30.

Painting of the week[1]

Rembrandt. *A Polish Nobleman.* (Andrew Mellon Collection) Gallery 48. Tues. through Sat. 12:00 & 2:00; Sun. 3:30 & 6:00.

Tour of the week

Medieval Italian Art. Rotunda. Tues. through Sat. 1:00; Sun. 2:30.

Tour

Introduction to the Collection. Rotunda. Mon. through Sat. 11:00 & 3:00. Mon. (Labor Day) 1:00; Sun. 5:00.

Sunday lecture

Sèvres: Porcelain of Kings. Guest Speaker: Carl C. Dauterman, curator, Western European Arts, The Metropolitan Museum of Art, New York. Auditorium 4:00.

Sunday film—"Civilisation," I

The Skin of Our Teeth, 12:30 & 1:30.

MONDAY, SEPTEMBER 14, THROUGH SUNDAY, SEPTEMBER 20

Painting of the Week[1]

Fra Filippo Lippi. *Saint Benedict Orders Saint Maurus to the Rescue of Saint Placidus.* (Samuel H. Kress Collection) Gallery 4. Tues. through Sat. 12:00 & 2:00; Sun. 3:30 & 6:00.

Tour of the Week

Renaissance Italian Art. Rotunda. Tues. through Sat. 1:00; Sun. 2:30.

Tour

Introduction to the Collection. Rotunda. Mon. through Sat. 11:00 & 3:00; Sun. 5:00.

Sunday Lecture

The Craft of Early Italian Painting. Guest Speaker: Marvin Eisenberg, Professor of the History of Art, University of Michigan, Ann Arbor. Auditorium 4:00.

Weekday Film—"Civilisation," I

The Skin of Our Teeth, 12:30 & 1:30.

Sunday Film—"Civilisation," II

The Great Thaw, 12:30 & 1:30.

MONDAY, SEPTEMBER 21, THROUGH SUNDAY, SEPTEMBER 27

Sculpture of the week[2]

Maillol. *Bather with Raised Arms.* (Ailsa Mellon Bruce Fund) Rotunda. Tues. through Sat. 12:00 & 2:00; Sun. 3:30 & 6:00.

Tour of the week

Baroque Italian Art. Rotunda. Tues, through Sat. 1:00; Sun. 2:30.

Tour

Introduction to the Collection. Rotunda. Mon. through Sat. 11:00 & 3:00; Sun. 5:00.

Sunday lecture

Mary Cassatt: Artist, Connoisseur, and Dynamic Personality. Guest Speaker: Frederick A. Sweet, Former Curator of American Painting, The Art Institute of Chicago, Chicago, Auditorium 4:00.

Weekday film—"Civilisation," II

The Great Thaw, 12:30 & 1:30.

Sunday film—"Civilisation," III

Romance and Reality, 12:30 & 1:30.

Sunday concert

Beethoven and His Contemporaries. National Gallery Orchestra. Richard Bales, *Conductor.* East Garden Court 7:00.

(Inquiries concerning the Gallery's educational services should be addressed to the Educational Office or telephoned to (202) 737-4215, ext. 272.)

[1] 11"x14" reproductions with texts for sale this week—15c each. If mailed, 25c each.

[2] 8"x10" black-and-white photograph with text for sale this week—75c each.

BILL DECKER, SHERIFF OF DALLAS, TEX.

HON. JAMES M. COLLINS

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, September 9, 1970

Mr. COLLINS. Mr. Speaker, we have just buried one of the finest lawmen that ever lived. All of us in Dallas loved and respected Bill Decker.

Sheriff Decker was a friendly man. He was humble yet had a fine sense of humor. He had the courage of a Texas Ranger.

He was a fair man and gave everyone an even break. Decker was sheriff for all of the people in Dallas, night and day.

The Dallas Times Herald on September 1 had an editorial tribute on Decker. You will be proud to read the following on a great Texas lawman:

Bill Decker died as he had lived 24 hours a day for 21 years—as sheriff of Dallas County.

Illness—chronic emphysema—had finally defeated him as no human adversary had ever succeeded in doing, and he had submitted his resignation as sheriff. But the resignation was not to take effect until Sept. 1. So Bill Decker died as sheriff of Dallas County and that was fitting.

For as we said in an editorial only last week, when Decker's resignation was announced: "The office of sheriff of Dallas County and Bill Decker have become so closely related in the minds of most of us that it is almost impossible to think of one without thinking of the other."

As long-time sheriff and before that as a deputy constable and then deputy sheriff, Decker performed a signal service for the people of this county in the enforcement of the law. But his service to the people of this county far transcended the mere discharge of the formal responsibilities of his office.

As we also said in the editorial last week: "Indeed, Bill Decker was a highly unusual and highly successful officer, but more important, Bill Decker was a highly unique human being. It was the great humanness of the man that will live on as one of the dominant qualities of the Decker legend."

Decker was, above all, a man of deep compassion for his fellowmen. As the story on his death in this newspaper so correctly noted, Decker's primary image was that of a friend of the people, a man never too tired or too busy to lend a helping hand to anyone who needed it.

He was known particularly as a friend of the "little people," many of whom came to him when they were in trouble and whom he helped unstintingly to his utmost capability. But in the same sense of the word, he was a friend of the "big people" as well. Their station in life, be it big or little, whether he had known them for a long time or not at all, carried no weight with Bill Decker when they sought his help as a friend.

The resolution, read in Commissioners Court by his good friend, County Judge Lew Sterrett, and passed by the court, says it well:

"We are deeply saddened by the passing of this truly great public official. This is indeed a sad day in Dallas."

PAY SCALES

HON. O. C. FISHER

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, September 9, 1970

Mr. FISHER. Mr. Speaker, I recently received from a constituent, Mr. B. R. Stephens of New Braunfels, Tex., an editorial which appeared in the August 1970 edition of Roads and Streets magazine. It points to the exorbitant increase in pay scales, particularly as related to the construction industry. Because of these astounding revelations it becomes more important than ever that the Congress update the Taft-Hartley Act and take such other steps that would be designed to apply some brakes to this inflation-producing trend.

The editorial follows:

ONE-SIDED UNION SETTLEMENTS HEAD FOR $40,000 TO $50,000-A-YEAR WAGES IN 1970'S

(By Harold McKeever)

Memo to the President and Congress: Will some of you please shut your office doors, take

pencil in hand, and figure where we're heading if union wage settlements continue in the prevailing pattern.

We say shut the door first, for a reason. Particularly if you do this while figuring for the construction industry—the Operating Engineers, Teamsters, Cement Masons, Electrical Workers, Ironworkers, and Laborers—we wouldn't want any of your constituents to see the look of consternation you'll have, or should have, if you own life insurance and have friends and constituents who must pay for their children's college education a few years hence.

Just take any of a dozen typical recent settlements, and project the three-year raise three times. That will bring you to 1979. It comes up *$24 an hour* for the Operating Engineers—$42,000 a year *without overtime* in an 1800-hour year. Other construction workers in various regions will be making $40,000 to $50,000 by end of decade.

As this is written, Operating Engineers Local 150 in the Chicago area has just scored again on this pattern. They won from a $4.75-an-hour increase for Class I to $5.05 an hour for Class II over 38 months, bringing their pay with fringes to $11.05 an hour for Class I. The union had demanded $5.20, and it took a costly strike and lockout to force even this small concession.

This same go-around occurred three years ago in the Chicago area. A billion-dollar, seven-week strike of highway and heavy jobs in that year brought only minor reduction of the Operating Engineers' completely outrageous demands for more feather-bedding work rule and the 50 percent increase wanted.

Mr. Nixon and Mr. Congressmen, now just tack on two more raises like this, in 1973 and 1976, with compounding, and you can see what the inflation picture is for the decade of the 1970's. Or use any of scores of other skyrocketing construction union settlements as your model—then ask Mr. Burns, yes, and the Hill, to think what this will do to any anti-inflation program, and what it is doing to every citizen.

The Chicago Tribune of July 4 put the problem in perspective in an editorial on the area settlement just reached with the Teamsters. This was for $1.65 an hour wage boost plus added $8 weekly health-welfare-pension plus cost-of-living increase—41 percent over three years. In the Tribune's words:

"This is vastly more than any conceivable increase in the cost of living or the productivity of the drivers. This means the shippers will have to pay more for freight; the customer will have to pay more in prices; the country has lost another important round in the battle against inflation.

"We can't criticize the truckers for being able to get what they wanted. But their success was not wholly the result of their own persistence. They were helped by a series of laws and precedents giving them the advantage over the trucking industry with which they were bargaining—if that was the word for what led to a total capitulation on the part of the industry.

Many of the drivers took other jobs to help make up for their loss of income. There was little if anything the trucking companies could do to make up for their loss of income. Had they tried to hire other drivers for their trucks, they would have been subjected to merciless persecution for strike-breaking and probably found guilty of refusing to bargain in good faith.

"The drivers who were unable to earn enough on their own were given food stamps (worth up to perhaps $160 a month). The money for this was put up by the taxpayers, including the companies being struck. Had this been another state, the striking workers might have qualified also for unemployment compensation, even though the unemployment was of their own making.

"These are examples," the Tribune editorial concluded, "of the many ways in which present labor laws are loaded in favor of unions . . . If we are ever to have a successful anti-inflation policy, it will have to include statutory changes to insure that collective bargaining means more bargaining, less one-sided collecting, and a more impartial attitude on the part of public agencies."

Mr. President, even though this is an election year you might at least pass this page along to your fiscal policy advisors. Then tell us the solution on your next TV program.

HE BROUGHT A STREAM BACK TO LIFE

HON. WILLIAM A. STEIGER

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, September 9, 1970

Mr. STEIGER of Wisconsin. Mr. Speaker, the question is often asked, What can a private citizen do about the pollution of the air, water, and land?

In this age of big government, big business, big universities and big everything, it is easy to lose sight of the value of individual effort toward the big problem of pollution abatement.

One of the outstanding examples of individual commitment and action for a better environment has taken place in Cedarburg, Wis. There, Mr. Del Cook decided 6 years ago that the creek running through his backyard did not have to be polluted.

Mr. Cook's struggle and eventual success is indeed inspiring. I have called it to the attention of my colleagues before. Del has now been honored by the Reader's Digest and in an editorial of the August 19 News-Graphic of Cedarburg, Wis. I would like to include as part of my remarks the editorial and the following article by Roul Tunley which appeared in the July 1970 Reader's Digest:

HE BROUGHT A STREAM BACK TO LIFE

(By Roul Tunley)

Late in 1962, Delbert J. Cook, an advertising executive born and raised in Chicago, then employed in Indianapolis, New York, Washington, D.C., and Milwaukee, got fed up with cities. Deciding to seek the solace of life in the country as a free-lance marketing consultant, he bought an old barn on Cedar Creek, 20 miles outside Milwaukee, and started remodeling it with his own hands. He worked all winter in his spare time. He'd always wanted to live on a stream, and now he dreamed of fish jumping, small boys swimming, dragon-flies buzzing, picnickers wading.

Then came the spring thaw. Walking down to the creek one morning, he was shocked to see what the winter snow and ice had concealed: swirls of oil, floating garbage, a rusty stove at anchor, and an odor of decay that killed the fragrance of early spring. Del Cook's dream stream was an open sewer!

His shock turned to outrage in the summer of 1964, when thousands of dead fish, belly up, appeared in the creek. Boiling angry, Cook drove into Cedarburg, largest town on the river (pop. 8000). There an official told him, "It's happening all over. There's nothing you can do about it." The man added with a smile, "It's part of progress, I guess."

Del Cook didn't smile. And today, thanks largely to him, Cedar Creek, running 32 miles through some of America's loveliest country, flows clear again. Volunteers did the work, and it didn't cost the government a penny. But it wasn't easy.

Cook started his campaign the night of his meeting with the Cedarburg official. At a gathering of the local 4-H Club, which he headed, he discussed the situation with the youngsters. They voted to make cleaning up the creek their project. A group of Explorer Scouts joined them, and one of them suggested a name: the Cedar Creek Restoration Council. It was decided to charge dollar-a-year dues.

Knowing their technical limitations, Council members persuaded Floyd Stautz, a state health engineer, to be their adviser. On his advice, they divided the waterway into sectors, then formed survey teams. In canoes and on foot, they laboriously pinpointed each pollution source: sewage pipes, faulty drains, overloaded septic tanks, cattle runoffs, industrial wastes. Then they set aside a Saturday for a massive cleanup of the 2½-mile stretch through the area.

On the appointed day, more than 400 Scouts, 4-H members, highschool students and adults (teenagers outnumbered grown-ups six to one) showed up. Wading into the stream, they hauled out tires, bedsprings, bottles, barbecue grills, mattresses, old refrigerators—even the remains of a 1936 Chevy. City dump trucks hauled away 26 loads.

At this point, with no-dumping signs posted along the banks and with violations documented, Cook naively thought that the worst was over. After all, the law was explicit: no sewage or waste matter could be dumped in surface water. All he had to do now was to get officials to notify the violators, and the stream would quickly come back to life.

It didn't work out that way. As the weeks passed, Cook learned a hard truth: everybody gives lip service to clean water, but when it comes to doing something about it, there's an overwhelming lethargy, especially when it involves the pocketbook. Typical was a butter factory which was still contaminating Cedar Creek with whey—although as far back as 1953 it had been ordered to stop the practice. Other polluters included an animal-food manufacturer who dumped what Cook described as "blood and guts" into the stream and an outboard-motor factory spewing oil waste. Overloaded facilities at Cedarburg and Jackson emitted sewage not fully treated, and many faulty septic tanks added to the problem. Test samples of water showed bacterial counts, involving fecal matter, as high as 1,750,000 per 100 mg. of stream sample (any count over 200 can make water unsafe for human contact).

Cook doggedly pursued all the offenders with orders, summonses and writs via health officers, town constables, and officials in the state capital, Madison. He wrote countless letters, made countless calls.

Friendship became part of the price of the cleanup when Cook was forced to file suits against neighbors who failed to act. He learned early that fighting pollution is no way to win a popularity contest. He was referred to contemptuously as "Mr. Clean" and called a blatant publicity-seeker.

Occasionally people told him to his face, "You have no business coming in here as an outsider and *doing* things." More often they spoke behind his back. A whispering campaign suggested that he was doing it all to get a fat state job. The malicious gossip was groundless.

Only once—in 1969—did Cook falter. Fed up with innuendo, lethargy and constant roadblocks, he decided he'd enough of his nonpaying job as head of the Restoration Council and would go back to being a full-time marketing consultant. When he resigned, the local paper dug into its print box for its biggest type. "Cook Quits!" it bannered. Even a Milwaukee paper ran a front-page editorial. When shocked citizens raised

a storm of protest, Cook changed his mind.

From then on, the going seemed easier. Gradually, the plodding, checking and nagging paid off. Today, six years since the start of the campaign, virtually all sources of pollution have been eliminated from Cedar Creek. This, plus continued annual cleanups by students, Boy Scouts and others, has resulted in the stream's coming back to life.

Shortly after they got into action, the Restoration Council decided to make the waterway beautiful as well as clean. Trees and shrubs were planted, barbed wire was removed, and areas beneath bridges were cleaned up. A 15-mile canoe trail was opened, and the state stocked the stream with game fish. And, finally, Cook received word from the state health department certifying that the stream was now safe for swimming. "I felt like jumping up and down when that arrived," he told me.

Other dividends flowed in. The 2000 high-school students and other young people who helped in the campaign have become an army staunch wardens of the waterway. Says local lawyer and one-time state legislator, J. Curtis McKay: "If you toss an empty six-pack into the stream, chances are a brawny student will tap you on the shoulder and invite you to follow the cans into the water."

Land values along Cedar Creek have doubled since the campaign started. Other parts of the state have taken heart. The Rubicon River Restoration Council was formed, followed quickly by other groups seeking to restore the Root, Wisconsin, Oconto and Milwaukee rivers. Several times a month, Cook is asked to address such groups.

Last November, the state's leading newspaper, the Milwaukee *Journal*, took note of Cook's "sparkling achievement" in an editorial, and expressed satisfaction that there is "still a place in this land for the totally committed and considerably angry individual." Last March, President Nixon wrote commending Cook on the job: "The Council's work provides a splendid example of the dedication and effectiveness that volunteer groups can bring to the fight against pollution."

But the real rewards of doing a job like that at Cedar Creek are not always measured in a President's letter, in newspaper headlines, or even in the applause of fellow citizens. Cook's greatest satisfaction came one morning last spring when he got up early and walked down to the creek. Dragonflies buzzed lazily as a bass flashed above the sparkling surface. The fragrance of spring filled his nostrils. Leaning down, he cupped his hands and drew up the first drink of clean, clear water anybody had had from the stream in 25 years. Delbert Cook felt a surge of elation. Not only was the creek alive; so was a city boy's dream.

(From the Cedarburg (Wis.) News-Graphic, Aug. 19, 1970)

A TRIBUTE TO A FELLOW TOWNSMAN

The Reader's Digest in its July issue gave national recognition to one of our fellow townsmen, Delbert J. Cook in an article captioned "He Brought a Stream Back to Life."

The article was the third of a series the Digest is published about "small, splendid efforts" of citizen-volunteers who are trying to make our country a better place to live in, dealing with Involved Americans.

The article is reproduced in this issue. It was written by Roul Tunley, a staff writer who spent a week here interviewing people, and going up and down Cedar Creek.

Cedar Creek is not a large river as rivers go, having its source in Cedar Lake and emptying into the Milwaukee river, but it is a stream that flows thru beautiful countryside, and it was filling up with pollution.

Del Cook singlehanded went to work to clean up the stream. He organized the Cedar Creek Restoration Committee, and they engaged in clean-up campaigns that resulted in certification by the State of its clean water.

Mr. Cook achieved results because of his deep and abiding interest. He went out, donned on hip boots and worked just as hard and probably harder than anyone in the manual efforts to clean up the river debris.

He has stepped on people's toes. He has dared to fight "city hall," appearing before town, village and city governments, pointing out that they were guilty of polluting the stream because of inefficient sewer and disposal systems.

He has had one disappointment in his endeavor to stop the Stadium Freeway from coming into this area, but he has not given up yet. If he should fail, no one can accuse him of not having put up a gallant fight.

CUBA CANECUTTERS AND OTHER SUBVERSION

HON. O. C. FISHER

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, September 9, 1970

Mr. FISHER. Mr. Speaker, I recently received from a constituent, Mrs. Gabe R. Anderwald, of Bandera, Tex., an article which had appeared in the VFW Magazine, written by Donald L. Miller. The story contains some revealing and thought-provoking information, which I include as a part of my remarks.

The article follows:

ALONG THE RED FRONT

(By Donald L. Miller)

Antiwar demonstrations are scheduled to pick up in momentum and possibly in violence in the weeks just ahead.

One of several moves, certain to capture media attention, will be a series of "long marches," suggested by Arthur Waskow, of the Institute for Policy Studies.

The "long march" was institutionalized by Mao Tse-tung. In a desperate effort to save his Communist forces from defeat by Chiang Kai-shek 'way back in 1934–35, Mao led his forces from Kiangsi and Fukien provinces through Kweichow and Szechwan into northern Shensi. Mao's forces survived and during the confusion at the end of World War II succeeded in seizing control of the entire China mainland.

Arthur Waskow's proposal for "long marches" in the U.S. is not for retreat, but for advance. Under his plan, a series of "long marches" would originate at symbolic locations and converge in Washington, D.C., either Aug. 6–9, the anniversary of the atomic bombings of Hiroshima and Nagasaki or on Labor Day, Sept. 7.

For symbolic originating points, Waskow suggested Kent, Ohio, where four student demonstrators were killed; Augusta, Ga., where six black demonstrators were killed; New Haven, Conn., where Black Panther leader Bobby Seale is being tried for murder, and Lexington and Concord, sites of the first shots in the American Revolution.

The suggestions were made to a wide variety of leaders attending a June conference in Milwaukee sponsored by New Mobe, the New Mobilization Committee to End the War in Vietnam. Included in the meeting were representatives of the Southern Christian Leadership Conference, the National Welfare Rights Organization, the Black Panthers and the Venceremos Brigade, Americans who have been cutting sugar cane in Communist Cuba.

Even as it met, New Mobe reportedly was on the verge of a split, not over opposition to American involvement in Vietnam, but over how violent New Mobe demonstrators should become. A strong contingent is said to be favoring more violence.

What this new "violence" will involve is not yet known. After one group of American young people came back from a sugar cane-cutting expedition in Cuba there was a rash of firebombings. For years Havana has been promoting distribution of explicit directions on how to make Molotov firebombs, and simple dynamite time bombs. So far as the assaults have been against buildings. To justify bombing and burning of property, the left has been advancing the idea that violence takes place only when a person is hurt. So the new concept of non-violence permits property destruction.

A possible, even probable, turn toward firebombing and dynamiting of buildings by some so-called antiwar groups requires a new, and tighter, set of limits on where the expression of political dissent ends and where open war on society begins. The ultimate in dissent, of course, is revolution.

LEGISLATIVE REORGANIZATION ACT OF 1970

HON. FRED SCHWENGEL

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, September 9, 1970

Mr. SCHWENGEL. Mr. Speaker, I call on you, and my other colleagues here in the House, to assist me in forcing the editor of a prominent newspaper in Iowa "eat a little crow." The editor, who happens to be a very good friend of mine, has suggested editorially that he seriously doubts if we will have the fortitude to pass a meaningful congressional reform bill in this Congress. Frankly, I share his concern and would be most happy to join him in "eating a little crow" in the event we do pass a meaningful reform bill. The editorial to which I refer, from the August 18 issue of the Cedar Rapids Gazette, follows:

REORGANIZATION, EH?

More than two weeks have elapsed since the U.S. house decided to postpone until another day final consideration of the reorganization bill which it had debated for nearly a month.

When the postponement was announced, we expressed doubt in this space that the bill would be taken up again this session; we thought it rather obvious then that the leaders had agreed to let the bill die a quiet death—probably because it had been amended to the point where some genuine reorganization would have been in prospect had it been passed and sent to the Senate. We also said we'd be glad to eat a little crow if our guess proved to be inaccurate. We stand by that offer but as of the moment it doesn't appear we'll have to make good on it.

Here is another example of the hypocrisy that not only is riling up young America but is raising hackles on older citizens who've just about had it with trying to work within the system to do nothing more than modernize it. In this instance a vote on the bill was sidetracked by a few Democratic leaders who, we'll venture, wouldn't have the support of even a majority of house Democrats, not to mention house Republicans, if they'd put this bill to a vote.

By way of review, the original bill was mislabeled a "reorganization" bill. But after the house adopted several amendments, includ-

ing one to require record votes in committee of the whole if requested by at least 20 members, the leaders grew skittish and backed off. What they wanted was something in the name of "reorganization" that was anything but that and what they were about to get was a semblance of reorganization by way of amendment.

There's still time in this congress to take up the bill, as amended, and to pass it. We don't think the house will do it. We hope we're proved wrong.

FISH RESOURCES ACT OF 1970

HON. RICHARD T. HANNA

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, September 9, 1970

Mr. HANNA. Mr. Speaker, last April I received information which suggested that a significant share of the fish being caught off the coast of Orange County, Calif., had cancer or other serious abnormalities. After confirming the accuracy of these reports, and under the auspices of the Merchant Marine and Fisheries Committee, I conducted emergency hearings in Santa Ana, Calif., on the relationship between water pollution, fish diseases, and human health.

There are those who say that since no clear, consistent and convincing causal link between fish diseases and human illness has been illustrated, it is folly to pursue the issue. I disagree, and I am today introducing legislation, the Fish Resources Act of 1970, which expresses that disagreement, requiring that an in-depth study be undertaken of this matter. Where human health is at stake, we must, in my judgment, endeavor to establish to a certainty whether the connection does or does not exist. If we are to err, let it—for once—be on the side of being overly concerned about the relationship between man and his environment. We need not recount today the consequences of past failures to adequately consider the vulnerability of man to variations in his environment.

There are two dimensions to the relationship between pollution, fish disease, and human health. The first involves the capacity of fish to serve as biological magnifiers of substances harmful to humans but harmless to the fish. The second raises the possibility of transmission of diseases by afflicted fish to man.

In the first instance, fish have been found to have the ability to concentrate quantities and types of substances which can be lethal to man but which seemingly have no deleterious effect on the fish. In this role, the fish serve as but one step in a process known as biological magnification. Fish can ingest other fish or plant life which have likewise consumed other edibles, each of which may contain toxic substances. I think it is easy to see how this chain reaction can build to the point where any one fish purchased in the local supermarket can contain dosages of a particular toxic substance to a degree dangerous to human health. Notable examples of this process and its effect on humans are the Minamata tragedy in Japan in 1953 and the not infrequent outbreaks of fish poisoning resulting from "natural occurring" biological poisons in fish in tropical waters. In the Minamata incident, fish had ingested marine organisms which served as transmitters, or vectors, of toxic substances derived from mercurial compounds in industrial waste. When then consumed by humans, severe neurological disorders ensued. In this outbreak, the fatality rate in humans was 34 percent.

The problem of fish poisoning continues to increase in the tropical Pacific islands. The possible role played by pollution in these outbreaks is revealed in the fact that such incidents only seem to occur in the one-tenth of 1 percent of the ocean area that is the most susceptible to destruction by pollution. Although the mortality rate in these incidents has remained below 1 percent, the victims do suffer varying degrees of incapacitation. This presents a significant health problem and, as the population in these areas increases, so does the severity of the problem.

The enormity of this problem becomes apparent when we consider that one of the more recent approaches to the growing food resource demands created by the ever-expanding world population will add another step to the magnification process. The long-heralded fish protein concentrate may not be the panacea it was acclaimed as being if these toxic substances cannot be removed prior to the concentration process.

Fortunately, in this area at least, research has been going on for some time. The mechanism by which these toxic substances are assimilated by the fish has been uncovered and steps are now being taken to break the enzymatic and protein lock which retains these substances in the fish's system to permit its removal before consumption by man. I do not mean to imply that this problem is licked—far from it. The hardest part still lies ahead—the development of the method whereby this lock can be broken. This effort must be supported.

Although I am encouraged by this continuing research effort, I am nevertheless appalled at the acknowledged dearth of information available, and, for that matter, research being done on the second dimension of this problem, the effect fish diseases contracted in polluted water may have on human health. This is to me as crucial a problem as that of biological magnification. For, although many experts assert that there is no known evidence of any particular disease being transmitted to the human consumer, virtually nothing is known regarding the susceptibility of man to the viral or bacterial causes of disease in fish. In other words, it is possible that fish can function as vectors for the causative factors of particular diseases, even though the developed disease in the fish is incompatible with the human system.

For example, it is not known how the cancers and abnormalities in the the fish caught in the Santa Ana River outfall may affect the health of a consumer. It is known that the cancer itself is not transmittable; it is not known whether the viral cause of the cancer may be accepted by and thereby develop in the human consumer. In addition, the causal relationship between water pollution and fish diseases is not completely known, although it is known that the incidence of disease increases in polluted waters.

Until these questions can be answered and steps taken appropriate to those answers, we will continue to deal with an extremely dangerous unknown. Answers must therefore be found as soon as possible to remove this potential threat.

We are dealing then, with two distinct although connected problems. In one, we know what the problem is and what is needed to solve it. In the other, we have not even begun to understand the problem, let alone be on the way to solving it. In this latter case, that of possible linkages between polluted water, diseased fish, and human health, our basic obstacle to be overcome before we may move forward toward constructive actions is the total lack of definitive facts on the subject. We just do not know what the connections are. It is to the discovery of these unknowns that my bill is directed, and likewise these hearings.

THE PEACE OFFICER—A SYMBOL OF THE SYSTEM

HON. GLENN CUNNINGHAM

OF NEBRASKA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, September 9, 1970

Mr. CUNNINGHAM. Mr. Speaker, in recent weeks tragic and senseless occurrences in many of our cities have resulted in death and serious injury to dedicated police officers. One such tragic episode occurred in my congressional district, in Omaha, Nebr. A young police officer, Larry Minard, 30 years old and the father of five children, lost his life in a plotted bombing incident, paying the supreme sacrifice while serving his fellow citizens.

Mr. Speaker, the eulogy delivered at the funeral of this young policeman expresses the mission, the value, and the worth of our peace officers. It would behoove all of us to reflect upon the message of Dr. Marvin E. Hall, pastor of the First Baptist Church, Omaha, Nebr., in the hope that we might be better able, through our own words and actions, to help reestablish deserved respect and rightful status for our police officers:

THE PEACE OFFICER—A SYMBOL OF THE SYSTEM

(Delivered at the funeral of Larry Dean Minard on August 20, 1970 at the John A. Gentleman Mortuary by Dr. Marvin E. Hall, Pastor of the First Baptist Church in Omaha, Nebr.)

We assemble here today to honor and pay our last respects to a peace officer who died in the line of duty. In honoring patrolman Larry Minard, we are honoring the peace keeping profession, which he represented. We would do well on this occasion to exalt the role of the peace officer in our democratic

society. The enemies of our way of life have paid the law officer an unwitting compliment by telling him he is a part of the establishment, and by calling him a symbol of the system. This is an unwitting compliment because this is the best system of government this planet has ever known. The peace officer is a symbol of the system, indeed!

First of all, the policeman is a symbol of the universal authority of law and order. This authority is of God and is basic to civilization itself. It was revealed to Moses on Mount Sinai. It was reinforced by the Prophets of the Old Testament. It was reaffirmed by the Lord, Jesus, who came to amplify and fulfill the law. It was reiterated by the Apostolic Church in the words of the Apostle Paul, in Romans the 13th chapter, the first seven verses. I would like to read this passage of scripture:

"Everyone must obey the state authorities; for no authority exists without God's permission, and the existing authorities have been put there by God. Whoever opposes the existing authority opposes what God has ordered; and anyone who does so will bring judgment on himself. For rulers are not to be feared by those who do good, but by those who do evil. Would you like to be unafraid of the man in authority? Then do what is good, and he will praise you. For he is God's servant working for your own good. But if you do evil, be afraid of him, for his power to punish is real. He is God's servant and carries out God's wrath on those who do evil. For this reason you must obey the authorities—not just because of God's wrath, but also as a matter of conscience.

"This is also the reason that you pay taxes; for the authorities are working for God when they fulfill their duties. Pay, then, what you owe them; pay them your personal and property taxes, and show respect and honor for them all."

GOOD NEWS FOR MODERN MAN

This passage of scripture is especially significant, when you remember that it was written against the background of one of the most corrupt and oppressive governments in the history of the world. That of Nero, the Caesar of Rome! It isn't the person who occupies the seat of authority that is the important thing, but the authority itself. Paul isn't saying that we should respect Nero as a man, but we should respect the authority of government. We respect the President of the United States. We may disagree with him, but we respect the presidency in the same manner. We respect and salute our flag, not because we agree with everybody in government, but because we respect the office they fill. The people delegate authority to City Councils, State Legislatures and National Congresses to make the laws in a democracy. To the policeman in the precinct, the people delegate the authority to enforce those laws. When someone resists a police officer, he is resisting all power to restrain evil. When one resists arrest, he is actually resisting God himself, so the police officer is a symbol of the universal authority of law and order.

In the second place, the policeman is a symbol of security. We can sleep tonight, because policemen like Larry will be awake and alert for danger everywhere. The very presence of a police officer is a deterrent to crime. We need to stress, not only that crime does not pay, but that crime actually costs and the cost ought to be so great that the very threat of punishment will be a deterrent to evil.

In the third place, the policeman is a symbol of safety and caution. Why do we intuitively glance at the speedometer when we see a cruiser car? Because that cruiser car is a symbol of safety. The police officer is a sort of public conscience which reminds us to be careful. This is for you own good.

In the fourth place, the policeman is a symbol of service. One of the first things my parents taught me was that a cop is your friend, and he's there to help you in time of trouble. Jesus said, "Blessed are the peacemakers for they shall be called the children of God." (Matthew 5:9) No one can calculate the number of disturbances dissipated because of the kindly tact of an understanding police officer, mediating a family fight or breaking up a brawl at a tavern. The directions given to people who are lost; lost children returned to their homes; the police escort to the emergency room of a hospital. This is service, and the policeman is the very symbol of public service. Larry was an example of a responsible young person. He's an example of the "under 30" youth of today, who supposedly can be trusted! Larry chose to do something about his world. Here was a young man who wanted to be a part of the solution to Omaha's problems and not a part of the continuing problem. Larry didn't drop out and run away from the challenges of our time, he elected to accept some goals for himself and to set out to make his life count for the public good. The policeman is a symbol of service.

And in the fifth place, the policeman is a symbol of sacrifice. Jesus said, "Greater love hath no man than this, that a man lay down his life for his friends." (John 15:16) A police officer is a lamb marked for the slaughter, everyday he goes to work. He never knows when he will meet a sniper or an ambush, or when some sick mind will set a bomb for him. His family is in jeopardy, always fearful. The fear of death is something they learn to live with all the day long. The police officer's personal integrity is impuned at the bar of justice by a court system which still gives the benefit of doubt to a criminal, and often gives the criminal the benefit and advantage, even when there is no doubt in the mind of the arresting officer. His honorable profession is caricatured and ridiculed by anarchists and communists and the underworld, and even by some naive and gullible clergyman, and some who are not so naive but have a sinister and subversive objective in mind.

If Larry were here, he might say to us something like this. He probably wouldn't say it in the hearing of other officers, but he would feel it deeply.

I vow to thee, my city, all earthly things above
Entire and whole and perfect, the service of my love.
The love that asks no questions: the love that stands the test,
That lays upon the altar the dearest and the best:
The love that never falters, the love that pays the price,
The love that makes undaunted the final sacrifice.
And there's another city, I've heard of long ago
Most dear to them that love her, most great to them that know,
We may not count her armies; we may not see her King;
Her fortress is a faithful heart, her pride is suffering.
And soul by soul and silently her shining bounds increase,
And her ways are ways of gentleness and all her paths are peace. Amen.

—*Sir Cecil Spring-Rice.*

Whether a peace maker dies in battle in South Vietnam or is killed by a sniper, or is torn apart by a bomb, or is impaled on a cross, the motive for service is rooted in the love and loyalty we have as Christians to the Son of God, our Lord, Jesus Christ.

VINCE LOMBARDI

HON. EDWARD P. BOLAND

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, September 9, 1970

Mr. BOLAND. Mr. Speaker, Vince Lombardi's death ends an era in the sports world. More than any other man, he made professional football what it is today: The undisputed king of America's sports and the darling of its sports fans. Everyone knew of Lombardi—the 12-year-old sandlot players who pored over his celebrated book "Run to Daylight," the Sunday afternoon TV fans who marvelled at his team's brutal efficiency, the corporation presidents who recruited him to give inspiring talks to groups of lagging employees.

Lombardi's Green Bay Packers reigned over professional football for nearly a decade, demonstrating week after week the kind of tough, disciplined skill Americans like to think characteristic of their country itself. The Packers were synonymous with excellence. And Lombardi, their coach, was virtually synonymous with pro football. His photographs were published everywhere: The big toothy grin when an opposing team crumbled before a Green Bay end sweep, the brooding preoccupation when plotting strategy, the withering glare when confronting a player caught slacking during drills.

He demanded nothing short of a player's total effort. A taskmaster almost unrivaled in sports, Lombardi drove his athletes to the very limits of their potential. He brought out their best—by bullying, by exhorting, by cajoling, by praising. Many discovered in themselves undreamed of abilities. They gave Lombardi grudging respect even when his mankilling practice sessions brought them close to mutiny. Jerry Kramer, writing in Life magazine, says:

No coach ever stamped himself so clearly upon a team. Even in the hottest days of summer, when he whipped us and prodded us and punished us, when he rode us so hard we all came together in our transient hatred for him, I knew I was his creation, and we were his creation, and the difference between being a good football team and a great football team was only him.

And, when their passions had subsided, they gave him something akin to adulation. Kramer says:

Willie Davis heard how sick he (Lombardi) was the night the Giants played an exhibition on the West Coast. Willie got on a plane in Los Angeles the same night, flew all night, had a cup of coffee, went up and saw Vince for two minutes and then turned around and flew home to Los Angeles. "I had to go," Willie said. "I had to. That man made me feel like I was important."

Lombardi's ability to bring a team together was as uncanny as his ability to lead one. His Packers, as disparate and dispirited a crew as existed in professional sports when he took over in 1959, soon gave up their sullen feuds. The team, in fact, showed the kind of affectionate comradeship you would expect to find only in a combat platoon or a

close family. This is what Lombardi missed most during his one year hiatus in coaching:

What I missed most was—well, it wasn't the tension or the crowds or the game on Sunday. There's a great closeness on a football team—a rapport between the men and the coach. It's a binding together, a knitting together. For me, it's like fathers and sons. That's what I missed.

Lombardi snorted contemptuously at the bewilderingly sophisticated plays and patterns now fashionable in pro football. His strategy was simple and direct.

His personal credo was equally simple: pride, courage, hard work.

He once said:

Football is not just a game but a way of life. It's a game of courage, stamina and coordinated efficiency, of sacrifice, dedication, self-denial and love.

No one lived up to these virtues better than Vince Lombardi.

Mr. Speaker, I place in the RECORD several newspaper columns on Mr. Lombardi's career:

[From the Washington Post, Sept. 4, 1970]

VINCENT LOMBARDI

The Packers were young and they were deep in talent. It was all there. You could see it, you could feel it. The Redskins? They're not that young, not that talented. But we'll be there, we'll be giving in what we've got. Hell, there's no other way.—Vince Lombardi, quoted by Tom Dowling in the September Washingtonian.

The Redskins will be there this fall, giving what they've got. But now they'll be there without Vince Lombardi so we will have to see how much they will have to give. For all of his giant legacy to them—the know-how and the credo, the examples set and the lessons taught—there was so much pure magic and magnetism in his presence that you cannot be sure how much the legacies can weigh against the loss. What we can be sure about is the magic that was there—the drive and the faith and the ability to inspire with the big toothy grin and the terrible angry snarl.

He was a very decent man, who believed that a football team could have a soul if the players believed in themselves and in the team and in him, and that then they would win. One measure of the man is that it didn't sound corny when he said it. And the other, of course, is that it worked.

Vincent Lombardi was the best football coach of his time—and the year he spent among us was the best thing that has happened to this town in a long time. For a while there, we were traveling first class which doesn't happen all that often, let's face it, in this city of second-class citizens, built around the industry of politics which is itself essentially a game of compromise.

With Lombardi there was no such word as compromise. He was fond of saying that winning wasn't everything, it was the *only* thing, which is easy enough to say except that he also lived by it. *There was no other way.* You know the record—a Fordham Block of Granite, West Point, the New York Giants and then the glory years at Green Bay; five National Football League championships, finishing with three in a row, 1965, 1966, 1967.

This is the kind of record a man can honorably cash in and retire on, and be comfortably ahead, safely enshrined. So perhaps the greatest thing about Vince Lombardi is that he couldn't take it, sitting it out in a Green Bay front office in 1968, with a fancy title and that unassailable legend and no football team. He had put the whole stack back in the game with the *Washington Redskins*, short on talent, long in the tooth, going nowhere. We have Edward Bennett Williams to thank, in large part, for getting him here, and while it only lasted one season, it was a winning season, 7–5–2, and that wasn't all we had to be thankful for. We had the evidence in Lombardi—and we still have it—that this town *can* travel first-class. Somehow, you couldn't doubt that the Redskins would go on getting better, and that it was only a matter of time before they would finally take it all, because the Coach wouldn't have it any other way. So it was a shot of adrenalin for a whole community and that is Vince Lombardi's particular legacy to all of us.

[From the New York Times, Sept. 9, 1970]

SOME SECOND THOUGHTS

(By Arthur Daley)

The chances are that not even those closest to Vince Lombardi had a true appreciation of the greatness of the man nor a proper realization of what a towering public figure he had become. But his tragic death from cancer last week brought a new appraisal and Vince began to assume even larger and more heroic dimensions.

Such was his national importance that the news of his death rated a three-column spread on the front page of The New York Times. Without doing any exhaustive checking, I would venture the guess that the last football coach whose death also rated the front page of The Times was Knute Rockne of Notre Dame almost 40 years ago.

Like Rockne, Vince also drew a eulogy from the President of the United States. But the impressive part of the Lombardi funeral rites was the depth of the hold he had on the football public at large and on his players in particular. There is something especially touching about seeing these roughest and toughest athletes impelled to tears at the death of a man who sometimes had been portrayed as an unfeeling slave-driver. None felt his lash more than the Green Bay Packers. Yet they knew better.

TRUE VALUES

"Vince taught us the values of life," said Willie Davis, the once ferocious defensive end from Grambling who unshamedly shed tears of grief at the death of his former coach.

Lombardi taught them in everything he did. At practice one day Lee Roy Caffey was dogging it and not giving with the allout effort that his coach always demanded. Vince came at him, snorting fire and brimstone.

"Lee Roy," bellowed Lombardi, "if you cheat on the practice field, you'll cheat in the game. And if you cheat in the game, you'll cheat the rest of your life. I'll not have it."

Thus was hammered home a high moral principal that Vince extended from the football field to the outside world. It was a sad Red Blaik, the great West Point coach, who stood outside St. Patrick's Cathedral the other day and spoke tenderly of his prize pupil on his Army staff.

"Vinnie's values were the old values," he said. "He had an old-fashioned respect for God and country and authority. By modern standards I suppose he'd be classified as a square. Yet he completely commanded the admiration and respect of his players."

There probably was not a more straitlaced coach in the business than Vince, a daily churchgoer. Yet he established a singular rapport with the playboys on his squad, especially Paul Hornung, who went full-tile in his playing—on the field and off it. They formed a mutual admiration society. Hornung thought Lombardi was the greatest coach and Lombardi thought Hornung the greatest clutch performer. Both were right.

After the Packers had won their first championship playoff of the Lombardi regime in 1961, Vince had all his players and their wives out to his house for what also became a New Year's Eve party. He was wandering round in his role as a good host, checking to make sure everyone was happy. He approached Hornung sprawled in an overstuffed chair. When Vince told me of their conversation, he broke into his deep-throated roar of laughter.

"I asked Paul if there was anything I could do for him," said Vinnie. "He extended an empty glass and said, 'Yes, a scotch and soda, please.' I reached for it and yanked back my hand as if Paul had handed me a viper. I suddenly asked myself how I could ever bawl out Hornung for breaking the rules when I was serving him a drink even though the season was over and rules had been lifted. 'Mix your own drink,' I said, compromising hospitality and coaching in one sentence."

A MATTER OF PRIDE

The one thing that Vince harped on most was pride. He demanded pride in individuals and pride in team. It was to spell success because he instilled an esprit de corps that few football clubs have ever matched. One of the strange items in all the interviews with so many of the Packers was the recurrence of the expressions of "father" and "father image." I can't conceive of such a relationship on the part of any other coach.

"No one likes to be humiliated," once said Fuzzy Thurston, a running guard of all-Pro stature. "But this is a totally dedicated man and somehow you don't mind it from him. He demands 125 per cent and that way he gets 95 per cent."

Vince was totally intolerant of gifted athletes who refused to make full use of their abilities. And none delighted him more than the one who was eager to learn. It was Vince who made Bart Starr the extraordinary quarterback he was to be, although the coach originally wondered if Bart was not too polite and too self-effacing for the job. But Starr reached a point where he even thought exactly the same as Lombardi.

Now Vince is a football legend. His election into the Pro Football Hall of Fame at Canton is a certainty and the legend will keep growing because he has to be one of the most remarkable men that pro football has produced.

[From the Washington Post, Sept. 4, 1970]

AMERICAN PEOPLE TOLD TO VALUE LOMBARDI'S LESSON IN TEAMWORK: PRESIDENT LEADS A NATION OF MOURNERS

President Nixon led a sports-oriented nation yesterday in mourning the death of Vince Lombardi of the Redskins.

"The power of Vince Lombardi's personality swept the world of sports," Mr. Nixon said in San Diego, where he was attending a state dinner for President Gustavo Diaz Ordaz of Mexico.

"When I think of Vince Lombardi, I think of him standing at the side of a football field, his attention focused sharply on his team. He was an imposing figure—and an inspiring one. On the field and off, his very presence was commanding. As I think of him that way, I know that he will always hold a commanding place in the memory of this nation.

"Vince Lombardi believed in fundamentals. On the football field this meant blocking and tackling and running to daylight. Off the field it meant his church, his home, his friends and his family. He built his life—as he built his teams—around basic values and that is why his greatness as a coach was more than matched by his greatness as a human being.

"Many who knew very little about football nevertheless knew a great deal about Lombardi. They knew that he was a man of discipline and determination, of courage and commitment, of pride and purpose, of loyalty—and of love. They knew that he had reached the top of his field because he was able to help others discover the best that was in themselves.

"Like the power sweep which became his trademark, the power of Vince Lombardi's personality swept the world of sports and made a lasting impact on the life of all it touched. He asked a great deal of his players and his associates. But he never asked more of any man than he asked of himself. The lesson all Americans can learn from coach Lombardi's life is that a man can become a star when, above all else, he becomes an apostle of teamwork.

"Several weeks ago I had the privilege of talking on the telephone with coach Lombardi in the hospital. * * *"

He was granted full control of the Redskins with the title of executive vice president and purchased 50 shares of stock in the club valued at $500,000. His salary was estimated at $110,000 annually.

Although he announced after leaving the hospital for the first time that he would be in training camp on July 19, when the veteran players were originally scheduled to report, he named Austin "interim head coach" three days after the rookies reported.

Austin is a former head coach of the Pittsburgh Steelers and was an assistant on Mr. Lombardi's staff at Green Bay for six years.

Only 11 days after Mr. Lombardi began resting at home from his first operation, he went to New York City for a meeting of NFL club owners to discuss a dispute with the players' association.

The next day he watched the veteran players work out on their own at the Georgetown University football field.

Four days later, he went to Baltimore to see the Redskins' rookies play the Colts' first year men in Memorial Stadium.

The next day he visited the veterans again at Georgetown before being readmitted to the hospital.

Mr. Lombardi was born June 11, 1913, in Brooklyn, N.Y.

He attended St. Francis Prep in Brooklyn and Fordham University, where as a 5-foot-8, 185 pound guard he was one of the renowned Seven Blocks of Granite.

He never had a losing season in a career that began in 1939 at St. Cecelia High School in Englewood, N.J.

In 1947 Mr. Lombardi became freshman coach at Fordham and two years later joined the staff of Col. Earl (Red) Blaik at West Point.

His first coaching in pro ball came in 1954 under Jim Lee Howell with the New York Giants. Five years later Mr. Lombardi was appointed head coach and general manager of the Packers.

He took a team that had a 1–10–1 record the previous season and finished third in the Western Conference of the NFL with a 7–5 record. He never finished lower than second with the Packers after that.

The Packers lost the championship game in 1960, his second season, to the Philadelphia Eagles, 17–13.

Green Bay won the NFL title in 1961 and 1962 and, after a lapse of two seasons, won three straight, plus the first two Super Bowl games.

His overall coaching record in Green Bay, including exhibitions, was 141–39–4 for a .783 percentage.

[From the Boston Herald Traveler, Sept. 4, 1970]

THE LOMBARDI RECORD

"I hope to be a winner the first year."

This was the statement made February 6, 1969, by Vince Lombardi as he accepted the Head Coaching job of the Washington Redskins.

The 1969 Redskin record: 7 wins—5 losses—2 ties.

The winning record hoped for by Lombardi was realized.

It was the first winning season for the Redskins since 1955, ending a 14-year famine.

It also kept intact Lombardi's great record of never having had a losing season, nine at Green Bay and last year at Washington. His 10-year record now stands at 96 victories, 34 losses and 6 ties. It was remarkable that the 7 wins and 5 losses was the identical record Lombardi had in his first year at Green Bay in 1959.

This gives him the second best winning percentage in pro football, .738 Pct. The Rams' George Allen has the best mark, .755 Pct. with 40 wins, 13 losses, and 2 ties.

Vince Lombardi played his collegiate football at Fordham University where he was one of the famed "Seven Blocks of Granite." After attending Law School at Fordham, he coached and taught Chemistry, Latin and Physics at St. Cecelia High School in Englewood, New Jersey.

Then in 1946 he became the fine coach at Fordham University where he served until 1948 when he was named assistant to Earl "Red" Blaik at West Point.

Lombardi left the U.S. Military Academy in 1954 to join the New York Giants under Jim Lee Howell as offensive line coach. In four years with the Giants, they won two Eastern Division Titles and one World Title.

In 1959, Lombardi went to Green Bay as Head Coach and General Manager and dramatically altered the football fortunes of the Packers. He took the Packers from a 1-10-1 record to contention his first season and from 1960 on, the Packers never finished below second as they captured 6 Western Division and 5 World Championships, including an unprecedented three in a row from 1965–1967 and the first two AFL–NFL World Championships in 1966 and 1967. Overall his record was 141-34-4 for a .783 winning percentage.

In addition to serving as General Manager of the Packers, Lombardi also serves, holds, or held the following awards and positions: Chairman of the Board, Public Facilities Corp., of Madison, Wis., Fordham University's highest award—the Insignits Medal: The Senator Brien McMahan Award; Trustees of Fordham University; Citizens Committee of St. Norbert's College; President of the State of Wisconsin Mental Health Association; Chairman of the State Cancer Fund; Director of Pop Warner Football; Special Events Coordinator of The City of Hope. Also a member of Board of Trustees, American Cancer Society, District of Columbia.

Lombardi received the high honor of selection as member of the Order of Malta.

In 1969 he received many honors: The John V. Mara Memorial Award as Sportsman of the Year, by the New York CYO; the "Silver Buffalo" award as Man of the Year by the National Boy Scout Federation; "Salesman" of the Year honor as voted in a poll of one million salesmen in the country; received an honorary doctor's degree in humane letters from St. Peters College, Trenton, N.J. He previously received an honorary doctor of laws degree from St. Norbert College. He also was a Golden Fleece award recipient. Lombardi was on the Advisory Board of National Capitol Area Council of Boy Scouts of America. He was a member of the Board of Trustees of District of Columbia Division American Cancer Society; on Committee for Children's Hospital of the District of Columbia. He was Honorary Chairman of Washington, D.C. Kidney Foundation Drive for 1970. He also is on Board of Directions of National Football Foundation and Hall of Fame. Is a member of Citizens Committee for Peace and Security.

He recently received the high honor, "The Lighthouse Award" from the New York Association for the Blind—honored as "Builder of Men."

Lombardi authoried a best seller, "Run to Daylight," produced a film, "Second Effort" which is in a great demand by sales groups. He also produced a 12-series football instruction film.

Lombardi married the former Marie Planizt. There are two Lombardi children, Vincent and Susan.

THE NEW MILITARY INTELLIGENCE

HON. JOHN R. RARICK

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, September 9, 1970

Mr. RARICK. Mr. Speaker, last May I had called to the attention of this body the unbelievable spectacle of a programed tour of military installations in our country by high-ranking Communist military officers—page 15772, May 15, 1970, and page 18795 of June 8.

At that time I commented that apparently the rationalization for such immaturity was the hope that we would so impress the Communists with our military potential that they would be deterred by fright.

Recently, the Assistant Chief of Staff for Intelligence of the Department of the Army, confirmed the inspection tour of our military bases, stating:

It was believed that their participation might perhaps lead to improved mutual understanding, the avoidance of dangerous misjudgments of our strengths.

This is military intelligence? For whom?

Mr. Speaker, I include a copy of the correspondence from the Department of the Army to follow my remarks for the RECORD:

DEPARTMENT OF THE ARMY, OFFICE OF THE ASSISTANT CHIEF OF STAFF FOR INTELLIGENCE
Washington, D.C., July 14, 1970.

Hon. ———,
U.S. Senate,
Washington, D.C.

DEAR SENATOR ———: This is in reply to your inquiry concerning the tour of selected United States Army installations by communist military officials.

The visit to which Mr. Gibson refers, in his letter which accompanies your inclosed inquiry, was part of the Department of the Army Annual Foreign Military Attache Tour of several United States military installations. Invitations to participate in the tour were extended to all foreign Military Attaches, or their assistants, who are fully accredited to Department of the Army. The Military Attaches of some communist countries were therefore permitted to participate in the tour.

As you know, Military Attaches are their countries' diplomatically accredited military observers in the United States, and in this capacity they report their observations of our Armed Forces to their governments. Their participation in the Attache Tour not only gave them the opportunity to observe firsthand the leadership, training and discipline of our Army, but also helped them to gain a better understanding of the people and the strengths which are the essence of our country's greatness. They were able to make their observations in the open and hospitable environment of a free and democratic society. Some of the governments represented are police states and we do not expect, nor do we always receive, reciprocal treatment for our own Military Attaches in their countries. However, the marked differences between our society and a police state were quite evident, on the recent tour, to the representatives of some 48 nations.

In some previous instances, the military representatives of certain communist countries were excluded from the Attache Tour. This year, it was believed that their participation might perhaps lead to improved mutual understanding, the avoidance of dangerous misjudgements of our strengths, and possibly some increase in freedom of movement and observation for our Military Attaches in their countries, which incidentally is on an upward trend. I wish to emphasize that all of the activity and information to which the attaches were exposed was of an unclassified nature. The protection of our classified information was an inherent factor in the planning and conduct of the Attache Tour.

Sincerely,

J. A. McCHRISTIAN,
Major General, GS, ACofS for Intelligence.

WARREN TO LOSE A GIANT IN COMMISSIONER O'BEE

HON. JAMES G. O'HARA

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, September 9, 1970

Mr. O'HARA. Mr. Speaker, a relentless foe of the lawless and defender of the public safety is retiring.

He is Walter W. O'Bee, police commissioner for the city of Warren, Mich.

Recently, the Macomb Daily published an editorial which describes the dedication, compassion, and extraordinary knowledge and ability which he brought to his job.

I include the editorial "Warren To Lose a Giant in Commissioner O'Bee" in the RECORD at this point:

WARREN TO LOSE A GIANT IN COMMISSIONER O'BEE

The only persons who will applaud the retirement of Walter W. O'Bee, Warren Police Commissioner, will be the chronic lawbreakers.

Commissioner O'Bee, the first policeman to work his way through the Warren Police Department ranks and still only 49, will be missed by the city he has served so well for 29 years.

Too, he will be missed by the police serving under him, whose champion he has been as often as he has been a fair and understanding critic.

Then there is the host of fellow police chiefs and officers throughout the county and area with whom he has worked. To a man they were in their praise of the youngest police commissioner in Warren's booming history.

To say that O'Bee has been a relentless foe of lawbreakers, particularly organized crime, is almost a gross understatement: grand juries in Wayne and Oakland County have called him in frequently because of his intimate knowledge of how the syndicate operates.

But relentless as he was in bringing to justice those who broke the law in Warren, the commissioner was also a compassionate man.

At a time in history when U.S. Supreme Court rulings have leaned toward the lawbreaker's rights O'Bee was found to be well ahead of the court in recognizing those rights.

Even those whom Commissioner O'Bee found it necessary to bring into court for law violations found the commissioner's fair handling of their cases a mitigating influence.

Just so did the officers serving under him find they had a genuine friend when they came up for discipline and criticism for some infraction of rules.

Commissioner O'Bee has not only been a "policeman's policeman," he has been honest and conscientious to an unfailing degree. Although given freedom on such matters as taking a day off, O'Bee never failed to check it first with Mayor Ted Bates.

There is no record of the thousands of overtime hours O'Bee spent on his job as commissioner during his tenure of almost three years.

In his long, busy day, Commissioner O'Bee also found time to escort and show visiting youngsters through the police station. Impossible to assess will be the law-respecting influences which Commissioner O'Bee exerted over others to prevent crime or to deter someone inclined toward crime to law-abiding pursuits.

So, Commissioner O'Bee also must be described as a "people's policeman" too.

Now, after 29 years in police work, Commissioner O'Bee has decided to leave his job to a younger man. He's right when he says that he wants to quit now that he has the Warren crime situation in hand.

Mayor Bates will have no easy task in replacing so capable a public servant and one who has been one of the mayor's closest friends. That's because O'Bee served so well in the years of Warren's meteoric rise to one of Michigan's largest cities.

In a rustic frame of reference, Walter O'Bee is "going out to pasture" voluntarily. He's going into the cattle business full-time in Sanilac County, on a farm near Marlette.

Up north, Walter already owns a nucleus of 53 Hereford and Black Angus beef cattle, and he recently has bought farm implements to till the soil he owns, far from the maddening din of traffic and crime problems

But wherever Walter O'Bee goes, there goes a man.

CONSPIRACY AGAINST CIVILIZATION

HON. EMILIO Q. DADDARIO

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Wednesday, September 9, 1970

Mr. DADDARIO. Mr. Speaker, the hijackings of the past weekend are a tragic indication of the extent to which misguided individuals will engage in international piracy and blackmail. The severe menace posed by such criminal activity, threatening not only property but life as well, cannot be tolerated in a free world. In its largest sense, these concerted hijackings constitute, as an editorial in the September 8 edition of the Hartford Courant suggests, a "conspiracy against civilization." How civilization will ultimately react to such pressure will be crucial, for this is the acid test. Strong and decisive actions must be taken by all free nations if international air travel is to continue as a viable concept.

I commend this editorial to the attention of my colleagues:

CONSPIRACY AGAINST CIVILIZATION

The barbaric, almost simultaneous, hijacking of four jet airliners, three of them successful, presents the civilized world with a challenge that somehow it will have to meet effectively. It is probably significant that the only unsuccessful seizure attempt was against the El Al Israel airliner, where one of the hijackers was killed and the other wounded, apparently by armed guards aboard the plane. El Al is the only major line to "ride shotgun". Because it is particularly vulnerable as an airline flying its jets on international routes in and out of a country at war, it has taken the most extensive precautions of any line, including searching passengers before they board its planes. How the two terrorists slipped their weapons through the search which they were supposed to have undergone before boarding is not clear, but the ultimate protective device, the armed guards, foiled the hijackers without harming the passengers or crew.

Searching passengers and arming guards may be effective against individuals, psychopathic or merely inadequate, who have seized planes in the past. But what can society do to defend itself against the evil conspiracy that the Popular Front for the Liberation of Palestine has mounted against it? The governments of the lands in which it operates disclaims responsibility for the Front or for the conspiracy it is engaged in. The situation is not as simple as was that in 1904 when President Roosevelt's cable to the Sultan of Morocco, "Pardicaris alive or Raisuli dead" produced Pardicaris alive two days later. The idea of seizing and holding Arabs as counter-hostages to those that are held by the conspirators may be tempting, but is hardly likely to be used. And the proposal voted down by an international conference on hijacking last year that sanctions be applied to countries granting asylum to hijackers is no more likely of getting general support now than it was then.

But the four seizures, only one of which was aborted, leave a sense of general outrage that cannot be denied. So far there have been no fewer than 250 hijackings, of which 187 were successful and only 63 that were thwarted. Many of these were by individuals and it is quite possible that more effective preventive measures could have prevented them. But there is not likely to be an end of those like Sunday's seizures, which are the product of a political conspiracy until the civilized nations who are the victims find some way of punishing those who are ultimately responsible.

COURAGEOUS COUPLE PROVIDE MEDICAL AID AND A MEASURE OF HOPE TO NATIVES OF DIFFA REGION IN NIGER, AFRICA

HON. SPARK M. MATSUNAGA

OF HAWAII

IN THE HOUSE OF REPRESENTATIVES

Wednesday, September 9, 1970

Mr. MATSUNAGA. Mr. Speaker, the day may not be too far distant when all Americans will consider it fashionable to be charitable toward one's fellow human beings. For perhaps too long we Americans have come to expect that a beneficent government will care for all those who are unable to fend for themselves. This is particularly true with respect to our attitudes toward unfortunate peoples in other countries.

Recently, however, an article appeared in the Honolulu Star-Bulletin, telling the story of Dr. and Mrs. Bill Kirker. The story was so touching that it may convince large numbers of Americans that charity is not only fashionable but rewarding.

Five years ago, the Kirkers forsook a lucrative medical practice in Hawaii, said goodbye to friends and family, and

traveled to the Diffa Region of Niger, a newly independent African country north of Nigeria.

As the only doctor in the region, Bill Kirker worked in appalling conditions, dispensing as much medicine as he could lay his hands on, building a 60-bed hospital, performing 60 operations monthly. His beautiful wife, Barbara, served for a time as his anesthetist during operations, and more recently she has been running the hospital's diet kitchen.

Their efforts led the American Ambassador to Niger, Samuel Adams, and the director of the President's Cabinet in Niger, Maitourare Gadjo, to nominate them for the Lane Bryant International Volunteer Award. They were named as winners of a citation in 1969.

Mr. Speaker, the Kirkers are improving the health of people in Diffa, but there is certainly room for additional improvement. As the article points out, average life expectancy in Diffa is 39 years, as compared with the U.S. average of about 70 years. About 30 to 50 percent of the children die of infections before the age of 5.

Dr. and Mrs. Kirker are seeking support of their program, both in terms of medical personnel volunteers and financial aid. Very few causes, Mr. Speaker, are as worthy as the medical program the Kirkers have undertaken in Niger.

I know that any donations sent to the Kirkers, in care of 2523 East Manoa Road, Honolulu, Hawaii 96822, would be put to most worthy use.

So that my colleagues and other readers of the RECORD might be inspired from reading the dramatic story of the Kirkers' activities, I ask unanimous consent to include the entire article at this point in the RECORD:

GIVING UP "THE GOOD LIFE" TO AID OTHERS

(By Tomi Knaefler)

Five years ago, Dr. Bill Kirker was "all set."

He had a beautiful wife. He had completed his internship at Queen's Medical Center, was through with his military obligation and was a partner in a thriving practice here.

Then he went to practice medicine in the heart of Africa. There was no running water, no electricity and no other doctor for some 150,000 people in an area larger than the state of Indiana.

His explanation is simple as it is humble: "I decided, and my wife agreed, that I could make a more signifiant contribution by going to an area where no medical care was available unless a doctor went there."

And while they have no larger bank balance to show for their efforts, an interview with the Kirkers revealed healthy psychic and emotional income from their personal investment.

Kirker even has this bonus: Well over a thousand children have been named after him by mothers who went to him—instead of delivering at home—because of severe obstetrical complications.

In gratitude, the babies—boys and girls—bear his name, rather than their fathers as is the common practice.

Mrs. Kirker, a former professional Hawaiian and Tahitian dancer here and on the Mainland, laughed: "The people can't quite say Kirker. It comes off more like 'Kreekay.'"

The Kirkers are so sold on what they're doing they expect to go back to the "boondocks" for another 10 years or so.

But, first, several months of vacation visiting with her parents, Mr. and Mrs. Loren Nelson of 2523 East Manoa Road.

The Kirkers hope that by the time they go back, they can convince other physicians and medical personnel to do likewise.

Kirker "just can't understand why" more physicians don't take the opportunity to serve in remote areas.

"Even strictly from a selfish standpoint, there's so much to be gained—learning about new cultures, new countries and new languages," he said.

Kirker estimates that half of the doctors in the U.S. could well be spared and spared around the world.

Kirker and his wife, Barbara, first went to Africa, more specifically Niger, as Peace Corps volunteers. He served as head of a Peace Corps medical team. Their pay was $115 a month each, plus a savings plan of $75 a month per person that was banked for them by the U.S. Government.

At the end of a two-year hitch, the rest of the team left and the U.S. dropped Niger from its assistance list. Kirker accepted the Niger government's offer to remain as a $7,700-a-year departmental director of health of Diffa County.

"Don't let that title fool you," Kirker said. "It's nothing but a fancy title that doesn't mean anything. I'm the only doctor for the entire section of Diffa."

Diffa is one of seven sections in Niger, which was granted independence from the French in 1960. It is north of Nigeria, next to Lake Tchad and encompasses a large southern portion of the Sahara Desert.

Niger is said to be one of the most stable countries in Africa. Kirker describes its president, Diori Hamani, as "a very good man" and notes that there has been no revolution and no change in government since its independence.

But the country is very poor. And the cost of living is exceedingly high—as high as the sweltering 150-degree temperature in the direct sun during the summer months. In the winter, the temperature runs around 110 to 120 degrees during the day and drops to near-freezing at night.

In Diffa, gasoline costs $1.50 a gallon. Land Rovers are about the only vehicle that can make it in the countryside. There are no roads, just sand dunes. And lots of water holes during the bug-infested rainy season.

Because it rains only 10 to 12 times during the two-month rainy season, water is crucial.

The sanitation level is "non-existent" in the bush, where people live in grass huts. The more affluent have mud houses, considered the best way to beat the constant heat. Educated families live in cement block residences.

The people are either nomads who roam the desert and are lighter skinned, or black Africans of several tribal extractions.

As a result, there are seven major languages—each as different as Japanese is from English. This doesn't include the assortment of dialects and French, which is the national language.

Kirker said he often has to have several interpreters to assist him. And lacking medical consultants, he has a library of 100 well-used text-books.

Despite the bugs, snakes, lack of running water, electricity, intense heat, low pay and high costs Kirker is still eager to have other medical personnel join him.

The Niger government pays for roundtrip transportation and the problem of education of children is "not insurmountable," according to Kirker.

In addition to personnel, he is hoping to set up a nonprofit charitable corporation to enable Americans to contribute funds, drugs and equipment to help finance his hospital.

Kirker said:

"It's not that the government isn't cooperative. They're giving us all they can. It's simply that they just don't have the kind of money needed. They're just so poor. The budget now runs 10 cents per person per year and I work a lot of the time without drugs."

He and his wife are anxious to meet individuals or groups interested in assisting the program. They also plan to put on fashion benefits featuring African garments to raise funds.

When they first got to Diffa, the main medical facility consisted of "two buildings with two patients sitting inside."

Since then, he has built up his hospital, consisting of 10 buildings with six specialty sections. The hospital has 60 beds and a daily average of 110 in-patients. Those lacking beds sleep on the floor in grass huts.

More beds are needed. But they cost $50 each and it costs an equal amount to transport them, according to Kirker.

Other urgent needs he cited: A functioning laboratory, an X-ray facility, a surgical unit that would enable operating under asceptic conditions, sanitary washing conditions. And many people are still working as volunteers because the government can't put them on the payroll.

He said, "We hope to have our own well and our electricity working by the time we return."

He attends between 100 and 300 out-patients daily and does about 60 operations monthly. Only patients who are very sick are evacuated to the hospital from seven out-patient dispensaries dotted through the county and manned by crews of African nurses and orderlies.

Because of the personnel shortage, Mrs. Kirker is an active participant—pitching in where needed. For over a year, the former dancer gave the anesthetic during surgery. More recently, she set up the hospital's diet kitchen, which feeds two meals daily.

She has worked out a clever cook book originally for Peace Corps personnel, showing how to prepare native foods and ways to substitute for American and Oriental dishes.

Kirker says of his wife's talent: "She's an excellent cook and can make anything taste like anything. She prepares her own ham, pork chops, bacon and even sausages."

Because she's such a good cook, he said, "food isn't a problem." But, said he, "I did crave fresh apples."

She yearned for "Oriental faces and Oriental food."

The couple met on the Mainland when he was a senior in medical school and she a dancer on tour.

He said, "I was visiting my family and my dad, a former physician in Michigan, said I ought to go down and see the Hawaiian show at a nearby nightclub. I did."

The Kirkers managed to get a vacation from Niger only because a Norwegian physician wrote to ask whether he could get a temporary job while his wife did anthropological work in the area.

Unlike the U.S., where illnesses of aging, such as heart disease and cancer, are the key medical problems, in primitive Niger, the average person doesn't live long enough to get such chronic ailments.

The life expectancy there is 39, compared to the U.S. average of about 70.

An estimated 30 to 50 per cent of children die of infections before they're 5, up to 15 per cent from malaria.

Other major killers are smallpox, dysentery, encephalitis, hepatitis, pneumonia, tuberculosis, measles and yellow fever.

Hence, preventive medicine through immunizations is one of Kirker's important programs. A mobile immunization unit rambles around, catching people where they are—along sand dunes, in the market place, in the village—to give them vaccines.

Kirker enjoys a good relationship with the people now. At first, he said, they really ran

away from him because he was the first white man they'd ever seen.

Now, the color barrier is gone for the most part. It isn't unusual for a patient to walk 500 miles to see him.

THE GAPS OF MEN

HON. JAMES H. (JIMMY) QUILLEN

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Wednesday, September 9, 1970

Mr. QUILLEN. Mr. Speaker, a distinguished professor of East Asian studies at Milligan College, Tenn., Dr. Wen Yen Tsao, delivered what I feel was a very important address at the 49th Street Christian Church in Indianapolis, Ind., on March 8, 1970, and at Johnson Bible College on April 19, 1970.

His address, which also was reprinted in the July 12 issue of the Christian Standard, deals with what he terms the horrifying moral decay within this country.

Dr. Tsao discusses the "gaps of men" in his article and I am making his words available for readers of the RECORD:

CONSIDERING GAPS—WHEN MAN BREAKS COMMUNICATION WITH GOD, HE INVITES A MULTITUDE OF EVILS

(By Wen Yen Tsao)

Man is a social being, gregarious by nature. And yet, man in dealing with his fellowman is peculiarly intolerant and at times cruel. Throughout history the worst enemy of mankind has been man himself. In modern times we unhappily have found that instead of harmony and goodwill, there are conflicts and gaps among men.

GAPS EVERYWHERE

Internationally the conclusion of World War II saw the emergence of the cold war in which a gap was clearly discernible between the Communist world and the free world. The early 1960's, however, ushered in a different global situation. Almost overnight the Communist world was no longer monolithic; its inherent contradictions have led to its inevitable erosion resulting in many unpatchable gaps. The schism between the two Communist giants has made it especially clear that the deep-rooted national interests of the two have shattered the Marxist dream of international Communist unity. On the other hand, neither is the free world any more monolithic. Similarly many gaps on this side of the iron curtain have made it anything but a united house

Internally the gaps in any human society are ubiquitous. Even in the same family gaps seem to be inevitable. There is a gap between husband and wife. As a Chinese saying goes, "Though sleeping in the same bed, the bedmates dream different dreams."

There is a gap between brothers. The supposed brotherly affection has often been besmirched by jealousy and enmity. Fratricide is as old as the history of man. Modern Cains are often reported in the press.

There is a gap between father and son. The prodigal son is certainly not a monopolized by-product of modern civilization. Adam, being made in the image of God, was as good as the son of God. And yet Adam defied God by eating the forbidden fruit. Ever since then, in spite of ethical and religious precepts with special emphasis on filial pity, the son more often than not is rebellious against the father.

Perhaps the so-called "generation gap" is actually a hangover from the son's age-long rebellion against his father. The term "generation gap" of course is semantically fallacious and logically unsound. What is meant by the word "generation"? Chronological or biological? Physiological or spiritual? Nevertheless, the term has been used to posit an imaginary gulf between a segment of people comparatively younger and another comparatively older. The confrontation between the two has been dramatized by the utter contempt of the younger people for the established conventions, whatever they might be.

The ubiquity of gaps in a modern American society has assumed alarming proportions. The oft-cited pledge, "One nation under God, indivisible, with liberty and justice for all," has become almost like a mockery.

EZEKIEL'S WORLD

In my opinion, the situation today in the United States may be somewhat comparable to the situation in Israel before the fall and destruction of Jerusalem in 586 B.C. For a glimpse of the situation of the Jewish people during this period, read Ezekiel 13:1–5; 22:25–31.

Before the fall of Jerusalem, Ezekiel repeatedly denounced his people for their wickedness of all kinds, and he constantly warned them of the impending disaster. A catalog of the iniquities and sins committed by the people of Israel in the prophet's time may be made as follows: (1) oppression of strangers, widows, and fatherless; (2) violence and murder; (3) lewdness and vile indulgence of lust; (4) bribery and extortion; (5) disregard of parents; (6) profanation of the Sabbath; and (7) idolatry. The worst of the iniquities was that the sons of Israel had forsaken their own God, who said through Ezekiel: "Thou hast forgotten me."

Let us have a look at the Jewish people who flagrantly violated the moral laws. They included all classes. It is appropriate to identify them by groups: (1) The prophets, who should have spoken God's truth, deceived and misled the people. (2) The priests, who should have kept and revered the devine law, violated and profaned it. (3) The princes, who should have protected their subjects and promoted their welfare, did just the opposite. (4) The people generally, who should have exercised justice, sympathy, and concord, oppressed and robbed their neighbors.

It seems that all classes of the Jewish people were striving together for the nation's ruin. The prophet was alarmed at what he saw, and he was fervently trying to stem the tide to save his people from destruction.

The prevailing situation in this country and the situation in Israel before the fall of Jerusalem are comparable. Iniquities are rife and perpetrators are running rampant.

RACISM

One of the worst iniquities among Americans today is racism. The oppression of strangers, which Ezekiel denounced, can be found in racial discrimination, which has led to extremism in all forms. A large number of the American people cannot rid themselves of racial prejudice. The whites generally have little respect for the blacks. The blacks, having been discriminated against since the ominous year of 1619 when a shipload of Negro slaves was brought to Virginia, are antagonistic toward the whites.

In recent years racial prejudice has taken on the ugliest form of racism, which is a coin of two sides—white racism and black racism. Animosity is often inflamed, and violent means are frequently employed. Especially in disputes involving Negroes, the substance of the arguments will be thrown overboard and emotion will instantly ignite, making people take sides according to the color line—the pigmentation of the skin.

With such a deep-rooted prejudice the racial problem will become increasingly serious. Most of the so-called white liberals, though seemingly sympathetic with the blacks, are hypocrites. If they are politicians their interest is in votes from the other side of the track. Liberal politicians, if they can afford it, usually live in newly developed suburban areas and send their children to private schools; yet they claim to be crusaders for civil rights and they cry out demanding desegregation! Dr. S. I. Hayakawa, the samurai who became famous overnight in San Francisco last year, rightly pointed out: "You and I can live in the suburbs and demand integration in the schools downtown. We can make the moral demands and someone else has to live with them."

In my opinion, in order to solve the racial problem we should eradicate the erroneous conception of racial superiority and give way to new concepts of the equality of man. Let us hold this truth to be self-evident that the character and integrity of a person does not depend on the pigmentation of the skin. Let us all take the apostle Paul's words to heart: "There is neither Jew nor Greek, there is neither bond nor free, there is neither male nor female: for ye are all one in Christ Jesus" (Galatians 3: 28).

VIOLENCE

In close connection with racism, violence is another iniquity tormenting American society. Violence and murder are listed in the catalog of Ezekiel's denunciations. Some intellectuals, notably Erwin N. Griswold, formerly Dean of Harvard Law School, have pointed out that since America was founded in revolution, it has in it a certain amount of congenital disregard for law. This explanation, it seems to me, can hardly furnish a justifiable excuse for resorting to sheer physical force. A nation which might have been born in violence should by no means continue to live in violence. As a child one acts like a child; as an adult one acts like an adult. As America has reached its maturity, it should have been weaned from violence.

Unfortunately, this is not the case. As the present situation stands, it seems that as long as the silent majority remains silent America is ignominiously becoming a nation dominated by the "ronins," the Japanese term for riffraffs, misfits, swashbucklers, and brutes. These asocial elements in the United States are better organized and far more sophisticated than their Japanese counterparts. Under the aegis of the Constitution and with the blessing of the so-called leftist and liberal segments of the country they have become increasingly vociferous and violent, intimidating the great majority of the people into silence. Billy Graham was recently reported to have blamed the "white news media for imposing a leadership on the American public which they do not want and for making heroes of radicals, both black and whites" (Associated Press, February 27, 1970). Even a justice of the United States Supreme Court, William O. Douglas, is openly preaching the gospel of revolution in his newly published book, "Points of Rebellion," saying that where grievances are strong, "violence may be the only answer to oppression!

With such moral and material support to egg them on, the American "ronins" have made a mockery of the American judicial system by performing bestiality in the courts; they have made a mockery of American democracy by taking to the street their causes or grievances. Streets have taken the place of the Capitol; streets have become the counterpart of people's courts of Red China; streets have been transformed into the Kremlin of the Soviets!

Americans generally have been so spoiled by such a large measure of liberty under the Constitution that they seem to have taken much for granted and scarcely appreciate it. Liberty has become license to practice licen-

tiousness of all kinds. "O liberty! what crimes are committed in thy name!"

Today people in this land of freedom and democracy are gripped by the fear of violence in all forms. In the wake of Martin Luther King's assassination, Washington was sacked for the second time in one and a half centuries, not by an enemy from without but by its own citizens from within, not for a plausible cause but for the sake of violence. Indeed, violence has become a way of life of the American people. Especially in big cities discontentments, grievances, and prejudices are being transformed into violent crimes—looting, ravaging, burning, raping, and killing. Even institutions of higher learning, which are supposed to be beacons for enlightenment, have been besmeared with infamy, for on the campus violence is often the instrument of the younger generation. But violence is contagious; the American society is becoming one in which no assurance can be given against vicious attacks. No sensible person would risk his life by walking on some of the streets in the cities after dusk. This deplorable situation has deprived the average American of his life, limb, liberty, or property without due process of law. Nominally he is safeguarded by the provisions of the Constitution, but social environment fraught with violence has made such provisions no better than scraps of paper.

BRING JUSTICE UP TO DATE

What makes the situation worse is the way criminal justice is administered in this country. As a lawyer who has been educated and trained both in China and the United States, I know something of both the strengths and weaknesses of the American judicial system. The theory and practice of criminal justice in this country are antiquated, being reminiscent of the eighteenth and nineteenth centuries. The elaborate protection of the rights of the defendant, for example, which was justifiable a century ago, is now becoming anachronistic. The society of modern times is increasingly urbanistic, complex, and complicated with increasing rate of violent crimes. For the preservation of law and order and for society's own survival the whole administration of criminal justice has to be reoriented and readjusted. Yet the Supreme Court of the United States has been fettered by its own rules. The case of Miranda versus Arizona, 1966, is a notable example. The Court usurped the legislative power of Congress by stipulating restrictions on law enforcing agencies, making prosecution and conviction of criminal suspects extremely difficult if not impossible.

To cope with crime, a new philosophy of criminology and penology must be introduced: In the whole administration of criminal justice the prime concern should be given to the offenses that have been actually committed and to the criminality of the offender rather than to the technicalities that have evolved, especially during the last few decades, for his protection. The right of society to perpetuate its own existence should outweigh the right of the individual criminal. Whoever has eaten the forbidden fruit, to him retribution must follow.

Another necessity to cope with the rising rate of crime is speedy trial. No unnecessary technicality should stand in the way of justice. Justice delayed is justice denied. In my opinion, certainty and celerity of punishment is more efficacious than its severity.

As to the victims of violent crimes, society should provide appropriate remedies to redress the wrongs, damages, injuries, and losses sustained by them. To neglect the rights and privileges of the victims but to afford the criminals overwhelming constitutional safeguards is injustice and absurdity to the last degree.

THE CULT OF SEX

The iniquitous situation next to the rising rate of violent crimes is the worship of sex among the American people generally—an iniquity also vehemently condemned by Ezekiel. The American people are singled out partly because they, more than others, have commercialized and glorified sex. Pornography is rampant partly because the Supreme Court of the United States has afforded it a kind of legal protection. This is made plain in the late Senator Dirksen's article, "A New Plan to Fight Pornography," in the "Reader's Digest" for November, 1969. Today pornographical materials, including motion pictures, have inundated the American public and it seems that a complete surrender to lewdness is the order of the day.

Professor J. D. Unwin, of Cambridge University, having made a study of eighty civilizations ranging over four thousand years, comes to the conclusion: "Any human society is free to choose either to display great energy, or to enjoy sexual freedom; the evidence is that they cannot do both for more than one generation."

GODLESSNESS

The worst iniquity perpetrated by man from time immemorial is his disobedience to the Creator and his shameful godlessness, which, as we have noted, tops Ezekiel's catalog of denunciations. Instead of worshiping God, man prostitutes himself before idols, such as money, machine, material well-being, and Mars. Instead of hearkening to God's words as revealed by the true prophets and Christ Jesus, he lends his ear to the false prophets who preach agnosticism, materialism, naturalism, atheism, and communism. By so doing man has chosen to be separated from God thus creating a gap between Creator and creature. This is the most horrifying gap as I see it, because man's separation from God is the worst sin and the wages of sin is death!

As man has separated from God he will be extremely vulnerable to all kinds of iniquities, leading to moral degeneration and social disintegration. The danger of godlessness is therefore real and grave. I am mindful of William Penn's admonition: "Men must choose to be governed by God, or they will condemn themselves to be ruled by tyrants."

The Chinese as a race have long believed that the universe is governed by heaven. In the "Book of Odes," an ancient classic presumably edited by Confucius, it is recorded: "Heaven so produced the teeming multitudes that in everything there is principle." In the cosmos there are principles governing the movements of all the planets in an orderly, harmonious manner. Similarly, in a human society man should also be governed by heaven-ordained principles so that an orderly, harmonious existence may be realized. Therefore, the traditional Chinese maxim has it. "He that obeys the will of heaven prospers, he that rebels against heaven perishes."

The world is in a turmoil and human society has fallen into decay simply because of man's disobedience and godlessness. Would it not be far better for the people all over the world to make their spiritual needs override all other needs and to submit themselves entirely to God who was, is, and shall ever be.

Now is the time for the prodigal son to return to his father's arms.

THERE'S SOMETHING ABOUT A HOMETOWN BAND

HON. WILLIAM G. BRAY

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, September 9, 1970

Mr. BRAY. Mr. Speaker, there is, indeed "something about a hometown band" as the words to the song make clear, and this is especially true in the case of the Ben Davis High School Band of Indianapolis, Ind.

Late this past summer the band capped one of the most outstanding records ever compiled for its performance in competition with a European tour that included 10 concerts, four marching performances, and two first prizes in the World Music Festival, Kerkrade, the Netherlands.

Not only the community served by the high school, but the city of Indianapolis and the entire State of Indiana are tremendously proud of the band's accomplishments. And, I venture to say, the spirits of two of America's greatest bandmasters—John Philip Sousa and Patrick Gilmore—are smiling in approval.

The following material, which I am proud to enclose in the CONGRESSIONAL RECORD in tribute to this fine group and all who made their trip possible, is a record of a tour that will never be forgotten:

HISTORY OF THE METROPOLITAN SCHOOL DISTRICT OF WAYNE TOWNSHIP

The name of the community which grew up along the Vandalia Railroad six miles west of Indianapolis, Indiana in the 1870's has always been a little in doubt. Some say it came about from a group of men who met and determined to petition the Vandalia railroad for a stop there. The superintendent of the Vandalia railroad was Benjamin Davis, who suggested that the community build a loading platform adjoining the tracks and in the center of the community. When the work was completed a name was needed for the Vandalia time table and somebody suggested it be named after the generous superintendent.

Perhaps no Indiana community has undergone greater changes than Ben Davis. And perhaps the most outstanding feature of the Ben Davis development has been in the school system. Ben Davis has majored in the upbuilding of a school system not surpassed even by lofty Indianapolis. In 1892 the first high school was built with two rooms upstairs for the High School and two below for grade pupils. Time took its toll. Teachers and pupils came and went. In 1914 Ben Davis had to send its high school pupils to Plainfield, a neighboring town, because of the inadequacy of the old building. A year later a new high school was built.

The Ben Davis school setup is one of which communities ten times larger might well be proud. The township now has 14 elementary schools, two Junior High Schools and a most modern and well equipped Senior High School to accommodate 2,500 students. A third Junior High School will be opened in the fall of 1971.

HISTORY OF THE BEN DAVIS HIGH SCHOOL BAND

The 1969–70 Ben Davis High School Band has 257 members of which 150 are members of the European Band Tour.

During the school year the students are divided into one of four bands: namely, the Symphonic (87), Concert (80), Varsity (67) and Cadet (23). The Symphonic band is directed by Hal A. Meurer, Department Chairman and Director of Bands, Paul W. Silke, assistant band director is director of the Concert and Varsity Bands and Steve Argelyan, Orchestra conductor, directs the Cadet group. Members of all four bands join together to make the "Marching Giants" one of the nations largest and best marching bands.

Band and instrumental music became a part of the school program at Ben Davis in 1937 when Mrs. Elva Strouse was employed to teach instrumental music. Directors who have succeeded her include, Omar Rybolt,

Mrs. Rybolt, Ralph Chandler, Hal A. Meurer.

Under the present band program, set-up by Meurer in 1954, instrumental music begins in Grade 7, at either of the two Junior High Schools. Approximately 175 students begin each year with each Junior High School having two instrumental directors. The Fulton School program is directed by Gene Smith and Mrs. Pat Meurer and the Ben Davis Junior High Band is directed by Ron Doak and Fred Niemeyer.

The Ben Davis Band has compiled an enviable record of accomplishments. Five times State Marching Champions during the past nine years it is respected by every band director as one of the States finest. A composite record of achievements during the past ten years is as follows:

1960—1st Place at the Riverview Tournament of Bands, Chicago, Illinois; Indiana State Fair Champions; Honor Band at Tulip Festival, Holland, Michigan; 500 Festival Parade and Race Activities.

1961—1st Place at the Riverview Tournament of Bands, Chicago, Illinois; Indiana's Representative at Inaugural Parade in Washington, D.C.; Indiana State Fair Champions; 500 Festival Parade and Race Activities.

1962—1st Place at the Riverview Tournament of Bands, Chicago, Illinois; 4th Place Indiana State Fair; Orange Bowl Parade, Miami, Florida; 500 Festival Parade and Activities.

1963—1st Place at the Riverview Tournament of Bands, Chicago, Illinois; Kentucky Derby Parade, Louisville, Kentucky; Tournament of Roses, Pasadena, California; 2nd Place Indiana State Fair, 500 Festival Parade and Race Activities.

1964—Indiana State Fair Champions; 1st Place, Festival of States, St. Petersburg, Florida, Participated in the 500 Festival Parade and Race Activities.

1965—4th Place Indiana State Fair; Honor Band at the 500 Festival Parade and Race Activities; Tour to Willoughby, Ohio, Burlington, Ontario; Feature Band at Waterloo, Ontario Parade and Music Festival.

1966—Indiana State Fair Champions; 1st Place, 1st Division Class "A" concert band Indiana School Music Contest. Tell City—Cincinnati Trip; 500 Festival Parade and Race Activities.

1967—Indiana State Fair Champions; 1st Place, 3rd Place National Disneyland Holiday Contest competing with 275 bands; Represented United States at Expo 67, Montreal, Canada; 500 Festival Parade and Race Activities.

1968—Indiana State Fair 3rd Place; 500 Festival Parade and Race Activities. Howell, Michigan Melon Festival; 3rd Place National Disneyland Contest; Indiana State Fair 2nd Place; 1st Division State Concert Band Contest Class "A."

1969—2nd Place Indiana State Fair; Honor Band at Butler University, Indiana University and Indiana State University football games; 1970 Orange Bowl Parade, Miami, Florida; Eastern Tour with Symphonic and Concert Bands to Niagara Falls, Canada, Boston, Long Island and New York City; Honor band at Rushville, Indiana Auto Parade; Stage Band Contest 1st Division State Contest, highest rating by any band. 500 Race Activities.

CITY OF INDIANAPOLIS.

From the City of Indianapolis, Indiana
To the World Music Festival of Kerkrade, Holland

GREETINGS: Indianapolis is extremely proud to be represented at the World Music Festival by the Ben Davis High School Band. This band has won 1st prize five times over the last decade at the Indiana State Fair Marching Band Contest, and as holders of this distinction, it is indeed fitting that they should represent the city of Indianapolis.

Indianapolis is the 12th largest city in the United States and geographically serves the Nation as its "crossroads" between North and South, East and West. We are the largest city in the United States with a consolidated government and in 1971 will celebrate our 150th Anniversary.

Along with our greetings, we extend our congratulations to all of the festival participants and our admiration for your accomplishments.

With best wishes for the success of the festival,

I am,

Sincerely,

RICHARD G. LUGAR,
Mayor of Indianapolis.

1970 BEN DAVIS BAND EUROPEAN TOUR RECORD

(By Joe Vandoski, assistant to the band director)

Over the past decade, the Ben Davis High School Band of Indianapolis, Indiana has brought much honor to the State of Indiana and has contributed a great deal to the major parades in the United States and Canada. It all started in 1959, when Ben Davis appeared as the feature band in the Holland Tulip Festival, Holland Michigan. In 1960 the band received an invitation to appear as Indiana's Representative in the Inaugural Parade of President John F. Kennedy. In December of 1961, the band journeyed to Miami, Florida to participate in the King Orange Jamboree Parade, and the following year the band appeared before an estimated live audience of fifty thousand people and a television audience of over one hundred million in the famous Tournament of Roses Parade in Pasadena, California. This certainly appeared to be the pinnacle of the band's career.

However, bigger and better things lay ahead. In 1964, the band participated in the Festival of States parade and band contest held in St. Petersburg, Florida. There, Ben Davis competed with bands from several states and was awarded 1st place receiving 298 out of a possible 300 points. This parade seemed to signify the end of an era for the Ben Davis Band for it marked the last major parade for Ralph W. Chandler the man who had molded the band into one of the best and most active in the Nation.

However, Ben Davis was fortunate to receive a man as director who would lead the band on to new horizons. Hal A. Meurer assumed the directorship in 1964 and immediately proved to be a very competent band director. In 1965, the band performed in the Waterloo Band Festival in Ontario, Canada, and in 1967 they appeared in Expo 1967 in Montreal, Canada. Also, during the period from 1960 to 1967 the band won five Indiana State Championships. In late December of 1969, the band made its second appearance in the King Orange Jamboree Parade in eight years. However, this parade seemed almost anti-climatic because of the anticipation of the greatest undertaking of the Ben Davis Band—an appearance at the World Music Festival and a good-will concert tour of Europe.

The planning began more than a year before proposed departure date. The students had to earn more than $700 in that year's period in order to make the tour. Since this was such a difficult task, the band furnished candy, fruit cakes and other miscellaneous items for the band members to sell, the profit of which was used for their own expenses. Then in early May of 1970 the band started practicing after school most evenings of each week. They were required by the World Music Festival to perform a twelve minute marching show and three concert selections. This proved to be a task considering the time limitations, graduation and working schedules. However, things went reasonably well and the band displayed the fruits of their endeavors in a dress rehearsal July 7.

The rehearsal was well publicized and attended by over 2,000 people. Mrs. Esther Bray, wife of Indiana's 6th District Congressman, William G. Bray, expressed regret that Representative Bray was unable to attend because of pressing matters in Congress and delivered a message from Mr. Bray along with her own personal wishes for the band's success. Then Joseph E. Vandoski, Assistant to the Band Director, read a letter from Mr. James Keogh, Special Assistant to President Richard M. Nixon, who gave the following message to the Band:

"The President is confident that through the efforts of your young people as ambassadors of good will, all those with whom they come in contact will be aware of the warm sentiments of the people of our country."

Finally, a proclamation from Edgar G. Whitcomb, Governor of the State of Indiana, was read by Mrs. Harriett Burns of his office. The proclamation reviewed the band's past accomplishments and their forthcoming appearance at the World Music Festival and was concluded by declaring Tuesday, July 7, 1970, Ben Davis Band Day for the State of Indiana. This was the last time the band would be together until late evening of July 10 when a chartered intercontinental jet would take the 150 musical ambassadors of good will along with 100 adults on a musical adventure that would not end until 28 days later.

The evening of the departure an estimated crowd of 2500 was on hand to see the band off. And, after a two hour delay, the band boarded the jet and was off to London, England. The evening of July 11, the band played a concert in Bathersea Pleasure Gardens, London. During a break in the concert, the Band Director, Hal Meurer, introduced Paul Silke, Assistant Band Director, Fred Niemeyer, Gene Smith, Mrs. Patricia Meurer, members of the musical staff in Wayne Township and Joe Vandoski and Rick Pate, assistants to the Band Director, and thanked them for their help in making the tour a reality. Mr. Meurer then thanked his brother, Robert Meurer, for his help in organizing the show and tour. He also expressed thanks to Ronald Doak who stayed home in order to make preparation for the State Fair Band Contest. The band was very well received. The next day the band marched by Whitehall, Big Ben, Westminster Abbey, the Houses of Parliament and commenced at Trafalgar Square. Again the band was very well received drawing a large crowd which grew even larger as the band marched through the streets of London. The policeman who was in charge of showing the band the parade route remarked that the band was well liked because most American bands play stock marches whereas Ben Davis played rock music—"Aquarius" and "The Horse."

On Tuesday July 14, Bastille Day, the band played a marching concert under the Eiffel Tower. This was quite an honor for an American band to be scheduled to play a concert on the National Independence Day of France. Despite the light mist which continued during the concert, the band attracted a large crowd. The French people enjoyed the rock music and the variety of steps the band used while marching. Next the band was off to Kerkrade and the World Music Festival.

The band arrived in Kerkrade, Netherlands, Friday night July 17. A few hours after arrival the band director received a telephone call from a member of the World Music Festival Committee who informed him that our marching time had been moved from Sunday to Saturday and that we were to open the Music Festival by request of Prince Claus of the Netherlands. This was quite an honor. The next morning the band opened the Festival with a big bang winning a 1st prize. The theme of the show was "A Musical

History of the United States" which concluded with the unfurling of a giant replica of the Flag of the United States while playing "God Bless America" and then they marched off the field playing "Stars and Stripes Forever". The next day, Sunday July 19, the band played three concert selections including one which was composed by one of the judges. For their efforts the band received a 1st Prize with Distinction. There was a large article along with pictures of the band the next day in the "Limburgs Dagblad," a Holland newspaper. In addition, the television news in the Netherlands showed films of the band's marching performance and told of their accomplishments at the Music Festival. The next day, victorious, the band set out for Germany and a concert at Heidelberg.

The band played a concert in the Palace Courtyard of the Heidelberg Castle the afternoon of Tuesday, July 21st. The setting of the centuries old Castle and the modern music of the band made for a very exciting concert. The evening concert schedule for the Band Shell had to be cancelled because of rain.

Thursday, July 23rd the band played a concert in the Casino Kursaal in Lucerne, Switzerland. The sight of huge majestic mountains in the background made this concert absolutely breathtaking. The band had a large audience which included two representatives of Eli Lilly International. The band director introduced them and thanked Eli Lilly International for their assistance in making the concert tour possible.

The band's next performance was in Innsbruck, Austria, Saturday, July 25th. The band marched through the center of the city in the afternoon drawing a very large and enthusiastic crowd. That evening they played a concert at the Music Pavilion in the Hof Gardens. The band was very well liked receiving six encores. They played "The Horse" several times since it seemed to be the selection that the crowd enjoyed most. As the band played it the people would dance, jump up and down or just tap their feet. After the final encore, the band director stepped completely away from the podium until the audience stopped clapping and cheering. Then he stepped back onto the podium to give the band instructions and the audience started clapping and cheering very loudly again. It was quite an experience and tends to prove the adage that "Music is the International Language."

The next concert was Tuesday, July 27, in Venice, Italy in St. Mark's Square. The setting for this performance was haunting. On a three tiered band stand was Ben Davis composed of very modern, young people from many thousands of miles away, and in the background was the famous St. Mark's Cathedral which enshrines the remains of one of the disciples of Christ. The band drew a large crowd and was well received. Three people from Brazil who were visiting Venice remarked that the band was as fine as any college group they had seen. As a matter-of-fact they thought Ben Davis was a college and were surprised to learn that the band was a high school group.

The concert in Rome, Friday, July 31st was very successful. Fuigi Sapio, the Assistant Mayor of Rome was there to introduce the band and present them with a certificate. The band performed both their award winning marching and concert shows. After the concert Assistant Mayor Sapio insisted that the band march again! In compliance, the band performed their marching show prepared for the London and Innsbruck street marching.

On Sunday, August 2nd, the band left for Assisi, Italy, in order to participate in the Festival of the Angels which was filmed to be shown at a later date in Los Angeles, California. Participation in this festival is by invitation only and the band was very proud to be included.

The band's final concert was in Florence, Italy, Tuesday, August, 4th in the Senorina Plaza in the heart of Florence. They received a great ovation for their efforts—a fitting climax for a very successful concert tour.

On Thursday, August 6th, ten concerts, four marching performances, two 1st prizes and twenty-eight days later the Ben Davis Band returned home. They were greeted by the band members who did not make the trip to the tune of "Back Home Again in Indiana". Also an estimated 3,000 fans along with television and press men were on hand. The following Saturday the band held a triumphal parade in downtown Indianapolis headed by Richard Lugar, Mayor of Indianapolis and Lee Eads, Marion County Sheriff. After returning to Ben Davis High School, Howard Wood, High School Principal; Hal Meuer, Band Director; Dr. Sidney Spencer, Superintendent of Schools for Wayne Township; and Mayor Lugar gave speeches praising the band for their role as Musical Ambassadors of Good Will from the United States to the countries of Europe.

[From the Indianapolis Star, July 21, 1970]

SALUTE BEN DAVIS BAND!

The Ben Davis High School Band, which is touring Europe, has won first place in an invitational show band contest of the International World Music Festival in Holland. Quality counts.

[From the Indianapolis News, July 22, 1970]

ANOTHER DAVIS WIN

The band played on and won first place in the International World Music Festival.

The band was from Marion County's Ben Davis High School which has a long record of Hoosier and national titles for musical performance. Competing in showband competition at Kerkrade, Holland, Ben Davis took on and defeated some of the world's finest bands. The squad is on a tour of Europe where it has played to appreciative and enthusiastic audiences in London and Paris. Concerts are also scheduled for Germany, Austria and Italy before returning to Indiana.

Ben Davis has carried Hoosier and American talents to the Old World and in the process has played its way into the hearts of many Europeans. The band is a splendid good-will ambassador for the state and country.

[From the Indianapolis News, Aug. 14, 1970]

CHEERS STILL ECHO IN BEN DAVIS BAND EARS

(By Kathleen Van Nuys)

"Nothing can compare with the thrill of people cheering us at Kerkrade," said Nancy Denny, recalling Ben Davis High School Band's World Music Festival appearance in the Netherlands.

"Even before we began to play, people stood and cheered and they kept it up until we finished. I've never been so proud of our band."

The musician was also impressed with the friendship Dutch families extended bandsmen during their only stay in private homes on the month-long European tour.

"Our stay in people's homes was the best part," stated Harry Powers. His comment was backed up by Lou Carlisle, Terri Hughbanks and Laura Sauter, who pointed out the "fun in trying to communicate with people who don't speak English."

Marilyn O'Brien enjoyed using her "school-learned French" to vertify directions with a Paris policeman, just so she could thank him in his native tongue. "It also was fun to stumble through two days of a mixture of Dutch, English, French and sign language in Kerkrade where the husband in our home spoke French," she added.

Mary Hennigan and Terry Lawrence were interested in various customs, while Kathe Turner and Judy Engle told of overnight stays in two monasteries.

EVERYTHING WAS FUN

"I liked the feather beds in Germany," confessed Linda Elliott, while Patty Dierdorf raved about the scenic Rhine River boat trip. "Everything was fun, even bread, expensive Cokes, hard rolls and long bus rides. I do wish I'd been a little more proficient in sign language," admitted Marti Daily.

"Just walking about towns, buying different things was exciting," observed Doug Cottingham. Judy Krueger's shopping was made more pleasant by a shop owner who replaced, without charge, a small stein she accidentally broke.

The enthusiasm of these and other musicians comprising the 160-member touring group is carrying over into daily rehearsals for the entire 270-member band's Indiana State Fair appearance in two weeks. "I've never had as spirited or enthusiastic a group," said director Hal A. Meurer. The band, gunning for a sixth state championship, is riding on the wave of two honors won at the Kerkrade contests which ended Sunday.

"Our band received first prize in the marching show band contest and was awarded first prize, with distinction, in the concert band division," said Meurer. "Ours was the first band to receive the latter award and 50 had appeared ahead of us."

Bands from 19 countries, mostly in Europe, competed in the event and the majority were adult organizations. Tour highlight for Meurer, who lost 20 pounds was two unscheduled concerts played at the request of Rome and Assissi officials.

CROWDS WERE BIG

"The crowds were so big and vocally enthusiastic," said the director. "They clamored for encores, and came up onto the stage after we'd quit from the heat and exhaustion. We were playing today's music with a big band," he added, trying to explain the music-loving Italians' wild reception.

Meurer recalled the fun bandsmen had playing on open air street cars to publicize their Heidelberg concert. "They also enjoyed our four fun-making French bus drivers," he added.

Dr. Forrest Denny, father of Nancy, accompanied the band to take care of illnesses, but there were few. Mrs. Denny and another daughter, Anne, also made the trip.

"Mona Halstead, who dropped a suitcase on her foot and broke a toe, was our only casualty," said Meurer who had two able assistants, William Minnick and Bennie Decker.

Minnick, Ben Davis Junior High School principal, handled details for 90 adults on the tour, while bookkeeping teacher Decker arranged for student chaperones. Both served a year on the tour's planning committee.

THE WHITE HOUSE,
Washington, D.C., August 15, 1970.

Hon. WILLIAM G. BRAY,
House of Representatives,
Washington, D.C.

DEAR BILL: It is easy to understand your pride in the Ben Davis High School Band whose members just recently performed at the International Band Festival held in Kerkrade. Your feelings are shared not only by me but by countless fellow citizens who appreciate the goodwill they created, and the outstanding example they displayed of the American way of life.

I hope that you will convey my warm congratulations to them for being such effective unofficial ambassadors, and for bringing so much credit to their country.

Sincerely,

RICHARD NIXON.

SOME NEEDED CHANGES IN THE PHILADELPHIA PLAN

HON. O. C. FISHER

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, September 9, 1970

Mr. FISHER. Mr. Speaker, under leave to extend my remarks I include a copy of a letter written to Mr. James Hodgson, Secretary of Labor, from Mr. Malcolm A. Watson, president of Fisk Electric Co. of San Antonio. The letter contains some very timely and constructive suggestions, which I would hope the Secretary will seriously consider.

The letter follows:

FISK ELECTRIC CO. OF SAN ANTONIO,
San Antonio, Tex., August 20, 1970.

Mr. JAMES D. HODGSON,
Secretary of Labor, Capitol Building, Washington, D.C.

DEAR MR. HODGSON: I recently read an article in the August, 1970 Edition of "Electrical Contractor" quoting remarks of yours regarding skilled labor shortage and employment of Minority groups; and I have to agree with you on both. I am sure there are many other businessmen who would agree with you.

However, if what I've been told about the "Philadelphia Plan" is true, I cannot agree with you; that is, if it is forced hiring of a predetermined ratio. This type of plan can give jobs to a minority group, but will be at the cost of others, without any return, and will only add to our inflationary problem.

I would offer the following alternative plan that would do several things.

Add a new classification to the skilled crafts other than apprentice and would suggest "Helper" or "Laborer", preferably "Helper".

This new classification could be used to accomplish several things:

Provide more manpower on construction projects at a lesser cost. As it is now, we Electrical Contractors have to pay Journeyman Scale for nothing more than hard work—moving heavy equipment and materials and clean up and more than half of the manhours of installation are utilized on work that does not require a skilled man but could be done by people with less knowledge and experience under the supervision of a skilled person.

This additional classification would accomplish the following:

(A) Decrease our shortage of skilled craftsmen.

(B) Reduce the cost of construction.

(C) Would provide a period of time for evaluation of minority groups as possible skilled candidates.

(D) Then the people in this classification would have a goal to achieve, better their living standards, and could retain their dignity as an equal.

The only opposition to this plan would be the people who do not care about their fellow man because of their concern for either money or power; and we could again be the leading industrial country in the world. I believe if we studied the industrial gain and success of Japan and West Germany, we would find their secret.

I would appreciate hearing from you regarding this matter.

Very truly yours,

MALCOLM A. WATSON,
President.

MASSACHUSETTS STATE SENATE RESOLUTIONS URGING PRESIDENTIAL AND CONGRESSIONAL ACTION TO AVERT SERIOUS HEATING FUEL OIL SHORTAGES IN NEW ENGLAND

HON. HAROLD D. DONOHUE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, September 9, 1970

Mr. DONOHUE. Mr. Speaker, all the citizens and consumers, as well as the congressional delegations here from and in Massachusetts and New England, are very deeply and rightfully concerned about the increasing threat of great physical and financial hardships that will inevitably be visited upon them if the present heating fuel oil shortage should be permitted to intensify.

I, and all the other members of our delegations here, have repeatedly called upon the President, other appropriate Federal officials, and the members of the House Ways and Means Committee to take pertinent action to avert this growing and discriminatory burden that has already, for too long and too heavily, been visited upon the taxpayers of Massachusetts and our regional area.

All of us will persevere in our cooperative efforts and we must earnestly hope that the White House and all Federal agencies and officials will very soon recognize our just appeal for relief and respond promptly and effectively to adjust this inequitable situation.

At this point I am pleased to include a copy of the resolutions adopted last August 17, 1970, expressing the sense of the Massachusetts State Senate on this vitally important subject and they follow:

RESOLUTIONS MEMORIALIZING THE CONGRESS OF THE UNITED STATES TO REVERSE THE ACTION OF THE HOUSE WAYS AND MEANS COMMITTEE PROHIBITING THE PRESIDENT OF THE UNITED STATES FROM INCREASING OIL IMPORTS AND TO ADOPT THE RECOMMENDATIONS OF THE PRESIDENTIAL CABINET TASK FORCE ON OIL IMPORTS

Whereas, New England has in recent years been the victim of great discrimination in the price of home heating oil because of the existing national oil import quotas; and

Whereas, As a result of such quotas there has been a serious shortage of No. 2 home heating oil in the New England area; and

Whereas, Massachusetts consumers alone use 2.2 billion gallons of home heating oil annually; and

Whereas, Recent action of the United States House of Representatives Ways and Means Committee prohibits the President from increasing oil imports and adopting the recommendations of the Presidential Cabinet Task Force on oil imports; and

Whereas, Such action by the Ways and Means Committee prevents a reduction in the price of oil in New England and interferes with the availability of an adequate supply of such oil; now, therefore, be it

Resolved, That the Massachusetts Senate memorializes the Congress of the United States to reverse the action of the United States House Ways and Means Committee prohibiting the President from increasing oil imports and adopting the recommendations of the Presidential Cabinet Task Force on Oil Imports; and be it further

Resolved, That copies of these resolutions be forwarded by the State Secretary to the President of the United States, to the presiding officer of each branch of Congress and to each member thereof from the Commonwealth.

Senate, adopted, August 17, 1970.

NORMAN L. PIDGEON,
Clerk.

A true copy.

Attest:

JOHN F. X. DAVOREN,
Secretary of the Commonwealth.

BIOLOGICAL CONTROLS OF INSECT PESTS

HON. JOHN D. DINGELL

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, September 9, 1970

Mr. DINGELL. Mr. Speaker, pursuant to permission granted, I insert into the CONGRESSIONAL RECORD two excellent commentaries appearing in the Conservation News, an educational service of the National Wildlife Federation, Volume 35, No. 16, dated August 15, 1970. The first, entitled "The Statement" sets out some clear circumstances and facts with regard to the use of DDT and the foolish position taken by the Department of Agriculture thereon. The second, entitled "Anti-Mosquito Mosquito" points out how it is possible to achieve biological controls of insect pests through wide use of radiation breeding and similar methods.

I insert the two articles in the CONGRESSIONAL RECORD with the hope that somebody in the Department of Agriculture will read and benefit from them.

Perhaps with the passage of time the Department of Agriculture will achieve a more enlightened position than it has demonstrated in the past on the manner and use of pesticides and their hazards to man, animals, and the environment.

The text of the two articles follow:

THE STATEMENT

There should have been some appropriate sign or omen to mark the day as James Moorman, environmental attorney, double-timed back down the steps of the U.S. Court of Appeals for the District of Columbia. But there wasn't.

It was just August 10, 1970. The day conservationists fired the shot that wasn't heard across the street.

Representing the Environmental Defense Fund, Sierra Club, West Michigan Environmental Action Council, National Audubon Society and Izaak Walton League of America, the young attorney had filed a brief that just might write the concluding chapter in the vintage DDT controversy. And definitely destroyed any remnants of the U.S. Department of Agriculture's pesticide credibility.

The brief was conservationists' reply to Agriculture's "Statement of the Reasons Underlying the Decisions on Behalf of the Secretary with Respect to the Registration of Products Containing DDT," filed in response to the Court's demand for an explanation of

Agriculture's refusal to suspend registrations of poisons containing DDT.

Agriculture's "Statement" and the conservationists' subsequent analysis are not recommended reading for those wishing to retain the illusion of a world as they would have it rather than the way it is.

For years, conservationists steadily increased pressure to eliminate the use of DDT in favor of safer chemical pesticides and integrated controls. Their demands were consistently met with premeditated governmental malfeasance and increasingly vitriolic attacks from DDT apologists up to and including charges of anti-capitalism and genocide.

The frantic, often paranoiac drive to save DDT at any cost peaked with "The Statement." It contends DDT is "essential" to fight disease vectors viz. "DDT has been widely used to protect man against a number of important arthropod-borne diseases, e.g., malaria, onchocerciasis, typhus, encephalitis, yellow fever, tick fever, bubonic plague, cholera and dengue fever." Citing the prestigious Mrak Commission Report, and two more references that don't support its contention. The Statement argues that disease control benefits outweigh the danger of carcinogenesis (which it contends has yet to be proven in man).

Strangely, the Mrak Report actually concluded, "It is reported by well informed scientists that as far as insect vectors of disease are concerned there is none known which are normally susceptible to DDT that cannot be controlled with a substitute."

When the conservation attorneys get down to Agriculture's specific disease threats, the mind boggles. Witness the following as paraphrased from their reply to the Court.

DDT did help eliminate malaria in the U.S. Now the only malaria in this country has been contracted in other parts of the world and there are substitutes for DDT including methoxychlor, dichlorvous, abate, Malathion, etc. Typhus was eliminated from the U.S. many years ago. Encephalitis is rare in the U.S. and controllable by Malathion. Yellow fever hasn't been reported in the U.S. since 1904. The carrier mosquito can be controlled with abate, and one vaccination provides complete protection for at least ten years.

Tick fever is a rare disease in the United States. *It cannot be controlled by DDT.* (italics added). Bubonic Plague is very rare in the U.S. (three or four cases per year) and is controlled far more efficiently by means other than DDT. Cholera does not occur in the United States and is rarely insect borne. Dengue fever is not endemic to the United States and is carried by the yellow-fever mosquito. Onchocerciasis does not occur in the United States. In Africa, the black fly carrier is controllable with methoxychlor.

The conservationists were no less devastating in their rebuttal of The Statement's contention that "DDT is as important to the farmer as penicillin is to the physician."

The Mrak Report stated, "Although DDT is still involved in some of the international food production programs sponsored by U.S. agencies, there is a feeling that a withdrawal or systematic reduction of DDT would have a minimum effect."

The Statement itself says, "Records of the (Agriculture) Department indicate that there are about 65 other registered pesticides that will control one or more of the insects controlled by DDT."

Citing Agriculture's own *Agriculture Economic Report No. 158;* April 1969, "DDT Used in Farm Production," the conservationists point out that farmers are the major domestic users of DDT. However, only 2% of U.S. crop land is treated with DDT which is being replaced for many uses because insects are developing resistance and there are less costly insecticides for some purposes.

Cotton growers use most (¾) of the DDT that farmers buy, but only about 38% of the country's cotton acreage is actually treated with DDT. "While Respondents (Department of Agriculture) say there are no alternatives to DDT for the cotton bollworm (Heliothis) their own registrations list chemical alternatives including parathion, methyl parathion, axodrin, carbaryl, gardona and several others."

"The cotton bollworm is an insect that is not nomally a pest because it is under heavy pressure from naturally occurring predacious insects. The use of a broad spectrum poison such as DDT destroys these predators, releasing the bollworm from predation and elevating it to pest status. The cotton bollworm problem, therefore, not only is not solved by DDT, but is often *caused* by DDT (emphasis in original). Some studies actually show that the use of DDT and other insecticides gives a lower yield of cotton than occurs in untreated fields."

In response to conservationists' charges that DDT is responsible for mounting wildlife disasters, The Statement allows that" . . . the present available scientific evidence indicates that there are some adverse effects upon certain species of fish and wildlife as a result of the use of DDT, but that such effects do not constitute an imminent hazard to fish and wildlife or the environment."

Some adverse effects on fish and wildlife? There is extensive documentation of local bird mortalities directly attributable to DDT applications. Entire species of carnivorous birds, including the peregrine falcon, bald eagle, osprey, brown pelican, Cooper's and sharp-skinned hawks, etc, are seriously threatened by DDT's effect on their reproductive processes.

The Statement maintains, however, that ". . . in these instances of bird mortalities that have been attributed to the use of DDT in a treated area, the depopulations in the area have been temporary." Incredibly, the article cited to support this proposition says robins returned to the DDT treated area only *after DDT treatment ceased and was replaced by methoxychlor.*

DDT's effect on aquatic organisms may be more disastrous, albeit more insidious, than on birds. The Statement admits DDT causes "fish mortality and reproductive failures," but that Agriculture knows of no species of fish that is endangered as a result of DDT use.

Absolutely no one has yet intimated entire species of fish are endangered by DDT. But it is a little easier to understand how Agriculture managed to rationalize away the massive documentation on mortalities and reduced reproductive success of aquatic organisms when The Statement notes a ". . . review of animal populations shows no overall decline but, to the contrary, the harvest of fish and wildlife populations are continually increasing."

After analyzing the references Agriculture submitted to support that statement the conservationists replied, "Three of the references concern water fowl populations and show population declines, not increases. One concerns falcons, but is dated 1942, preceding the use of DDT. Two concern big game, which are completely irrelevant to this case. One involved an inconclusive and unscientific report of bird watchers. One has absolutely nothing to do with population trends, but concerns the adverse effects of DDT on brook trout behavior. One indicates an increase in Great Lakes fish harvests over the years, but does not take into account the problems plaguing that fishery as a result of DDT in recent years."

The Statement's rationale of DDT's carcinogenic properties is perhaps even more frightening due to the nature of the issue and the fact that the "average" American contains 12 parts per million DDT.

The Statement acknowledges, "There are reports of carcinogenicity resulting from the administration of large doses of DDT in test animals." But that, "the relevance of such findings to cancer in man has not been established."

In evaluating the 1969 "Innes Report" of the National Cancer Institute, the Mrak Commission stated, "The evidence for the carcinogenicity of DDT in experimental animals is impressive and the Panel takes no exception to the conclusions as to DDT recorded in the JNCI report of the National Cancer Institute Study. *This study has demonstrated that DDT increased the incidence of cancer in mice under the experimental conditions employed. . . .*" (Emphasis in original.)

And as Agriculture says, that doesn't *prove* DDT is carcinogenic in humans. But, the Mrak Report states, ". . . a remarkable degree of concurrence has been found to exist between chemical carcinogenesis in animals and that in man where it has been studied closely."

Dr. Samuel S. Epstein, Chief, Laboratories of Environmental Toxicology and Carcinogenesis, Children's Cancer Research Foundation, said, "These data on the carcinogenicity of DDT in a wide range of animal strains and species unequivocally demonstrate a highly significant potential carcinogenic hazard to man."

Complete polarization on the DDT issue and the Agriculture Department's sorry pesticide record preclude any serious attempts at kindness when pondering the abortion of logic that spawned The Statement.

In 1969, the House Government Operations Committee charged the Pesticides Regulation Division refused for five years to exercise its cancellation authority when it had reason to believe a pesticide was ineffective or even hazardous. In fact, the hearing record stated, "Until a few weeks ago, the Pesticides Regulation Division did not even have procedures for conducting hearings or studies which registrants may request as a matter of right before cancellation action can become effective. When registrants receiving cancellation notices requested hearings or studies, prosecution of the cancellation action was halted and the product left on the market."

The Committee revealed that during the five-year period ending June 30, 1969, the Agriculture Department approved more than 1,600 pesticides over the objections of the Department of Health, Education and Welfare. "The exact number is not known because the Pesticides Regulation Division does not keep records of products registered over HEW objections and has failed or even refused to inform HEW of action taken with respect to its objections."

Wisconsin Senator William Proxmire recently pointed out that "although an interdepartmental agreement between HEW and Agriculture requires that unresolved HEW objections be referred to the Secretary of Agriculture before a registration is approved, not one of the more than 1,600 HEW objections was so referred."

Painfully aware of this background, conservationists were encouraged, but nonetheless suspicious, when on the heels of the Mrak Commission's devastating report the Agriculture Department proclaimed it would phase out all non-essential uses of DDT by 1971. As usual, their suspicions were well founded.

On May 6, 1970, Agriculture issued notices of cancellation for 30 uses of DDT. The New York Times subsequently reported, however, that the Department's Science and Education Director Dr. Ned Bayley admitted "DDT had not been used extensively on these crops" and the cancellation notices were issued largely to "get our house in order."

In the July 29, 1970 Congressional Record, Senator Proxmire revealed Agriculture predictably had so far decided 54 out of an esti-

mated 100 total DDT uses were "essential to the public health or welfare."

It is difficult to get a house in order when the furniture is missing and the plumbing won't work. The Court is clearly the sole recourse for the public interest. Bitter experience in the long DDT battle dictates caution in outguessing the vagaries of the law. But it's difficult to stifle hope that The Statement will be the last in a long line of indefensible defenses and DDT will finally end up on the museum shelf where it belongs.

ED CHANEY.

ANTI-MOSQUITO MOSQUITO

Apparently deaf to siren songs from American chemical manufacturers, two University of Notre Dame scientists have developed an absolutely safe way to reduce the world's yellow-fever mosquito population. Safe for everyone but mosquitoes, that is.

As reported in the July 1, 1970 issue of "BioScience," the anti-mosquito mosquito resulted from a cross-breeding process that began with the irradiating of some yellow fever mosquitoes. The irradiation produced mosquitoes with broken chromosomes. Professor of Biology Karamjit S. Rai and graduate student Paul T. McDonald then cross bred the mosquitoes until an insect with an entirely new chromosome was produced.

The male mosquito with the new chromosome appears normal and strong, but produces sperm which are 75% incapable of fertilizing eggs or producing a new generation of mosquitoes. Of those offspring which are produced, approximately 80% of the males inherit the sterility factor, continuously passing the lethal characteristic to succeeding generations.

The advantage of the new-chromosome mosquito, according to Dr. Rai, is that it is competitive with other mosquitoes when released in the general population. Mosquitoes subjected to radiation and then released do not transmit sterility to subsequent generations and are often too weak to fly or mate with normal females. The new breed, however, appears to be able to compete with normal males, to mate and to transmit its sterility to future generations. This makes it possible, in theory, to wipe out the entire species in time.

Best of all, Dr. Rai says the creatures cannot develop an immunity to the sterility chromosome as they can, and have, to DDT and other pesticides.

The World Health Organization is planning to test the new mosquito's practicality in India.

UNICEF'S QUESTIONABLE CONNECTIONS

HON. O. C. FISHER

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, September 9, 1970

Mr. FISHER. Mr. Speaker, under leave previously given I include in my remarks a copy of a letter written by a San Antonio constituent to Postmaster General Winton M. Blount.

It will be noted that the writer points out that recently a decision has been made by the Post Office Department to allow UNICEF to sell greeting cards in lobbies of post offices. This appears to reverse a prior policy.

The revelations contained in the letter are significant. Let us hope the Postmaster General will review and reverse the action recently taken.

A copy of the letter follows:

AUGUST 18, 1970.

WINTON M. BLOUNT,
Postmaster General,
Washington, D.C.

DEAR MR. BLOUNT: It has come to my attention that the Post Office has changed its earlier decision to not allow UNICEF to sell greeting cards in lobbies of the United States Post Offices. With the overwhelming amount of evidence available showing that UNICEF's whole staff has always been loaded with actual Communists and known Communist sympathizers and that over one hundred millions of dollars has been given by UNICEF to outright Communist governments, I cannot understand this reversal. According to its own literature, UNICEF never gives anything, anywhere, at any time to a single child. It gives only to governments.

If you have some doubts about Communist control of UNICEF you might just check the list of artists chosen to do the art work. Pablo Picasso, who has belonged to the French Communist Party since 1944, and who has been praised by a Marxist Magazine as a "lifelong Communist", is one of the best known but the list of others would include Hans Erni, Ben Shahn, Antonio Frasxoni, Doris Lee, Arnold Blanch, Karel Svolinsky, Lojos Vincze, and Jean Lurcat. Their records as communists and communist symathizers are available through investigative branches of our government. So far as I have been able to determine, The U.S. Post Office and the Communist Party bookshops are the two principal places that these UNICEF greeting cards are sold. Allowing them to be sold in the lobbies of our Post offices throughout the country is the same as an endorsement by the United States Government and is in bad taste, if not something more.

I further feel, as a matter of principle, that if you allow an atheistic communist group to raise funds in this manner, that you should not be discriminatory and also allow various churches, the minutemen, the Ku-Klux Klan and the John Birch Society to do likewise.

— —.

A PRAYER FOR PRISONERS OF WAR

Hon. G. V. (SONNY) MONTGOMERY

OF MISSISSIPPI

IN THE HOUSE OF REPRESENTATIVES

Wednesday, September 9, 1970

Mr. MONTGOMERY. Mr. Speaker. I would like to share with my colleagues the following supplication to God Almighty entitled "A Prayer for Prisoners of War." It was written by Rear Adm. James W. Kelly, U.S. Navy, Chief of Chaplains:

A PRAYER FOR PRISONERS OF WAR

Almighty Father, who suffers in the affliction of your children, we call upon you now from the depths of our anxiety and great concern for our countrymen and loved ones who have fallen into the hands of the nation's foes. In the face of the evils that these brave men endure and before the grim burdens they are forced to bear, give them courage and hope, and never failing confidence in you.

But most of all, O God, we ask that the day will soon come when we can all celebrate their release and safe return to their homes and kindred.

Give to all of us who wait and hope in the face of every disappointment the will to persevere in the cause of peace and the wisdom to conquer hate with love and every doubt with a renewed faith in you. Amen.

INTRODUCING CHILDREN TO THE ARTS

HON. FRED SCHWENGEL

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, September 8, 1970

Mr. SCHWENGEL. Mr. Speaker, the Davenport-Times Democrat recently carried an excellent article by Julie Jensen on the need for acquainting our children with the arts at an early age. I applaud her suggestion, and offer my wholehearted support to help implement it. She quotes John D. Rockefeller III as saying:

We need the arts if we are to be whole human beings—fully alive and vital and in control of ourselves and of our environment.

His statement is certainly true, and can only be fully realized if we start this phase of our children's education at an early age. The article follows:

[From the Davenport-Bettendorf (Iowa) Times-Democrat, Aug. 22, 1970]

MAP FOR YOUNG TRAVELERS

(By Julie Jensen)

(EDITOR'S NOTE.—The following statement on the role of the arts in our society, particularly among the young, is by Mrs. Elliott R. McDonald Jr. of Davenport, who contributes feature articles to the Times-Democrat under the name of Julie Jensen. She is chairman of the Iowa Arts Council ..ia appointment by Gov. Robert D. Ray. She is the wife of an attorney, mother of a boy and a girl, and author of several novels, short stories and a children's play. Her first hardback novel, "Amalie's Story," is scheduled for publication by Simon & Schuster Sept. 18.)

When the Russian Sputnik circled the globe in the late 1950s, the U.S. rushed headlong into a crash program of science emphasis, only to learn that scientific sophistication does not do away with social problems. What does? The arts might.

In a time when we need minds schooled in the ways of creating more than ever before in our history, the arts hold out some hope of wholeness, and to realize that hope, we must begin with the young.

At a time when educators are desperately searching for new ways to reach the minds and spirits of disadvantaged children, the arts are offering a whole range of potential teaching approaches.

Former Secretary of Health, Education and Welfare, Robert Finch, has written, "There is ample evidence that involving children in creative work and appealing directly to the creative impulses can aid children in opening up and breaking out of what often is a closed world, to the point where they are ready to benefit from instruction in the 3 R's."

A place where this is happening is the Henry Street Settlement in New York City, where the staff has found a way through the arts, through music, acting and the dance, to reach delinquent, emotionally ill and neglected children and help them to raise their sights and take steps toward socially useful lives.

The arts are exploration in perception. They seem to work, stimulating children to learn and grow instead of marking time through class periods and grades.

The privileged middle and upper class child has just as much need for the arts as the disadvantaged. Not many parents are qualified to teach their children very much about the arts. The best one hopes for is a favorable

atmosphere in adult conversations and surroundings and reading habits.

John D. Rockefeller III has said, "We need the arts if we are to be whole human beings—fully alive and vital and in control of ourselves and of our environment."

Rockefeller also quotes William Saroyan's definition of the purpose of the arts: "To give the traveling human race an improved map that shows the way to itself."

We look to the schools to acquaint children with the arts as we looked to them to assimilate the immigrant and to meet the challenge of Sputnik.

But the schools are dedicated to job-oriented studies. Arts education is considered a separate matter, not woven into the fabric of general education. Children graduate without understanding that the creative scientist and the creative artist have a great deal in common.

Where is the bridge between disciplines that are essential partners in human progress?

In the home, in the school, and in youth centers for the arts where the atmosphere is accepting and free. Young people need a place where they are welcome to grow, explore, experiment and fail, if necessary. A place where they can apprehend the relation between music, the dance, drama, painting, and sculpture.

Young people need a place where they can learn that the arts are the key to the higher order of things our cultural heritage, our gift of expression, our creative faculty, our sense of beauty.

The arts are more important as old values become less meaningful—as too many Americans are caught in the grip of anonymity or fear.

We are too accustomed to thinking of the arts as a fancy dessert or even a parsley garnish, when they are actually meat and potatoes for the mind and the spirit.

Isaac Stern, the world-famous violinist, suggests that all children be educated in the arts from the time they are five. "We have at hand the rarest of all possibilities, the time and the money. There has never been a nation on earth as rich as this one. Let it be known, also, for richness in the way men live, and why and how they live."

It has to begin with the young, this investment in a high civilization.

A MAJOR DEFEAT FOR THE AMERICAN TAXPAYER

HON. JOHN G. SCHMITZ

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, September 9, 1970

Mr. SCHMITZ. Mr. Speaker, at the Capitol in Washington on August 13, 1970, the American taxpayer suffered a major defeat at the hands of his elected representatives.

In this particular showdown, the taxpayer had the President of the United States on his side, but even that was not enough. By 289 votes to 114—21 more than the necessary two-thirds—the House of Representatives overrode President Nixon's veto of an additional half billion dollars for our increasingly chaotic, violence-prone and drug-ridden educational system. This amount was over and above an increase of almost a billion dollars for the schools which the President himself had already requested.

In vote after vote all across the country, the people have let it be known that they no longer accept the great American myth that all problems can be solved by education, and that all educational problems can be solved by more money. They have seen in their own local schools in the experiences of their own children, the proof that we are actually getting less of a return for more of an outlay in education today.

Citing the New York City School Fact Book, compiled by the City University of New York in 1969, then Special Assistant to the President Roger Freeman reported on June 19 that:

> Reading and arithmetic achievement, in the highest expenditure schools ($1100 per pupil and up, median $1330), average between 5 and 7 months *behind* those in the schools with the lowest expenditures (below $600 per pupil, median $551).

Hard as it may be for the school spenders to accept them, these are the facts.

In his veto message to Congress on this bill, President Nixon stated that:

> It raises the spending on old approaches that experience has proved inadequate.

He declared:

> I flatly refuse to go along with the kind of of big spending that is wrong for all the American people.

The President could not be more right. I voted against this bill when it came to the House floor, before his veto—and was deeply disturbed to learn that an attempt had then been made to avoid a rollcall vote on it. Although a majority of House Republicans voted as I did to sustain the President's veto August 13, no less than 77 of them voted to override it and to help saddle the American taxpayer with the additional cost—to be paid either in direct taxes or, more likely, in the hidden tax of inflation—for school programs largely unable to handle the vast sums of money they receive now.

Recently the National Education Association launched a new policy of big-time lobbying at all levels of government, with special concentration on Congress which is now giving $12 billion a year in Federal aid to education. It comes as a real surprise to most people to recall that just 5 years ago we had no direct Federal aid to education, and that the most liberal Congress we have had in 30 years authorized it in 1965, only as part of the political backlash from Senator GOLDWATER's defeat in the Presidential campaign of the preceding year.

The overriding of the veto on this school spending bill shows that the influence of the National Education Association's lobbying campaign is being felt—and that the people back home, suffering from taxes and inflation, and increasingly dissatisfied with the present cost and performance of the schools, are being forgotten. But these school lobbyists can be beaten. They were beaten, on several key issues in which I was very much involved, in the California State Legislature last year.

Conservative and moderate Congressmen ought to keep in mind that most of the big school spenders are fundamentally opposed to their political principles and will never support them no matter how many concessions are made—and that they cannot take the vote of the overburdened taxpayer and inflation hit housewife for granted. A change of 11 votes would have sustained the President's veto and saved the taxpayer half a billion dollars which will now be poured into the bottomless pit of a foundering school system.

STUDENTS WORK TO CLEAN THE AIR

HON. RICHARD T. HANNA

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, September 9, 1970

Mr. HANNA. Mr. Speaker, on August 24, 58 vehicles set out from the Massachusetts Institute of Technology on the first leg of a race that ended 3,600 miles later at the California Institute of Technology in Pasadena.

This was, however, no ordinary race and the car which covered the distance in the lowest elapsed time was not necessarily declared the winner. The most significant component in the rather complicated scoring system which ultimately determined the winner was the capability of the engine to meet and exceed the exhaust emission standards set by the Federal Government for 1975 automobiles. All the vehicles were tested at the outset of the race, at a Detroit stopover and at Caltech in Pasadena. Comparisons of these figures and each vehicle's elapsed time determined which had been victorious.

I am singularly impressed with the effort and energies which have been expended by the students at MIT and Caltech who organized and conducted this race, known as the Clean Air Car Race. It is estimated that from 1,000 to 1,500 students spent this summer building, testing, and perfecting automobiles they think can help reduce vehicular air pollution. They have been assisted in this effort by the National Air Pollution Control Administration of the Department of Health, Education, and Welfare, electric and propane gas industry associations and by two of the major automobile manufacturers, General Motors and Ford.

I have long contended that the Federal Government alone cannot effectively fight air pollution. Only through a coordinated, concentrated effort—as epitomized by this Clean Air Car Race—by industry, private citizens, and governmental bodies can we succeed. The Federal Government's role must be, as it was in this effort, one of guidance and, as necessary, funding.

I commend the following articles to my colleagues' attention as an example of what can and must be done if we are to survive our environmental crisis:

MIT TO DOCUMENT CLEAN AIR CAR RACE FOR NAPCA; 58 ENTRIES FROM 44 UNIVERSITIES

The 1970 intercollegiate transcontinental Clean Air Car Race, scheduled to start Aug. 24, will be documented with papers and films compiled by Massachusetts Institute of Technology, under contract with National Air Pollution Control Administration. Thirty- and 50-minute films for general audiences,

and a 30-minute technical film, will cover pre-race building and testing of vehicles as well as race performance and pollution emission testing. Technical papers will analyze race data to discover reliability and safety of the five types of cars used, which include electrics, gasoline-electric hybrids, steamers, turbines, and cars with conventional internal combustion engines burning low-polluting fuels such as propane, natural gas, or special blends of gasoline. Studies will also present economic evaluation of the power plants and their fuels using both current and future cost estimates.

Major objective of race, stated M.I.T. graduate student Bob McGregor, chairman of CACR Organization Committee, is to gather information on pollution emission and performance of unconventional propulsion systems, thereby permitting better judgment of feasibility of such systems. "After the race," McGregor said, "we can present previously unavailable facts describing these characteristics to both the general public and the scientific community." NAPCA will use the documented information in judging candidates for the Federal Clean Car Incentive Program, intended to stimulate private research and development of commercially acceptable low pollution passenger vehicles by providing graduated financial incentives to those risking capital resources for this development.

FIFTY-EIGHT ENTRIES FROM FORTY-FOUR UNIVERSITIES

The race, organized primarily by students at M.I.T. and the California Institute of Technology at Pasadena, Calif., will feature 58 experimental low-pollution vehicles from 44 U.S. and Canadian universities. The vehicles, which must meet or better exhaust level pollution standards set by Federal Government for 1975, represent to varying degrees the cooperative efforts of industry and university, in that some student groups have designed and built cars with little or no industrial aid, while others are driving experimental vehicles built by industrial firms. Race rules stipulate, however, that students make all roadside repairs.

The cars, each with a two-man driving team, will start from M.I.T. in Cambridge and follow a 3,600-mile superhighway route to Caltech in Pasadena. Race will be divided into seven legs, with overnight stops at Toronto; Detroit; Champaign, Ill.; Oklahoma City; Odessa, Tex.; and Tucson, Ariz. A normalized time based on route speed limits and traffic and road conditions, will represent optimum driving time for each leg. Each vehicle's elapsed race time will be recorded and its emission of carbon monoxide, hydrocarbons and nitrogen oxides tested in Detroit and Pasadena, to be compared with pre-race emission tests. Points in the race will be based on fuel consumption, elapsed time for each leg, performance and handling, and most particularly, on pollution emission.

FEDERAL, INDUSTRIAL, STUDENT COOPERATION

An estimated 1,000 to 1,500 students have spent this summer building, testing and perfecting automobiles they think can help reduce vehicular air pollution. NAPCA, in addition to the grant for race documentation, has provided the CACR Organization Committee with monetary assistance in planning and staging of the race. Electric and propane gas industry associations are setting up refueling or recharging facilities along the race route, and 20 Chevelles plus $40,000 has been provided by General Motors to collegiate groups otherwise unable to muster adequate support. The Ford mobile laboratory is conducting pre-race emission tests.

The 1970 competition is an outgrowth of a two-car race in 1968, when a student at Caltech raced a battery-powered electric car which he built, against a similar type car built by a group of M.I.T. students. Contestants drove in opposite directions between Pasadena and Cambridge, and while the M.I.T. car finished first, it had to be towed so much that penalties gave victory to the Caltech car.

STUDENTS RACE CLEAN-AIR CARS TO WEST COAST

(By David Hoffman)

CAMBRIDGE, MASS., August 24.—The weirdest cars in America hissed, gurgled and hummed toward California today at the start of the 3,600-mile "Clean Air Car Race."

With students at the wheels, 425 low-pollution power plants began leaving the Massachusetts Institute of Technology campus at precisely 3 this morning—at imprecise intervals. Spectators laughed but participants didn't.

By 8:30 a.m. the caravan of cars and support vehicles stretched several hundred miles along the Massachusetts Turnpike en route to an overnight pit stop in Toronto. At least most were headed for Toronto.

A reddish 1970 Javelin with a huge hole in its hood was pushed to the starting line by four solemn-faced students from the University of California at San Diego. It featured a steam engine stoked by liquid propane gas.

The car's boiler let loose a great puff of steam. There were whirring sounds. A liquid looking much like milk began to spill from underneath and run toward the gutter. "That's normal," said the driver. As the car began an all-over shiver, its starting time was called and the students gave a massive shove. It made the Charles River, three blocks away, and quit completely.

The Clean Air Car Race is being jointly sponsored by MIT and the California Institute of Technology to dramatize the threat of exhaust pollution and to test concepts for alleviating it.

Entering cars are divided into five categories. Internal combustion, electric power, electric-hybrid power, steam and turbine. The engines are powered by unleaded gasoline, leaded gasoline, diesel, kerosene, natural gas, liquid natural gas, alcohol and batteries. A prize of $5,000 goes to the winner in each category, the money coming from the Department of Health, Education and Welfare.

As for how the winners are chosen only the students understand that. A computer in Chicago will be asked to relate each entry's pollution emission, performance, racetime and thermal efficiency. A great deal of arguing reportedly went into the selection system.

A car that resembled a crushed Jungle Jim moved briskly to the starting line. Behind the driver was a gas turbine powered by propane gas and designed to drive an electric motor, which, in theory, moved the car.

"That's the quietest car I've ever heard," said a visitor.

"That's because it isn't running," said the driver, Anne T. Packer, a student at the University of New Hampshire.

"What's funny about this," she continued, "is that we didn't really decide to go until 9 last night. But we always wanted to visit California. We can't do much. We've only got $10."

Miss Packer's car was hoisted aboard a long flat-bed trailer a few blocks from the starting line. Its battery will be used again six days later to cross the finish line in Pasadena, she said.

While attracting much interest, the electric and steam-powered cars seemed to fare the worst today. The steamers never escaped MIT's campus. Three of the five electrics experienced power problems within 50 miles of Boston. At a turnpike filling station near Worcester, Mass., the Boston University-Avis entry was being swarmed over by students in Avis "We Try Harder" shirts. They were feeling the car's lights and wire for a hidden short.

"This is terrible," said driver Thomas E. Jeleniewski of Boston. "We may have lost a third of our range."

It is perhaps wrong to emphasize all that went wrong this morning. An hour after all entries had started, I patrolled the turnpike west of Boston and outward for 50 miles.

The only clear air cars in evidence were the three electrics. Each contained a powerplant designed not for cross-country auto races but for going to supermarkets. The others were long gone.

It is perhaps right to emphasize how much interest the electricity, natural gas and oil industries have expressed in this race. Their representatives mingled freely with the drivers this morning, and nearly every car had a joint university-industry sponsor. A company that manufacturers lead for gasoline helped Wayne State University prepare its entry, which used leaded gas. The name of prominent natural and propane gas manufacturers were emblazoned on the hoods of cars using those fuels, including "The Gasser" the only entry sponsored by a high school.

Behind the wheel was Kenneth Pigg, 16, of Putnam City West High School in Oklahoma City. He was asked why his car used both propane and natural gas. I was handed a pamphlet prepared in part by the Corken Pump Company which pointed out that 37 million Americans have natural gas in their homes and thus could serve as filling stations for natural gas-burning cars.

[From the Washington Post, Sept. 3, 1970]

LEAD-FREE AUTO WINS "CLEAN" RACE

PASADENA, CALIF., September 2.—The overall winner in the 1970 Clean Air Car Race was the lead-free gas-powered Mercury Capri entered by students from Wayne State University in Michigan, race judges announced tonight.

The car, captained by Richard A. Jeryan, was served by crew members Brian Geraghty, Dan Harmon and Mile Riley.

Co-winners in Class 1, for internal combustion engines, were the 1970 Chevrolet Nova from the Worcester Polytechnic Institute, Mass., and the alcohol-powered 1970 American Motors Gremlin from Stanford University.

The winner in the electric classification was the homemade sedan from Cornell University driven by students Mark Hofman, Jane Hersey, Foster Hinshaw and Peter Lord.

SENATOR GORDON ALLOTT SPEAKS

HON. BARRY M. GOLDWATER, JR.

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, September 9, 1970

Mr. GOLDWATER. Mr. Speaker, recently, Senator GORDON ALLOTT, Republican of Colorado, gave an address in Chicago. His address concerned the President's Commission on Campus Unrest. I urge my colleagues to read his remarks in their entirety, as what he said is disturbing, to say the least. Indications also seem to point to the fact that Senator ALLOTT could very well be right in his doubts—grave as they are—and reservations about the Commission. Senator ALLOTT has expressed the very same views as I wrote about recently. I submit them now for your very serious consideration:

STATEMENT BY SENATOR GORDON ALLOTT

Greetings: Summer is ending and the school year is beginning. It is a good time to remember a wise remark by Mr. Dooley, the fictional philosopher who entertained Americans around the turn of the century. Mr. Dooley was once asked: "If you had a boy would you send him to college?" To which Mr. Dooley replied: "At the age when a boy is fit to be in college, I wouldn't have him around the house."

That joke has an odd ring to it nowadays. Because of the actions of a small but determined minority of violent students, many of our great universities are becoming unfit places for the decent majority of students.

In fact, a lot of our traditional jokes about universities now sound odd. Not so long ago it was fun to describe a professor as a man whose job is to tell students how to solve the problems of life which he himself tried to avoid by becoming a professor. Perhaps there once was a time when one could avoid problems by becoming a professor. But that time has passed.

Not so long ago someone defined a "university" as an institution for the postponement of experience. Perhaps the same person defined an "education" as something that enables one to get into more intelligent trouble. Both these definitions seem a little dated today. Today our universities are institutions where people are exposed to dangerous kinds of experiences. And sometimes it seems that an "education" is something that enables one to get into the most mindless kinds of trouble.

Ladies and gentlemen, the old jokes about universities are not funny any more. The situation on our campuses is no laughing matter—as they can tell you in Madison, Wisconsin, where a bomb recently killed a father of three, and did millions of dollars in damages.

This morning I want to share with you my thoughts on the dangerous situation we face as the new school year begins. I am happy to be able to speak with you on this subject.

You represent American agriculture, and American agriculture represents the sort of achievements that come from healthy cooperation between free men and free universities. Too few Americans understand that agriculture is one of the most technologically sophisticated businesses in this technologically sophisticated Nation. And too few people understand that the phenomenal productivity of American agriculture owes much to the creative partnership that has long existed between American farmers and our great State universities. I am sure everyone here understands this, and that is why I know you are interested in helping save our universities.

A good way to begin helping our universities is to discuss intelligently an important project now underway in Washington. This project disturbs me and I think it should disturb you.

Right now the President's Commission on Campus Unrest (the Scranton Commission) is writing a report on its findings. It will issue that report soon. In fact, the issuance of that report may closely coincide with the opening of the new school year.

What disturbs me is that this report may do even more damage than has already been done by what I think were flamboyant, inflamatory, prejudiced and irresponsible actions by the Commission during its months of public hearings. There is reason to fear that the forthcoming report may be a flaccid whitewash of the violent new-left political movement that is openly seeking to capture or destroy our great universities. My concern is based on two facts. First, this Commission has not behaved well so far. Second, this kind of Commission is foredoomed to failure because it is perfectly designed to aggravate the problems it is supposed to solve.

Let me deal with the general and the particular. I will explain why such Commissions are generally a bad idea, and then why I think this particular Commission has been no exception to that rule.

The central problem with such Commissions is that they are literally irresponsible. They do not have to answer to any voters for the statements they make. They are not responsible for implementing their own recommendations. They can cruise into a troubled community, generate a lot of publicity, raise tempers and a lot of dust, and then be gone. Others are left responsible for cooling the tempers and settling the dust after these instant experts have dashed off to the scene of their next instant analysis.

Another and related problem with such Commissions is that, while the individual members have no continuing responsibility for implementing the policies they advocate, they do have responsibilities in their regular employment. And these responsibilities can influence their behavior when serving on Commissions. Let me give an example.

One of the members of the Commission is President of a university that has its own full complement of tensions and political activists. This man is not *responsible* for any campus but his own. Yet he is under the constant pressure of temptation—the temptation to use his spot on the Commission to make the sort of statements that will please the radicals he will have to cope with on his own campus this fall.

Now I do *not* think all Commissions are equally bad. It is important to distinguish between two kinds of Commissions—those which investigate questions of fact, and those which delve into matters of moral judgment and policy formation. Compare the Warren Commission with the Commission on Campus Unrest.

The Warren Commission was created to investigate the facts about the assassination of President Kennedy. It was composed of eminent men who had no axes to grind. Its purpose was to lay to rest the ugly and neurotic rumors that inevitably circulate after such a tragedy. I think the Warren Commission performed that task reasonably well.

But the Commission on Campus Unrest is not investigating a narrow question of fact. It is deeply enmeshed in the most emotion-charged issues of the day. Indeed, some Commissioners have shown great zest for declaiming on drugs, war, peace and anything else which some radical witness claims is making him restless. This Commission is not composed of men who are uniformly eminent or disinterested. Rather they are a mixed batch, and some have highly developed (and fashionably leftist) political views which they are not bashful about advertising.

I am not saying that there have not been proper times for the Commissioners to express strong opinions. On the contrary, I think the Commissioners have been derelict in not voicing strong indignation when witnesses have viciously attacked this Nation, and arrogantly justified coercive behavior. On such occasion the Commissioners have been distressingly passive. They have given the impression of seeking what Lincoln called "sophistical contrivances"—such as "some middle ground between the right and the wrong."

This brings me to the matter of this Commission's particular failings.

First, some of the Commissioners are hardly objective investigators. It will be recalled that one young Commissioner—who has become the darling of the media—almost immediately after being appointed announced that he thought the President was to blame for the problems at Kent State. For months now one has not been able to turn on the television news without seeing this man laying down the law about other people's sins.

Second, the Commission has given a disproportionate amount of time to hearing political speeches by radicals. Perhaps the effect of such hearings would not be quite so bad if the press could be relied upon to give balanced coverage. Unfortunately, the press only makes matters worse. When the Commission descended on Kent State, the President of that University gave a very interesting and balanced assessment of the situation. But the prominent press coverage went to some student who said—and I do not jest—that campus riots would not stop until we "clean up our lakes and rivers."

The third failing of the Commission is that some members have been rude, arrogant and high-handed in dealing with persons who are not radicals. For example, physicist Edward Teller and philosopher Sidney Hook—two of America's most distinguished and public spirited scholars—were treated with disdain and contempt when they testified.

Members of the Commission staff also have been guilty of high-handed arrogance. At one o'clock in the morning of August 17 a phone rang at Lockbourne Air Force Base near Columbus, Ohio. The caller was a 28-year-old law student employed by the Commission. This young man demanded that the Air Force instantly send a helicopter 130 miles to the Holiday Inn in Kent, Ohio from which he was calling. He wanted the helicopter to fly him to Camp Grayling in central Michigan so he could serve subpoenas on some Ohio National Guardsmen who were undergoing summer training there. He also demanded a contingent of Air Force policemen to accompany him. The people at Lockbourne patiently explained that they did not have any helicopters or policemen to lend. This did not satisfy the staff member, who proceeded to place a number of other demanding calls. Before long he was demanding things of the tactical air command post at Langley Air Force Base in Virginia. There he harassed the executive officer for the Air Force Vice Chief of Staff. At about 2:30 a.m. he awakened a Deputy Assistant Secretary of Defense at home. In what must be one of the year's great understatements, the Secretary allowed as he was "not too thrilled" by the chance to talk to this aggressive staff man in the middle of the night. I am happy to report that when this staff man finally quit calling—at 5:55 a.m.—he still had not managed to brow-beat the military into giving him helicopters and a battery of policemen.

The fourth failing of this Commission is that its members have not demonstrated proper sensitivity to the civil rights of witnesses. Commission "hearings" frequently have resembled trials. Witnesses have been subjected to accusatory inquisitions. Commissioners have assailed reputations and rendered judgments on the basis of flimsy information and hasty investigation.

Ladies and gentlemen, when I think about these failings, I worry about the possible contents of the report the Commission will issue soon. I hope the report does not reflect these failings I have mentioned. I especially hope it avoids the five most familiar—and frankly, the dumbest—cliches about campus disorders. These cliches are familiar to us all.

The first cliche is that all the trouble can be described by the antiseptic word "dissent"—implying that riots and bombings are a form of "dissent."

The second cliche is that all the unrest is a result of "excesses" of idealism—implying that the bombers have hearts of gold.

The third cliche is that the Federal Government should "listen to" and "be more responsive to" the radicals—but this cliche does not tell us what is to be gained from "listening to" an arsonist, or how one is supposed to be "responsive to" a rioter.

The fourth cliche is that we should cure the disorders by changing our foreign policy,

or cleaning up Lake Erie, or performing some other list of good deeds demanded by a violent minority. This cliche ignores the fact that to do so would amount to giving up majority rule and turning our democracy into a mobocracy dominated by adolescent minorities.

The fifth cliche about campus disorders is the tiresome statement that usually passes for fairness. This is the statement that campus violence is equally bad when done by political leftists or political rightists. The trouble with this is that it implies that violence is coming from both sides. In fact, last spring leftist elements shut down 500 universities *in one week*, and rightist elements shut down *none*.

As I have said, I hope the Commission report avoids these damaging cliches. If the report accepts these cliches, it will give a Government stamp of approval to all the muddled thinking that has influenced the most misguided university administrators in recent years.

There are raging conflagrations on our campuses. We need to douse them—and the incendiaries who are lighting them—with cold water. But the Commission report may be about to pour kerosene on the flames.

This will especially hurt the moderates on campus who are fighting today on embattled and eroding ground. They occupy the position of simple decency. They are fighting for traditional academic freedom—for the freedom of scholars to teach without political interference. They are fighting to prevent our universities from coming to resemble some Latin American universities where militant students impose their politics on every aspect of university life. In short, these moderate men and women are fighting—sometimes at risk to their own safety—for you and for me. And you and I will suffer along with them if the Commission report cuts the ground from under them.

Recently there have been some optimistic predictions that this would be a relatively quiet year on campuses. I do not know whether this hope is justified. But this much I do know. The dedicated, patient moderate men and women on campuses have been strained to the breaking point in recent years in their efforts to hold up the standards of common decency on campus. They have been attacked—sometimes physically attacked—by extremist students. They have been betrayed by weak administrators bent on appeasement. They have been distracted from their scholarly tasks. The last thing these brave and dedicated people need is a stab in the back from this Commission. And that is exactly what they will get if the Commission report justifies the violent minority which has done millions of dollars damage on campus, has forced the closing of hundreds of universities, and has violated the rights of millions of American students and scholars.

This Commission has already done damage simply by failing to be manfully indignant when radical witnesses have suggested that riots are justifiable until the Government does what radicals demand. A report that fails to express vigorous indignation about coercion from the left will amount to a stab in the back to the moderates and the majority.

If the Commission does administer this stab in the back, then we will be face to face with a grim irony. The Commission established to investigate disorder will have become a cause of disorder. This Commission was appointed by this Administration. I am a Republican; a member of the Senate leadership; and I am one of the President's most consistent supporters. Hence, I take no pleasure from noting the misadventures of this Commission. However, common sense tells me that the President himself is not solely responsible for this. He is quite properly preoccupied with the tasks of establishing peace and economic stability. He cannot personally attend to all the details of domestic policy.

So, in such matters he must rely heavily on his staff. I am convinced that responsibility for this Commission and its make-up rests heavily on the shoulders of a few of the President's senior domestic policy advisors. If so, in this matter, the President's advisors have not served him well.

In fact, if the Nation's domestic affairs are unsettled this fall by campus disorders, part of the blame will attach to the Commission on Campus Unrest, and to the President's advisors who assembled it.

One lesson to be learned from this is that people in Washington are not well placed to solve the problems on the campuses. The most important work on behalf of common sense and decency on campus can be done by people like you back in your respective states.

The way for you to begin is by facing three hard facts.

First, neither the Federal Government nor any policy or official of the Federal Government is to blame for campus problems. Nothing could be more inane than the testimony of those persons who told the Commission that the President or the Vice President is to blame. There have been major campus disorders since 1964—and at that time Mr. Nixon was practicing law in New York and Mr. Agnew was serving as Baltimore county executive. Blaming the President's or Vice President's "rhetoric" for campus riots is about as sensible as blaming Leo Durocher's "rhetoric" for the Chicago fire of 1871.

The second hard fact we must face is that the Federal Government cannot solve the problems of the campuses. With regard to private institutions such as Harvard, if the alumni do not exert their influence—and especially their financial power—on behalf of common decency, then nothing can save them. With regard to the State universities, unless the State legislatures exercise their power, the State universities are doomed.

The third hard fact we must face is that if our universities are going to be saved, they will be saved by persons such as you. The next time a school administration or faculty appeases radicals by shutting down the school, let the State legislatures cut the funding for the school accordingly. If one week of classes are suspended, let a prorated amount of funding be withdrawn. This will work wonders for putting backbone in university administrators. Further, when it dawns on the faculty that the State legislatures vote the funds that pay faculty salaries, the faculty will become anxious to keep classes going.

It is clear where persons such as you fit into this process. In an important sense each of you is a trustee of your State university. If each of you, and each of your friends, takes it upon yourself to talk sense to your State governments, then the State governments will talk sense to the persons who are running our precious—and expensive—universities.

If you and your legislators talk sense, then our universities will survive the kind of nonsense that has been talked by so many witnesses before the Commission, and the kind of nonsense which threatens to appear in the Commission report.

Ladies and gentlemen, I know it is very early in the day to be pondering such grave and ominous matters. But it is rather late in the life of our great universities for us—all of us—to join in defending them from their violent enemies, and from those who obscure the facts about these enemies.

All of us have a stake in the survival of these universities. And there can be no doubt that the very survival of these institutions as educational institutions is at stake. If these institutions are not to be debased; if they are not to become staging grounds for radical political agitation; then all responsible citizens must take a stand.

If you do take a stand, you can undo all the damage that has been done by the Commission on Campus Unrest, and you can make sure that no one will ever think we need another such Commission.

WHEN CBS AND WALTER CRONKITE FAILED TO TELL IT LIKE IT WAS

HON. O. C. FISHER

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, September 9, 1970

Mr. FISHER. Mr. Speaker, under leave to extend my remarks I include a copy of a letter from a constituent, Mr. William J. Cooper, Jr., of San Antonio, Tex., addressed to the president of CBS in New York. The letter contains some interesting and pertinent information regarding an August 21 broadcast, which I am pleased to bring to the attention of the membership of the House.

The letter follows:

SEPTEMBER 4, 1970.

The PRESIDENT,
Columbia Broadcasting System,
New York, N.Y.

DEAR SIR: When Vice President Agnew called the TV networks to task for their reporting tactics there were loud screams of anguish about freedom of the press and speech. As I recall, yours was one of the loudest and most vociferous voices heard.

This is all well and good. I firmly believe in freedom of speech and all the other guarantees set forth in the constitution and amendments thereto. But I also believe that to yell "fire" in a crowded theater where in fact there is no fire, trangresses the concept of freedom of speech.

The purpose of this letter is to exercise my own freedom of speech to tell you that in my opinion you, or rather your network, seems to have transgressed this concept.

Between 5:30 and 6:00 p.m. on the 21st of August 1970, I was listening to the newscast aired in San Antonio, Texas by KENS–TV, a CBS affiliate. A portion of this program features Walter Cronkite with the CBS news. On this date, he was commenting about the National Guard being equipped with the army M–16 rifle. He said, among other things, that if called out on riot duty, this is the only weapon with which they will be equipped. Then a sketch of the M–16 rifle was shown and Mr. Cronkite intoned ominously, "This rifle will fire 600 rounds per minute." The inference seemed clear to me that with this awful weapon, specially issued to the National Guard, they could "mow 'em down," with each guardsman spewing forth 600 rounds per minute.

I categorically challenge: First, that the M–16 will fire 600 rounds per minute for even one minute.

1. The *rate*, and I emphasize the *rate*, of fire of the M–16 rifle is probably in excess of 600 rounds per minute.

2. The M–16 rifle is loaded with a clip of ammunition which normally holds twenty rounds. To fire 600 rounds per minute would require that the shooter—fire, eject, and reinsert 30 clips of ammunition in the space of 60 seconds. This, if not physically impossible, is highly improbable.

3. I doubt that the normal infantry rifle-

man will stagger into combat carrying 600 rounds of ammunition on top of his already burdensome load, to say nothing of a National Guardsman called out on riot duty and probably handed one, or at the most, two clips of ammunition.

4. Without laying any claim to being an ordnance expert, I seriously doubt that the M–16, or any other rifle, would sustain a rate of 600 rounds per minute without overheating and becoming warped or jammed.

Secondly, the inference that there is something nefarious about the National Guard being issued M–16 rifles.

1. The National Guard has a dual role to fulfill. To begin with, they function as state militia under the command of the governors of the various states. Then they are an on-call reserve subject to the call of the President in war, national emergency, or other appropriate times. Because of this, it has long been customary to equip National Guard troops with modern weapons as they become available in sufficient quantity.

2. The M–16 is the weapon being issued to the Regular Army as the standard item of equipment. To impute, even by inference, that National Guardsmen are being equipped with the M–16 rifle for riot duty because it is a more deadly weapon does a dis-service to our government and to our country as a whole. Of course, the M–16 is more deadly to enemy troops than previously used rifles. There would otherwise be no justification for equipping the army with this weapon. Surely you do not think the Guard, as a Federal reserve, should be expected to engage in combat with a weapon inferior to one readily available. And most assuredly, you do not expect the Guard to be equipped with one rifle for general warfare, and another for riot duty. The supply, accounting, and maintenance problems generated by possession of two distinctly different rifles, to say nothing about the difference in caliber of ammunition, would be tremendous.

Again, sir, you screamed loud and long about freedom of speech when Mr. Agnew stood up and exercised his freedom of speech to express his thoughts about network reporting tactics. Again, I favor freedom of speech just as much as you do. But if you are going to tell it, then I say to you, tell it like it is!

Very truly yours,

WILLIAM J. COOPER, Jr.

SENATE—*Thursday, September 10, 1970*

The Senate met at 10 a.m. and was called to order by Hon. JAMES B. ALLEN, a Senator from the State of Alabama.

The Chaplain, the Reverend Edward L. R. Elson, D.D., offered the following prayer:

O Lord, in reverent mood we open our hearts to Thy presence and our minds reach up to Thee for direction. Let that mind be in us that was in the Man of Nazareth. Rule over the deliberations of this body for the welfare of this Nation and the advancement of Thy kingdom.

Through Jesus Christ our Lord. Amen.

DESIGNATION OF ACTING PRESIDENT PRO TEMPORE

The PRESIDING OFFICER. The clerk will please read a communication from the President pro tempore of the Senate (Mr. RUSSELL).

The assistant legislative clerk read the following letter:

U.S. SENATE,
PRESIDENT PRO TEMPORE,
Washington, D.C., September 10, 1970.

To the Senate:

Being temporarily absent from the Senate, I appoint Hon. JAMES B. ALLEN, a Senator from the State of Alabama, to perform the duties of the Chair during my absence.

RICHARD B. RUSSELL,
President pro tempore.

Mr. ALLEN thereupon took the chair as Acting President pro tempore.

THE JOURNAL

Mr. MANSFIELD. Mr. President, I ask unanimous consent that the reading of the Journal of the proceedings of Wednesday, September 9, 1970, be dispensed with.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

ORDER FOR THE TRANSACTION OF ROUTINE MORNING BUSINESS

Mr. MANSFIELD. Mr. President, I ask unanimous consent that there be a period for the transaction of routine morning business, with statements therein limited to 3 minutes.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

ORDER FOR RECOGNITION OF SENATOR YOUNG OF OHIO

Mr. MANSFIELD. Mr. President, I ask unanimous consent that the distinguished Senator from Ohio (Mr. YOUNG) be recognized tomorrow for 20 minutes after disposal of the unobjected-to items on the calendar.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

COMMITTEE MEETINGS DURING SENATE SESSION

Mr. MANSFIELD. Mr. President, I ask unanimous consent that all committees be authorized to meet during the session of the Senate today.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

ORDER OF BUSINESS

Mr. MANSFIELD. Mr. President, I suggest the absence of a quorum.

The ACTING PRESIDENT pro tempore. The clerk will call the roll.

The assistant legislative clerk proceeded to call the roll.

Mr. BELLMON. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

PRISONERS ALL

Mr. BELLMON. Mr. President, the tragic hijacking of four airliners has focused the world's attention on a group of captives on a Mideast airfield. Everyone prays for their safe return; all men are appalled by the barbarity of the captors.

But there is another group of prisoners, halfway around the world from that desert landing strip, who also deserve our prayers and support. These are the American soldiers, sailors, and airmen held by the North Vietnamese.

The passengers of the three jets now in Jordan have been held 4 days. Some of our men in Vietnam have been prisoners over 4 years.

We must not allow time to dull our concern for any American illegally detained. The issue of prisoners is again in the spotlight. Let us be certain all Americans held anywhere are remembered.

STATUS OF UNFINISHED BUSINESS WHEN TEMPORARILY LAID ASIDE

Mr. BYRD of West Virginia. Mr. President, I ask unanimous consent that when the unfinished business, Senate Joint Resolution 1, is temporarily laid aside this afternoon, circa 5 p.m., it remain in that status until the close of morning business on tomorrow.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

COMMUNICATIONS FROM EXECUTIVE DEPARTMENTS, ETC.

The ACTING PRESIDENT pro tempore (Mr. ALLEN) laid before the Senate the following letters, which were referred as indicated:

REPORT OF AGREEMENTS SIGNED FOR FOREIGN CURRENCIES UNDER PUBLIC LAW 480

A letter from the General Sales Manager, Export Marketing Service, U.S. Department of Agriculture, transmitting, pursuant to law, a report of agreements signed for foreign currencies under Public Law 480 (with an accompanying report); to the Committee on Agriculture and Forestry.

REPORTS ON REAPPORTIONMENT OF APPROPRIATIONS

A letter from the Deputy Director, Office of Management and Budget, Executive Office of the President, reporting, pursuant to law, that the appropriation to the Department of Interior for "Management of lands and resources," Bureau of Land Management, for the fiscal year 1971, has been apportioned on a basis which indicates a need for a supplemental estimate of appropriation; to the Committee on Appropriations.

A letter from the Deputy Director, Office of Management and Budget, Executive Office of the President, reporting, pursuant to law, that the appropriation to the Department of the Interior for "Management and protection," National Park Service, for the fiscal year 1971, has been apportioned on a basis which indicates the necessity for a supplemental estimate of appropriation; to the Committee on Appropriations.

REPORT ON INTENTION OF THE NAVY TO DONATE CERTAIN SURPLUS PROPERTY

A letter from the Under Secretary of the Navy, reporting, pursuant to law, the inten-

tion of the Department of the Navy to donate two railway flat cars to the Pacific Southwest Railway Museum Association, Inc., San Diego, Calif.; to the Committee on Armed Services.

PROPOSED LEGISLATION RELATING TO BENEFITS FOR EMPLOYEES OF THE GOVERNMENT OF THE DISTRICT OF COLUMBIA

A letter from the Assistant to the Commissioner, Executive Office, Government of the District of Columbia, transmitting a draft of proposed legislation relating to benefits for employees of the Government of the District of Columbia, and for other purposes (with accompanying papers); to the Committee on the District of Columbia.

PROPOSED LEGISLATION TO AMEND THE ATOMIC ENERGY ACT OF 1954, AS AMENDED

A letter from the Chairman, Atomic Energy Commission, transmitting a draft of proposed legislation to amend the Atomic Energy Act of 1954, as amended, to clarify the authority of the Atomic Energy Commission to authorize the establishment of a material access approval program for individuals having access to certain quantities of special nuclear material, and for other purposes (with accompanying papers); to the Joint Committee on Atomic Energy.

BILLS INTRODUCED

Bills were introduced, read the first time, and, by unanimous consent, the second time, and referred as follows:

By Mr. PEARSON:

S. 4332. A bill for the relief of Farouk Brahimi; to the Committee on the Judiciary.

By Mr. SPONG:

S. 4333. A bill for the relief of Eddie Troy Jaynes and Rosa Elena Jaynes; to the Committee on the Judiciary.

By Mr. GORE:

S. 4334. A bill for the relief of Leticia Ramos; to the Committee on the Judiciary.

By Mr. GOODELL (for himself and Mr. JAVITS):

S. 4335. A bill to deter aircraft piracy by invoking a commercial air traffic quarantine against countries abetting aircraft piracy; to the Committee on Commerce.

(The remarks of Mr. GOODELL when he introduced the bill appear later in the RECORD under the appropriate heading.)

ADDITIONAL COSPONSORS OF BILLS

S. 5

At the request of the Senator from Minnesota (Mr. MONDALE), the Senator from Illinois (Mr. PERCY) was added as a cosponsor of S. 5, to promote the public welfare.

S. 4089

At the request of the Senator from Utah (Mr. MOSS), the Senator from Oklahoma (Mr. BELLMON) was added as a consponsor of S. 4089, to amend the Internal Revenue Code of 1954 to clarify the status of certain oil well service equipment under subchapter D of chapter 36 of such Code (relating to tax on the use of certain vehicles).

S. 4092

At the request of the Senator from West Virginia (Mr. RANDOLPH), the Senator from Florida (Mr. GURNEY) was added as a cosponsor of S. 4092, to establish a Commission on Fuels and Energy to recommend programs and policies intended to insure that U.S. requirements for low-cost energy will be met, and to reconcile environmental quality requirements with future energy needs.

S. 4096

At the request of the Senator from South Carolina (Mr. HOLLINGS), the Senator from Illinois (Mr. SMITH) was added as a cosponsor of S. 4096, to amend the Federal Food, Drug, and Cosmetic Act.

S. 4265

At the request of the Senator from Oregon (Mr. HATFIELD), the Senator from West Virginia (Mr. RANDOLPH), the Senator from Alaska (Mr. GRAVEL), the Senator from Vermont (Mr. PROUTY), the Senator from New York (Mr. GOODELL), the Senator from Colorado (Mr. ALLOTT), and the Senator from Kansas (Mr. DOLE) were added as cosponsors of S. 4265, to amend section 306 of the Consolidated Farmers Home Administration Act to increase the aggregate annual limit on grants for water and waste facilities constructed to serve rural areas and to increase the aggregate annual limit on grants for plans for the development of such facilities.

S. 4266

At the request of the Senator from Utah (Mr. MOSS), the Senator from Massachusetts (Mr. KENNEDY), was added as a cosponsor of S. 4266, to amend the Federal Aviation Act of 1958 in order to authorize certain reduced-rate transportation to individuals who are 65 years of age or older.

S. 4297

At the request of the Senator from West Virginia (Mr. BYRD), on behalf of the Senator from Massachusetts (Mr. KENNEDY), the Senator from Rhode Island (Mr. PASTORE) was added as a cosponsor of S. 4297, to create a health security program.

S. 4331

Mr. HART. Mr. President, I ask unanimous consent that, at the next printing, the name of the Senator from New Jersey (Mr. WILLIAMS) be added as a cosponsor of S. 4331, to amend the National Vehicle Safety Act of 1966 in order to promote competition among motor vehicle manufacturers in the design and production of safe motor vehicles having greater resistance to damage, and for other purposes.

Mr. President, it was an oversight on my part that the name of the Senator from New Jersey was not listed with the several original cosponsors when I introduced the bill yesterday.

The PRESIDING OFFICER (Mr. MONDALE). Without objection, it is so ordered.

AMENDMENT OF THE CONSTITUTION TO PROVIDE FOR THE DIRECT POPULAR ELECTION OF THE PRESIDENT AND VICE PRESIDENT—AMENDMENT

AMENDMENT NO. 885

Mr. EASTLAND submitted an amendment, intended to be proposed by him, to the joint resolution (S.J. Res. 1) proposing an amendment to the Constitution to provide for the direct popular election of the President and Vice President of the United States, which was ordered to lie on the table and to be printed.

(The remarks of Mr. EASTLAND when he submitted the amendment appear later in the RECORD under the appropriate heading.)

AMENDMENT OF PUBLIC HEALTH SERVICES ACT—AMENDMENTS

AMENDMENT NO. 886

Mr. DOMINICK. Mr. President, I submit an amendment, intended to be proposed by me, to the bill (S. 3418) to amend the Public Health Services Act to provide for the making of grants to medical schools and hospitals to assist them in establishing special departments and programs in the field of family practice, and otherwise to encourage and promote the training of medical and paramedical personnel in the field of family medicine. The purpose of this amendment, which is based on language suggested by the American Medical Association, is to cure what I consider to be an inflexible approach to the problem with which this bill is concerned. That problem is a shortage of general practitioners caused by increasing specialization in the medical profession. I agree with the overall objective of the bill, which is to produce more doctors and other medical personnel who are trained in the field of family practice medicine. But, I think the method proposed to carry out that objective is too rigid.

As presently written, this bill would require medical schools to establish separate departments of family medicine of equal standing with their other departments in order to qualify for grants. My amendment would give medical schools more flexibility by requiring only that they make sufficient administrative arrangements to satisfy the Secretary that grant funds would, in fact, be used for programs designed to train doctors and other medical personnel in family practice medicine.

I ask unanimous consent that the amendment be printed in the RECORD at this point in my remarks.

The PRESIDING OFFICER (Mr. BYRD of West Virginia). The amendment will be received and printed, and will lie on the table; and, without objection, the amendment will be printed in the RECORD.

The amendment (No. 886) is as follows:

AMENDMENT NO. 886

On page 2 strike out lines 11 through 16, and in lieu thereof, insert the following:

"(1) to establish or operate, as an integral part of their medical education curriculums, programs to provide teaching and instruction (including continuing education) in all phases of family practice";

Beginning on page 8, line 21, strike out all through page 9, line 17, and insert in lieu thereof, the following:

"(1) a school of medicine to establish or operate a program for the teaching of family practice medicine unless the Secretary is satisfied that such school has made adequate administrative provision for such program, through separate departments, administrative units, or other administrative arrangements that emphasize family practice in the education of medical students, interns and residents."

Mr. DOMINICK. Mr. President, although family practice is itself a specialty recognized by the American Medical Association, it requires training in several of the traditional specialities—internal

medicine, pediatrics, surgery, psychiatry, obstetrics, and gynecology. For that reason, an educational program in family practice medicine is adaptable to a diversity of administrative arrangements.

Many medical schools have programs which emphasize the teaching of family practice medicine. But at present, only nine of these schools administer such programs through separate departments of family medicine. The others administer their programs in a variety of ways, depending on what each school determines to be the most effective utilization of its particular resources. Some schools have established divisions of family medicine within one of their departments. Others have administrative arrangements which draw on the resources of several departments.

My staff has contacted representatives of several of the medical schools which do not have full departments of family medicine, and asked them their opinion regarding the requirement in this bill that each school set up a separate department of family medicine which is of equal standing with its other departments. Each school was strongly opposed to the requirement, and several stated flatly that they would not apply for Federal funds which were subject to that requirement. These are some of the reasons given:

First. Congress should not be legislating the curriculums of medical schools.

Second. Each medical school should be permitted to determine how best to administer its family medicine program, based on its particular resources.

Third. It would be difficult to get top-flight people to staff separate departments of family medicine. It would be better to utilize top people in existing departments.

Fourth. It would be very expensive to establish and operate separate coequal departments of family medicine. The cost estimates ranged from $250,000 to $600,000 per year.

The testimony of Dr. William R. Willard, recent chairman of the Council on Medical Education of the American Medical Association, before the committee which considered the bill, indicates he had the same problem with it that I have. He said:

We are somewhat concerned, however, over the specification in section 761(a)(1) that there must be "separate and distinct departments" established for those purposes. While new administrative units would be desirable, the requirement of "separate and distinct departments" would render ineligible for Federal assistance many otherwise worthy programs of family practice.

He referred to the report of the Ad Hoc Committee on Education for Family Practice of the American Medical Association, which emphasized that separate departments were only one of several ways of satisfying the need for administrative units responsible for carrying out family medicine programs, and went on to say:

In the light of this, surely it would be inadvisable to legislate the organizational structure for teaching family medicine, especially since some medical schools are successfully developing programs without separate departments.

Referring to the requirement that family medicine departments be of "equal standing" with other departments, he pointed out that such requirement is unclear because:

The various clinical departments of medical schools are not equal now in terms of budget, numbers of faculty, patient load, curriculum, or other measurable criteria.

After testifying before the committee, Dr. Willard wrote to Senator YARBOROUGH, the chairman, reiterating his opposition to the separate department requirement. He said:

It would be administratively inappropriate and unworkable.

He suggested an amendment which would eliminate that requirement, and leave it to the discretion of the Secretary of the Department of Health, Education, and Welfare to decide whether a medical school which applies for funds has made adequate administrative arrangements to assure that the funds will be used for a family medicine program. My amendment is based on his suggestion. I ask unanimous consent that a copy of his letter be printed in the RECORD at this point.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

AMERICAN MEDICAL ASSOCIATION,
Chicago, Ill., July 23, 1970.

Hon. RALPH YARBOROUGH,
U.S. Senate,
Washington, D.C.

DEAR SENATOR YARBOROUGH: You will recall that I had the privilege of testifying for the American Medical Association on behalf of Senate Bill 3418, in support of this Bill, which would assist in developing programs of family practice. You will also recall that I took some exception to Section 765(b), which reads:

"(b) The Secretary shall not approve any grant to—

"(1) a school of medicine to establish or operate a separate department devoted to the teaching of family medicine unless the Secretary is satisfied that—

"(A) such department is (or will be, when established) of equal standing with the other departments within such school which are devoted to the teaching of other medical specialty disciplines;

"(B) such department will, in terms of the subjects offered and the type and quality of instruction provided, be designed to prepare students thereof to meet the standards established for specialists in the specialty of family practice by a recognized body approved by the Commissioner of Education; . . ."

Possible language, which would meet my objection, to cover the content might read somewhat as follows:

"(b) The Secretary shall not approve any grant to—

"(1) a school of medicine to establish or operate programs of the teaching of family medicine unless the Secretary is satisfied that there is adequate administrative provision for such programs, either separate departments or other administrative arrangements or units that emphasize family medicine in the education of medical students, interns, and residents."

Section 765(b)(1)(A) and 765(b)(1)(B) and Section 765 (b)(2) should be dropped. Section 765(b)(1)(A) which specifies that the family practice department must be equal to other departments is not realistic, as my testimony pointed out, and would be administratively inappropriate and unworkable. Section 765(b)(1)(B) is inappropriate because medical students cannot be prepared to meet the standards for specialists in family practice. Their training is more generic and is a basis for practice in any specialty. Hopefully, there will be family practice orientation in the undergraduate program, however. Section 765(b)(2), which relates to the type and quality of program for the internship and residency, is redundant because an accredited program in family practice will, by definition, prepare residents for the specialty of family practice.

I appreciate the courtesy of the hearing which you gave me and the American Medical Association. If we can be helpful in any way, please call upon me or Dr. Rube.

Sincerely yours,

WILLIAM R. WILLARD, M.D.,
Immediate Past Chairman, Council on Medical Education.

Mr. DOMINICK. Mr. President, these views are shared by the Association of American Medical Colleges. Dr. Robert M. Heyssel, associate dean for health care programs, Johns Hopkins University School of Medicine, representing the association, testified:

The Association would view with great concern approaches which would have the effect of determining departmental organization and the nature of the curriculum in medical schools by statutory action. We join with the American Medical Association in their reservation concerning the specific language of S. 3418. Medical schools are actively changing their educational programs to meet new challenges. Support for specific programs rather than general support will limit the speed, flexibility, and effectiveness of this process of innovation. The objectives sought through S. 3418 could be well achieved if the bill were modified to provide broad support for all programs that will increase the number of physicians qualified to participate in the delivery of primary health care.

So, in summary, I repeat that I am in favor of the overall objective of this bill—to increase the number of doctors and other medical personnel who are trained in family medicine. But, I am opposed to the method this bill would adopt to achieve that objective. I think the requirement that medical schools establish separate departments of equal standing with other departments is ill advised for two basic reasons. The first is that such an approach is too inflexible. It would discourage the innovation and experimentation by medical schools which is necessary in order to find effective solutions to current and future health manpower needs. The second is that Congress should not be in the business of dictating the organization of, as well as the contents of, medical school curriculums. I think it makes better sense for Congress to establish the overall objective and to leave it to the medical schools, as my amendment would, to decide how best to carry out that objective, restricted only by the discretionary power of the Secretary to determine whether the method chosen would be effective.

ADDITIONAL STATEMENTS OF SENATORS

PLANE HIJACKINGS IN THE MIDDLE EAST

Mr. PEARSON. Mr. President, for the past few days headlines, television, and radio coverage have been dominated by

the crisis caused by recent hijackings in the Middle East. At stake at this moment are the lives of many people and the fate of nations.

Need I remind this body that this desperate situation affecting people and governments around the globe has been caused by a mere handful of determined, demented men. Need I recall that what we dreaded for so long we have now witnessed—the hijacking of a 747, with all its living cargo? Indeed, need I describe what this Nation, in living color, has witnessed—the explosion by sabotage of one of these great ships.

Mr. President, I do not directly address myself today to the underlying causes of war and peace among the belligerent nations of the Middle East. I do not address myself directly to the grave matters of international diplomacy involved. Rather, my emphasis shall be on the prevention and deterrence of the phenomenon of air piracy, the new and most dangerous crime of the 20th century.

It has been my concern that up to the present the American public has treated the problem of hijacking with apathy. In many minds, there has been a pervasive atmosphere of levity about this recurring phenomenon. Perhaps this attitude was understandable in the context of a free ride to Cuba. But where the drama is played against the backdrop of a volatile war torn Middle East where terror and death have become a daily occurrence, hijacking must be recognized for the gravely serious matter that it really is.

Reflective of this apathy, Congress and the Federal agencies have not approached this problem with determination and conviction. Many things could be tried. Many things could be done. The establishment of a joint FAA-industry "strike force" to be available on a moment's notice; development of a prosecution task force from FAA and Justice to assist local U.S. attorneys in the prosecution of apprehended criminals; continued pressure through the Department of State, ICAO, the United Nations, and other international organizations to bring uniformity of post-hijacking handling of criminals and to eliminate sanctuaries—these are but a few of the things which responsible agencies should be doing.

Moreover, figures at my disposal indicate that only one-quarter of 1 percent of the Federal Aviation Administration fiscal 1971 budget was allocated for research and development related to the problem of hijacking and concealed weapons.

But I must be frank to say that I have been struck by the lack of determination to solve the problem on the part of airline management. It is my considered opinion that the airlines have not applied full force of their resources, technology, and resolve toward the prevention of hijacking. With few exceptions, our major air carriers have taken a "maybe it will go away" attitude with regard to this enormously complex problem.

Admittedly, airlines are subject to economic and competitive pressures of not insignificant magnitude. However, at a meeting called at my request following the hijacking of a TWA jet at Dulles during which a pilot—a resident of my State—was wounded, and at which meeting representatives of the airlines, airline pilots, FAA, CAB, Department of Justice and State met to discuss possible solutions to this problem, the general attitude taken by airline management representatives at that meeting was that they have done, are doing, or will do all that is presently feasible to avoid hijackings. But let me remind Senators that there have been 249 U.S. and international hijackings. Think for a moment, if you will, how many lives have been or will be jeopardized if this problem is not soon brought under reasonable control.

As one with some experience in the field of aviation and as one who has studied this problem and offered legislation, it is apparent that a single remedy is not sufficient or possible. We need electronic devices, security guards, more effective screening of passengers, perhaps international boycotts, in addition to strong legislation, effective enforcement and international agreements.

Mr. President, I wish to emphasize that we must attack this problem with our best effort. We must prevent it from happening again. It defies belief that we can build and fly these great planes, but that we are unable to assure the safety of their flight.

THE ACADEMIC COMMUNITY AND WAR

Mr. McGEE. Mr. President, I invite the attention of Senators to an open letter to the President of the United States, written in May of this year by Miller Upton, president of Beloit College, in Wisconsin.

President Upton's letter strikes me close to home. Like him, I have a background as a scholar-teacher. I have been intimately connected with the academic community all of my adult life. Like him, I have been distressed of late by the academic community's collective response to the trials and turmoil facing our country.

Mr. Upton is a man whose own beliefs led him in the past to claim the status of a conscientious objector. Yet, he writes:

> My moral opposition to war, however deeply and conscientiously held, does not entitle me on any ethical or moral grounds to take violent action against those who disagree.

The academic community, he fears, has tolerated excess in the name of dissent, thus violating the transcendent value to which it should be dedicated.

Mr. President, I ask unanimous consent that President Upton's letter to the President of the United States be printed in the RECORD.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

BELOIT COLLEGE,
OFFICE OF THE PRESIDENT,
Beloit, Wis., May 11, 1970.

President RICHARD M. NIXON,
The White House,
Washington, D.C.

DEAR MR. PRESIDENT: As a college president, a past scholar-teacher, and one who has consciously devoted his whole life to the cause of higher education in the conviction that it offers the greatest hope for social progress and the elevation of man to his highest potential, I wish to apologize to you and the nation for the grotesque failure of the academic community at this hour of national trial and turmoil.

I am fully aware of how extremely presumptuous it is for one to represent himself to apologize for the many, but I am constrained to do so nonetheless for the shame I feel for the community with which I have been so intimately related for so long and in which I have placed so much confidence in the past. Those who do not agree with me will, of course, be able and willing to speak for themselves.

Let me establish a point about myself at the outset so that my position can be more accurately interpreted. I was a conscientious objector during World War II, and were I of draft age now I would be a conscientious objector again. But my moral opposition to war, however deeply and conscientiously held, does not entitle me on any ethical or moral grounds to take violent action against those who disagree. I must bear witness to truth as I see it, but I must also respect the right of the other person to do the same. Certainly, I must never hurt or demean another simply because he won't go along with my own conviction.

This commitment to respect for the individual, intellectual openness, and freedom of inquiry is the transcendent value to which an academic community must be subservient. In fact, it is the only value to which the academy can pledge allegiance if it is to be consistent with itself. To elevate any other value is to break faith with this transcendent value and it is at this point that we have violated our public trust as professional educators: we have given in to violence and threats of violence in support of a particular point of view, and in doing so we have allowed the academic integrity of our individual institutions and the academic community at large to be violated.

Being a conscientious objector to war and one who would issue such an open letter as this, I clearly am not opposed to dissent and protest. But I am vigorously opposed to violence in any form and for any reason, and most of all I am opposed to would-be leaders capitulating to intimidation and violence. Those who respect violence when used against them will inevitably employ violence when it suits their cause.

We in colleges and universities have tolerated unspeakable intimidation and thought control on the part of radical students, faculty and others, and yet when Vice President Agnew speaks out forcefully against such the only voices that are heard from the academy are those who castigate him and you for repressing dissent. There are few college campuses, if any, where Vice President Agnew, or any member of your cabinet for that matter, could speak without disruption and even physical abuse and intimidation. But a convicted murderer, dope peddler, or one committed to the forceful overthrow of the government will receive not only a respectful hearing, but will be paid a handsome honorarium in addition. In the light of his high position, I have been embarrassed by some of the Vice President's intemperate language. But surely he has as much right to dissent and to give a respectful hearing as any of the criminal element of our society.

Much of the academic community is now telling you how to settle the war in Vietnam and being critical of your effort to protect lives and shorten the war by moving troops into Cambodia. I find it highly unbecoming of us to presume to tell you how to fight the war in Vietnam when we aren't even able to settle the wars on our own campuses. Nor do I use the word *war* in this context lightly. The throwing of missiles to do physical harm, the throwing of firebombs to burn buildings, the use of guerrilla tactics via arson and vandal-

ism, the shooting and killing of combatants and noncombatants is every bit as much war as that which prevails in Vietnam, Cambodia, and the Near East. I have often wondered sardonically how many protestors of napalm have themselves thrown fire bombs or engaged in arson.

I have also been appalled by a certain arrogance and inconsistency on our part with regard to the way we are free to tell you and others how to handle your jobs but become deeply resentful, insulted, and even hostile when there is any suggestion of your intrusion into "our" domain. I am quite sure that I am able to run Beloit College better than you, but by the same token I am sure that you are able to deal with the issues of the Presidency of the United States, including fighting the war in Vietnam, better than I. The widespread propensity of members of the "intellectual" community to make judgments without benefit of facts is one of my greatest disillusionments and embarrassments.

As a matter of fact, my early naivete led me to embrace the academic life because of my belief that members therein were committed to intellectual honesty, rational behavior and humanistic concern and compassion. Recent incidents have merely confirmed all the more what my life's experiences have suggested. Academic man is as much motivated by vested interest, is as much controlled by base emotion, and reasons as much from prejudice as any other mortal. My readings of Ecclesiastes, the New Testament and the life of Mahatma Gandhi should have prepared me for this, but they didn't.

We who work closely with young people and should know and understand them best have not been very helpful to them or to you and others of the adult community in serving as a vehicle of communication. We have too often taken sides ourselves and been critical of one group or the other and not been sufficiently discriminating in our communicative role.

Maybe we can be forgiven on the grounds that the task is such a difficult one. I know that the great bulk of college students are genuinely concerned about the inhumanity and futility of war and deeply question the legitimacy of a life that sanctions and even glorifies indiscriminate killing and maiming. I also know that the great bulk of adults and members of the establishment are sincere, dedicated individuals with the same hopes and aspirations as the young. But I also know that in each group there are examples that support the worst stereotype of each. The great frustration of the day is that despite this great community of interest and concern there is a growing separation based upon the sinful tendency to judge by stereotype and preconception. We in the academic community are frequently party to this sin even though our training should particularly help us to know better.

Although my own sentiments are basically with the young people, I must admit that there is a general pandering to the young at the present time that is both disgusting and irresponsible. Disgusting because it prostitutes normal respect and affection. Irresponsible because it is creating an unrealistic cleavage between age groups.

Of course, young people on the whole are wonderful, but what's new about that? The great reward of college work is the opportunity it affords to associate regularly with this age group. The idealism, absolutism, intellectual honesty and great aspiration of the young are the eternal attributes of this age group upon which society is dependent to preserve its vital, dynamic quality. These attributes are the standards of behavior to be expected, not glorified as unique in any narrow time span of human history.

Young people are first and foremost people. Those who are young today will be old tomorrow and having to relate to those who are younger then. As people they represent all types, some taller than others, some fatter than others, some with higher IQs than others, some more criminally inclined than others, some more saintly than others, some more hostile than others, some more vocal than others, etc. There is no general virtue attributable to youth any more than there is general evil. We have done all young people a great disservice in recent years by suggesting to them that they are of a different breed from the rest of us and beyond reproach. They are nothing more than the fresh blood being pumped into the human society, just as we were in the past and their children will be in the future. We in Academe should have known this better than anyone else and not have failed them and you in your common need for understanding.

We have been quick to tell you that you are alienating the youth of America, but we seem to pay little attention to the way we are alienating our own constituencies by our failure to protect the authentic academic integrity of our institutions. Implicitly we are also alienating the youth of America over the long run by our failure to be faithful to our leadership responsibilities.

The pain that hurts most of all is the realization that I bear partial responsibility for the unnecessary deaths of four young people on the campus of Kent State University. The National Guard troops should never have been there in the first place, because we shculd never have permitted the conditions to develop which necessitated the presence of troops. Once this die was cast, it was simply a matter of time before tragedy would strike. If fault lies anywhere for the Kent State deaths it lies not with you and the Vietnam War but with the radical acts and excesses we have tolerated in the name of dissent.

I am sure you know, Mr. President, that I do not say these things with tongue in cheek to placate others, to curry favor, to advance partisan interest, or to defend your war policies. Last fall I joined with a number of other college presidents to urge your rapid withdrawal of troops from Vietnam. I reaffirm this plea. But when I consider the whole matter fully and objectively, I have to concede that you have been more faithful to your leadership responsibilities than we in Academe have been to our own.

With respect for the tremendous burdens you must bear for the rest of us and the conscientious way you are bearing them and with apology for the cruel injustices that have been foisted upon you by the professional community of which I am a part, I remain,

Respectfully yours,

MILLER UPTON.

CONTINUED RISE IN TEXTILE IMPORTS

Mr. THURMOND. Mr. President, the continued rise in textile imports was dramatically illustrated early this month when the U.S. Department of Commerce issued figures showing a 12-percent jump for these imports within the last month.

An article entitled "Textile Imports Set Record," listing this information and other facts on textile imports, was published in the September 5, 1970, issue of the State newspaper.

Mr. President, I ask unanimous consent that this article be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the State, Sept. 5, 1970]

TEXTILE IMPORTS SET RECORD

WASHINGTON.—Textile imports set a record 436 million square yards in July, up 12 per cent from June and 28 per cent higher than July, 1969, the Commerce Department reported Friday.

For the first seven months of this year, imports of cotton, wool and synthetic textiles totaled 2.5 billion square yards, 19 per cent higher than the same period last year.

The value of imports in the first seven months was $1.07 billion, up from $916 million last year. U.S. textile exports totaled $389 million compared to $363 million a year ago. The textile trade deficit was $681 million in the January-July period compared to $553 million a year ago.

Imports from Japan, Taiwan, Hong Kong and South Korea accounted for 52 per cent of the trade during the first seven months of the year.

THE HUMAN SIDE OF THE IMPORT QUOTA QUESTION

Mr. McINTYRE. Mr. President, we are all aware that in the not too distant future the House will act on the import quota bill recently reported by the Committee on Ways and Means. Hopefully it will not be too long before we in the Senate are given an opportunity to vote on this most necessary measure.

There can be no doubt that the issue of protection for the Nation's shoe and textile industries is a delicate one and most deserving of the debate it has engendered. However, the debate has too often become bogged down in theoretic economic puzzles and has ignored the one factor which gave rise to the legislation in the first instance—the thousands of jobs which have already been lost and the thousands more which may be lost in the not too distant future.

It is too easy for the plight of the shoe and textile workers to be lost in the maze of charts and statistics which are used in the continuing debate. It is not easy for me to forget, however, because my State has been one of the most seriously affected by this flood of cheaply made foreign shoes and textiles. Literally thousands of men and women have lost their jobs in New Hampshire, often with little help of gaining retraining or reemployment. I am constantly reminded of this sad situation by the letters I receive every day from men and women who have either lost their jobs or fear that they will soon lose them.

Last week I received an especially moving request for help from Mrs. Evelyn Erickson, of Farmington, N.H. She knows firsthand the misery faced by fellow workers—the sudden closing of factories, the necessity of going on unemployment, the long search for a new job.

I hope that all Senators will read her letter and ponder what will happen if the import quota bill is not acted upon soon.

Mr. President, I ask unanimous consent that the letter from Mrs. Erickson be printed in the RECORD.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

FARMINGTON, N.H.

DEAR SENATOR MCINTYRE: If our President doesn't realize by now that shoe workers need help with letters and a march on Washington and all that has been done to persuade him then we may soon be out of business for good. I'm afraid much more delay will close our shop. We had business for years even when other shops slacked or closed, but then some other shops making the fancier shoe had so much competition from foreign countries they began to change over and make shoes like ours. Last spring our Mr. Katz filed for bankruptcy. He said this change-over by other shops had cut down orders. We have been terribly hurt this summer by the imports. We used to have all we could handle all summer long. Not so this year.

I'm worried over the flood of imports of *all kinds* into our country. The stores are full and it's difficult to find American-made goods. By the lack of our homemade things and in spite of your determination not to buy them, you find people who didn't want to but couldn't find American goods. To my way of thinking we are going to be hit hard later on. All we hear is talk of unemployment. When asked if shoe imports were responsible they hedged and admitted the imports do have something to do with it. *Why do they* hedge about it? You and I *know* my job has been seriously affected by these imports. The stores are *full* of them.

I have a handful of polite letters in answer to my appeal for help for us. One flow stitch room closed here in Farmington this summer after the 4th of July vacation. They worked one day and closed the next. The main shop said lack of orders was responsible and most officials in the shops said it's the imports.

I asked President Nixon to please listen to you and others who know the situation here in New England and other areas making shoes. Our shops are so small business I guess we aren't considered very important.

I'm *sure* of one thing: one more *"study"* or *delay* will close more shops.

We used to have three, sometimes four on our job. There isn't enough work for one girl now and I need to work. We got little spurts of work for a week or so then the cutters are out again.

I feel very upset about it all. In watching President Nixon, he impresses me as being wrongly informed about imports. I'd like to see him come up here and let our people take him on a tour of towns with many shops closed and people out of work. I'd like him to see the volume of imports in the shopping centers.

I appreciate the efforts of Senators and all who have tried to put through a bill to control the imports. I *know* we need trade but I hate to give up *my job* for them to prosper and we know Japan is prospering at our expense. It would seem the President is more anxious to protect them than to help us Americans. If I don't have more work soon, I'll have to give up my home. It's no longer a pleasure to own it, but a burden to a woman alone and 63 years old. I have tried to have faith that we would get help but I am very discouraged. Many girls didn't send in the clipping to the President, I scolded some and they promised to send them. They want help and their jobs but they feel President Nixon wouldn't help us if they did send it in. The apathy that besets shoe workers over this isn't good. They need their jobs; they don't know what else to do except draw unemployment checks. I don't like doing this if I can work. I would much rather. I'm from a pretty ambitious family and I enjoy working. I'm unhappy when I don't have work.

Keep up the good fight for us. We sure need it.

Sincerely,

MRS. EVELYN ERICKSON.

NIXON ADMINISTRATION FOREIGN POLICY

Mr. BELLMON. Mr. President, one of the great strengths of the Nixon administration is its handling of foreign policy. Because of his wide background and knowledge of international affairs and the deep interest he has demonstrated over the years by his visits to many foreign countries, President Nixon has brought to the White House a new sense of confidence and firm leadership.

While the successes of the administration in reducing American involvement in Vietnam and in launching a new initiative for peace in the Middle East are well known, much progress also is being made in Latin America. This progress is adequately reviewed in a Chicago Daily News syndicated article by Pete Laine.

Mr. President, I ask unanimous consent that an article from the Oklahoma City Times be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

NIXON'S LATIN POLICY BEGINS TO WORK

(By Pete Laine)

WASHINGTON.—Eighteen months ago U.S. relations with Latin America were roaring downhill toward the edge of a cliff.

The Alliance for Progress had soured. A new wave of coups by Latin militarists had signaled new seizures of U.S. properties. Suspicious of Richard Nixon, many Latins looked for reprisals and were spoiling for a fight.

Today, the Nixon administration, fingers crossed, is well pleased with the way its Latin policy is working. Critics call it a nonpolicy or benign neglect but something is going right for a change.

The picture is still far from hearts and flowers, yet it shows the inter-American family in its happiest—or least combative—condition since the euphoria of the launching of the Alliance in 1961.

Everyone has grown up, said an administration spokesman who has lived and worked with Latins on and off for 25 years. He meant the United States too.

Success may be an impossible dream in terms of U.S.-Latin relations, measurable only by the infrequency of disasters. Even so, the glow through the administration's spectacles as it views the hemispheres is not entirely divorced from reality. Here is what it sees:

A cooling of Latin hostility since Mr. Nixon took the low-key road instead of the retaliation route at the climax of last year's expropriation crisis with Peru.

The channeling of Latin energies into the grindingly slow and highly complex series of negotiations aimed at improving the Latin trade position.

The results may be peanuts, but it is the first time that the United States and the Latins have ever held protracted, business-like discussions on a footing of equality.

Generally tolerable behavior, at least in public, by the Latin dictators. Liberal opinion in the United States and elsewhere has been outraged only by the repeated charges of political torture in Brazil. It is, of course, an important exception.

For the first time in living memory, the absence of U.S. interference in Latin elections. The United States maintains it is not even meddling, let alone picking candidates as it used to.

As a result, the Latins are really beginning to believe Mr. Nixon's promise of a mature partnership.

The Latins are looking to Europe also for trade help, taking some of the heat off the United States by granting the Latin's request for control of their affairs, the United States has also made them responsible for the results.

Cuban Premier Fidel Castro is taking his lumps. Castro's public admissions of failure over the sugar harvest are a poor advertisement for the Communist system.

There are plenty of loud and angry words coming out of Havana, but real subversion is virtually nonexistent.

Pentagon concern over Soviet naval moves in the Caribbean is not shared in U.S. diplomatic circles, where there is doubt that Castro has much to gain from them.

On the other hand, the debit side still has some formidable entries.

The thundercloud of the population explosion darkens the sky more every day, threatening eventually to engulf all cities, to erase all progress. Yet there is little the United States can do about it.

There is the increasing evil of terrorist brutalities; but these are criminal acts directed at diplomats, political only by coincidence. Kidnappings also happen outside of Latin America. The victims are not only from the United States.

Somewhere, sometime, a second Fidel will rise to the surface and there is not much the United States can do about this either. Hopefully, such an emergence will not be followed by an international missile crisis.

In the immediate future, despite a rising wave of protectionism in Congress, the United States must yield some concessions in the Latin trade talks.

But administration officials are optimistic about the talks. Congress has made such a noise about protectionism, they say, that the Latins now appreciate the rough path faced by the free traders in the White House.

Fortune has lent a hand, too. Latin world trade came out of its slump last year, easing the domestic pressure on the Latin negotiators to squeeze the last drop out of Uncle Sam.

McGEE SENATE INTERNSHIP CONTEST

Mr. McGEE. Mr. President, for 8 years it has been my pleasure to conduct for high school juniors in my State of Wyoming the McGee Senate Internship Contest, which brings to the Nation's Capital one boy and one girl for a week planned to enhance an understanding of the mechanisms and the procedures of a democratic society.

The contest is designed to stir up interest among high school students in national and international questions. Three well-known, nonpolitical people from the State served as the panel of judges in the competition. In their judgment, this year brought the highest level of essays that the many years of the contest have produced.

The subject matter of the required essay this year was conservation, quality living, environmental control. For Wyoming to focus on that question is of great relevance. For here is a part of the world that we call God's country in which one would think there were no pollution problems.

I think what it does say to us in the Rocky Mountain West is that the mistakes of the already polluted parts of the United States may have served as a grim warning to those of us from the high altitudes of the Rockies of at least what

to watch for and try to avoid in the future and, at the same time, to come to grips with the first outcroppings of environmental pollution even at the local level.

Of course, it would be impossible for everyone to read all the essays submitted, but I think the most outstanding ones are of interest to us all and should receive wider circulation. For this reason, Mr. President, I ask unanimous consent that two of these essays, written by Connie Sandberg, of Albin, Wyo., and Don Tolin, of Casper, Wyo., which received honorable mention in the McGee Senate Internship Contest, be printed in the RECORD.

There being no objection, the essays were ordered to be printed in the RECORD, as follows:

CONSERVATION: ITS RELEVANCE IN WYOMING

(By Connie Sandberg, Albin, Wyo.)

Conservation in its simplest form means "wise use" and conservation is intensely relevant to the future of Wyoming. When we think of conservation, we think first of natural resources or those things every citizen inherited from nature. These are the soils, clean air and water, forests and grasslands, fish and wildlife, and fuels and minerals in Wyoming.

Fortunately for the purposes of conservation, Wyoming is not a heavily populated state. According to the 1960 census, Wyoming is an empire equal to the combined area of New Hampshire, Massachusetts, Rhode Island, Maine and Pennsylvania—states whose 1960 population was fifty-seven times greater than Wyoming's. This makes the conservation of soil, clean air, waters, forests and grasslands much simpler.

The soil must be conserved to make it possible for the farmers and ranchers to be prosperous. This is made possible through federal agencies such as the Agricultural Stabilization and Conservation Service. Farmers are encouraged to strip farm to prevent the land from blowing in dry years or washing away in wet years. Ranchers are encouraged to build dams and terraces to hold water instead of letting it wash away through gullies and canyons. The farmers and ranchers must put stubbles and fertilizers back into the soil to preserve the lands for future generations if Wyoming is to stay a healthy state economically.

A generation ago very few people would have thought clean air was very relevant to our state because everyone took it so much for granted. However, much is being said and written about air pollution and this makes us ever conscious of the blessing that clean air is in our state of Wyoming. Water pollution is also a great worry in those states relying heavily on industry for their prosperity. As new industry is lured to our state our leaders must forever be on the watch to be sure that our clean air and water are protected for future generations.

Forests and grasslands are two of the greatest resources of Wyoming and their conservation is most important for our economy. Nearly one-half of the land in Wyoming is owned by the federal government so rules and regulations are outside the hands of the people of the state. According to 1960 figures 47.1 per cent of the land is federally owned, 7.1 per cent owned by state and local governments; 3 per cent belongs to Indian tribes, and the rest or 42.5 is privately owned. Most of the federally owned land is confined to mountainous areas of the state and set aside as national parks or national forest, a policy which has preserved most of the primitive beauty of Wyoming's wilderness areas and primed its tourist industry. These beautiful areas may be our greatest asset in years to come. As people in labor and industry work fewer and fewer hours or fewer and fewer days per week, they are going to look around for a place to spend those free hours and days. More of our population is being hemmed into huge cities so when the people get a chance for a few days off, they are going to head for the wide, open spaces where the air and water are clean and the mountains beautiful. Certainly there is no better place for this than Wyoming.

Though we think of our national forests as being things of beauty and drawing cards for tourists, we have to remember that half of the forests in Wyoming are classified as commercial forests and therefore are money makers. Wyoming live sawtimber reserves total more than 26 million M board feet. Total lumber production in recent years has averaged about 100,000 M board feet so it is estimated that Wyoming forests could support an industry of twice the current size. Certainly conservation of these forests is most relevant to the future of our state.

Our grasslands are very important to the future of our state. Someone once said, "All meat is grass." This is partly true because most of the animals which furnish meat for our tables feed on grass. Since we are dependent upon these grasslands for the products which the livestock furnish, we must be interested in their care and use. The number of livestock we put on the rangelands is important because if there are too many and they eat the plants down too near the soil, the surface of the soil is exposed making it easy for the wind and water to carry it away. 70 to 80 per cent of agriculture income usually comes from livestock and livestock products in our state. Agriculture is our second largest industry so our grasslands are very important.

Fish and wildlife should be conserved because of the income to be derived from the tourist trade and out-of-state hunters and fishermen. Wildlife find it hard to live in an area in which good conservation methods are not practiced. Fish cannot live in a stream choked with topsoil. Where the soil is eroding away, the deer, rabbits, raccoon and pheasants do not have the necessary food and cover; good land-use practices are very important to preserve soils for the farmer and rancher and also to preserve our wildlife. Our State Game and Fish Department does much to increase fish habitats. They remove the undesirable fish, improve ponds and streams, enforce limits and other laws and do scientific research and study to make these improvements even better. It is up to each individual to see that our streams and lakes are not littered with trash and garbage.

Wyoming should be very careful of its minerals because these are non-renewable resources. If we are to consume some now and still leave some for future generations, it is imperative that they be dealt with intelligently. Minerals, including oil and gas, were responsible for 30.6 per cent of total Wyoming economic activity, while agriculture was responsible for only 30.6 per cent in 1960. In 1963 the minerals industry employed 8,753 hired workers and distributed a payroll of $60,033.00. About two-thirds of this employment was associated with oil and gas. Under the best conditions today it is estimated that we can take only 70 to 85 per cent of the petroleum in a pool. It might be that science should explore ways in which a greater amount of the petroleum could be extracted from each pool. Our coal supplies, too, are being wasted. About 20 to 25 per cent of the good coal is left in "mined-out" areas. Many thousands of tons of metallic ores have been left in mines. The reason for the waste is that it would not pay the miners to remove the low-grade ore or coal and so it is cheaper to leave it in the ground. As our scientific knowledge increases, we are extracting more and more of these low-grade ores. Industry and the manufacturer may aid in the conservation of the non-renewable resources by using lower-grade ore and by extracting all the minerals from the ore, rather than taking only one and discarding the rest. Another method of conservation is the re-use of as many of these minerals and metals as possible. A trip to any city dump will prove that many metals that might be reused are thrown away. The conservation of non-renewable resources may not be laid at someone else's door. With this group of resources, it becomes every person's job to aid in wise use. Everyone can help.

Conservation is the key word to the future of Wyoming. Rather than rely on our non-renewable resources which can never be replaced, it is well that our leaders are beginning to look to the travel industry. It could be promoted to the leading industry of our state as more and more people look for more recreation. More and more people could be encouraged to stop to spend more time in hunting, fishing, skiing and relaxing. Travel industry pollutes the clean waters to a certain extent but not to the extent that huge manufacturing facilities pollute the air and water. The travel industry is now our third largest industry but shows annual gains of about 4.5 per cent or perhaps more under this year's report.

In addition to conserving the natural resources including soil, clean air and water, forests and grasslands, fish and wildlife, and fuels and minerals, I think there is one other great resource that our state must try to conserve and that is the youth of our state. All over our nation the use of drugs has destroyed some bright young lives. Hopefully, education on the results of drug abuse will help conserve the young people of the state of Wyoming.

In conclusion, conservation is most relevant in Wyoming if we are to have a strong, clean state in the years to come.

CONSERVATION: ITS RELEVANCE IN WYOMING

(By Don Tolin, Casper, Wyo.)

"Be fruitful and multiply, and fill the earth, and subdue it; and have dominion over the fish of the sea, and over the fowl of the heaven, and over every living thing that moveth upon the earth."

This passage from the first chapter of the Bible (Genesis 1:28) illustrates the idea that the Earth was made for man's use. Today man is fulfilling this concept and utilizing the Earth as well. Yet with modern technological advancements, man seems to be living on the principle of "over-kill" or in a denotative sense in regard to this passage and the environment, the principle of overfulfillment. Wyoming is not alien to this principle of "over-kill" or overfulfillment; therefore the relevancy of conservation in the state of Wyoming is of extreme importance and should be of great concern to the interested individual.

When determining what conservation actually means, one finds that the term is quite ambiguous. Connotations that are attached to conservation include the wise use of our natural resources, the protection of our natural resources, and even further the preservation of our natural resources. The term conservation becomes more complicated when analysing what consists of natural resources. In addition to minerals and ores, some people include timber and grasslands to the list of natural resources. This expanding tally can be further amended to include air, water, wildlife, and even people. Confused? Well, interestingly, all of the aforementioned items do share something in common with each other. All possess their own niche in a very vast and complex system, an ecosystem. One can now offer a broad work-

able definition of conservation, that is the protection of an ecosystem, our environment.

In the past, conservationists were stereotyped as little old ladies with nothing better to do but parade around and shout out such catchy slogans as "Save our trees." Perhaps this group of individuals were truly interested in conservation, yet their cries were ignored, ridiculed, and dismissed. Legitimate as their cries might have been, man was in the Industrial Age, and natural resources were being rapidly exploited and developed without any regard to the limited and unreplenishable supplies that existed. Man was interested in progress, and unconscious that he might be disrupting the delicate balance that existed in Nature.

When the Pilgrims came to America, they found it in a rather untouched state. True, there were Indians living throughout the continent of North America, yet the Indians seemed to be able to work with Nature rather than against her. They were able to live with Nature in a peaceful co-existence. Anyway, America was rich in land and resources. The early forefathers saw America as a land whose natural resources would never be exhausted in any length of time. That is, they were under the false impression that there was no chance of running out of the natural resourcse or destroying the earth that provided them. As America aged, she found herself with diminishing wilderness areas and supplies of natural resources, and a growing population. Today, one has only to look around at America—there exists few wilderness areas, very limited supplies of natural resources, problems with air and water pollution, and over-population.

Wyoming can be compared to the pristine state this nation was in two hundred years ago. This state has been relatively unaffected by air and water pollution, which now plagues almost every area of this country, to say nothing of the world. Wyoming has often been referred to as the land of wide open spaces. With the large size of the state and the population of less than 400,000 people.

Wyoming has not been burdened with overpopulation. Except for the oil industry, Wyoming had not been troubled with the concepts that the natural resources would be exhausted. However, within the last decade, industries which utilize the natural resources have been slowly moving into the state. Taking into account these facts, the populace of this state should consider themselves rather fortunate for having only a few problems in the area of the environment. Unfortunately, this great state is not immune from any of the environmental evils and headaches that plague our fellow countrymen. If Wyomingites fail to remember history, and hold the same views that the forefathers of America did in regard to the environment, and ruin and waste resources, pollute the air and water, and over populate, this state will find herself troubled, as the overall nation now is in terms of the environment. Hence, if we desire to avoid all of the evils and problems that would come to Wyoming on a large scale, by failing to learn our lesson and not looking ahead into the future, conservation should be very relevant in Wyoming.

In the last few years there have been several vital issues that have been of concern to the conservationists in Wyoming and should demonstrate that indeed, some wise conservation attitudes do exist in the state. Some of these issues include the proposed Washakie and Laramie Peak Wilderness Areas, the harvesting of many stands of trees indiscriminately throughout the state, the proposed flood control programs in various areas of the state, the over killing of wildlife, and the issues concerning the pollution of the air and water. Also, businessmen and officials have stated that good-will is very important to the state. The one industry that probably affects the entire populace in the state and spreads good-will is the tourist industry. It is surprising the numbers of travelers who come to Wyoming simply to enjoy its natural beauty. Clean air and water, blue skies, and plenty of elbow room are some things of which to be very proud.

Since man is supposedly a thinking creature, it is unfortunate that conservation is ignored by some. For example, at a recent Wyoming Air Resources Council hearing in Casper, one man suggested that there be no air standards until there is a problem. "We shall react to proven hazards." In other words, after our air is dirty, we would then spend money and time to clean it up. Unquestionably, this type of thinking is the antithesis of a wise conservation attitude, and can not be tolerated in this state.

As progress and industry seem to be so vital for our survival, it would be unreasonable to seek discontinuing either. It might be noted here, that conservation IS good business. On an economics basis it can be proven that a conservation attitude is practical and feasible. In fact, industries and businesses can actualy profit in the long run from following a wise conservation policy.

As the interested individual looks around the state, he will note the number of organizations and clubs being formed and the number of voices that are being heard in the name of conservation. Another encouraging note is that conservationists and conservation-oriented groups will be holding the statewide Wyoming Environmental Congress in Casper during the middle of May. These groups that have been organized and this convention that is to be held, further demonstrates that conservation is pertinent in Wyoming.

Man has fulfilled his obligation as set forth in the first chapter of the Bible. However, man can not continue on his uncontrollable path by living on the principle of overfulfillment. He will find himself not as the conqueror, but as the conquered. Elbow room, clean water, blue skies, and high quality recreation would not exist in Wyoming if conservation had no relevance. Wyoming is truly a great state to live in, and if the people of Wyoming desire to maintain such enjoyable qualities that are now present, conservation MUST continue to be relevant in Wyoming!

THE 83D BIRTHDAY ANNIVERSARY OF ALF M. LANDON

Mr. PEARSON. Mr. President, yesterday Alf M. Landon, Mr. Republican of Kansas, celebrated his 83d birthday. This remarkable man continues to make solid, positive contributions to the ongoing dialog about the great issues facing this country today. In particular, he has in recent years made a most significant contribution to the debate about what should be the dimensions of our foreign policy in the decade ahead.

As all of you know, Alf was Governor of the State of Kansas and in 1936 received the Republican nomination for President. Since that time he has continued in the role of citizen-statesman serving the State of Kansas and the Nation as a whole.

On this special occasion I salute a most distinguished American and a close friend. And because so many Senators know Alf personally or know of his great record, I take this opportunity to call this anniversary to their attention.

STATEMENT OF PROF. PAUL J. FREUND OF THE HARVARD LAW SCHOOL BEFORE THE SENATE JUDICIARY COMMITTEE IN OPPOSITION TO SENATE JOINT RESOLUTION 61, THE EQUAL RIGHTS FOR WOMEN AMENDMENT

Mr. ERVIN. Mr. President, there is no doubt that the equal rights for women amendment has been subjected to very little analysis. In fact, the House of Representatives did not hold any hearings on this proposal, and the Senate hearings made no attempt to investigate the effects of such a constitutional amendment on the myriad State and Federal laws which make distinctions between men and women. It is a very real testament to the lack of consideration given to this matter that the definitive critical legal statement was written in 1945—25 years ago—by Prof. Paul Freund of the Harvard Law School. Not only was Professor Freund not asked to bring his statement up to date by the House or the Senate subcommittee considering this problem, but very few, if any, legal scholars were asked to comment on the matter by anyone.

In the hearings called this month by the Senate Judiciary Committee to look into the problems posed by this amendment, Professor Freund has been finally asked to bring his views on this matter up to date. I recommend Professor Freund's statement to all Senators. He is an outstanding constitutional scholar, and he has explored in detail for the committee the chaotic legal conditions which will exist if this amendment passes. He realizes the dangers of dealing with the complex legal relationships between men and women by the simplistic approach taken by the House-passed amendment. On this point Professor Freund said:

> The truth is that a motto of four words, however noble in purpose, is hopelessly inept to resolve all the diverse issues of classification by sex in the law. It is as if the Constitution declared "all power to the people," and left it at that.

The equal rights for women amendment is receiving in the Senate Judiciary Committee the first thorough analysis it has received in 25 years. It is no compliment to the concept of equal rights for women that the advocates of this amendment are demanding that it should pass without adequate consideration. If any Senator doubts the seriousness of the changes which the equal rights for women amendment would bring about and the need for adequate consideration, I suggest he read Professor Freund's statement to the Senate Judiciary Committee on September 9, 1970.

Mr. President, I ask unanimous consent that Professor Freund's statement be printed in the RECORD.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

STATEMENT OF PAUL J. FREUND

I appreciate your invitation to appear and present my views on the Equal Rights Amendment. I am a professor at the Harvard Law School, specializing in Constitu-

tional Law, and I am here in a purely personal capacity, having prepared a statement some twenty years ago in opposition to the Amendment when it was previously before the Senate.

I am anxious that my position not be misunderstood. I am in wholehearted sympathy with the efforts to remove from the statute books those vistigial laws that work an injustice to women, that are exploitative or oppressive discriminations on account of sex. Too many of such laws continue to disfigure our legal codes. I submit, however, that not every legal differentiation between boys and girls, men and women, husbands and wives, is of this obnoxious character, and that to compress all these relationships into one tight little formula is to invite confusion, anomaly, and dismay.

Let me illustrate. Consider two types of laws that differentiate on the basis of sex. One prescribes heavier criminal penalties for men than for women who commit identical offenses. This can only be explained on some moralistic basis that has no rational relation to the purposes of the criminal law. The other type prescribes, or officially approves, different premium rates for life insurance for men and women; based on actuarial statistics of life expectancy, the rates for women are lower. Here is a legal recognition of the facts of life, which happen indeed to favor the position of women. Is there any reason to visit the same condemnation on these two kinds of laws, as if they were equally repugnant to our sense of justice, and to do so by a change in our fundamental law that would leave no freedom of action to any state? Anyone who sees an important difference in these two cases cannot in good conscience, I submit, support the proposed amendment.

It will not do to answer that the courts will make sensible distinctions and will not give a literal meaning to "equal rights under law." If only that were the purport of the Amendment it would be redundant of the equal protection guarantee of the Fourteenth Amendment. The Supreme Court has not held, as is sometimes loosely stated, that women are not "persons" within the meaning of that Amendment. Rather the Court has found in the past that certain laws do not discriminate unfairly against women. Very probably the Court would be less tolerant today in applying the guarantee of equal protection to differences based on sex, as it is less tolerant of unequal treatment in other fields. But it is precisely to avoid the necessity of submitting such questions to the courts, to strip the courts of any latitude of application, that the proponents of the Equal Rights Amendment urge the necessity of its adoption. Their model is not the generally flexible concept of equal protection, but the concept as it has now come to be applied to provisions of law based on race. The law, it is argued, must be sex-blind no less than color-blind.

Let us see whether the analogy to race is a satisfying one. It is now a constitutional principle that public schools and universities may not maintain a dual system for white and black students, respectively. Does it follow that men and women must be admitted without differentiation to West Point and Annapolis—not in separate but equal academies but in the same classes and in the same schol activities? If this is indeed the will of Congress. it can be carried out by simple majority vote, on an experimental basis, without waiting for a binding mandate from three fourths of the states. If it is not the will of Congress, I assume the proposed Amendment will not be approved by this body. The strict model of racial equality, moreover, would require that there be no segregation of the sexes in prisons, reform schools, public rest rooms, and other public facilities. Indeed, if the law must be as undiscriminating concerning sex as it is toward race, it would follow that laws outlawing wedlock between members of the same sex would be as invalid as laws forbidding miscegenation. Whether the proponents of the Amendment shrink from these implications is not celar. It has been stated that equal treatment would not be required if it ran counter to prevailing standards in the present state of our culture. This is an escape valve not found in the Amendment itself and one of very uncertain dimensions. Some may believe that to permit women to work as coal miners offends prevailing mores; but evidently such an exemption from the Amendment's coverage would be strongly repudiated by the proponents.

Subjection of women to compulsory military service, along with men, raises a similar question. Again, the proponents appear to insist that the drafting of women as well as men for suitable military service would in fact be required under the Amendment. They assume, probably correctly, that equal "rights" would include obligations of service; and under the Amendment men could claim that the "right" of exemption from the draft must be applicable without regard to sex. If this major innovation in the draft is truly the will of Congress, it can be achieved, like the opening up of West Point and Annapolis, by simple legislation, and at once, without waiting to be bound by the action of three fourths of the states. Draft policy is, after all, the responsibility of the national government. A change of policy of this magnitude in framing a draft law is customarily the subject of full and informed hearings before appropriate committees and is voted on after well-focused debate. It may or may not be a desirable change to make, but in other circumstances it would surely be thought irresponsible to impose such a reform almost without attention, as a half hidden implication of a motto which, in addition. would be frozen unalterably in the Constitution.

Consider next the field of domestic relations, with its complex relationships of marital duties and parental responsibilities. Every State makes a husband liable for the support of his wife, without regard to the ability of the wife to support herself. The obligation of the wife to support her husband is obviously not identical to this; if it were, each would be duty bound to support the other. Instead, the wife's duty varies from State to State. In some jurisdictions there is no obligation on the wife, even if the husband is unable to support himself. In others, the wife does have a duty of support in such a case. In 1968 a recommendation on the subject was made by a Task Force on Family Law and Policy of the Citizen's Advisory Council on the Status of Women, a group that supports the Amendment. The recommendation was a progressive and equitable one: "A wife should be responsible for the support for her husband if he is unable to support himself and she is able to furnish such support." (Report, p. 9). So far, so good. But under the mandate of the Equal Rights Amendment, what would be the effect on the rule fixing the husband's duty? Some members of the Task Force, but only some, took a position consistent with the principle of the Amendment:

"Some of the task force members believed that a husband should only be liable for the support of a wife who is unable to support herself due to physical handicap, acute stage of family responsibility or unemployability on other grounds."(*Ibid.*) This solution would be dictated by the Equal Rights Amendment but would be contrary to the law of every State. Can it be said that the favorable treatment everywhere accorded to wives in respect of support is a manifestation of male oppression or chauvinism or domination? Can it be expected that all that States will make an about-face on the law of support within a year of the adoption of the Amendment; and if they do not, what will be the reaction of housewives to the Equal Rights Amendment when husbands procure judicial decisions in its name relieving them of the duty of support?

The truth is that a motto of four words, however noble in purpose, is hopelessly inapt to resolve all the diverse issues of classification by sex in the law. It is as if the Constitution declared "All power to the people," and left it at that. A hundred years ago the framers of the Fourteenth Amendment resorted to a high-sounding but unexamined motto when they provided that no State might abridge the "privileges and immunities of citizens of the United States." What those privileges are still is a subject of litigation and debate. We wonder how a phrase so unthought-through could have found its way into the Constitution as a mandate for legislatures and courts. We can at least profit from that experience. We can at least try to think things, not merely words, when amending our fundamental law. Of course no legal provision can anticipate unforeseeable or out-of-the-way problems that may arise. But when a proposal leaves the mind so unsatisfied regarding its effect on ordinary, obvious, recurring relationships, a more specific and concrete approach is clearly called for.

I would not want to leave the subject on a purely negative note. My concern, as I have said, is with the method proposed, which is too simplistic for the living issues at stake. It remains, then, to suggest alternative approaches. A great deal can be done through the regular legislative process in Congress.

Concrete guidelines are set forth in an April 1970 Report of the President's Task Force on Women's Rights and Responsibilities (not the same task force cited earlier). After recommending support of the proposed Amendment, the Report urges that Title VII of the Civil Rights Act of 1964 should be amended to empower the EEOC to enforce the law, and to extend coverage to State and local governments and to teachers; that Titles IV and IX of the Civil Rights Act be amended to authorize the Attorney General to assist in cases involving discrimination against girls and women in access to public education, and to require the Office of Education to make a survey on that subject; that Title II of the Civil Rights Act should be amended to prohibit discrimination because of sex in public accommodations; that the jurisdiction of the Civil Rights Commission be extended to include denial of civil rights because of sex; that the Fair Labor Standards Act be amended to extend coverage of its equal pay provisions to executive, administrative, and professional employees; that various amendments be made to the Social Security Act; and that liberalized provision be made for child care facilities. It is an extensive, important, and thoughtful set of proposals. If a two-thirds majority can be found for the abstraction of the Equal Rights Amendment, it would be puzzling to know why a simple majority could not even more readily be found to approve this concrete program.

In addition, Congress would give a vigorous and valuable lead by enacting model laws for the District of Columbia in the fields of labor legislation and domestic relations.

Moreover, a few significant decisions of the Supreme Court in well-chosen cases under the Fourteenth Amendment would have a highly salutary effect. And decisions under Title VII of the Civil Rights Act will clarify the role of state laws regulating employment with respect to the concept of bona fide occupational qualifications.

Finally—and this may seem to some to be a radical suggestion—Congress can exercise its enforcement power under the Fourteenth Amendment to identify and displace state

laws that in its judgment work an unreasonable discrimination based on sex. This would be done on the analogy of the 18-year old voting legislation.

In this connection let me point out a serious deficiency in the proposed Amendment. Its enforcement clause gives legislative authority to Congress and the States "within their respective jurisdictions." This is a more restrictive authorization to Congress than is to be found in any other Amendment, including the Fourteenth. If the new Amendment is deemed to supersede the Fourteenth concerning equal rights with respect to sex, Congress will be left with less power than it now possesses to make the guarantee effective. This is the final anomaly.

A NOTE ON RULES OF CONSTRUCTION

What would be the effect of the amendment on various laws that are now applicable only to women, or that differentiate between men and women in their provisions? What would be the effect, for example, on state laws setting minimum wages for women only, or the law of dower where it is not equally applicable to men?

The question divides itself into two parts: what is the mandate addressed to legislatures, and what is the mandate addressed to courts?

So far as legislatures are concerned, I assume (perhaps mistakenly) that equality could be achieved by moving in either of two directions; that is, a special minimum wage law or industrial seating law for women could be repealed, leaving no minimum wage or seating law in effect, or it could be extended to men either in its present form or with new standards applicable across the board. If the legislature repeals such laws because of the increased burden on employers to extend them to men as well, equality of rights will have been achieved, but one can only ask, "What price equality?".

Suppose, however, that within the one-year period between adoption of the Amendment and its effective date a legislature does not act to equalize certain differentials based on sex, or acts in a way thought to be still incompatible with the Amendment. The problem then becomes the subject of litigation. Are the courts given the same latitude of direction as I have assumed the legislatures possess to accommodate the law to the Amendment?

The legislative history, such as it is, suggests that certain guidelines should control the action of the courts. Reference has frequently been made, in this connection, to the following passage in the memorandum of the Citizens Advisory Council on the Status of Women, March 1970:

"Where the law confers a benefit, privilege or obligation of citizenship, such would be extended to the other sex, i.e., the effect of the amendment would be to strike the words of sex identification. Thus, such laws would not be rendered unconstitutional but would be extended to apply to both sexes by operation of the amendment. . .

"Where the law restricts or denies opportunities of women or men, as the case may be, the effect of the equal rights amendment would be to render such laws unconstitutional."

This guideline is far from clear. As was pointed out by Congresswoman Mink in the brief discussion in the House (Aug. 10, 1970, CONGRESSIONAL RECORD, pp. 28027–28028), "Under this reasoning, however, both results could occur. For example, the minimum wage law for women only is a special benefit and under the first rationale would be extended to both sexes. But it is also a law which is discriminatory against men [and restrictive, one could add, of women's liberty of contract] and thus could be held unconstitutional."

Mrs. Mink would have liked to insert into the Amendment a clarifying proviso, as follows:

Provided, that any State or Federal law which confers rights, benefits and privileges on one sex only shall be construed to apply to both sexes equally."

However, on the assurance of Congresswoman Griffiths that the proviso was implicit in the Amendment and that Mrs. Mink's concerns were unfounded, she did not press her point and voted for the Amendment as it stands. (*Ibid.*)

But even the proviso as offered by Mrs. Mink would hardly have been adequate as a guide. Consider the case of different ages of capacity to contract or marry: 18 for females, 20 for males, let us assume. From one point of view, only young women are given the benefit or privilege of contracting between 18 and 20, therefore the age should be lowered uniformly to 18. From another point of view, only young men are given the privilege or benefit of disaffirming an obligation between 18 and 20, therefore the age should be raised uniformly to 20. Or consider the problem of rights and duties *inter se,* as in the case of dower, in a state which grants that interest only to wives, or which grants it in larger measure than curtesy can be claimed by husbands. From one point of view, dower is a benefit granted to the woman and so should extend in corresponding measure to the man. From another point of view, the benefit is freedom during marriage of the wife's property from curtesy, so that it is the absence of such a marital property right in one another's property that should be the objective of the decision. How property held by a spouse is to be valued in this uncertainty, and how titles are to be secure when such property is conveyed, are questions that continue to give one pause, even after trying to apply the extrinsic guidelines. Surely the result cannot turn on whether a wife is seeking to convey property free of curtesy, or a widower is claiming the equivalent of dower on his wife's death.

Normally a legislature would focus on such problems of equalization as it revised its law of property or custody or marriage. But when 50 states are put under a new mandate of "equality" with respect to all aspects of law that have been regard to sex differentiation, and where that mandate is self-executing through the courts, wholesale confusion is likely to occur. It should be remembered once more that the intervening hand of Congress, where states are laggard or confused, is precluded, except where Congress would independently have power, under the "respective jurisdictions" clause of the Amendment's enforcing provision.

RISING PROPERTY TAXES THREATEN ELDERLY

Mr. MUSKIE. Mr. President, on behalf of the distinguished Senator from New Jersey (Mr. WILLIAMS), who is absent on official business, I ask unanimous consent to have printed in the RECORD a statement by him entitled "Rising Property Taxes Threaten Elderly" and an article relating to this subject.

There being no objection, the statement and article were ordered to be printed in the RECORD, as follows:

RISING PROPERTY TAXES THREATEN ELDERLY

Mr. WILLIAMS of New Jersey. Mr. President, today hundreds of thousands of elderly homeowners are finding themselves financially paralyzed by rising property taxes.

In many communities taxes have doubled—and in some instances tripled—within the past ten years.

For aged persons already living on limited fixed incomes, this makes the economic squeeze even more burdensome. Yet, for most overburdened property owners, there is no relief in sight. In every region in our Nation, older Americans whether they live in cities, towns, rural areas or the countryside—are feeling the pinch.

Their problems have now reached crisis proportions and demand immediate and far-reaching attention on all fronts.

My own state of New Jersey has attempted to meet this urgent problem. On November 2 the voters will decide whether the property tax exemption will be raised from $80 to $160 for homeowners 65 and over with earnings not in excess of $5,000. This measure would certainly provide welcome relief for the aged.

But, it should be emphasized that many states are already financially hard-pressed and can only go so far before their revenue sources are exhausted.

Other measures must also be explored. One such proposal is my Housing for the Elderly Act, S. 4154. It would establish an intergovernmental task force to report on several possible measures—such as a Federal income tax credit—to provide property tax relief for the overwhelmed aged homeowner. Moreover, the task force would report on practical means of providing Federal assistance to States or local governments granting tax relief to elderly property owners.

Mr. President, an excellent article in the Newark Evening News describes the severity of this program for the aged. In one example cited, an elderly widow found that her $796 property tax bill had more than doubled during the past six years. Since her total annual income amounted to $1,176, she had only about $7 per week for food, clothing, transportation, health care, maintenance of her home, and other expenses.

Mr. President, this article provides compelling reasons for the enactment of my Housing for the Elderly Act.

PLIGHT OF CALIFON'S "GRANNY" WOLETZ STRESSES TAX BURDEN ON ELDERLY

(By John L. Cavnar)

CALIFON.—Mrs. Bertha Woletz is known affectionately in her Mount Grove farmstead neighborhood as "Granny" because of her quick wit and ready smile.

"I don't feel like smiling, but it's expected of me," said the 68-year-old widow. "I'm just plain scared I won't be able to keep my home, and these taxes are killing me."

Mrs. Woletz received her tax bill Monday. "I didn't sleep at all Monday night," she said, "I was awake all night with worry."

Her tax bill on her old one-time chicken farm where she has lived the last 38 years is $795.80, more than double what it was when her husband died six years ago. And her total income, including interest on a small savings account and Social Security, is but $1,176—a net "profit" of about seven dollars a week.

Mrs. Woletz' problem is similar to that of a lot of people over 65, particularly farmers who worked for years without being included in the Social Security program. And in Hunterdon County, a rural area, some 15 per cent of the residents are over 65.

The Woletzes started their chicken farm in 1932, and continued it until Woletz became ill in 1961. "I guess it's just no use," Mrs. Woletz said in a German accent she has retained the 46 years she has been in this country. "We were always honest and decent and worked hard. We didn't stand around and say 'I want, I want.' I just don't understand this tax business."

Mrs. Woletz stooped slowly to pick up her grandson from a stroller and carry him in her home for a mid-day nap. She struggled because her slight 90 pounds is racked with arthritis from her waist down.

"I'd like to get a job," she said, "but I can't because I have no way to get to work." She is home-bound by lack of transportation and her illness, but her daughter, who lives a few miles away, does her shopping in ex-

change for baby-sitting with her four young children.

Mrs. Woletz rented rooms one year to two students, receiving a total of $25 a week from them.

She apologized for her toes peeking through holes in her shoes, and changed into slippers with the aid of a long handled shoe horn so she wouldn't have to stoop. "Sometimes when I get down," she said, "I have trouble getting up again."

She said "people on welfare have a lot more than I do, but I can't ask for that kind of help. Should I hang myself today or tomorrow?"

It was cases like this that led 72-year-old Harold Van Doren, a retired Bell Labs electrical engineer, to press state legislators for tax relief for the elderly.

Van Doren is comfortable through his pension and real estate holdings, and has a spacious well-kept home in Teetertown Road in Lebanon Township. "I got involved," he said, "because this is such a wonderful place to live, but the taxes are making it unbearable for the people on social security.

"These people are proud," he said. "They don't want to end up, after owning their homes for years, in a bread line or using food ration tickets."

Van Doren submitted a four-step plan to Sen. Wayne Dumont, R-Warren, calling for additional relief as property owners increase in age. He doesn't know how instrumental his proposal was, but shortly after he mailed it Dumont pledged his support to an Assembly bill which would raise senior citizen property tax exemptions from $80 to $160.

In an 11th hour move before the Legislature recessed for the summer, the proposal to grant the exemptions to residents 65 and over, and earning $5000 or less a year, was approved for a statewide referendum in November.

Van Doren's other proposals are, starting at age 69 through 71, property owners earning less than $4,000 annually would be permitted a 25 per cent deduction from their school tax; from 72 through 79, residents earning less than $3,000 would be granted a 50 per cent school tax deduction, and those 80 and over and with incomes of $1,000 or less would have total school tax deduction from their tax bills.

"The problem is," he said, "how to maintain a home in the face of high taxes, particularly school taxes when you're too old to have children in school. It's taxation without representation."

He said the people are holding on to their homes as long as they can, and then they have to go to nursing homes if they can afford to.

Van Doren pointed out that in his home community of Lebanon Township, schools account for 84 per cent of the tax dollar, with $2.80 of the $3.46 tax rate going to the local and regional schools.

NONRATIFICATION OF THE GENOCIDE CONVENTION HAS IMPACT ON WORLD OPINION

Mr. PROXMIRE. Mr. President, I feel I must remind the Senate of the embarrassing fact that our nonratification of the Genocide Convention of 1948 has had a detrimental impact on the opinion of many people of other nations. This tragic delay in ratification of a convention which outlaws the worst human crime has seemingly provided our detractors with propaganda. With our many domestic ills, such as racial strife, student unrest, and a rising crime rate, as well as certain segments of our foreign policy, I can see why some foreign peoples might be questioning our commitment to fundamental principles.

In this regard, Mr. President, I ask unanimous consent that a portion of the remarks in support of the Genocide Convention of Ambassador Charles W. Yost, U.S. Representative to the United Nations, before the special subcommittee of the Foreign Relations Committee be printed in the RECORD.

There being no objection, the remarks were ordered to be printed in the RECORD, as follows:

IMPACT ON WORLD OPINION

As regards world opinion, this convention has attained over the years since it was first drafted a position of unique symbolic importance as an act of worldwide condemnation of what is perhaps the most dreadful crime men can commit.

In the context of modern history it also stands for another principle of fundamental importance; namely, that whatever evils may befall any group or nation or people are a matter of concern not just for that group but for the entire human family.

It is almost needless to remind this subcommittee that these principles and human feelings lie very deep in the American tradition, and indeed express our Nation at its best. How exceedingly frustrating it is, therefore, that our country should for so long have stood aloof in the community of nations from this treaty which gives such powerful historic expression to our own feelings and principles!

I can assure the subcommittee that in my diplomatic life, at the United Nations and elsewhere, no question has ever been asked me about the policy of my country which has been more difficult to answer than questions about American inaction on this convention.

To answer once and for all such questions, to remove such a needless source of ambiguity and confusion from our foreign relations, would not, I believe, fail to serve the interests of the United States.

HIJACKINGS BY ARAB GUERRILLAS

Mr. HARRIS. Mr. President, I join with other Senators in expressing shock and dismay over the series of plane hijackings by Arab guerrillas during the past several days. The men and women who did this are guilty of inhuman crimes against innocent men, women, and children.

Whatever we do hereafter to prevent hijackings—and we must act to prevent them—the United States must now do everything in its power to insure that the hostages held by guerrillas are released as soon as possible, and that no harm comes to them in the meantime. I fully support the efforts of the President and of Secretary Rogers to try to accomplish both aims.

Beyond this, I hope that our Government and the international airlines involved will explore many ways of preventing these barbaric acts in the future.

Our Government ought to explore with other nations the creation of an international compact requiring armed guards on international airlines, and, if necessary, providing subsidies to pay for them.

I would also support an international boycott of air travel to and from those nations where the guerrillas are based and operated, until those nations themselves act effectively to bring those of their citizens who are responsible to justice. Possibly an agreement might be reached immediately between our Government and American-owned airlines under which flights would be indefinitely suspended to and from nations which harbor air pirates. As others have suggested, the United States might also refuse landing rights to airlines of nations which have permitted guerrillas to operate within their borders.

I would hope also that our Government would seriously consider other sanctions against such nations, including the suspension of any economic and military aid they might be receiving.

Clearly, few of these preventive measures can be effective unless they are adopted internationally. For this reason I believe President Nixon should seek to convene an emergency international conference, sponsored if possible by the United Nations, to consider these and other ways to stop international air piracy.

The agenda of such a conference should certainly include the possible use of armed guards on international flights; sophisticated electronic means of searching passengers in order to detect weapons; restriction or prohibition of international air travel to and from nations which continue to permit guerrilla terrorists to operate freely; and international economic sanctions.

I am bringing these suggestions to the attention of President Nixon.

MOTOR VEHICLE INFORMATION ACT

Mr. HART. Mr. President, yesterday I introduced the Motor Vehicle Information Act, which is aimed at reducing the damage to vehicles in low-speed crashes and reducing the costs for motor vehicle insurance premiums. The bill was inadvertently omitted from the CONGRESSIONAL RECORD following my floor remarks, so I ask unanimous consent the full text of the bill be printed at the conclusion of these remarks.

As the senior Senator from Michigan, I am pleased to note that the automotive industry is responding to the public need for less fragile cars and more substantial bumpers which will protect these vehicles in the low-speed accidents where most of the insurance losses occur.

Mr. Ed Cole, president of General Motors, has indicated that his company "is making quite an effort to improve our front and rear end bumper problems by pulling the bumpers further away from the sheet metal and providing a uniform height and surface for contact." He also has indicated that GM is evaluating energy absorbing devices which can withstand car-to-car collisions with perfect matching bumpers up to 10 miles per hour. However, these devices, according to Mr. Cole, are expensive and many problems remain to be solved before they can be economically adapted to mass production of motor vehicles.

Additionally, the Chrysler Corp., commenting on the Motor Vehicle Information Act, said:

We believe there is merit in permitting the consumer to make an economic choice as between specific makes and models of automobiles based on data with respect to their crash worthiness.

I have been advised informally that both Chrysler and Ford are engaged in extensive research programs in an effort to develop property protection features for their vehicles.

Secretary Volpe has advised me that the Department of Transportation's experimental vehicle contracts provide "for designs that will prevent vehicle damage—either front or rear—in collisions up to 10 miles per hour. He goes on to say:

At low speeds, therefore, we do expect to eliminate damage, bringing significant economy to the motorist-consumer of the near future.

If the Department of Transportation moves swiftly to develop standards for vehicles in use and Congress provides the necessary financial assistance to the States to implement the authorized safety programs, we can expect to see significant reductions in economic losses now being experienced as a result of the millions of motor vehicle accidents occurring on our streets and highways annually.

There being no objection, the bill was ordered to be printed in the RECORD, as follows:

S. 4331

A bill to amend the National Traffic and Motor Vehicle Safety Act of 1966 in order to promote competition among motor vehicle manufacturers in the design and production of safe motor vehicles having greater resistance to damage, and for other purposes

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That this Act may be cited as the "Motor Vehicle Information Act."

PURPOSE

SEC. 2. (a) It is the purpose of this Act, (1) to amend the National Traffic and Motor Vehicle Safety Act of 1966 (hereinafter referred to as "the Act") to promote competition among motor vehicle manufacturers in the design, production, and sale of motor vehicles which are less susceptible to damage in traffic accidents occurring at normal operating speeds and which lessen the risk of injury and death to occupants of motor vehicles and pedestrians involved in traffic accidents, and (2) to provide for the augmentation and implementation of certain Federal Motor Vehicle Safety Standards.

(b) The first section of the Act (15 U.S.C. 1381) is amended to read as follows:

"That the Congress finds and declares that—

"(1) it is necessary to establish motor vehicle safety standards for motor vehicles and equipment moving in interstate commerce, to establish testing procedures for passenger motor vehicles, to undertake and support necessary safety research and development, and to expand the national driver register; and

"(2) it is the purpose of this Act to reduce the number and severity of traffic accidents, the number of deaths and injuries resulting from such accidents, and extent of property damage resulting from such accidents."

DEFINITIONS

SEC. 3. Section 102 of the Act (15 U.S.C. 1391) is amended by—

(1) inserting in paragraph (1) after "injury to persons" the following: "and unnecessary damage to motor vehicles";

(2) adding at the end thereof the following new paragraphs:

"(14) 'Make', when used in describing a motor vehicle, means the manufacturer's trade name or other designation for a particular line of motor vehicles.

"(15) 'Model' means a particular size and style of body of any make of motor vehicle, including distinctive sizes of sedans, convertibles, station wagons, and trucks, and such other classifications as the Secretary may prescribe.

"(16) 'Passenger motor vehicle' means any motor vehicle manufactured primarily for the transportation of its operator and passengers upon the public streets, roads, and highways."

PUBLIC DISCLOSURE OF COMPARATIVE SAFETY OF PARTICULAR MOTOR VEHICLES ADDITIONAL STANDARDS

SEC. 4. Title I of the Act (15 U.S.C. 1391 et. seq.) is amended by adding at the end thereof the following new sections:

"SEC. 124. (a) The Secretary shall develop and prescribe by regulations issued not later than July 1, 1972, a system of tests and testing procedures designed to allow a determination and comparison of the susceptibility to damage of passenger motor vehicles involved in traffic accidents which reasonably may be anticipated to occur at normal speeds and under normal operating conditions, including, but not limited to, collisions at speeds of 5, 10, and 15 miles per hour.

"(b)(1) The Secretary shall undertake a study of the feasibility of developing tests and testing procedures designed to allow a determination and comparison of the risk of personal injury or death to occupants of passenger motor vehicles resulting from traffic accidents which reasonably may be anticipated to occur at normal speeds and under normal operating conditions. The Secretary shall report the results of such study, and his findings and recommendations, including any recommendations for additional legislation he deems necessary, to the President and the Congress by July 1, 1972.

"(2) If the Secretary finds that such tests are feasible he shall develop and prescribe by regulations issued as soon as may be practicable such a system of tests and testing procedures.

"SEC. 125. (a) Each manufacturer of motor vehicles shall test production models of every make and model of passenger motor vehicle manufactured or imported by him in accordance with the regulations promulgated by the Secretary under the provisions of section 124 of this title, and shall furnish the results of such testing, including such data as the Secretary deems necessary, to the Secretary.

"(b) No manufacturer shall sell, offer for sale, introduce or deliver for introduction in interstate commerce, or import into the United States—

"(1) any passenger motor vehicle manufactured on or after November 1, 1972, unless production models of the make and model of such motor vehicle have been tested in accordance with the regulations promulgated by the Secretary under section 124(a) of this Act; or

"(2) any passenger motor vehicle manufactured on or after a date 180 days to one year after the date on which regulations governing tests and testing procedures are promulgated by the Secretary under the provisions of section 124(b) of this Act unless a production model of the make and model of such motor vehicle has been tested in accordance with such regulations.

"SEC. 126. (a) The Secretary shall compile information submitted to him under testing programs carried out under the provisions of section 124 of this Act, and furnish it to the public in a simple and readily understandable form in order to facilitate comparison among the various makes and models of passenger motor vehicles with respect to the factors analyzed by such testing programs. The information shall include, but not be limited to a comparative analysis of the cost of repairing motor vehicles under section 124(a). The Secretary shall require that the results of such testing be made available to prospective purchasers of passenger motor vehicles by the manufacturer of such motor vehicles prior to their sale."

"(b) The Secretary shall—

"(1) make such information available to insurance companies and business organizations engaged in the business of selling or underwriting motor vehicle insurance in interstate commerce, for use in determining premium rates for insurance covering property damages and personal injury related to the factors tested under the provisions of section 125 of this Act. Information furnished shall include, but not be limited to, identification of parts, components, systems, and subsystems damaged or displaced in the motor vehicles tested; and

"(2) report to the President and the Congress on February 1, 1973, on the extent to which the motor vehicle insurance industry is utilizing such information in the determination of insurance premium rates, together with such additional findings and recommendations, including recommendations for additional legislation, as he deems appropriate. The Secretary is authorized to conduct such studies and surveys as may be necessary to carry out the purposes of this Act.

"SEC. 127. The Secretary shall, as soon as practicable, promulgate a Federal motor vehicle safety standard which requires that all motor vehicles manufactured after January 1, 1975, and offered for sale in the United States, are so designed and constructed as to facilitate periodic motor vehicle inspection, and to facilitate the repairs necessary to meet the requirements of such inspection."

JUDICIAL REVIEW

SEC. 5. Section 105(a)(1) of the Act (15 U.S.C. 1394(a)(1)) is amended by inserting after the words "any order under section 103" the following: "or 127, or any regulation issued under section 124."

SAFETY RESEARCH

SEC. 6. Section 106(a) of the Act (15 U.S.C. 1395(a)) is amended by redesignating paragraphs (2) and (3) as paragraphs (3) and (4), respectively, and inserting immediately after paragraph (1), the following new paragraph:

"(2) collecting data from any source for the purpose of determining the relationship between passenger motor vehicle performance and design characteristics and (A) property damage resulting from motor vehicle collisions, and (B) the occurrence of personal injury or death resulting from such accidents;"

COOPERATION WITH OTHER AGENCIES

SEC. 7. Section 107 of the Act (15 U.S.C. 1396) is amended by striking out the period at the end thereof, and inserting in lieu thereof a semicolon and the following:

"(3) tests and testing procedures established under section 124, and methods for inspecting and testing to determine compliance with such tests and testing procedures.".

PROHIBITION AND EXCEPTIONS

SEC. 8. Section 108(b) of the Act (15 U.S.C. 1397(b)) is amended by—

(1) inserting in paragraphs (1), (3), and (5) of such section, immediately after the words "subsection (a)" wherever they appear in such paragraphs, a comma and the words "and section 125(b),"; and

(2) amending paragraphs (2) and (3) of such section 108 to read as follows:

"(2) Paragraph (1) of subsection (a), and section 125(b) shall not apply to any person who establishes that he did not have reason to know in the exercise of due care that such vehicle or item of motor vehicle equipment is not in conformity with applicable Federal motor vehicle safety standards or, in the case of a passenger motor vehicle, is not of

a make and model which has been tested in accordance with the requirements of section 125(b), or to any person who, prior to such first purchase, holds a certificate issued by the manufacturer or importer of such motor vehicle or motor vehicle equipment, to the effect that such vehicle or equipment conforms to all applicable Federal motor vehicle safety standards, and (in the case of a passenger motor vehicle) is of a make and model which has been tested in accordance with the requirements of section 125 (b), unless such person knows that such motor vehicle or motor vehicle equipment does not so conform or (in the case of a passenger motor vehicle) is not of a make or model which has been so tested.

"(3) A motor vehicle or item of motor vehicle equipment offered for importation in violation of paragraph (1) of subsection (a), or section 125(b), shall be refused admission into the United States under joint regulations issued by the Secretary of the Treasury and the Secretary; except that the Secretary of the Treasury and the Secretary may, by such regulations, authorize the importation of such vehicle or item of motor vehicle equipment into the United States upon such terms and conditions (including the furnishing of a bond) as may appear to them appropriate to insure that any such motor vehicle or item of motor vehicle equipment will be brought into conformity with any applicable Federal motor vehicle safety standard prescribed under this title, brought into conformity with the requirements of section 125(b), or will be exported or abandoned to the United States.".

PENALTIES

SEC. 9. Section 109(a) of the Act (15 U.S.C. 1398(a)) is amended to read as follows:

"SEC. 109. (a) Whoever—

"(1) violates any provision of—

"(A) section 108 (relating to motor vehicle safety standards);

"(B) subsection (c) or (d) of section 112 (relating to keeping records and reporting data);

"(C) section 114 (relating to certification); or

"(D) section 125 (relating to passenger motor vehicle testing); or

"(2) refuses to permit an inspection authorized under section 112 (a) and (b) shall be subject to a civil penalty of not to exceed $5,000 for each such violation or refusal. A violation of a provision of such sections or regulations issued thereunder, shall constitute a separate violation with respect to each motor vehicle sold, offered for sale, introduced or delivered for introduction in interstate commerce, or imported into the United States in violation of such provisions or regulations, and with respect to each failure or refusal to allow or perform an act required thereby. A refusal to allow an inspection authorized under section 112 (a) and (b), or a refusal or failure to allow or perform an act required thereby, shall constitute a separate violation with respect to each day such refusal or failure continues."

INJUNCTIVE RELIEF

SEC. 10. Section 110(a) of the Act (15 U.S.C. 1399(a)) is amended by inserting in the first sentence thereof, immediately after the words "standards prescribed pursuant to this title", a comma and the following: "or to the requirements of section 125(b)".

REPURCHASE OR REPLACEMENT

SEC. 11. Section 111(a) of the Act (15 U.S.C. 1400(a)) is amended by inserting immediately after the words "applicable Federal motor vehicle safety standards" the following: "or the requirements of section 125(b)."

INSPECTION OF MANUFACTURING FACILITIES

SEC. 12. Section 112(b) of the Act (15 U.S.C. 1401(b)) is amended by inserting, immediately after the words "or are held for sale after such introduction", a comma and the following: "or are held after being tested in accordance with the requirements of section 125(b)".

CERTIFICATION OF CONFORMITY

SEC. 13. Section 114 of the Act (15 U.S.C. 1403) is amended by inserting before the period at the end of the first sentence a comma and the following: "and that the particular make and model of such motor vehicle has been tested in accordance with the requirements of section 125(a)".

AMENDMENT OF INSPECTION AND REGISTRATION STANDARDS

SEC. 14. (a) The Secretary shall, not later than January 1, 1937, amend Highway Safety Program Standard number 1, relating to periodic motor vehicle inspection, issued June 27, 1967, under the provisions of section 402(a) of title 23, United States Code, to include the following additional provisions:

(1) The standard shall require inspection of a motor vehicle whenever the title to the motor vehicle is transferred for purposes other than resale, and whenever the motor vehicle sustains damage if any safety-related mechanism, subsystem, or functional non-operational part, as defined by the Secretary, is damaged.

(2) The standard shall require that a certificate of safe operating condition shall be prepared and signed by an inspector trained to perform this duty. The inspector shall be certified by the State in accordance with provisions established by the Secretary. No motor vehicle inspector may be certified by any State if he owns or receives any benefit in or from a business or enterprise engaged in the repair or sale of motor vehicles, automotive repair parts or accessories. *Provided*, a State may approve a motor vehicle inspector receiving such benefit where the vehicle population to be served is insufficient to make independent motor vehicle inspectors feasible and such State makes provision for protecting the public from any conflict of interest resulting from such certification.

(3) The standard shall be expressed in terms of motor vehicle safety performance applicable to all used motor vehicles.

(b) The Secretary shall, not later than January 1, 1973, amend Highway Safety Program Standard number 2, relating to motor vehicle registration, issued on June 27, 1967, under the provisions of section 402(a) of title 23, United States Code, to include requirements for a State motor vehicle registration and uniform certificate title program similar to the registration and title program contemplated by the Uniform Motor Vehicle Certificate of Title and Antitheft Act promulgated by the National Conference of Commissioners on Uniform State Laws.

REPORTS ON IMPLEMENTATION

SEC. 15. (a) The Secretary shall report to the President and Congress by January 1, 1972, the extent to which the States have implemented programs in accordance with the provisions of Highway Safety Program Standards numbered 1 and 2, relating to periodic motor vehicle inspection and motor vehicle registration, respectively, as issued on June 27, 1967, and make legislative recommendations for Federal financial and other assistance, as he deems necessary in order to facilitate compliance by the States by January 1, 1973.

(b) The Secretary shall report to the President and Congress by January 1, 1974, the extent to which the States have implemented programs in accordance with the provisions of section 14 of this Act, and make legislative recommendations, for Federal financial and other assistance, as he deems necessary to facilitate compliance by the States by January 1, 1975.

(c) Not later than January 1, 1975, the Secretary shall—

(1) certify each State program of periodic motor vehicle inspection and motor vehicle registration which meets the requirements of the applicable standard;

(2) the Secretary shall not approve any State Highway Safety Program under this section which does not establish a program of periodic motor vehicle inspection or motor vehicle registration meeting the requirements of the appropriate Federal Highway Safety Program Standard; and

(3) funds authorized to be appropriated to carry out the provisions of section 14 and this section shall be used to aid the States to conduct the Highway Safety Program approved in accordance with subsection (a) hereof. Federal aid highway funds apportioned on or after January 1, 1975, to any State which is not implementing a Highway Safety Program approved by the Secretary in accordance with this section shall be reduced for the first year of noncompliance by amounts equal to 10 per centum of the amounts which would otherwise be apportioned to such State under section 104 of title 23, United States Code, with the reduction of an additional 10 per centum for each succeeding year of noncompliance, but not in excess of a total of 30 per centum, until such time as the State is implementing an approved Highway Safety Program certified by the Secretary in accordance with this subparagraph (c). Any amount which is withheld from apportionment to any State hereunder shall be reapportioned to the other States.

(d) In order to carry out the provisions of this section, the Secretary may—

(A) assist, by contract, grant, or any other arrangement, any State in establishing or improving programs of periodic motor vehicle inspection and motor vehicle registration;

(B) use the personnel, facilities, and information of Federal agencies, and of State and local public agencies, with the consent of such agencies, with or without reimbursement for such use;

(C) enter into contracts or other arrangements and modifications thereof, and make advance, progress, and other necessary payments;

(D) obtain the services of experts and consultants in accordance with the provisions of section 3109 of title 5, United States Code;

(E) issue, amend, and repeal such rules and regulations as may be necessary; and

(F) take such other appropriate action as may be necessary.

SEC. 16. There are authorized to be appropriated to the Department of Transportation such sums as may be necessary to carry out the provisions of this Act.

HIJACKING OF INTERNATIONAL CIVILIAN AIRPLANES

Mr. PELL. Mr. President, the hijacking of international, civilian airplanes is a heinous and dastardly deed and a crime for which drastic remedies are necessary. More than the appointment of another study commission is needed.

I would suggest that the United States take the lead in immediately canceling the service of its airlines to any country not willing to extradite hijackers who are within its boundaries.

I realize such an action would cause some economic hardship to our airlines, and I believe that we should do all possible to ease their load in any other ways that we can. But I do believe that

such a boycotting procedure would achieve the result we wish by discouraging future hijackings.

If this policy were adopted, hijackers soon would discover that they would not be welcomed at the country to which they divert an airplane. Indeed, hijackers would quickly learn that their actions would be a source of embarrassment and concern to that country for which the hijacker feels some bond of sympathy. Under these circumstances, I believe we would see a rapid decrease in the incidence of airline hijacking.

I must add, too, that I admire the technique the Israeli airlines have used. It has proved very effective and has prevented any hijacking of any of their airplanes. However, I think their complete technique might prove too draconian for us. The Israeli airline procedure is not only to have armed guards on each flight, but also to separate completely the cockpit from the cabin with bullet-proof material. Then, even if hijackers were successful in overpowering people in the passenger cabin, they still could not get into the cockpit. This would leave to the pilot the choice as to whether to follow the hijackers' instructions or risk his airplane being destroyed. Presumably, the Israeli pilots might prefer this latter alternative to landing in an Arab country.

THE PROPOSED EQUAL RIGHTS AMENDMENT

Mr. GORE. Mr. President, I wish to announce my endorsement and active support of the proposed equal rights amendment to the Constitution. There has been a great deal of discussion of proposed changes in the language approved overwhelmingly by the House of Representatives on August 10, 1970. I understand that when this matter comes before the Seante, efforts may be made to alter the House-approved language:

> Equality of rights under the law shall not be denied or abridged by the United States or by any state on account of sex.

Political, social, and economic equality for all citizens must be a continuing goal of any democratic government. Today, we have not completed the task of securing equal rights for women. Though passage of a constitutional amendment may not automatically bring about equality, as has been the case with other guarantees, but it should certainly be of material assistance, and this step should be taken.

In 1848, a group of women began the battle which, in a sense, will be culminated by the adoption of this amendment. These early Suffragettes believed women should participate in our governmental process as full-fledged citizens and voters. Today, I think no one would want to deny to women the right to vote.

But full citizenship involves much more than the right to vote. American women contribute toward their national economy, making up 38 percent of our labor force, but few would argue that women are treated with full equality in securing jobs and in being compensated for their work.

Women today do not have the opportunity to share fully the rights, privileges and duties of men. There are current State laws which restrict the contractual and property rights of married women. Women and men are treated differently when juries are impaneled and some States may arbitrarily provide greater penalties for female than male violators of the law.

Of course, some State laws and some Federal laws are specifically designed for the true protection of women. I think women can be properly protected without being restricted and discriminated against.

The language of the proposed amendment as approved by the House appears adequate. I support that language.

THE CABLE VERSUS SATELLITE ISSUE

Mr. GRAVEL. Mr. President, I wish to bring to the attention of the Senate a growing apprehension that the benefits of a hard-won space technology shouldered by a patient American taxpayer will continue to be denied the general public.

The Nation's largest commercial utility, the American Telephone & Telegraph Co., recently announced its intention to lay another high-capacity, underwater transatlantic cable. Ironically, the announcement comes at a time when large groups of transatlantic satellite circuits are unused. It also comes at a time when several high-capacity communications satellites soon will be launched.

These latest international communications satellites, manufactured under the stewardship of the Communications Satellite Corporation, face an uncertain financial future should this cable be approved.

Are the dice loaded against the public? I think they are.

Congressional action in 1962 created the Communications Satellite Corporation—Comsat. Common carriers were given the option to exercise as much direct influence in its management as the public. Yet, in the case of Comsat's financial life and death, its primary competitor—A.T. & T.—has several seats on Comsat's board of directors. There is no question that A.T. & T. has access to important cost information and marketing strategy that otherwise would be denied a competitor. Were it denied, as normally expected in an unregimented economic society, the public would benefit from free competition. As things now stand, however, the cable versus satellite issue is not one of free competition. Instead, it is like playing with a set of loaded dice. The public has no chance but to come up snake eyes on the first throw.

ORDER OF BUSINESS

Mr. BYRD of West Virginia. Mr. President, I suggest the absence of a quorum.

The ACTING PRESIDENT pro tempore. The clerk will call the roll.

The assistant legislative clerk proceeded to call the roll.

Mr. BYRD of West Virginia. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

CONCLUSION OF MORNING BUSINESS

The ACTING PRESIDENT pro tempore. Is there further morning business? If not, morning business is concluded.

DIRECT POPULAR ELECTION OF THE PRESIDENT AND THE VICE PRESIDENT

The ACTING PRESIDENT pro tempore. Under the previous order, the Chair lays before the Senate the unfinished business which will be stated by title.

The title was read as follows: A joint resolution (S.J. Res. 1) proposing an amendment to the Constitution of the United States relating to the election of the President and the Vice President.

The Senate resumed the consideration of the joint resolution.

Mr. EASTLAND. Mr. President, we again take up the very serious and complex question of whether and how to change our method of electing the President and Vice President of the United States. No more important issue will confront us during this Congress than this one.

The resolution reported by the Judiciary Committee, over the objections of six other members of the committee and myself, would substitute the system given us by the framers of the Constitution of electing our highest officials with a national plebiscite.

In my judgment, it would be extremely detrimental to the Nation and the political processes which have served us so well to make such a drastic revision in our method of electing the President and Vice President. This proposed constitutional amendment has been mislabeled as "reform." I believe that its passage by the Congress and ratification by the States would accomplish radical change, not reform. I completely agree with the statement made by Prof. Charles Black of Yale Law School during his testimony before the Judiciary Committee:

> I think a case can be made for the proposition that direct election, if it passes, will be the most deeply radical amendment which has ever entered the Constitution of the United States.

There is great wisdom and truth in Professor Black's statement. It should be self-evident that when we alter the formula for victory in presidential campaigns, there will naturally result great changes in the type and style of campaign waged by the candidates. The primary objective of a presidential election campaign is to win the election. Within the bounds of propriety and legality candidates and their managers will say and do whatever is necessary to achieve that end. We should never lose sight of these basic facts.

Under the present system the formula

for victory is to carry a sufficient number of States to produce a majority in the electoral college. This compels candidates to make broad national appeals to the voters. While it is highly desirable to carry populous States with large electoral votes, the successful candidate does not alienate the less populous States with a small number of electoral votes, because those votes might be needed to produce a winning majority in the electoral college. In fact, this has been the political history of our two-party campaigns for the Presidency under our present system.

The winning formula under the proposed direct system of election would be to attain a 40-percent plurality of the votes in a national plebiscite. There would be no compulsion or necessity to assemble a coalition of States; it would only be necessary to receive a 40-percent plurality of the popular vote.

It is not possible to say with certainty just how this drastic change would affect our presidential campaigns. It can be said with certainty, however, that its effect would be great.

Mr. President, while this resolution provides for the election of the President, in reality it provides for minority rule.

In my judgment, the tendency of candidates and their managers would be to maximize their margins in the heavily populated States even at the expense of losing some votes in the rural, less populated States. Under the present system it makes no difference whether a candidate carries the State of New York by a margin of 100 thousand votes or 1 million votes. He receives all of New York's 45 electoral votes regardless of the margin. Part of the winning formula under the present system is to make a national appeal designed to carry such States as New York by a moderate margin, but at the same time to make an appeal to the farm States of the South and West with the hopes of carrying some of them.

Under the system of direct popular election, I believe that there would be no such incentive to take a balanced approach. Rather, there might be an irresistible temptation to adopt a platform and develop issues designed to carry New York by 1,500,000 votes, Massachusetts by 750 thousand votes, California by 1 million votes, and Illinois and Michigan and Pennsylvania by 500,000 votes each.

With an aggregate popular vote lead of 4,750,000 in those six States, a candidate could afford to settle for a minority ideological vote in the small States.

The 1970 census figures confirm what we already knew about the accelerating tendency of rural and small town areas to lose population to the great urban and suburban portions of the Nation.

The political effects of this process would certainly bring about the radicalization mentioned by Professor Black. There are many troubling questions raised by the prospect of this radical revision of our system of electing the President. Among these questions are:

Will the political power of the smaller States be diminished by the adoption of this proposed amendment? Specifically, will the political power of the States and the people who produce and mine the food, fabrics, and minerals of the Nation be diminished?

Will the adoption of the proposed amendment create an irresistible temptation to electoral fraud?

Will the adoption of the proposed amendment lead to interminable electoral recounts and challenges?

Will the adoption of the proposed amendment necessitate national direction and control of every aspect of the electoral process?

I believe that the answer to each of the questions is "Yes."

However, before we examine these important aspects of the proposed drastic change in the method of electing the President and Vice President, there is one feature of this matter which I think it is of crucial importance to discuss. I do not think it wise nor proper to abandon our present system of electing the President and Vice President in favor of a national plebiscite system. However, if we are to elect our highest officials in a a national plebiscite, it is extremely important that the candidates elected obtain a clear popular mandate of the voters of this Nation.

This proposed constitutional amendment as now drafted provides that a President and Vice President can be elected with a 40-percent plurality of the popular vote. If we are to have a plebiscite, it is imperative that we make certain that the will of the majority will be done, not the will of the minority.

Mr. President, at this time I send to the desk an amendment to change the requirement for election from a 40-percent plurality to 50 percent of the total popular vote cast. Under my amendment, in the event no pair of candidates attain 50 percent of the vote, then a runoff election shall be held in which the choice of President and Vice President shall be made from the two pairs of persons who received the highest number of votes.

I ask unanimous consent that this amendment be printed in the RECORD at this time.

The ACTING PRESIDENT pro tempore. The amendment will be received and printed, and will lie on the table; and, without objection, the amendment will be printed in the RECORD.

The amendment is as follows:

AMENDMENT NO. 885

On page 5, line 3, strike "40 per centum" and insert in lieu thereof "50 per centum".

Mr. EASTLAND. Mr. President, I offered this amendment in the Judiciary Committee when this matter was being considered by it. This amendment failed by a vote of 9 to 7.

There are many theoretical and practical reasons for the adoption of my amendment.

In theory, the requirement that candidates receive at least 50 percent of the vote in order to be elected is preferable to the 40-percent plurality requirement. The stated purpose of this constitutional amendment is to place directly in the hands of the voters all power in the election of the President and Vice President. Another stated purpose of the amendment is to give effect to the "one person—one vote" rule and make it apply to presidential elections. The goal of these purposes is to assure that the national popular will is expressed in the selection of the President and Vice President.

Surely, these purposes would be better served by making certain that the President and Vice President represent the will and votes of a national majority, not merely a national 40-percent plurality.

The 40-percent-plurality rule could easily result, not in the expression of the national popular will, but its perversion. Under that system candidates for President and Vice President could be elected whom a clear majority of the American voters expressly wished to be defeated. In order to illustrate this point, and without dealing in personalities, one can examine the results of the last presidential election and make reasonable speculation about the 1972 presidential election.

Suppose that the 40-percent plurality is in effect when the 1972 elections are held and that the candidates are President Nixon, the Democratic nominee, and a candidate of the Urban Coalition Party or a Peace Party. Let us further suppose that the thrust of the Democratic campaign and the third party campaign is that the President has failed to deal adequately with important foreign and/or domestic problems. The basic thrust of the Nixon campaign would be that the President has done a good job in dealing with these problems.

These are not unreasonable assumptions.

If the results of that election give President Nixon 43 percent of the vote, the Democratic nominee 42 percent of the vote, and the third party candidate 15 percent of the vote, President Nixon would be reelected. Would this be an adequate expression of the national will? In my judgment, it would not.

Mr. BAYH. Mr. President, will the Senator yield?

Mr. EASTLAND. Yes, I yield for a question.

Mr. BAYH. I would like to pose one very simple question to the distinguished chairman of the full Committee on the Judiciary. The percentages that he quotes as a speculation for the 1972 election have a familiar ring. Are not those the same percentages of the nationwide popular vote that occurred in the 1968 election?

Mr. EASTLAND. I think approximately, yes.

Mr. BAYH. I only raise this question because if we are trying to point out the weaknesses and the strengths it would seem to the junior Senator from Indiana that if we have a President sitting in the White House now who received 43 percent, while his opponents received 42 percent and 15 percent, and we do not question his credibility or his credentials of office when he is chosen by the electoral college, that we would have similar reason not to be inclined to question his credibility if elected by the popular vote.

Mr. EASTLAND. The people in 1968

voted for a change and got their change. If these percentages are correct, the people in 1972 would vote for a change and would not get the change.

Mr. BAYH. I appreciate the response of the distinguished chairman, my friend and colleague from Mississippi. There can be some questions as to the type of change that has transpired since 1968.

I share the concern of the distinguished Senator from Mississippi that we maximize the popular will, and for that reason I have insisted that we have a runoff provision in Senate Joint Resolution 1. In fact, I suppose I am responsible for having it in there because of my concern that we not proliferate the party structure and because of my belief that a runoff would minimize such proliferation.

I differ with my friend and colleague where the runoff should be struck, whether at 40 or 50 percent. But we concur in the basic premise that we should have a runoff when the candidate who gets the most votes gets less than a certain amount of votes.

Mr. EASTLAND. Do not get the idea that if this measure provided for 50 percent I would be for it.

Mr. BAYH. The Senator from Indiana was going to ask that question of my friend from Mississippi, but he beat me to the punch.

Mr. EASTLAND. No; I would still be against it, because it would destroy the federal system.

Mr. BAYH. I was hoping that we would have the prestige and advice and counsel of the Senator from Mississippi.

Mr. EASTLAND. I thank my good friend, but under no conditions could I support this constitutional amendment.

Mr. CURTIS. Mr. President, will the Senator yield?

Mr. EASTLAND. I yield for a question.

Mr. CURTIS. I am sorry I did not hear the Senator's full statement. Due to the hour the Senate is meeting, we cannot be everywhere at once, but I shall peruse it in the RECORD.

How long does the Senator think it would take to hold a runoff election if this amendment were to become a part of the Constitution? The elections are held, the votes are counted, presumably in the States, or somewhere. Anyhow, they are certified nationally. Various contests or objections are filed, which is not unusual. A final determination is made. Then an announcement is made that there must be a runoff. There must be some opportunity for the parties and candidates to prepare for the runoffs and campaigns.

My question is, How soon after the November election would that be?

Mr. EASTLAND. I think some part of June of the next year. In the meantime nobody would know who the President was. This country would be floundering in a hopeless sea of uncertainty.

Mr. CURTIS. Even if it would not take that long, it would mean disaster in many situations in our foreign policy, as well as domestic problems.

Mr. EASTLAND. Why, it would be disastrous if it took only until January.

Mr. CURTIS. Exactly.

I wanted to make another inquiry of the distinguished Senator. Because of the high position he holds as chairman of the Judiciary Committee, I value his opinion.

I direct the Senator's attention to section 2 of the joint resolution, relating to qualifications of electors. This section carries some of the language contained in the Constitution at the present time. It reads:

> The electors of President and Vice President in each State shall have the qualifications requisite for electors of the most numerous branch of the State legislature.

That fits into the present system of counting the electoral vote, but then the language continues:

> Except that for electors of President and Vice President, the legislature of any State may prescribe less restrictive residence qualifications and for electors of President and Vice President the Congress may establish uniform residence qualifications.

Should the Supreme Court rule against the recent voting act allowing 18-year-olds to vote, if the pending amendment were to become a part of the Constitution any State could choose as they might wish. Is that not correct?

Mr. EASTLAND. Certainly.

Mr. CURTIS. Could the political forces in charge of State government in a given State secure an unfair advantage for their national ticket by changing the voting age?

Mr. EASTLAND. This proposal has several hearts, but let me tell my distinguished friend from Nebraska that he has gone to the very heart of the thing. Yes, it would be an unfair advantage.

Mr. CURTIS. When I raised this point the other day I received the reply, well, they would not lower the age down to 13 or 14. They would not have to do that. They could do otherwise to change it. If the idea becomes generally accepted that 18-year-olds should vote, someone is going to suggest, well, if they are closer to 18 than they are to 17, then they are 18.

Mr. EASTLAND. That is right.

Mr. CURTIS. And the legislature of a State could not be criticized for taking that view.

Mr. EASTLAND. And I think we would have just that in some States in the country.

Mr. CURTIS. Is there anything in the Federal Constitution at the present time prohibiting a State from extending the right to vote to citizens?

Mr. EASTLAND. No.

Mr. CURTIS. Does the distinguished chairman happen to know whether or not aliens do vote in some of the States?

Mr. EASTLAND. That I do not know.

Mr. CURTIS. Would it not be possible for a State to grant the right to vote to all aliens, or perhaps to aliens who had filed their first papers to become citizens? From the standpoint of the Federal Government, they could do it; could they not?

Mr. EASTLAND. Yes, that would be true, except I think it would throw the election, and could throw the election, into court.

Mr. CURTIS. Probably so, but what I am trying to illustrate is this: This amendment is based on the premise of casting individual votes and totaling them from a national standpoint and at the same time preserving that part of the Constitution which gives the States authority, within some limitations, of determining the qualificaitons of voters. Is that not correct?

Mr. EASTLAND. That is correct.

Mr. CURTIS. Are those two ideas compatible?

Mr. EASTLAND. I do not think so.

Mr. CURTIS. Could it be likened to a situation where a State, in reference to statewide elections, permitted counties or other subdivisions to determine the qualifications of voters?

Mr. EASTLAND. Well, of course, a State could delegate to a county——

Mr. CURTIS. I mean the area we are getting into could be as ridiculous as that?

Mr. EASTLAND. As that; that is correct.

Mr. CURTIS. I have changed my mind about one matter. Some months ago I was of the opinion that it was not important to require the President-elect to have a majority. I have changed my mind on that. I believe that the President, in order to furnish leadership in domestic matters when crises come along, or in world affairs, should represent a majority.

Mr. EASTLAND. That is what this amendment provides——

Mr. CURTIS. The amendment of the Senator from Mississippi.

Mr. EASTLAND. Correct.

Mr. CURTIS. Without the amendment of the Senator from Mississippi, that would not be the case; would it?

Mr. EASTLAND. No. We would have a minority President, one that received as low as 40 percent of the vote.

Mr. CURTIS. Under our present system, is it not to the advantage of both major parties to discourage third, fourth, and fifth party candidates from getting into the race for President, because it lessens their opportunity to get a majority of the electorial vote?

Mr. EASTLAND. Mr. President, I am going to be frank with my friend from Nebraska. I do not see anything holy in the two-party system. Now, three parties, yes. I would say that what we have to keep away from is a multitude of small parties. That would weaken and destroy this country—destroy the effectiveness of our Government. It would be just like the French Government and the German Government——

Mr. CURTIS. I could agree with the Senator on that, because——

Mr. EASTLAND. Between wars. But I cannot say that three, now, would do that.

Mr. CURTIS. Well, that may be true, because if we get too harsh on the third, it might reach a situation in this country where the formation of a new party could

never be brought about. Let me state my question in another way.

If this amendment is agreed to as written, without any change, then is it not true that there would be little or no restraint from preventing politicians from stirring up a lot of candidates and putting them into the race, and getting them onto the ballot, because they have nothing to lose; they do not need more than 40 percent, if they have the most votes? Is that not correct?

Mr. EASTLAND. Why, certainly. And if you have a very strong candidate in one of the parties, I think it would be done.

Mr. CURTIS. It very likely would be done. I thank the distinguished Senator. I feel that the proposal before us is the most significant proposal to come before Congress in a long time.

Mr. EASTLAND. In this century.

Mr. CURTIS. And I thank the distinguished chairman of the Committee on the Judiciary for his contribution to the discussion.

Mr. EASTLAND. I thank my friend from Nebraska.

Mr. BAYH. Mr. President, will the Senator yield?

Mr. EASTLAND. For a question.

Mr. BAYH. I would like to clarify one point made by the Senator from Nebraska.

Mr. EASTLAND. Mr. President, I ask unanimous consent to yield to the Senator from Indiana without losing my right to the floor, and without my subsequent remarks being counted as a second speech on this legislative day.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

Mr. BAYH. I appreciate the courtesy of our distinguished chairman of the Committee on the Judiciary. Did I understand my friend from Nebraska to say that he thought we should have a President who had the support of the majority of the people in troubled times, particularly in times of foreign intrigue such as we are going through now.

Mr. CURTIS. I think that would be much better.

Mr. BAYH. I think the record should show that the present President was elected by 43 percent of the voters and that he was elected under the electoral college system, which has been enthusiastically supported by our friend from Nebraska.

Mr. CURTIS. No, I did not say that.

Mr. BAYH. There is no guarantee, under the present system, that we will have a majority President. In fact, we have had a number of Presidents who had less than a majority; in fact, some of them were outstanding Presidents.

Mr. CURTIS. No, no. President Nixon did get a majority of the electoral vote. That is the only vote recognized under our Constitution, and the present Constitution requires him to get a majority of that vote.

Mr. BAYH. I thought I heard the distinguished Senator from Nebraska say he should have the support of a majority of the people.

Mr. CURTIS. No. I do not think I said any such thing. In fact, I think the only vote for the President we have, in reality, is the electoral vote.

Mr. BAYH. Does it concern the Senator from Nebraska at all that it is possible for a President today to get a majority of the electoral votes and still have less than a majority, and in fact, have even fewer votes than his principal opponent? Does that concern the Senator from Nebraska at all?

Mr. CURTIS. No, it does not, because—and I have history on my side—the country has gotten along under such a system, and no one has been sworn in as President without having a majority of the electoral vote.

The Senator is urging the country to depart on a course of action where they would not need any majority of any kind, where the electoral vote is out, and no majority of the popular vote is required. This is an invitation to minority candidates, and it is an invitation for campaigning and campaign strategy to splinter the vote and end up with a minority President.

Mr. BAYH. I suggest to my friend from Nebraska that he looks at one part of this animal and I look at another, and we reach a different conclusion as to what the overall appearance is. It is not unusual for men of good faith to look at similar facts and come up with different conclusions.

The facts of the matter are that the present system allows the electoral college to put into high office a man who receives many fewer votes than the man he is running against. We do not have to speculate to a very great degree; we have only to look back to, let us say, 1948, when President Truman was running in a situation very similar to that in 1968. As we will recall, we had the Henry Wallace candidacy, the Strom Thurmond candidacy, and Dewey and Truman. In 1948, President Truman had a 2 million popular vote plurality. Yet, if there had been a change of less than 28,000 votes in the right three States, the electoral college would have put Governor Dewey into the Presidency, despite the fact that 2 million more Americans throughout the country thought Harry Truman should be the President.

I concur in the judgment of the Senator from Nebraska that we need to maximize support for the President in the serious times in which we find ourselves. But, is the Senator from Nebraska telling us, in this day and age, that he does not have some concern over the President's ability to govern if he had 2 million fewer popular votes than the man he has just defeated for the Presidency?

Mr. CURTIS. As the distinguished Senator said the other day, in opening debate, there is not any perfect plan. The plan I am defending has worked for a long time. It provides that no one would become President unless he has a majority of the electoral college vote. I do not think we should depart from that.

Mr. BAYH. The Senator did not answer the question posed by the Senator from Indiana.

Mr. CURTIS. All right. State it again.

Mr. BAYH. Pardon me.

Mr. CURTIS. State it again.

Mr. BAYH. I do not wish to prolong this discussion. We have been imposing on the time of the Senator from Mississippi. But I think it is important to ask ourselves how the President can have the maximum amount of credibility today. It seems that only God can give a President the necessary power, strength, courage, and foresight to be President. I do not think any mortal man really has such qualifications. Given the troubled times in which we live, does the Senator from Nebraska feel it would be possible for a President to have maximum credibility, maximum faith of the country, if he is elected President of the United States by the mathematics of the electoral college, even though 2 million more people throughout the country supported the man he ran against? That is exactly the situation that we almost had in 1948.

Mr. CURTIS. The Senator is citing hypothetical cases that almost happened.

Mr. BAYH. I am talking about the specifics of the 1948 election.

Mr. CURTIS. Well, they did not happen that way. Under the present circumstances, no one can be sworn in as President unless he has a majority of the electoral vote, and that is the right way to count the vote. Granted that in a close election, the one with the greatest electoral vote might be a little behind in the popular vote, still, not only in the outcome tied to a majority concept, but the campaign and the campaign strategy will be tied to the concept of a needed majority, and all of that is being abandoned in Senate Joint Resolution 1.

Mr. BAYH. May I just say to the Senator——

Mr. CURTIS. I do not want to impose upon the distinguished Senator from Mississippi.

Mr. BAYH. I will not impose further, except that I would still like to have an answer to the question.

The Senator suggests that there is something wrong about asking hypothetical questions. Yet, I have heard him ask every speaker in the last 2 or 3 days a series of hypothetical questions about runoffs and about qualifications of voters. I have been more than willing to try to answer these and to listen to others answer them. If the Senator from Nebraska feels that it is not a proper question to ask, that is fine; or, if he does not want to answer it, it is fine. But I should like to ask him once again, respectfully, whether he feels that you can maximize the credibility of the President of the United States if he is asked to govern this country when elected only by the mathematics of the electoral college system, if the man he ran against and defeated had the support of 2 million more Americans than the President himself had.

Mr. CURTIS. I will try to answer it. The term "maximize" is a relative term. I would say that that system would establish more confidence in the presidential election than the one the Senator from Indiana proposes. We are going

to elect no President who has the confidence of every citizen or the confidence of all the people around the world.

One difference in reference to these hypothetical questions is this: The Senator from Indiana is proposing a new, untried proposal. The evidence of how the system that he would replace would work is a matter of history, and that is quite a difference.

Mr. BAYH. I suggest to the Senator from Nebraska that to say that direct popular vote is untried completely ignores the fact, if I may say so, with all respect, that direct popular vote is used in every other election, on every election day, in every State, in every municipality, in every State legislature district, in every congressional district. We have ample knowledge of how this works. And I hope we can pursue the runoff question a little further.

Mr. CURTIS. All except in a Federal system. This is the United States of America. Our country is made up of 50 sovereign States. There has been no pattern for a popular election in that respect. The matter is just filled with complications and problems. If the distinguished Senator really believed in this popular election business, I cannot understand why he is not suggesting Federal qualifications for voters. I am against Federal qualifications for voters, but I believe that section 2 is in contradiction with the theme of the Senator's proposal for direct election and for runoff.

Mr. BAYH. I appreciate the fact that the Senator has brought up that point for the third time in 3 days. I will be glad to repeat the answer that I have given on the 2 previous days, but for the sake of the time of the Senator from Mississippi as well as the expense of reprinting the same answer, I will not do so. Perhaps those who want the answer will dig through the RECORD of yesterday and the day before and find the opinion of the Senator from Indiana.

To get back to the same question: the Senator is saying to the Senate and to the country that he is not concerned about a credibility gap and a confidence gap that would result in the White House——

Mr. CURTIS. I never said that.

Mr. BAYH. If the man occupying the White House had 2 million votes less than the man he ran against.

Mr. CURTIS. I never said that. I said it would be a lesser evil than what the Senator from Indiana proposes, and I cited the words of the distinguished Senator from Indiana which he used when he opened the debate, that there was no perfect system.

Mr. BAYH. But the Senator is not concerned about a President trying to govern if he has 2 million popular votes fewer than the man he ran against?

Mr. CURTIS. No one ever said that at all. I said that it would have a lesser impact on credibility than to embark upon what the Senator from Indiana proposes.

Mr. EASTLAND. If the Senator will yield for a question, when has that happened?

Mr. CURTIS. A difference of 2 million votes? I do not have all the figures at my fingertips. I do not think it ever has happened.

Mr. EASTLAND. I do not think it has, either.

Mr. BAYH. If the Senator will permit me to add one addendum, there have been three times when we have elected a President who had fewer popular votes than the man he was running against; 1948 is a typical example of the gap that can exist between a popular vote and an electoral vote.

No system, of course, is perfect. But it is a serious and grievous shortcoming of the present system that it has permitted the election to the top office of this land a man who had fewer votes than the man he was running against. This is a serious fault. Only one system guarantees that the man who sits down at 1600 Pennsylvania Avenue will be the man who has the most votes. That is the system supported by the distinguished Senator from Oklahoma, who gave a very eloquent defense of Senate Joint Resolution 1 yesterday. I recommend his remarks to anyone who is concerned about certain arguments that have been raised by the opponents. I wish they would read the remarks of the distinguished Senator from Oklahoma, because he has been studying this matter longer than almost any other Member of the Senate. He outlined his tortuous process of study in his speech yesterday, and I think he lays to rest very well the questions that have been raised.

The Senator from Mississippi has been very indulgent. I apologize. I will not ask him to further stretch his patience.

Mr. EASTLAND. Fifty-seven percent of the American votes would have mandated that a change be made, but the advocates of repudiated policies would have been reelected to another 4-year term.

Similarly, let us assume that the 40-percent plurality direct election system had been in effect for the 1968 presidential elections and that there had been a shift of 250,000 votes from President Nixon to Vice President Humphrey.

Incidentally, it is not unreasonable to assume that this shift might have occurred out of a total of more than 73 million votes cast in that election. In my opinion, it is more reasonable to assume such a shift than it is to make certain assumptions about past presidential elections under the present electoral system. Thus, when the statement is made that in the 1960 election a shift from Kennedy to Nixon of 15,600 votes would have given Nixon a majority in the electoral college even though President Kennedy would have received a plurality of the popular vote, the true postulate and assumption should be broken down to state that there would have had to be a shift from Kennedy to Nixon of 4,500 votes in Illinois, 5,000 votes in Missouri, and 6,100 votes in Minnesota. As can be seen, this is not one assumption, but three, which would have had to occur in conjunction with each other in order to reach the result of Nixon being elected over Kennedy.

In the event of such a shift of 250,000 votes from Mr. Nixon, Vice President Humphrey would have been elected President.

One of the fundamental issues in the 1968 election was the record of the Johnson-Humphrey administration. Vice President Humphrey carried the banner of that administration during his campaign.

He ran on what he regarded as the achievements and accomplishments of the administration. On the other hand, both Mr. Nixon and Governor Wallace attacked the record of the administration and strongly urged that it should be turned out of office. They specifically stressed certain foreign and domestic issues which were of concern to the American people and with which they contended the Johnson-Humphrey administration had dealt in an unsatisfactory manner. Both called for a repudiation of certain of these policies and of those who had executed them.

Would it have been an expression of the national will, under these circumstances, for Vice President Humphrey to have been elected President, even though almost 57 percent of the American people had voted "no"?

Those who feel that President Nixon has an uncertain and difficult mandate from the American people as a result of the last election should consider these two reasonable hypotheticals. Each would result in a much more difficult and uncertain mandate than President Nixon now has.

As a practical matter, we must consider the possible political impact of the 40-percent plurality rule. Whose political interests would be benefited by such a system? It is not easy to answer these questions with certainty but some clues may be had by examining the results of the elections for mayor in 1969 of our two largest cities.

In Los Angeles, if the 40-percent plurality rule had been in force, Thomas Bradley, not Sam Yorty, would be the mayor of that city today. In the first election, Bradley received approximately 41.7 percent and Yorty 26 percent of the vote. Los Angeles has a majority requirement for election, and in the runoff election Yorty defeated Bradley by more than 55,000 votes. Clearly the 40-percent plurality system would have resulted in frustration of the majority will in the Los Angeles election.

Mr. BAYH. Mr. President, will the Senator from Mississippi yield for a moment there?

Mr. EASTLAND. I yield for a question.

Mr. BAYH. I should like to make one observation, if the Senator would care to comment on it. I am struck again by the 41-percent figure. Mr. Bradley in Los Angeles obtained about the same percentage of the vote as did Woodrow Wilson when he was first elected President. If we are going to be consistent, I suppose that if Mr. Bradley could not have been a good mayor of Los Angeles with his 41 percent, then Woodrow Wilson could not have been a good President of the United States, either, with his 41 percent.

Mr. EASTLAND. I am not talking about qualifications. I am talking about

the frustration of the national will—of the will of the people, of a majority of the people. That is what I said.

In New York City, which has a simple plurality requirement, Mayor Lindsay was reelected with less than 42 percent of the vote. He would have been reelected under the 40-percent plurality system. His two principal opponents vigorously attacked his administration, and made it the chief issue of the campaign. Those who are familiar with the New York City political scene have stated that the only reason Mayor Lindsay was reelected was that the opposing vote was split. It is widely believed that if he had been forced into a runoff election he would have been defeated.

Mr. President, right there I think we have seen a very good instance of the frustration of the national will in the past few days in the Republic of Chile, which had two anti-Communist and anti-Socialist candidates which split the vote and, as a result, the candidate of the Communist Party was elected President of Chile, against the popular will of its people, so that it is now on the road to becoming a Marxist state.

Mr. BAYH. If the Senator from Mississippi will yield just there for a moment, what percentage of the vote did the Communist candidate receive in Chile?

Mr. EASTLAND. I cannot tell the Senator what the percentages were. It was a close election. As I recall, he beat one of his opponents by 39,000 votes.

Mr. BAYH. If my memory is accurate, I believe that the winner received in Chile about 34 percent. If the winner had received 34 percent under the provisions of Senate Joint Resolution 1, there would have to be a runoff. With a runoff the majority of the people in Chile might have chosen someone else.

Mr. EASTLAND. Well, it is just a matter of figures. That identical thing could happen in the future in this country under the Senator's 40 percent——

Mr. BAYH. I hate to keep imposing on the Senator, but what I was trying to say——

Mr. EASTLAND. Let me finish my sentence—40 percent of the vote in his resolution.

Mr. BAYH. The Senator has been patient. I think it is important for us to put in proper perspective what may happen and what may not happen. I did not look with great favor on the election of a Communist in Chile. I was hoping that that would not happen.

Mr. EASTLAND. As a result, we will have a nationalization of the copper industry and the other basic industries in that country. That could happen here, too, under what my friend from Indiana is proposing.

Mr. BAYH. I suppose it could also happen under the 50-percent system that the Senator from Mississippi is proposing or under the electoral college system.

Mr. EASTLAND. I do not think so. But the Senator is on much stronger ground when one has a majority of the vote.

Mr. BAYH. I am suggesting that it seems to be just a bit inconsistent to suggest that a candidate in Chile who is elected with a 34-percent vote, would have been elected under Senate Joint Resolution 1, or could not possibly have been elected under Senate Joint Resolution 1, because Senate Joint Resolution 1 provides that there has to be another election if a candidate gets only 34 percent of the vote. The runoff gives the people a chance to prevent that result. It was that very possibility that prompted us to establish the 40 percent requirement in Senate Joint Resolution 1.

Mr. EASTLAND. But the same thing could happen under the 40-percent requirement.

Mr. BAYH. But such a candidate would have to get more than 40 percent of the vote, which did not happen in Chile. Is that accurate?

Mr. EASTLAND. As I recall now, he got 36 percent.

Mr. BAYH. Thirty-six percent. It did not happen in Chile, then. Is that accurate?

Mr. EASTLAND. That is correct, but it could happen here under the Senator's provision.

Mr. BAYH. It could happen here only if the candidate got more than 40 percent of the vote, if he got 43 percent, like Nixon, or 41 percent like Woodrow Wilson, or if he got——

Mr. EASTLAND. If it is split up and we get a number of candidates and we get a strong Marxist candidate, as we had in Chile, it is just the same thing. It could happen in this country. We could have a Communist state, as they will have in Chile——

Mr. BAYH. I respectfully suggest——

Mr. EASTLAND. I mean, it is possible. I am not predicting that.

Mr. BAYH. Perhaps it is not the best of decorum in the Senate, but I would like to suggest that the Senator's persuasive argument can be used to argue the other possible outcome. The Senator has been stressing that in the 1968 election, 50 some percent of the voters voted for a change and voted against the candidacy of Mr. Humphrey. I would like to suggest that some 66 percent or 64 percent of the people of Chile, those who voted for opposition candidates, would be inclined to vote against the Communist candidate.

So, if we had a runoff candidate under Senate Joint Resolution 1, the chances would be very great that the runoff provision would have insured that the Communist was not elected.

Mr. EASTLAND. Mr. President, I hope my friend, the Senator from Indiana, is correct.

Mr. BAYH. There is no way that we can know.

Mr. EASTLAND. I do think that we have a system that could lead us down the road in the direction the Republic of Chile has gone.

Mr. Richard Scammon, who is acknowledged to be one of the foremost experts on the American political system, characterized the New York City mayor's election in the following language:

> In fact you might say there was a referendum on John Lindsay in New York and John Lindsay lost.

I am certain that we would not want to have the same thing said about an election for President and Vice President of the United States—that there was a referendum on a President and a Vice President and that they were still in office although they lost.

The conservative political elements in the United States are not going to accept a change in the electoral system which gives every indication of working to their disadvantage. The direct election system appears to be biased against the conservative political forces in the Nation, and this bias is reinforced by the requirement that the successful candidates have to poll only a 40-percent plurality of the vote.

There is no way to know with certainty which minor parties might run candidates for President and Vice President in the future. However, at the present time the most likely minor party in the field for the 1972 presidential election is the American Independent Party of former Gov. George Wallace. A Gallup poll of March 21, 1970, reveals that Governor Wallace has apparently held on to almost all the political strength he exhibited in 1968. He is now rated at 12 percent of the national popular vote in a three-way race between himself, President Nixon, and Hubert Humphrey.

It is highly significant that the persons who chose Wallace were asked:

> Suppose Wallace were not included, which candidate would you prefer—Nixon or Humphrey?

Of those who gave an answer, 76 percent of the Wallace voters in the Nation expressed a preference for Nixon and 24 percent preferred Humphrey. Outside the South, Nixon got the support of 67 percent of the Wallace voters as a second choice, and Humphrey received 33 percent. In the South, 83 percent of the Wallace vote went to Nixon and 17 percent to Humphrey.

The Washington Post of March 22, in reporting this poll, aptly headlined it: "Wallace Still Thorn to the GOP."

Although the Gallup poll showed President Nixon leading Mr. Humphrey by 54 percent to 34 percent, the New York Times of March 22, in reporting on this poll, stated:

> Although Mr. Humphrey loses now in this test race, experience shows that candidates often have greater recuperative powers, especially candidates who have the backing of a major party.
>
> A look back to early 1962, after President Kennedy's first year in office, shows that Mr. Nixon, who then was in the position that Mr. Humphrey is in now, trailed the incumbent by 35 to 52 percent, which is similar to the present Nixon-Humphrey results.

We must take every precaution to assure that any revision of our electoral system not result in a perversion of the national popular will accomplished in the name of democracy.

Apparently, the chief objection of the proponents of the 40-percent plurality system to the proposition that candidates must obtain a majority of the popular vote in order to be elected is that the 50-percent requirement would increase the likelihood of runoff elections. The prospect of runoff elections is deemed undesirable for a number of reasons:

First. Splinter parties would be encouraged to enter candidates in the first

election in the hope of denying both of the major party candidates 50 percent of the total vote cast, so as to force a runoff election. In such a runoff election, the leaders of the splinter party or parties could bargain with the remaining major party candidates for the votes they received in the first election. These votes would be crucial to the outcome of the runoff election, and the leaders of the splinter party or parties could extract promises from one of the remaining major party candidates for the delivery of their votes;

Second. An appeal must be made in the runoff election to the voters who supported the splinter party or parties in the first election. Persons who supported the candidate of a splinter party in the first election are likely to be political extremists. It would be undesirable for the candidates of the major parties in a runoff election to tailor their campaigns to the goal of obtaining this extremist vote. If this should happen, an extremist minority could exercise disproportionate leverage on American presidential politics;

Third. In the event of a runoff election, the American people would be in doubt and uncertainty between the first election and the runoff election as to whom the next President and Vice President would be. This doubt and uncertainty would have a bad effect upon the country. The voters would be tired of politics and would likely be less attentive to the issues in the runoff election.

In my judgment, these objections have no great substance or merit.

As to the first two objections, I believe that they overlook some realities of American politics. These objections are based on misguided notions of the American electorate.

It is a matter of historical fact that splinter parties in America are issue-oriented. There are times when both major parties have failed to present issues to the satisfaction of a significant segment of American voters. When this happens splinter parties are formed, which embrace one great issue or set of issues. These parties frequently nominate candidates for President and Vice President. Thus, the Greenback Party, the Progressive Party of 1912, the Progressive Party of 1924, the Progressive Party of 1948, the States Rights Party of 1948, and the American Independent Party of 1968.

Traditionally, these parties have disappeared because one or both of the major parties would embrace in whole or in part the issue advocated by the supporters of the splinter party, or because social or economic conditions which caused the emergence of this issue changed.

We can expect this to hold true in the future.

It is unrealistic and unreasonable to think that the candidate of such a splinter party, or its leaders, could instruct their followers how to vote in a runoff election. These people voted on the issues in the first election, and they would vote on the issues in the runoff election. They would vote for the major party candidate in the runoff election who more nearly embraced their ideas and expressed their feelings. For instance, in the 1968 election, if there had been a runoff between President Nixon and Vice President Humphrey, does anyone think that Governor Wallace could have told more than a handful of his supporters who to support in the runoff? If Senator McCarthy had been a splinter party candidate, does anyone think he could have instructed more than a few of his supporters who to vote for in the runoff?

Our whole political history suggests that even in personality-oriented elections it is very hazardous for an eliminated candidate to advise his supporters which of two remaining candidates to support. The normal human reaction is to resent such instruction. How much more true in issue-oriented elections, especially where the advice given is contrary to the natural feelings and instincts of the persons who supported the splinter party candidates in the first election.

It was reported in the press during the last election that a number of electors pledged to Governor Wallace stated that under no circumstances would they vote in the electoral college for one of the major party candidates, regardless of the suggestions or advice offered by Governor Wallace.

If the candidates or leaders of the eliminated splinter parties can deliver only a few votes in the runoff election, rather than millions of votes, there would be no reason or incentive on the part of the major party candidates in the runoff to make concessions or promises to such persons.

But, it is said, even if this is true it would be most unfortunate to have the major candidates in the runoff election competing for fringe or extremist votes. I am in agreement with this proposition, but, again, our political history tells us that the likelihood of such a thing happening is very remote. Such thinking is fallacious because it is based either on the premise that only the persons who supported the eliminated splinter party candidate would vote in the runoff election, or on the premise that every voter who supported one of the major party candidates in the first election would be frozen into support of the same candidate in the runoff election.

Both suppositions are palpably without any foundation.

Let us assume that those who supported the eliminated splinter party candidate or candidates are members of fringe or extremist groups. While it is perfectly true that each of the major party candidates in the runoff election would be happy to get as many of these votes as possible, neither could afford to leave the middle of the road and embrace any extreme or fringe ideas espoused by the followers of the eliminated splinter party, because to do so would create a great danger of a massive defection of his supporters in the first election.

Thus, the fear of a runoff election degenerating into a bid for extremist support is more fanciful than real.

As a matter of fact, I am convinced that the possibility of secret wheeling and dealing is much greater under the 40-percent plurality system than it would be under a majority system of direct election. Suppose, for instance, we convert to a 40-percent plurality system of direct election and that a public opinion poll taken in the spring of a presidential election year showed that in a two-party race, the prospective Republican nominee would receive 52 percent of the vote and the prospective Democratic nominee would receive 48 percent. Suppose that the same poll showed that in a three-party race with a splinter party candidate, the prospective Democratic nominee received 44 percent, the prospective Republican nominee 43 percent, and the splinter party candidate 13 percent of the national party vote.

It should go without saying that the supporters and managers of the Republican Party would do everything legally and honorably possible to persuade the splinter party candidate not to enter the field; likewise, the Democratic Party's supporters and managers would offer every encouragement for the splinter party candidate to run.

The splinter party candidate would then be in the position of having a choice of making a deal with one of the major parties or proceeding on his own course.

In this hypothetical example, the splinter party candidate could decide not to run for President, thus making it easier for the Republican nominee to be elected. In order to persuade the splinter party candidate to reach this decision, the Republican leaders and managers might well be required to make secret promises or commitments to the splinter party candidate. These promises or commitments might pertain to future policies of a Republican administration or appointments to be made by the Republican nominee after he was elected.

By the same token, in this hypothetical case, if the splinter party candidate decided to run for President, and thereby measurably help the chances of the Democratic Party of capturing the Presidency, the Democratic leaders and managers might have to pay for this benefit not only by making promises and commitments about future policies and appointments, but they might also be compelled to arrange for considerable campaign financing of the splinter party candidate.

I think that this hypothetical example of what could happen under a 40-percent plurality popular vote system is very reasonable.

In my judgment the American people do not want this kind of political game played with the Presidency.

It is quite true that under the 50 percent direct popular vote system deals and promises can be made in the runoff election to obtain the support of eliminated candidates. However, the great difference between the two situations is that in the runoff under the 50-percent system, any deals would be open deals openly arrived at. By the nature of things the entire voting public would know about any effort of one of the two candidates in the runoff to obtain the support of certain groups. Any promises made to these groups to obtain their

support would be public promises designed to attract their support.

Mr. BELLMON. Mr. President, will the Senator yield for a question?

Mr. EASTLAND. I yield for a question.

Mr. BELLMON. As one who served on the American Bar Association Commission that worked up the study that finally resulted in the drafting of Senate Joint Resolution 1, I was impressed with the arguments made during those discussions that setting a 40-percent plurality as the vote necessary for the President to be elected rather than 50 percent would tend to discourage splinter parties.

The feeling expressed by those who testified before the commission was that, if we would require a 50-percent plurality, many splinter party groups would be encourged to develop and participate in elections, because they would feel they could draw off the small percentage of votes necessary to throw the election into a runoff. But if the percentage were 40 percent, it would mean that splinter parties would need to siphon off 20 percent in order to keep one of the candidates from being declared winner and named President.

Does the Senator disagree with that feeling?

Mr. EASTLAND. Yes.

Mr. BELLMON. The Senator from Mississippi feels 50 percent would discourage splinter parties?

Mr. EASTLAND. I believe it is necessary that a man be elected President of the United States by a majority of the people. I think that is the overriding consideration. I have never been worried about splinter parties.

Mr. BELLMON. My experience in government certainly is not as lengthy as that of the distinguished Senator from Mississippi, but if I remember correctly, in 1948, our President received less than 50 percent of the votes. Also, in 1960 President Kennedy received less than 50 percent of the votes. In 1968 President Nixon received only about 43 percent. So it is nothing new in this country to have a President who received less than 50 percent of the vote.

Mr. EASTLAND. I think when we go to a 40-percent provision we are inviting splinter parties to come in in order to try to hold the vote under 40 percent.

Mr. BELLMON. In order for a splinter party to have any effect at all, it would be necessary for the total of the splinter parties to syphon off at least 20 percent of the vote under the 40-percent provision, whereas if we required a 50-percent majority for the President to be declared the winner, the splinter parties would have a much less arduous task. They would have to syphon off only 1 or 2 percent in order to throw the election into a runoff.

Mr. EASTLAND. Yes. I know it has happened in our history a few times, but I think the man who is elected President ought to be the choice of the majority of the people of this country.

Mr. BELLMON. I certainly agree with the Senator that it would be far more desirable if the President could be the choice of the majority of the people of the country.

Mr. EASTLAND. Well, it usually happens.

Mr. BELLMON. In my lifetime that has not been the case, since I have been an adult. President Eisenhower has been the only one who has served as President who received the majority vote of the people during the time I have been an adult, except for President Roosevelt, who became President before I was old enough to vote.

Mr. EASTLAND. Well, he certainly received 50 percent of the vote.

Mr. BELLMON. He did, but neither President Truman, President Kennedy, nor President Nixon succeeded in getting 50 percent or more of the vote.

Does the Senator say he is not concerned about the development of splinter parties

Mr. EASTLAND. I say that. We have the Prohibition Party and the Women's Rights Party. We have the Labor Party in New York State. I have never been concerned about them. I do not think they have made any impact in a presidential election in this country. With the case of Governor Wallace, Senator THURMOND, and former Secretary of Agriculture and Vice President Henry Wallace, I think they made an impact.

Mr. BELLMON. I believe the Senator from Nebraska (Mr. CURTIS) expressed concern that we not allow our political system to develop into a large number of splinter parties, as has happened in Germany, France, and other European countries, where government is able to operate only as a result of coalitions which may collapse at any time. Is the Senator concerned that that may happen here?

Mr. EASTLAND. No. As I said, I would be opposed to a great number of splinter parties that would make an impact and would weaken our Government, but I see nothing holy about the two-party system. There would be just as many under a 40-percent provision as under a 50-percent provision.

Mr. BELLMON. That is the point on which the Senator from Mississippi and I differ. I agree with the Senator that it would be disastrous if we adopted some change in our law that allowed a large number of splinter parties to grow up; but, as I have already stated, it was the consensus of many witnesses that testified before the American Bar Association Commission that the 40-percent rule would be less conducive to splinter parties than a 50-percent rule.

Mr. EASTLAND. I am sure they are sincere. Were those gentlemen college professors?

Mr. BELLMON. There were 18 members on the Commission, including two Members from the House of Representatives, two Senators or former Senators, two Governors, and a wide variety of other representatives from both the academic community and other communities. Walter Reuther was a member of it. They were not all college professors.

Mr. EASTLAND. I am pretty sure they were conscientious, but what they knew about American politics is something else.

Mr. BELLMON. There was a large and varied representation.

Mr. EASTLAND. I am sure they were conscientious.

Mr. BAYH. Mr. President, would the Senator from Mississippi permit me to interrupt the Senator from Oklahoma briefly?

Mr. EASTLAND. Mr. President, I ask unanimous consent to yield to the distinguished Senator from Indiana without losing my right to the floor or without my remarks counting as more than one speech on the joint resolution.

Mr. BAYH. Mr. President——

Mr. EASTLAND. Mr. President, is that request granted?

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. BAYH. I appreciate the usual courtesy of the Senator from Mississippi, my distinguished committee chairman.

I thought perhaps it was incumbent upon the Senator from Indiana to make one brief statement out of deference to the modesty of our colleague from Oklahoma. I think the point raised by the Senator from Mississippi is a legitimate one. Just because a panel is established does not mean its members have any political sophistication. However, I think that this particular panel had a rare combination of intellectual capacity, political sophistication, and diversity of philosophy, region of the country, and profession.

I say this because I am sure the Senator from Oklahoma would not brag about his own credentials, but I think it significant that at the time the Commission was meeting the Senator from Oklahoma was the Governor of his State. Also on that panel was another Governor, or a former Governor, of Illinois, Mr. Kerner.

I do not think there is a great deal to be gained by putting labels or tags on the various members of the panel. I would, however, suppose that, as Governor of the State of Oklahoma, the present Senator from Oklahoma (Mr. BELLMON) probably represented a more conservative view, than did Governor Kerner.

We did have a diversity of representation on that panel. Indeed, the Governor of Oklahoma represented the Republican Party and the Governor of Illinois represented the Democratic Party. Walter Reuther represented labor and Bill Gossett, of the Ford Motor Co., represented management.

That was the type of constituency represented across the board by that Commission.

As the lead-off witness before the Commission, and as one who was making a hard pitch for direct election, I must say that when I left the witness chair I said, "Boy, oh boy, if such a diverse panel can reach agreement on anything, the Senator from Indiana will be greatly surprised." This panel studied the question diligently for 10 months, and did reach a conclusion. I think that speaks very well for the results—the measure which is now before the Senate, Senate Joint Resolution 1.

I appreciate the tolerance of the Senator from Mississippi.

Mr. EASTLAND. Well, Mr. President, as I have said, I am sure they were fine gentlemen. They are entitled to their opinions, but they did not influence the Senator from Mississippi.

By way of contrast, the deals made with a "spoiler" or splinter party candidate under the 40-percent plurality system to induce him to run or not to run would be secret and not known to the public. The public would learn about those deals too late, after the election was over, and after the successful candidate was in office and delivering on his promises and commitments.

One reason that this kind of political game is much more likely to be played under a 40-percent plurality system of direct election than under the present system is the nature of public opinion polls in the United States. Public opinion polls are highly accurate at judging national public opinion. They are much less accurate at dealing with the impact of a third-party candidacy upon the two major parties in each of the 50 States. For example, many students of the 1968 Presidential election are of the opinion that, on the whole, Governor Wallace's candidacy hurt President Nixon more than it did then Vice President Humphrey. However, there is keen speculation that in certain individual States which went one way or the other by a relatively close margin, Governor Wallace's candidacy might have been decisive in throwing the States' electoral votes to Mr. Humphrey. Since the name of the game under the present system is to carry States, it is very hazardous for a major party candidate to have any dealings with a third-party candidate.

It is imperative to understand that if we switch to a 40-percent plurality system of direct election, all this will change. Since third-party candidacies are almost always issue oriented, the public opinion polls can give the managers of the two major parties a clear reading of the political impact of a third-party candidacy under a system of direct election.

Mr. Richard Goodwin, who was an adviser to Presidents Kennedy and Johnson, told the Judiciary Committee of his experiences with New York State politics and the manner in which minor parties operate in that State. Part of Mr. Goodwin's testimony is as follows:

To see that this is more than a theoretical possibility let us look at the experience of New York. That State is as close to a miniature nation, in terms of diversity of population and interests, as any in the Union. It is as large as some countries. New York now has four parties. The two smaller parties—liberals and conservatives—cannot carry a single city or borough, but within a State that does not matter. Popular vote is everything in statewide contests. The result is that both minor parties are important, and can make a decisive difference in a close race. They behave, on the State scale, exactly as we speculated that minor parties might act on the national scale: offering endorsements, making deals, and running their own candidates. For their members a separate party has proved the surest route to real power. If we move to direct election, there is no reason whatsoever why the same will not be true at the national level. In fact, operating just in New York both the liberal and conservative parties receive more votes than the total margin of national victory in two of our last three presidential elections.

Mr. Goodwin used his knowledge of New York politics to make the point that splinter parties and spoiler candidates would have every incentive to run or threaten to run for the Presidency under a system of direct popular election, even though he knew he had no chance to win. This was brought out in a colloquy with Senator BAYH, as follows:

Senator BAYH. Of course, you are not very powerful if you cannot win in this political process, and I think that is the thing that would be in a person's mind, in the leaders' minds when setting up this plan. Are we ultimately going to win and affect the outcome? And the chances are that the more you proliferate the less chance you are going to have of winning.

Mr. GOODWIN. You can be very powerful if you have the capacity to make others win or lose, witness Alex Rose in New York, even though you can never win yourself.

Without making any political or any other kinds of judgments of Mr. Alex Rose, it is well known that he is one of the political kingpins of New York City and New York State. He does not run for public office himself and probably could not be elected, but as Mr. Goodwin says, he has the "capacity to make others win or lose."

I am convinced that a system of requiring only a 40-percent plurality to win a direct popular election would result in the emergence of one or more "kingmakers." I do not think that this would be good for the Nation.

As to the third objection, that doubt and uncertainty would exist in the minds of Americans between the first and second elections as to who the next President and Vice President would be, this, too, is based on a misunderstanding of American politics and the American people. It is based on the unspoken premise that the American people are so emotionally and intellectually immature, that the doubts in the minds of the people during the interim between the first and second elections would be so great as to cause stresses, strains, and ruptures in our social and political fabric. In my opinion, the American people are mature and stable enough to participate in a runoff election without causing undue stresses or strains. The American people have shown their spirit and fortitude under recent crises of much greater magnitude, such as the assassination of the late President John F. Kennedy.

The people of other nations, such as France, have recently undergone the experience of choosing their national leader in a runoff election. This was accomplished without any great strain or upheaval. I believe that the American people are more stable than the French, and would be even better equipped for this situation.

Finally, it should be noted that the 40-percent plurality system would not assure that the American people would be free from doubt and uncertainty as to who the next President and Vice President would be.

If the popular vote totals were close and charges were made of fraud or irregularity in the voting or vote-counting process, a recount of all of the votes in the challenged precincts would be necessary in order to determine the winner. This could well entail the recounting of hundreds of thousands or even millions of votes. All of the more than seventy million votes cast in the Nation might have to be recounted in order to get a true and fair result.

During this time, which would doubtless be weeks, the American people would be in doubt and uncertainty as to the identity of the winners.

The doubt and uncertainty caused by a recount of the votes might result not only in the usual two-party presidential race, but could also result in a multi-party race. The recount in the event of the multi-party race could involve the question of which candidate received the most votes, but it could also involve the question of whether any candidate received the necessary 40 percent of the votes.

As to the argument that the American voters might grow weary of politics in a runoff election and might be less attentive to the issue, our recent political history suggests that this contention has little support. A runoff election campaign often sharpens the issues and, consequently, there is a greater turnout of voters in the runoff election than in the first election. For example, in the 1969 mayor's election in Los Angeles, the number of votes cast in the runoff election exceeded the number of votes in the first election by more than 130,000 votes.

This has happened in a number of other elections in the States or cities where runoffs in the absence of a majority are required in primary or general elections.

In conclusion, whatever arguments might be made in favor of the 40-percent plurality system and against the 50-percent requirement, they are, in my judgment, far outweighed by the compelling necessity to have our President and Vice President elected by a true popular mandate of a majority of the electorate.

Mr. President, another compelling reason why this proposed amendment to the Constitution should be rejected by the Senate is that it would have the effect, if adopted, of further diminishing the political power of the people of the less populous States. The political power of the great urban States would be increased even more than it is under the present system.

According to a 1969 study, 34 States and the District of Columbia would lose Presidential influence in a switch from the electoral college to the direct popular vote. Only 15 would gain, and one State, Oregon, would neither gain nor lose influence.

Every State that would gain power from the direct popular vote is an industrial State of the North or West, with the sole exception of Florida.

Ten of the 11 Southern States would lose significantly—from 10 percent, Texas, to 39 percent, South Carolina—under a popular-vote system. Four of the five border States would also lose.

There are 17 States with five electoral

votes or fewer, all outside the South and border. All 17 would lose substantially—from 21.5 percent—Nebraska—to 80 percent—Alaska.

The Southern and Border States would lose power because their voters, white and black, tend to vote far less frequently than Northern and Western voters. A popular-vote election would tend to reward voter turnout, rather than actual population.

The smaller States would lose because under the electoral college they have a bonus of two votes each, based on the number of Senators. While the larger States also get this bonus, in their case it represents a much smaller increment in percentage terms. Thus, Wyoming's presidential influence is marked up 200 percent—from one to three electoral votes—by its two-vote bonus, while Pennsylvania gains only 7 percent—from 27 to 29. In a switch to the popular vote, taking all variables into consideration, Pennsylvania's presidential influence would rise by 20 percent, while Wyoming's would decline by 70 percent.

A shift to the popular vote would profoundly alter the tone of future campaigns. Party platforms will move away from concessions to the South and the non-Southern small States, and candidates will concentrate their campaign efforts and appeals in the Northern industrial States which have the major concentrations of voters. Deemphasized by presidential candidates and platforms of the future will be: the South, the border, the Mountain, and Plains States, the farm belt, plus small States like Alaska, Hawaii, Vermont, Maine, New Hampshire, Rhode Island, and Delaware that fall into none of these categories.

In addition, national convention delegation assignments will tend to reflect this profound political shift. In all conventions through 1968, delegates have been assigned to the States on the basis of their electoral votes. If the electoral-vote system is repealed, delegates will undoubtedly come to be assigned on the basis of popular vote turnout. In the case of the Democrats, the McGovern Commission has already recommended changes along these lines. Once again, the big losers will be the South and border States—where vote turnout is comparatively low—and the smaller States of the North and West, whose percentage of the national popular vote is so much smaller than their percentage of the electoral vote.

Thus, the South, the border, and the smaller States will have considerably less influence in writing platforms and choosing presidential and vice presidential candidates of the future. And once the convention is over, these candidates will pay considerably less attention than presently to the South and border and Western States, and will tend to bypass the smaller States altogether.

The central presidential battleground in conventions as well as elections, will encompass a high-population belt of States ranging from lower New England and the middle Atlantic out to the industrial States of the Great Lakes. The only significant counterweight to this battleground will be the larger Sun Belt States of California, Texas, and Florida, which will have a decidedly subsidiary influence owing to their lesser numbers and to voter turnout in Texas and Florida, which is considerably below the national average.

In the 1968 election, California, Texas, and Florida cast 17.1 percent of the national popular vote. The largest 11 States of the Northeast and Great Lakes cast 48.4 percent. The remaining 36 States combined cast only 34.5 percent—little more than a third of the national vote.

In the 1968 electoral college, by contrast, the other 36 States cast a plurality of the total vote—44.6 percent. The 11 largest Northeastern and Great Lakes States cast 40.7, while the Sun Belt trio cast 14.7.

The Sun Belt's apparent gain under the popular vote is misleading; most of this represents its larger-than-average population increase since the 1960 census on which the present electoral college is based. These heavy gains will be reflected in electoral college apportionment following the 1970 census.

Based on estimated 1970 census figures, the three Sun Belt States would gain only marginally by a switch to popular voting. The nine remaining Southern States would lose an average of 22 percent of their present strength, while the 11 Northeast and Great Lakes States would gain 20 percent. The 17 smallest States—not counting the District of Columbia—would decline from an estimated 1972 electoral vote share of 11.88 percent to 6.69 percent of the popular vote—a drop of nearly 45 percent.

Under a direct popular vote, presidential and vice presidential candidates of the future would be ill advised to expend much of their time or attention outside the 11 large urban States of the Northeastern quadrant of the country.

And it goes without saying that any President elected by popular vote would be compelled to devote a far bigger share of his programs and concerns to the politically crucial population centers of this same Northeastern quadrant.

This is why repeal of the electoral college, and its replacement by a direct popular vote, would affect revolutionary changes not only in the national political process, but in the entire thrust and emphasis of the Nation itself.

Mr. President, I ask unanimous consent at this time that a table showing the effect on the political power of the States in Presidential elections, in the event the direct election system is adopted, be printed in the RECORD.

There being no objection, the table was ordered to be printed in the RECORD, as follows:

IF PRESIDENTS ARE ELECTED BY POPULAR VOTE—EFFECT ON STATES

15 STATES WOULD GAIN POLITICAL POWER

State	Percent of electoral votes	Percent of popular votes cast in 1968	Difference	Percent of change
New York	7.99	9.49	1.50	+18.77
California	7.43	9.89	2.46	+33.10
Pennsylvania	5.39	6.47	1.08	+20.03
Illinois	4.83	6.30	1.47	+30.43
Ohio	4.83	5.40	.57	+11.80
Michigan	3.90	4.51	.61	+15.64
New Jersey	3.16	3.92	.76	+24.05
Florida	2.60	2.98	.38	+14.61
Massachusetts	2.60	3.18	.58	+22.30
Indiana	2.42	2.90	.48	+19.83
Missouri	2.23	2.47	.24	+10.76
Wisconsin	2.23	2.31	.08	+3.58
Minnesota	1.86	2.17	.31	+16.66
Washington	1.67	1.78	.11	+6.58
Connecticut	1.49	1.71	.22	+14.76

34 STATES AND THE DISTRICT OF COLUMBIA WOULD LOSE POLITICAL POWER

Texas	4.65	4.20	0.45	−9.67
North Carolina	2.42	2.16	.26	−10.74
Virginia	2.23	1.85	.38	−17.04
Georgia	2.23	1.70	.53	−23.76
Tennessee	2.04	1.70	.34	−16.66
Maryland	1.86	1.68	.18	−9.67
Louisiana	1.86	1.50	.36	−19.35
Alabama	1.86	1.42	.44	−23.65
Iowa	1.67	1.59	.08	−4.79
Kentucky	1.67	1.44	.23	−13.77
Oklahoma	1.49	1.29	.20	−13.42
South Carolina	1.49	.91	.58	−38.92
Kansas	1.30	1.19	.11	−8.46
West Virginia	1.30	1.03	.27	−20.76
Mississippi	1.30	.89	.41	−31.53
Colorado	1.12	1.10	.02	−1.78
Arkansas	1.12	.83	.29	−25.89
Nebraska	.93	.73	.20	−21.50
Arizona	.93	.66	.27	−29.03
Utah	.74	.58	.16	−21.62
Maine	.74	.54	.20	−27.02
Rhode Island	.74	.52	.22	−29.72
New Mexico	.74	.45	.29	−39.18
New Hampshire	.74	.40	.34	−45.94
Idaho	.74	.40	.34	−45.94
South Dakota	.74	.38	.36	−48.64
Montana	.74	.37	.37	−50.00
North Dakota	.74	.34	.40	−54.05
Hawaii	.74	.32	.42	−56.75
Delaware	.56	.29	.27	−48.21
District of Columbia	.56	.23	.33	−58.92
Vermont	.56	.22	.34	−60.71
Nevada	.56	.21	.35	−62.50
Wyoming	.56	.17	.39	−69.64
Alaska	.56	.11	.45	−80.35

1 STATE WOULD HAVE NO CHANGE

Oregon	1.12	1.12	0	0

Mr. EASTLAND. Mr. President, these figures are startling with relation to the political power of the small States as against the large States. The States whose political influence in the election of the President and Vice President would be increased more than 15 percent in the event we change to a direct popular system are: New York, California, Pennsylvania, Illinois, Michigan, New Jersey, Massachusetts, Indiana, and Minnesota. The States whose political power would be diminished by 15 percent or more are: Virginia, Georgia, Tennessee, Louisiana, Alabama, South Carolina, West Virginia, Mississippi, Arkansas, Nebraska, Arizona, Utah, Maine, Rhode Island, New Mexico, New Hampshire, Idaho, South Dakota, Montana, North Dakota, Hawaii, Delaware, Vermont, Nevada, Wyoming, and Alaska.

The last eight named of these States would sustain a loss of 50 percent or more in the influence they had in the election of the President and Vice President.

Mr. President, even if the Congress should unwisely adopt this proposed amendment to the Constitution, I am of the firm belief that it would have little or no chance of being ratified by the States. When the people and the legislatures of the small, less populous

States realize that one of the political effects of this change would be to minimize their political power still further, then there will be very little chance of securing ratification by the necessary 38 States.

The proponents of the direct election system have tried to appease the concern of those of us who are worried about the loss of small-State influence by relying on the testimony of one Dr. John F. Banzhalf and his computers. Dr. Banzhaf testified before the Subcommittee on Constitutional Amendments that he had programed a great many figures into his computer and that the results conclusively proved that the people in the smaller, less populous States would gain a political advantage as a result of change to the direct popular election system.

With all respect to Mr. Banzhaf and his computers, I believe that flesh and blood human beings are better able to perceive what is in their own political interests, or what is to their own political detriment, better than any computer.

The New York Times published a very interesting survey of sentiment in the 50 State legislatures on the issue of substituting popular election of the President for the electoral system. I ask unanimous consent that this survey from the New York Times of October 8, 1969, be printed in the RECORD.

There being no objection, the survey was ordered to be printed in the RECORD, as follows:

STATES' SENTIMENT ON ELECTION PROPOSAL

State	Sentiment	Next session
Alabama	Strongly opposed	May 1971.
Alaska	Somewhat favorable	January 1970.
Arizona	Somewhat opposed	Do.
Arkansas	Somewhat favorable	January 1971.
California	do	January 1970.
Colorado	Strongly opposed	Do.
Connecticut	Strongly favorable	January 1971.
Delaware	Undecided	January 1970.
Florida	Somewhat favorable	April 1971.
Georgia	Undecided	January 1970.
Hawaii	Somewhat favorable	February 1970.
Idaho	Somewhat opposed	January 1970.
Illinois	Somewhat favorable	April 1970.
Indiana	do	January 1971.
Iowa	do	January 1970.
Kansas	Strongly opposed	Do.
Kentucky	Somewhat favorable	Do.
Louisiana	Undecided	May 1970.
Maine	Somewhat favorable	January 1971.
Maryland	Strongly favorable	January 1970.
Massachusetts	do	Do.
Michigan	Undecided	Do.
Minnesota	Strongly favorable	January 1971.
Mississippi	Somewhat opposed	January 1970.
Missouri	Somewhat favorable	January 1971.
Montana	Somewhat opposed	Do.
Nebraska	Strongly opposed	Do.
Nevada	Somewhat opposed	Do.
New Hampshire	Somewhat favorable	February 1970.
New Jersey	Strongly favorable	January 1970.
New Mexico	Somewhat favorable	Do.
New York	Strongly favorable	Do.
North Carolina	Somewhat favorable	January 1971.
North Dakota	Strongly opposed	Do.
Ohio	Undecided	February 1970.
Oklahoma	Somewhat favorable	January 1970.
Oregon	Strongly favorable	January 1971.
Pennsylvania	Somewhat favorable	January 1970.
Rhode Island	Strongly favorable	Do.
South Carolina	Strongly opposed	Do.
South Dakota	do	Do.
Tennessee	Somewhat favorable	Do.
Texas	do	January 1971.
Utah	Strongly opposed	Do.
Vermont	Somewhat favorable	January 1970.
Virginia	Somewhat opposed	Do.
Washington	Undecided	January 1971.
West Virginia	Somewhat favorable	January 1970.
Wisconsin	Strongly favorable	January 1971.
Wyoming	Somewhat favorable	Do.

Note: Total—Strongly favorable, 9; somewhat favorable, 21; undecided, 6; somewhat opposed, 6; strongly opposed, 8.

Mr. EASTLAND. Mr. President, it is very significant that the eight State legislatures which were listed as strongly opposed to the direct election plan as of October 1969, were Alabama, Colorado, Kansas, Nebraska, North Dakota, South Carolina, South Dakota, and Utah. On the other hand, the nine State legislatures that were listed as "strongly favorable" to the direct election plan are: Connecticut, Maryland, Massachusetts, Minnesota, New Jersey, New York, Oregon, Rhode Island, and Wisconsin.

It is striking to me that all of the legislatures listed as "strongly opposed" are Mountain States, Southern States, or Plains States, and that each of these States is basically small in population with relation to the other States, whereas of the nine States listed as "strongly favorable" all but one, Oregon, is located in the Northeast quadrant of the Nation and tend to be highly populated.

Mr. President, I am thoroughly convinced that when the members of many of the State legislatures listed as "somewhat favorable" in the New York Times survey are fully appraised of the political setback that would be suffered by their respective States if we convert to a direct election system, many of these legislatures would decide to oppose this amendment if it were submitted to them for ratification. We must remember that this New York Times survey was made in the summer and fall of 1969, in the full flush of enthusiasm for the direct election plan. I have no doubt that many members of these State legislatures have had a chance to reflect upon this proposition and now oppose it.

I hope and trust that if, by some mischance, this proposal is submitted to the States, that a greater effort will be made to inform the members of the State legislatures as to the detrimental effects upon their States.

Mr. President, I am from a particular region whose political influence will be diminished by the adoption of this proposed amendment to the Constitution. These are the Southern States.

The 1968 presidential elections demonstrated one clear fact, and that is, under the electoral college system it is politically dangerous in the long run to attack or kick around a group of States. Prior to the 1968 presidential elections a certain type of politician in the country perceived that political profit could be made by attacking the Southern States. The 1968 election showed that this is not correct. Two very interesting developments occurred during that campaign and election. First, the people of the Southern States were actively courted by two of the candidates for the Presidency. In the past, one major party candidate would be willing to actively seek southern votes, but the other condidate would carry such Southern States as he could based on party organization or tradition. In the 1968 election, however, there was active competition for these southern electoral votes.

The other interesting development of the 1968 election is that southern electoral votes were crucial to President Nixon's electoral vote majority.

If we retain our present electoral system, the political message from the Southern States to the leaders of both political parties will be read loud and clear:

Do not tread on us; do not abuse us. If you do, you will be defeated.

However, if we adopt the direct elective system and the Southern States lose a great deal of their weight in the election of the President and Vice President, then some of these politicians above mentioned might again perceive political profit in attacking the Southern States and southern people.

We do not intend to let this happen. I hope that other Senators from the South will join with us in helping to defeat this unwise proposal.

Mr. President, another strong reason for opposing this proposed constitutional amendment is that a system of direct election of the President and Vice President would necessitate strict Federal control of those elections. There is no question that rigid uniformity must be an integral part of the direct election proposal if the one-man, one-vote rule is to be truly implemented. If the President is to be elected by popular vote in a nationwide election, State boundaries and jurisdictions will become inconveniences. All States would, of necessity, have to conform their election laws to a single Federal standard.

Serious questions must be raised concerning the new election machinery and standards which must be created in order to have a smoothy run national plebiscite.

Federal laws or guidelines would have to be enacted to regulate, among other things, the eligibility of parties and candidates; the counting of ballots and the declaration of the winner; the validating and counting of absentee ballots; the penalties and prohibitions applicable to elections; the rules concerning recounts; the forum for the consideration of contested elections; the registration deadlines and a host of related matters now covered by State laws. Indeed, it is possible to envision a Federal election board charged with total responsibility for running the election down to and including the staffing of 180,000 polling places. The proponents of the direct election system seek to answer our concern of the probability of complete Federal control and supervision of Presidential elections by assuring us that Senate Joint Resolution 1 only grants Congress a "reserve power" to enact legislation, and that the States are allowed to retain their primary authority in the conduct of presidential elections. Let us examine this so-called reserve power that Senate Joint Resolution 1 would vest in Congress and see how innocent that power is. Section 2 of Senate Joint Resolution 1 provides that: The electors of President and Vice President in each State shall have the qualifications requisite for electors of the most numerous branch of the State legislature, except that for electors of President and Vice President, the legislature of any State may prescribe less restrictive residence qualifications and for electors of President and Vice Presi-

dent the Congress may establish uniform residence qualifications. Section 4 provides that:

> The times, places, and manner of holding such elections and entitlement to inclusion on the ballot shall be prescribed in each State by the legislature thereof; but the Congress may at any time by law make or alter such regulations. The days for such elections shall be determined by Congress and shall be uniform throughout the United States. The Congress shall prescribe by law, the time, place, and manner in which the results of such elections shall be ascertained and declared.

It can be seen that although the provisions of sections 2 and 4 pay lipservice to the principle of State control of elections, that vast plenary power is vested in Congress at its pleasure to completely overturn State laws pertaining to residency qualifications for electors and the times, places, and manner of holding presidential elections and entitlement to inclusion on the ballot. Congress is granted the authority at any time after the adoption and ratification of this amendment to enact a complete body of general law dealing with these vital matters which had been thought or properly left with the States. For example, the "times, places, and manner of holding such elections" would certainly encompass and include such Federal functions as determining the mode of voting, deciding who will count the votes, providing supervision to prevent fraud, and promulgating a system whereby the results of the balloting could be determined and publicly proclaimed.

This is the nature of the so-called reserve power which this proposed amendment would vest in the Congress.

I venture to predict that if we adopt the system of direct election of the President and Vice President, no more than one presidential election would be held under State standards prescribing the times, places, and manner of holding the elections and entitlement to inclusion on the ballot and residency qualifications. After that, the pressure would be irresistable for uniform Federal standards. In fact, probably not even one election would be held under State standards.

The whole thrust of Senate Joint Resolution 1 is that the States should have no role in the election of the President and Vice President. Uniformity is the keystone of the direct election system. If all else is to yield to the slogan. "one-person, one-vote" in the election of the President and Vice President, then how can one justify the various States having different residency qualifications? How can one justify one State being permitted to impose a literacy test as a requirement for voting, while other States do not have such requirements? How can one justify a situation in which a voter of one State might be denied the privilege of voting for the candidates of his choice because they were not eligible for inclusion on the ballot under the laws of the State, while citizens of other States who wish to vote for these candidates are able to do so under more lenient State standards?

Obviously, none of these variations in State laws can be justified under the logic of "one-person, one-vote," the same logic which would underlie the adoption and ratification of the direct election system. Under all of these situations, the right of a citizen to vote, or to vote for the candidates of his choice, will be denied by operation of the differences of the various State laws. This difference in treatment can only be cured by the adoption of uniform Federal laws.

My friend, the esteemed junior Senator from Michigan, has taken a great interest in this matter in the Judiciary Committee, and has added a great deal to our enlightenment. He wrote some individual views on Senate Joint Resolution 1 which are found on pages 22 and 23 or the committee report. I cannot agree with the conclusions drawn by Senator GRIFFIN in the individual views, but the thoughts he expresses have a compelling logic. During committee consideration of this measure Senator GRIFFIN offered amendments to make sections 2 and 4 of Senate Joint Resolution 1 read as follows:

> The Congress shall prescribe the qualifications for electors of President and Vice-President in each State and the District of Columbia, which qualifications shall be uniform throughout the United States.
>
> The Congress shall prescribe, by provisions of law uniform throughout the United States, the days for such elections, the requirements for entitlement to inclusion on the ballot therein; the times, places, and manner of holding such elections within each of the several States and the District of Columbia; the times, places, and manner in which the results of such elections shall be ascertained, certified and declared; and the manner in which and the period for which ballots cast in such elections shall be preserved.

I would like to quote from certain provisions of the individual views of Senator GRIFFIN:

> In addition to my reservations outlined in "Separate Views" concerning the runoff election, I am concerned because Senate Joint Resolution 1 does not require that uniform election procedures and voter qualifications be established as part of the plan to elect the President by direct popular vote.
>
> To make each vote cast for President anywhere in the United States equal to every other vote is a commendable goal. But it would make no sense under such a system to count the votes of 18-year-olds in some States, 19-year-olds in others, and 21-year-olds in yet others. Of course, the current attempt to lower the voting age to 18 by statute may provide a partial answer—if the statute is held to be constitutional by the Supreme Court.
>
> Furthermore, it would be inconsistent and self-defeating to leave each State with jurisdiction, as Senate Joint Resolution 1 does, to determine which candidates for President will appear on the ballot and the circumstances under which ballots for President will be counted.
>
> In light of the premise on which the direct popular vote is founded—that is, making every vote count—it is essential to guard against any device which would tend to dilute the vote of any individual or class of individuals. To leave each State with jurisdiction to determine voter qualifications and inclusion on the ballot would invite discredit on the claim that every citizen has an equal opportunity to participate in the election of the President.
>
> Consequently, I believe Sections 2 and 4 of Senate Joint Resolution 1 should be amended in accordance with the amendments which I proposed in committee. The result of adopting such amendments will be to confirm the public expectation of equal participation in the selection of a President.

Mr. President, I cannot agree with the Senator from Michigan that the Federal Government should take over these State functions of holding elections, but I must agree with his logic in carrying the thrust of Senate Joint Resolution 1 to its logical consequences.

My esteemed colleague, Senator CURTIS, honored the hearings held by the Judiciary Committee on Senate Joint Resolution 1 by giving some extremely interesting and pertinent testimony. During the course of his testimony, Senator CURTIS read from a statement submitted by an eminent attorney of his State, Hon. Clarence A. Davis. This statement is one of the best I have read concerning the inevitable Federal control of the election machinery in the unhappy event Senate Joint Resolution 1 is added to the Constitution. Mr. Davis also dealt with other unsatisfactory results of direct popular election of the President and Vice President.

The portions of Mr. Davis' statement as quoted by Senator CURTIS are as follows:

> It is impossible to go to the system of direct voting without that being followed by other Federal controls of our elections, and what other things I know not. But if we are to have direct election of presidents, we obviously will have to have Federal election laws covering the times and places of voting, qualifications of voters, and the enforcement of election laws.
>
> We clearly would have to set up a Federal bureau of elections to hold and supervise all presidential elections. We would have to have Federal clerks, Federal counting boards, Federal snoopers, and I suspect we would end up with not less than 25,000 additional Federal employees to run our elections. We will have Federal inspectors and Federal clerks of election, Federal counting boards in every county and sizable municipality within the United States.
>
> It is a small wonder that we have now some 5 to 6 million Federal employees and they have all grown out of just such innocent sounding phrases and direct election of presidents.
>
> Furthermore, we would have obliterated the voice of the States in the selection of the presidents. State lines would mean nothing and the candidates would obviously confine their campaigns to the vast metropolitan areas which, under this system of pooling of votes, would control the elections completely. The remaining States, for practical purposes, are disenfranchised and of no real consequence.
>
> The operation of such a plan, obviously, would require a Federal compilation of voter lists. In other words, a list of all citizens entitled to vote. And once we have started down this road, how long will it be before there is a movement for a nationwide Federal referendum on the Acts of Congress utilizing these same Federal voting lists; and how long before we will have initiative proposals from these same voting lists; and how long will it be before there will be a campaign to the effect that these little states are not entitled to two senators but senators should be proportioned to the number of voters in the state?
>
> In other words, do we change the basic government of the United States of a re-

public of sovereign states into a nationwide democracy knowing that attempted pure democracy throughout history has sown the seeds of its own destruction?

But it is said the electoral college has a couple of weaknesses, so we burn down the barn to get a couple of rats. On the contrary, we could prevent those weaknesses by electing the members of the electoral college by congressional districts compelled by the law to vote as their district voted, without losing the identity of the states or the areas within the states or permitting them to be engulfed by the votes of metropolitan areas which in turn would perish in 30 days if Nebraska and small states didn't feed them.

And what about election contests? Do we tie up the whole question of who is elected president because somebody starts an election contest in Texas or Chicago? Under the present system at least, that contest only affects the result of that particular state and the rest of the nation can proceed normally. But a contest in New York or Chicago with their millions of votes under the direct election plan can tie up the whole election of a President of the United States.

Suppose a total recount was called for. The term of the President could expire before that could ever be completed. Admittedly there is localized fraud or at least irregular voting in many of our large cities regardless of political party, but the localized fraud can only affect the vote of that particular city or that particular state. Under a national totalizing system, it can infect the whole country.

Another witness who testified before the Judiciary Committee, Mr. Alexander M. Bickel, professor of law, Yale School of Law, made the same point. Mr. Bickel testified as follows:

Well, I was thinking as Mr. White was testifying that it seems to me inevitable if you go to the popular election system to set up, not only on an ad hoc basis, but on a permanent basis, national vote counting, and I for one, although I have not really thought about this aspect of the thing as much as some have, as much as some of your future witnesses have, am not all that happy about central vote counting. "Honest men," when centrally in charge of a computer in Washington may be under even stronger temptation than "honest men" in this or that county.

But, I quite agree with you that it will follow as night follows day, that you will have a permanent central vote-counting operation in Washingon, D.C., if you go to the popular election, undoubtedly.

Mr. President, I am not through with my speech on the resolution. I shall yield the floor at this time and speak again at a later time.

Mr. GRIFFIN. Mr. President, will the Senator yield?

Mr. EASTLAND. I yield.

Mr. GRIFFIN. Mr. President, I ask unanimous consent that the Senator may yield to me without losing his right to the floor.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. GRIFFIN. Mr. President, the distinguished chairman of the Committee on the Judiciary made reference to individual views of the junior Senator from Michigan, as set forth in the committee report. Although the distinguished chairman and I do not reach the same conclusions concerning the merits of the pending resolution, I must say that I share his view that it will be necessary and logical if we are to elect the President by direct popular vote, for Congress to establish uniform voter qualifications and procedures for conducting such elections. Indeed, I believe Congress would be derelict in its duty if it did not establish such uniform standards in connection with, or directly following, adoption of a constitutional amendment to elect the President by popular vote.

We may, and we do, differ in our conclusions as to whether such a development would be good for the country—but the logic is unassailable. Furthermore, I can agree that the people of the several States should realize, as we consider this popular vote amendment, that uniform voter qualifications and election procedures will be a necessary and logical result. No one should be fooled on that point.

Mr. EASTLAND. Of course that is the logical result. It is what will happen. I think it is bad for the country. My friend disagrees with me.

Mr. GRIFFIN. I am glad to reaffirm the position and the reasoning set forth in my individual views contained in the committee report.

And, I might say that I believe the amendment referred to in those views, and rejected by the committee, should be presented for the Senate's consideration. I do not know what the Senate will do. But I believe it would be consistent with adoption of the direct election amendment to the Constitution to include a provision requiring such uniform standards.

I thank the Senator for yielding.

Mr. EASTLAND. I think the Senator's logic is unassailable.

Mr. President, I yield the floor.

Mr. BAYH. Mr. President, the distinguished Senator from Mississippi raised some very legitimate questions about the direct election proposal that I, as the chief sponsor and one of the authors of this amendment, would like to have the opportunity to address myself to.

These are legitimate questions. I think most questions are relevant and legitimate when a body such as the U.S. Senate contemplates a major constitutional reform. I do not think that a measure should be rammed down the throat of the U.S. Senate. It is not going to be.

The House carefully considered this measure and passed the measure by a vote of 339 to 70. This process has involved several years of study. Thus, I appreciate the fact that the Senator from Mississippi has raised these questions. I am glad to have the opportunity to address myself to them.

In a colloquy, the distinguished Senator from Nebraska asked the Senator from Mississippi, as he has been asked by several of us, how long he anticipated a runoff might take. I think this is a reasonable question.

I must say that the response of the Senator from Mississippi is a different response than I would have made and did make. Each of us can give his own judgment. The Senator from Mississippi judged that it would possibly take until June.

I would like at this time to reiterate that the historical record of runoffs in the United States would lead one, I think, reasonably to reach a different conclusion.

The State of Alabama has a runoff today. This runoff must be held within 4 weeks.

The State of Arkansas has a runoff provisions in both the primary and general elections. That runoff must occur within 2 weeks.

The State of Florida has a runoff provision. That runoff must be held within 3 weeks.

The State of Georgia has a runoff provision in both the primary and the general elections. That runoff must occur within 2 weeks.

The State of Louisiana has a runoff provision. That runoff must occur within 6 weeks.

The State of Mississippi—the State of our distinguished Judiciary Committee chairman—has a runoff provision, and the runoff there must occur within 3 weeks.

North Carolina has a runoff provision, and that runoff must occur within 4 weeks.

The State of Oklahoma has a runoff provision, and that runoff must occur within 4 weeks.

The State of Rhode Island has a runoff provision in both the primary and general elections. That runoff must occur within 4 weeks.

The State of South Carolina has a runoff provision, and that runoff must occur within 2 weeks.

The State of Texas has a runoff provision, and that must occur within 4 weeks. Texas has a runoff provision in both the primary and general elections.

Virginia has a runoff provision, and that must occur within 5 weeks.

I bring this to the attention of the Senate again only because I think that questions about a runoff are legitimate questions. The suggestion this body and the other body could not establish a runoff timetable that would prohibit unnecessary delay in choosing a chief executive, it seems to me, falls upon fallow ground.

If our States have been able reasonably to cope with the runoff timetable, I am confident that the U.S. Senate can do likewise. To suggest that these are just State runoff provisions and that we are talking about a national runoff is not a good argument. If France can provide for a runoff in selecting their chief executive in a 2-week period, as happened last year, I am confident that the Senate of the United States and the people of the United States can do as well.

I would like to deal very quickly, if I might, with another point that has been raised, by our distinguished committee chairman. Again we have an example of how men in good faith can look at the facts and reach different conclusions.

I think the concern of the Senator from Mississippi about the proliferation of parties necessitated by a popular vote is very legitimate.

In colloquy with the Senator from Nebraska, he expressed concern that a popular vote plan for electing a chief executive would lead to the proliferation of party structure that exists in France.

I would like to point out that there is a significant distinction between the runoff provision contained in Senate Joint Resolution 1 and the runoff provisions contained in the French national election code. The French require a runoff if no candidate receives 50 percent of the vote.

This is the proposal that is made in all sincerity and good faith by the Senator from Mississippi. The proposal of the Senator from Indiana and some 41 other sponsors requires a runoff if no candidate receives 40 percent of the popular vote.

One of the major reasons, if not the major reason, for lowering the runoff provision in Senate Joint Resolution 1 to 40 percent was to prevent the very proliferation that has existed under the French system.

If a splinter party can deny major party candidates a majority of 50.01 percent of the popular vote, the chance of participating in national politics and establishing splinter parties is going to be significantly greater. Indeed, this has been the French experience.

If we require a majority vote of 50.01 percent, then even an insignificant splinter party can prevent one of the major parties from winning and can put them in a position of having a runoff and they can then wheel and deal before the runoff.

If, on the other hand, the splinter party or parties must accumulate a minimum of 20 percent—and I should point out that this is a minimum and that under most circumstances the necessary splinter party vote would have to be more than 20 percent—if they have to carry this burden to trigger a runoff, the likelihood of involving themselves in the splintering tactics and of establishing new parties, in the judgment of the Senator from Indiana and the American Bar Association and the other organizations that have studied this matter, is going to be significantly less.

I should point out that in the last French election, where a runoff was required, if the 40-percent provision of Senate Joint Resolution 1 had been in effect instead of the 50-percent provision, no runoff would have been required. The same man would have won after the first election who won in the runoff election in France.

Perhaps I should add another word about the 40-percent runoff provision.

The Senator from Indiana has admitted before and he will admit again his concern lest we have a proliferation of parties. I do not believe the two-party system is necessarily sacrosanct, or at least that the present two parties are sacrosanct. If we had said a number of years ago that we had to have the same two parties existing ad infinitum, we would not have had the Republican Party candidate who is now sitting in the White House. That party started as a splinter party and then became a dominant party in American politics. We must not foreclose the possibility that a major force may develop in this country. I do not want to impose on my grandchildren the system we use today, although I think it is a pretty good system. Rather, I hope we maximize the Government stability that has been brought to our system by two major parties.

After expressing this concern, I feel the 40-percent provision will minimize possible deterioration of the two-party system. That is why the 40-percent provision is in the measure.

In the judgment of the Senator from Indiana, and many others who have studied this matter, the 40-percent provision strikes a delicate balance between two factors important to an acceptable electoral process in this country.

On the one hand it seems to me that it does minimize the proliferating effect as described a moment ago. On the other hand it requires a minimum level of support before one could be elected President. Presidents with such a mandate have been generally accepted prior to this time by our country. We have accepted a number of Presidents who had received votes in the 40- to 50-percent bracket and have not disputed their credibility. The present incumbent had 43 percent, Woodrow Wilson had 41 percent, and John Kennedy was less than a majority winner. So we have accepted the credentials of those candidates who received less than a pure majority.

On the other hand, if a President receives less than 40 percent of the popular vote I think we have to ask ourselves rather serious questions about his ability to govern. Does a candidate who has 35 percent, 30 percent, or conceivably 25 percent of the popular vote effectively represent a large enough constituency to govern effectively? In my judgment, the answer is no. Mr. President, if you get below the 40-percent mark, then, in the judgment of the Senator from Indiana and in the judgment of most of us who have studied this proposal, the best way of rectifying that decreasing support would be to go again to the public and let them make a determination as to who their national leader should be.

I think the Senator from Mississippi made a very compelling argument sustaining the importance of a runoff. The Senator from Mississippi and the Senator from Indiana do not agree on the relative merits of the overall provisions of Senate Joint Resolution 1, but I certainly agree with several aspects of the Senator's very compelling argument about the importance and validity of the runoff.

As we have studied this matter I have tried my best to study carefully the well-intentioned alteratives suggested by some of our other colleagues. Not the least significant and perhaps the most significant of those was made by the Senator from Michigan (Mr. GRIFFIN) and the Senator from Maryland (Mr. TYDINGS). This is a matter the Senate will have an opportunity to discuss, debate, and vote upon. I am not unalterably opposed to this contingency, but I would like to suggest that if one will look at the shortcomings of the runoff provisions and look at the shortcomings of the Griffin-Tydings proposal, there are less shortcomings in the runoff provision than under the other proposal.

If a candidate receives less than 40 percent of the public vote I would much prefer to have the final decision on who becomes President rest with the voters of this country and not on the decision made in a joint session of Congress or by some other formula proposed by some other Senators.

As the Senator from Mississippi pointed out, and I concur in his judgment, in a runoff I suggest there would be very little possibility for any third or fourth party candidate to deliver, carte blanche, large blocs of their voters. Indeed, this decision should be made, and under Senate Joint Resolution 1 would be made by the public. It should not be made in a smoke-filled room and it should not be made in the Halls of Congress, where some might make the decision on the basis of who carried congressional districts or States, where others would make it on the basis of how their party would be affected, and some might succumb to the temptation of other pressures.

I would much prefer that this decision be made by the people at large.

I would like to point out in this context that I hope there would be no runoff. I hope we would have a final decision on the first vote. History will speak rather kindly to this hope, I think, when we look at the past 200 years of our history. Under the 40-percent provision of Senate Joint Resolution 1, there has been only one President of the United States who received less than 40 percent of the public vote. That was Abraham Lincoln in 1860. In 1860 Abraham Lincoln received 39.76 percent of the popular vote and he was not on the ballot in 10 States. If he had been on the ballot of those 10 States it would be fair to say that in the entire history of our country no President would have been elected with less than 40 percent of the popular vote. Therefore, no runoff election would have been required if Senate Joint Resolution 1 had been operative. It is fair to suggest the future record will follow the same course of history.

But in the event forces might develop that we cannot anticipate, I strongly support the idea that if a candidate for President of any party should receive less than 40 percent of the popular vote there should be another election. Then the people of the country could go to the polls and elect the man who had a pure majority of support, and he would truly be a National President.

There was some reference in the colloquy with my distinguished colleague from Mississippi about the Chilean election. A quick check of the record will show that the Marxist candidate who won in Chile had 35 percent, that the second candidate had 34 percent, and that the other candidates collectively had approximately 31 percent. I certainly do not hail this as a great victory for democracy.

I am concerned about this picture, but if the provisions of Senate Joint Resolution 1 had been in effect, it is the judgment of the Senator from Indiana that those who voted other than Communist would have gone into the voting booths in the second runoff election and would not have elected a Communist.

If we are really concerned about eliminating the possibility that a candidate

with 34 or 35 percent, or even less, of the popular votes may be elected, from our election system, the Senator from Indiana would like to suggest that the present system contains a higher degree of possibility that a candidate with a very small percentage of the popular vote can be elected.

Let me explain that in a little more detail. It is now possible for a candidate to be elected President of the United States by carrying the 11 largest States of the Union, according to the 1970 census figures. Before the 1970 census figures, he would have had to carry the 11 most populous States and the smallest. But under the 1970 census figures, a candidate can win the election, carrying only the 11 largest States by the slightest popular vote margin.

Now let us look one step further. The census will show that it is possible for a candidate to carry those 11 States by a small popular vote margin and amass no more than 25 percent of the total national vote. In other words, let us suggest a hypothetical situation in which a candidate has enough popularity to carry the 11 large industrial States, but only enough popularity to carry them by a slight margin. He may be defeated by a landslide vote in the other, smaller States. So we have the definite possibility of electing a President who has a minimum amount of support in a very few areas of the country.

If we are really concerned about broadening the base of support for the President, creating a system which guarantees or maximizes the possibility of a national candidate and a national campaign with relatively uniform support throughout the country, then we have to get rid of the electoral college and go to the direct popular vote. Then a vote in a small State would amount to just as much as a vote in a large State and a candidate could not be elected President of the United States by carrying just 11 States of the Union.

Another point that was raised, I think very appropriately, by our distinguished colleague from Mississippi was the present political structure of our great State of New York. Having been in New York on more than one occasion, I am still amazed at the political structure in New York, which is unique among the States. But the Senator from Mississippi suggested that the direct popular vote system in New York was responsible for the proliferation of the party structure in New York.

All of us can guess the reason for the proliferation of the party structure in New York. The Senator from Indiana would suggest that the Liberal Party has been able to maintain viability in the State of New York not because of the direct popular vote system, but because in New York the Liberal Party can endorse either the Democrat or Republican candidate and thus, under the unit rule, throw all of those votes into New York State's electoral votes. If it plays a balancing role, a small splinter party like the Liberal Party of New York can determine how all New York's 43 votes shall be cast. Therefore, the unit system permits small groups of voters to have more influence than they are entitled to at the ballot box and more influence than they would have under a direct, popular vote system.

So if we are concerned about giving every voter one vote, and not giving to some voters more weight than they are entitled to, I suggest to my colleagues in the Senate that direct popular vote for President is the only system which guarantees equality of votes and which minimizes the proliferation of splinter parties.

In my judgment, and the judgment of several others, the unit rule under the electoral college system has given those splinter parties more than their proportionate weight in determining the outcome of the New York elections and that has permitted them to exist so long.

The Senator from Mississippi expressed concern that the direct election plan would not be supported at the State legislative level. As a former member of the Indiana General Assembly for some 8 years, I must say that nobody can predict what is going to happen in our State legislatures. If there is anything more unpredictable than what is going to happen in the U.S. Senate, it is what is going to happen in 99 State legislative bodies.

The polls conducted by the Senator from North Dakota (Mr. BURDICK) and the Senator from Michigan (Mr. GRIFFIN) do, however, show strong support for direct popular election. In both of those States a majority of the legislators who responded were in favor of direct popular elections.

Mr. LONG. Mr. President, will the Senator yield?

Mr. BAYH. I yield.

Mr. LONG. I do not want my remarks to be construed as meaning that I have closed my mind on this question. I have not decided how I am going to vote on passage, but I must say I was impressed by an editorial in this morning's Washington Post which, in effect, made the point that if our present system works, it is just by accident; that it was not intended to work that way. It would seem that the intention of the present system is one whereby the various States would select electors; that they would have available to them a number of outstanding men; that the electors—many of whom would not even know the man who might be President—would then meet, go over the qualifications of the the men who received the most electoral votes to start with, and were available, and try to pick the best man for the job.

The system was not at all designed to foresee what the present situation would be. Today people actually know and decide for themselves directly which man might be the best man for the office. They can do this in these days of television when voters can see the person, look him over, hear what he stands for, hear him asked a lot of questions, mail their own questions in, determine his position, and decide for themselves what they think of the man and of his platform, his program, and the record upon which he is running.

It is certainly a far cry from what we have in the Constitution, which was designed for a day when there was very little communication at all, when one could hardly expect to know for sure what the candidate looked like when he voted for someone to be an elector, who in turn would vote for someone to be President.

So it does seem to me that what we are using today as a system for electing a President is something that occurred entirely by accident, without the Founding Fathers at all anticipating how it would work today, and no one at that time could possibly have anticipated how the system would evolve.

Mr. BAYH. I appreciate that the Senator from Louisiana, who has, of course, been a great student of our governmental process, has pointed this out.

In fact, as I am sure the Senator knows, the great architect of the electoral college, Alexander Hamilton, said that he wanted the electors to be an elite group of independent citizens. I am sure Mr. Hamilton would be surprised by the present system.

Mr. LONG. Can the Senator tell me, under the system we have today, from a mathematical viewpoint, what is the smallest percentage of the popular vote that a candidate could have and be elected President, if the electors did as they should do, and voted for the person under whose name their names appeared on the ballot?

Mr. BAYH. I am glad the Senator raised that point, because when the distinguished chairman of the Judiciary Committee and I were involved in a colloquy earlier, he expressed concern about the election of a President in Chile who received only 35 percent of the popular vote. I was about to suggest—and I appreciate the Senator bringing the matter up again—that under the present-electoral college system, we operate under the unit rule, which was not anticipated by our Founding Fathers, as the Senator knows. Under the unit rule, a man can be elected President of the United States by carrying only the 11 largest States of the country by slight popular vote margins. So, if a candidate zeroes his campaign in on those 11 States, and manages barely to squeak by in them, he can be elected with about 25 percent of the popular votes.

Mr. LONG. Does he receive the electoral votes of a State if he has a mere plurality in that State?

Mr. BAYH. A mere plurality. I am sure the Senator from Louisiana is familiar with this, perhaps more familiar than I. About a year ago last spring the Senator from Indiana had the good fortune of addressing a joint session of the Arkansas legislature, in that beautiful, ornate hall in Little Rock. Suddenly, in the middle of my remarks on this subject, I realized that all those men and women in that chamber were either Democrats or Republicans. Yet, under the electoral system that we have, it was possible for every Democratic voter in Arkansas and every Republican voter in Arkansas, for every man and woman who voted for either Mr. Nixon or Mr. Humphrey in Arkansas, to have lost their votes. Governor Wallace received all of the electoral votes of Arkansas, although he received only about 38 percent of the

popular vote. He got all of Arkansas' electoral votes by getting only about 38 percent of the popular vote; and, with the totals for the major parties more equally divided, the percentage required to carry the State's entire electoral vote would have been even smaller.

Mr. LONG. If the Senator will yield, it seems to me it would be possible, under our present system, for a man to be elected President even though his opponent might have received 10 or 15 million votes more than the successful candidate.

Mr. BAYH. The Senator is absolutely right.

Mr. LONG. If we permitted that to happen, I should think the people of the country would ask what was the matter with the people up here in Congress, that they would insist on retaining a system that would make that possible. Would that not be a very severe threat to this Republic during a period of turmoil, when a man might be elected who might have been soundly defeated at the polls?

Mr. BAYH. Yes. The Senator has hit upon the point that has been the keystone of the concern of the Senator from Indiana. Today we are going through trying times, and they could well be worse when our grandchildren are here; we do not know. I do not know of anything that could do more to shake the confidence of the people than to have to be governed by a President who was soundly defeated under the criteria by which every other officer in the land is normally elected.

Mr. LONG. When you talk to the average citizen, unless this has been explained to him, and a lot of people do not know about it, it comes as a shock to him to find that a man could be elected President even though the other candidate receives a lot more votes.

Mr. BAYH. That is my key point, and I think that is another reason why about 80 percent of the people, when polled, respond by saying, "Why should I not have a chance to vote for my choice for President? I vote for my Senator, my Governor, my school board member, and for the lowest elective office." We have township trustees in Indiana; what is the lowest elective office in Louisiana?

Mr. LONG. Police jury commissioner.

Mr. BAYH. Police jury commissioner. The people say, "We vote for all these other officials, why not the President?"

Mr. LONG. I recognize that while people might vote for a third party candidate for President, knowing he had no chance to be elected, how does the Senator think the people of the country would feel about it if a third party candidate received about 20 electoral votes, and, after the election was over, those 20 votes could determine the outcome, and the candidate who received those 20 votes opened negotiations with the other candidates, requiring that they come to his terms in order to become President of the United States? Can the Senator conjure up the consternation that that would cause in the minds of a lot of people as to whether they would be sold out during the course of those negotiations?

Mr. BAYH. Mr. President, the Senator from Louisiana, in his inimitable fashion, has hit upon another key point that concerns the Senator from Indiana. This almost happened, of course, in 1968. If there had been a change of less than 42,000 votes, we would have had that very thing happen. I, too, think this would seriously shake the confidence of the people. Not only the man on top, but the system would be questioned.

Would the Senator permit the Senator from Indiana to explore one further point with him, inasmuch as he has been a Member of this body and has been a public servant for so many years?

Mr. LONG. Twenty-two.

Mr. BAYH. Twenty-two years, and I say this with admiration. Let the Senator think on this point, if he will. It was a matter to which I was addressing myself when the Senator addressed his question to me.

There has been some speculation raised about what will happen to the direct popular vote plan when it gets to the State legislatures. The Senator from Indiana had just said that it is pretty difficult to predict what State legislatures will do. I would like for the Senator from Louisiana to give the Senate his opinion. If we feel there are some basic shortcomings in the present system, and if we feel they need to be changed, would the Senator feel that a plan that was endorsed, in poll after poll, by about 80 percent of the people, that had been endorsed by the League of Women Voters, the U.S. Chamber of Commerce, the AFL–CIO, the UAW, the American Bar Association—does not the Senator think that a plan that had that broad a base of support would have as good chance, if not a better chance, of passing a State legislature than some other well-intentioned plan that did not have this broad-based support?

Mr. LONG. It would seem so. Of course, I have no idea whether the State legislatures can all be persuaded to agree to a plan, but I did vote, when I first came to the Senate, for the so-called Lodge-Gossett plan, and that plan failed to become law; and one reason that it failed to become law was that, while it did correct some of the shortcomings of the existing system, it created certain additional problems, and it failed to assure the operation of the democratic process in assuring that the man who had the most votes would win.

So those who opposed that Lodge-Gossett amendment, after it passed the Senate, were in a position to argue, "Well, even if we did that, we would still have no assurance that the man who has the most votes wins."

Commonsense would dictate that in a democracy, the man who gets the most votes ought to be elected President. That is why this Senator thinks that the average American would think that if the electoral system is going to be reformed, the logical way to do it would be simply to say that the man who gets the most votes wins. That is the idea in his city, in his State, and in his county. I think it comes as a shock and as a surprise to someone to be told that it does not work out that way at all. It could be that one man could be defeated 2 to 1 in the popular vote and be elected President, and that does not make sense to many people. Frankly, if it had not been explained to me how it came about, I would have difficulty understanding it that way.

Mr. BAYH. As the Senator from Louisiana has pointed out, the present system can depend on accidents. It could not be worse. I appreciate the contribution that the Senator from Louisiana has made.

The Senator from Indiana has been deeply concerned about three basic shortcomings of our present system. One is the point stressed so cogently by the Senator from Louisiana, that the present system permits the election of a President—and three times we have had this situation—who has fewer votes than the man who ran against him.

Second, the present system does not count all votes the same; half are not counted at all, because in each State the votes for the losing candidate are thrown away.

Third, the present system does not permit us to vote for our public officials, for the President and the Vice President. We vote for the electors. As the Senator from Louisiana pointed out, they are not part of the original intention of our Founding Fathers.

If we are concerned about these three shortcomings, as the Senator from Indiana is, there is only one system, only one plan, that will guarantee their correction, and that is the plan we are now debating.

Mr. HOLLAND. Mr. President, will the Senator yield?

Mr. BAYH. I am glad to yield to the distinguished Senator from Florida.

Mr. HOLLAND. As the Senator knows, the Senator from Florida does not favor the present system, and he does favor the so-called fractional system, because he has appeared three times before the Senate's subcommittee to be heard on that subject in past years. I am not in my question at this time, though, discussing the fractional system.

I have had more complaints, from my own thinking and from others, about one feature in Senate Joint Resolution 1, which I want to explore, and that is the feature that would have the District of Columbia, because of its population, given more weight in a presidential election than each of 11 sovereign States; whereas, the District of Columbia has no sovereignty of its own—it does not control the many aspects of daily life which are controlled by State law in the various States; and whereas this very Congress, only yesterday, took what was regarded as a sizable step—by some, at least—by giving to the District of Columbia a nonvoting delegate in the House of Representatives.

The Senator from Florida would simply bring up this question: How can the Senate, in good conscience, regard the District of Columbia as so far from being a State or anything like a State that it would give it only one nonvoting delegate in the House to represent it in Congress, and at the same time, under Senate Joint Resolution 1, put it into a position in which, because of its population, it will outvote 11 sovereign States, each of them, and in several different

combinations will outvote two of those States together? How does the Senator support this very large inconsistency in attitude of the Senate, shown not only by the vote yesterday but also by the consideration of this feature in the Senator's resolution today?

Mr. BAYH. I respect the distinguished Senator from Florida's difference of opinion with the Senator from Indiana over the relative merits of direct election. No one expressed the proposition more eloquently and supported the proportional plan more eloquently before the Senator from Indiana's Subcommittee on Constitutional Amendments than did the Senator from Florida.

I really do not see any inconsistency in this. We are talking about two different things. The nonvoting delegate proposition we took up yesterday and the proposals that some of us have to provide actual voting representation deal with the prime manifestation of statehood—namely, representation in Congress, and particularly in the U.S. Senate.

I can see how a person can make a good argument that representation in the Senate gives the attributes of statehood. But what we are talking about here, if I may say, with all due respect to the Senator from Florida, is not the attributes of statehood, of citizenship for a State, but the attributes of citizenship in a nation.

When we give to the citizens of the District of Columbia the right to vote for President, we are only perfecting what we have already given those citizens when we gave them the right to vote for President under the electoral college system. They now have the chance, as the Senator from Florida knows, to elect three electors under the electoral college system. We are really giving to each voter in the District the same weight, the same opportunity, to determine who his President shall be, as we give each voter in every other of the 50 voting units, or the 50 States.

The Senator from Indiana would respectfully suggest that there is not the inconsistency that the Senator from Florida seems to feel exists.

Mr. HOLLAND. If the Senator will yield further, the Senator from Florida voted for the constitutional amendment under which the District of Columbia is given the same electoral weight in presidential elections as the smallest State is given. But the Senator from Florida is not willing to even think about voting for a plan which gives the District of Columbia greater voting weight than each of 11 of the sovereign States. The Senator from Florida thinks there is no better illustration to be found than in the matter I am talking about of the fact that Senate Joint Resolution 1 is a radical departure from anything we have ever had heretofore, in that it proposes to change our form of government, insofar as presidential elections are concerned, from a republic with representation for the people into a direct democracy in which every person votes. There could hardly be a more revolutionary change than that.

The Senator from Florida would simply like the Senator from Indiana to discuss that feature, because it seems such a clear illustration here made that it is proposed actually to give the District of Columbia not just equal voting strength with the smallest of our States but, because of its population, to give it greater voting strength than 11 of our States and greater voting strength than several pairs of our States taken together. The Senator from Florida cannot conceive of States in that position ever approving this resolution. Neither can he conceive of anybody failing to see, when they look at this situation, that this proposal is a radical one, because it proposes to change so completely our federal form of government from a republic to a direct democracy in the field of the election of President and Vice President.

I thank the Senator for yielding.

Mr. BAYH. I appreciate the contribution of the Senator from Florida. Unless he insists, I will not go into a complete analysis of the points he has made, because the Senator from Indiana has already made them before.

Some have said that the popular vote system destroys the federal system. The Senator from Indiana disagrees with this. Although he feels that the federal system should be protected as it is an indispensable part of our form of government, he is of the opinion that this body, the U.S. Senate, was the body that Madison and Monroe and Jefferson and other of our Founding Fathers intended to support the federal system. The electoral college system, which is not really protecting the small States, was not the major compromise of the federal system.

Mr. HOLLAND. If the Senator from Indiana will yield for one more comment, the Senator remembers, of course, that under the Constitution the power of passing upon articles of impeachment is lodged in the Senate on a two-thirds basis. That is a very great power. It is a power which if applied to President and Vice President is the exact antithesis of the power of election. The Senator from Florida cannot see any justification for the refusal to regard the Senate, and the Senate and House together, as an appropriate body to pass upon the final election of President, if less than 40 percent of the vote is received in the first race.

As a matter of fact, in connection with impeachment, the House votes impeachment by a majority vote and then the trial is held before the Senate and the Senate can find guilty the defendant under that impeachment only by a two-thirds vote. That is exactly the antithesis of election. It is the matter of termination, as that term is applied to President and Vice President. The Senator sees no great difficulty at all in supporting both the theory and the traditional soundness of the principle of allowing Members of the House and Senate, acting together, each having a vote, to elect from the three high candidates, the President and Vice President, in the event no candidate receives 40 percent of the vote.

The Senator from Florida just calls that to the attention of his friend from Indiana because he thinks he has detected that the Senator from Indiana is unduly disturbed about the thought of vesting such power in the Members of Congress. We have already vested exactly the antithesis of the power of election in the Members of Congress. No one has complained of it at all. As a matter of fact, when a President was sought to be convicted in an impeachment trial here, the Senate reacted with very great patriotism and sound judgment when several Members refused to do what they had indicated previously they had intended to do, after all the facts were in and after all the implications had been made clear.

Thus, the Senator from Florida finds no justification for the objection to the election of President and Vice President from among the three top candidates, in the event no candidate gets 40 percent in the first election.

The Senator from Florida was a little surprised to hear his friend from Indiana indicate he did not feel that would be a sound program, to vest such power in the Members of Congress when, under the Constitution, the very powers we have been talking about in connection with voting impeachment and voting a verdict of guilty upon the trial are given to Members of Congress by the Constitution.

Mr. BAYH. I am glad that the Senator from Florida brought up that aspect of the contingency provision of the direct popular plan now before the Senate. I do not recall my exact remarks, but I believe I said I had no absolute objection to the alternative plan of going to a joint session of Congress. In fact, as the Senator from Florida may remember, the original direct election plan introduced by the Senator from Indiana contained that as a contingency. So I am not irreconcilably opposed to that. But what I am trying to point out is that if we are going to have a popular vote plan, I would much prefer to have the people make the final choice, in the event that no candidate gets more than 40 percent of the vote. This would effectively deal with the problem of proliferation discussed by my colleague from Louisiana and intimated by our colleague from Mississippi, the chairman of the Judiciary Committee.

If there is such a proliferation, the Senator from Indiana would feel much more comfortable if the people of the country had the opportunity to make the final choice, rather than to have the final choice rest upon the shoulders of the House and Senate. It is a better alternative, but the alternative suggested by the Senator from Florida is not beyond consideration.

Mr. HOLLAND. I have one more comment. I want to call attention to the fact that the program electing Presidents and Vice Presidents in the event no candidate gets 40 percent in the first election, is contained in the fractional program so strongly supported by the Senator from Florida, the Senator from North Carolina, and others. There is nothing new in it. It has been offered many times. The Senator from Florida is a little surprised to hear the Senator from Indiana indicate he feared some dire wrong results in the event Congress was to get the power to act finally, in the event no candidate received 40 percent of the vote. The Senator from Flor-

ida does not feel that way about it. He thinks that Senators and House Members come nearer representing a majority rule in our Nation than any other group that can be found.

House Members have all been elected by the votes of the voters in their district. Senators have all been elected by the votes of the voters in their States. To have them representing the people of this Nation carries on the tradition of this country as being a Republic and not a straight out democracy. The Senator from Florida wanted to call attention to that.

Mr. BAYH. I appreciate the Senator's bringing that up again. If I gave the inference I was unalterably opposed or felt that some diabolical results might follow the contingency plan discussed by the Senator from Florida, let the record show that I do not have that strong a concern. I would find that an acceptable alternative. But if we are going to have a horse, let us have a horse; let us not have the first half a horse and the back half a camel.

In like manner, if we are going to have the direct popular vote scheme, I would prefer to have the original choice as well as the contingency choice made by the people. I completely agree with the Senator from Florida, and this is why I supported that contingency plan earlier, that I feel this body, together with the House, is the best representative of the majority of the people, save one. No one can dispute that the majority of the people themselves most accurately represent the majority of the people.

For that reason, and only that reason, I prefer the contingency plan in Senate Joint Resolution 1 to the earlier contingency in my earlier direct popular vote plan and that plan supported by the Senator from Florida.

Thus I appreciate the fact that the Senator has brought this to our attention.

Now, Mr. President, I shall not proceed further on the District plan discussion. I thought perhaps I might say that the size of the vote in any election, whether in Wyoming, New York, or the District, is rather speculative because it all depends on the number of voters who come to the polls on any election day. It would seem to me, and I certainly respect the difference of opinion of our colleagues and the Senator from Florida, that if we believe the citizens of the District of Columbia are sufficiently citizens of the United States to permit them to vote for free electors regardless of the turnout on election day, we should also feel that they are sufficiently citizens of the United States to permit whatever numbers wanted to come to the polls on election day to vote for a President on a direct popular vote.

Rather than share the concern of the Senator from Florida over the relative size of the unit, I am concerned that the weight of each voter in the District be the same as that of each voter in New York or Alaska. Of course, that attribute is contained only in the direct popular vote plan.

Mr. HOLLAND. Mr. President, will the Senator yield further?

Mr. BAYH. I yield.

Mr. HOLLAND. Mr. President, as the Senator from Florida understands the position of the Senator from Indiana, he is not disturbed by the fact that the District of Columbia would be given greater weight in a presidential election than 11 separate sovereign States in the Nation under the plan which he is espousing.

Mr. BAYH. No. The Senator from Indiana is not concerned about that. As I said earlier in our discussion with the Senator from Louisiana and the Senator from Michigan, I am concerned about having a system that would guarantee to every voter the same voice in the outcome, not every county or every State. The direct popular vote plan is the only one that would do that.

Mr. President, I have one other passing reference to the splendid speech made by our friend, the Senator from Mississippi. The Senator from Mississippi expressed concern that although there were shortcomings in the presidential system, we were in effect, by going to the direct popular vote plan—to use his words—burning down the barn to get two or three rats. We can argue about the relative concern being given to the various shortcomings of the present system.

I am concerned about three basic shortcomings:

First, under the present system, we do not guarantee that the man who wins is the man who gets the most votes.

Second, we do not guarantee under the present system that everyone's vote will count the same in the final tally. About half of the votes are discarded in each election under the unit rule system and really cast for the candidate whom the voter actually opposes.

Third, we, as citizens of this country, do not vote for a President or a Vice President. We vote for these electors that are completely free to do their own will, not the will of the constituency that chose them.

If we are concerned about these three shortcomings, these three rats in the barn, the only way to eliminate those three shortcomings is to pass the direct popular vote plan and eradicate those particular rodents.

I say with all respect to those who have well-intentioned ideas about what should be done, that only the direct popular vote plan guarantees that the winner is the man with the most votes, that each citizen's vote has the same weight in the outcome of the election, and only the direct popular vote plan permits us to go into the voting booth and vote for the President and Vice President the same way we vote for Senators, Representatives, and every other officeholder in the land.

MESSAGES FROM THE PRESIDENT

Messages in writing from the President of the United States submitting nominations were communicated to the Senate by Mr. Leonard, one of his secretaries.

EXECUTIVE MESSAGES REFERRED

As in executive session, the Presiding Officer (Mr. McINTYRE) laid before the Senate messages from the President of the United States submitting sundry nominations, which were referred to the appropriate committees.

(For nominations received today, see the end of Senate proceedings.)

MESSAGE FROM THE HOUSE

A message from the House of Representatives, by Mr. Hackney, one of its reading clerks, announced that the House had passed the following bills, in which it requested the concurrence of the Senate:

H.R. 16542. An act to amend title 39, United States Code, to regulate the mailing of unsolicited credit cards, and for other purposes; and

H.R. 17809. An act to provide an equitable system for fixing and adjusting the rates of pay for prevailing rate employees of the Government, and for other purposes.

ENROLLED BILL SIGNED

The message also announced that the Speaker had affixed his signature to the enrolled bill (H.R. 18725) to establish a Commission on the Organization of the Government of the District of Columbia and to provide for a Delegate to the House of Representatives from the District of Columbia, and it was signed by the Acting President pro tempore (Mr. ALLEN).

DIRECT POPULAR ELECTION OF THE PRESIDENT AND THE VICE PRESIDENT

The Senate continued with the consideration of the joint resolution (S.J. Res. 1) proposing an amendment to the Constitution of the United States relating to the election of the President and the Vice President.

Mr. HART. Mr. President, I rise to support Senate Joint Resolution 1, now pending.

The proposed amendment to the Constitution of the United States would abolish the electoral college and provide in its place direct popular election of the President. In the direct election the candidate winning the plurality of at least 40 percent of the votes would become President. If no candidate received 40 percent, there would be a runoff between the two top candidates.

I realize that, in the several days during which we have begun development of the proposition, much of this analysis has been stated for the record. I should like the opportunity, however, for myself, to reassert some of the points already made, inasmuch as I think most of us in the Senate will be anxious to have in a concise form, available for distribution to those constituents of ours who express concern, our point of view.

Although some opponents of direct election seek to portray it as a hastily considered amendment to our Constitution, they are wrong.

Senate Joint Resolution 1 was reported out of the Senate Judiciary Committee by a vote of 11 to 6. This followed several years of extensive hearings in the Subcommittee on Constitutional Amendments under the able leadership of the Senator from Indiana (Mr. BAYH).

The Special Commission of the American Bar Association on Electoral College Reform, composed of eminent political scientists, lawyers, and public officials, studied the issue for almost a year, and concluded that the present system was archaic, undemocratic, and dangerous. Indeed Senate Joint Resolution 1—and this has been commented upon in the press rather frequently—has the almost unprecedented coalition support of the American Bar Association, the Chamber of Commerce, the AFL-CIO, the United Auto Workers, the League of Women Voters, and the National Association of Small Business. Public opinion polls and the canvass of State legislators by some of our Senate colleagues, including my distinguished colleague from Michigan (Mr. GRIFFIN) also reveal broad national preference for direct election. Last fall, the House of Representatives approved Senate Joint Resolution 1 by a landslide 339-to-70 vote.

In short, Mr. President, direct election is an idea whose time has finally come. Those of us who were privileged to sit with the late delightful Senator from Illinois, Everett Dirksen, will recognize the point I have just voiced. Senator Dirksen often reminded us of his willingness to support an idea whose time had finally come, and I think he might agree that this is such an idea and this happens to be the time.

The history of the electoral college reveals its dangers. There have been 46 presidential elections. In these elections, two Presidents were chosen by the House of Representatives; one Vice President was chosen by the Senate, and one President gained office only upon the vote of a special commission appointed by Congress. Most important, on three separate occasions, the popular vote winner was denied the presidency.

Recent elections have spotlighted the time bombs ticking away in our present system: The possibility of a minority President, or an electoral college deadlock followed by bargaining in the House of Representatives.

This danger of a "second choice" President is, I suggest, central to the debate. Opponents of direct election may suggest that precisely because the Nation has survived this situation three times in the last century, it is a risk we can live with.

I am less sanguine. Today, our social fabric is beset with tensions. We are sensitized by opinion polls to the popular will. The President possesses awesome powers of rapid, momentous decision. Particularly in times of crisis, a minority Presidency now could put an intolerable strain on our democratic system.

Mr. BAYH. Mr. President, will the Senator yield?

Mr. HART. I shall be glad to yield.

Mr. BAYH. Mr. President, I compliment our distinguished colleague from Michigan and fellow member of the Committee on the Judiciary for the part he has played prior to this moment in helping us move forward with this major constitutional reform. I know how busy he has been and is, and I think it speaks well, though in typical fashion, of our colleague from Michigan that he would be here at this hour, voicing his concern over the real flirtation with tragedy we have had because of the present electoral system.

I must say that the Senator from Indiana feels that the priority placed by the Senator from Michigan on the weaknesses of the system is the same priority that the Senator from Indiana places upon them. One of the deepest concerns that the Senator from Indiana has is that it would be impossible for the President to govern effectively if he were not the choice of most of the people. As the Senator points out, on three occasions we have had a minority President. Further there have been seven times in this century alone where a change of less than 1 percent of the popular vote, would have resulted in cases similar to those the Senator has pointed out.

I should like to address one quick question to the Senator. Earlier today, in colloquy with our distinguished colleague the Senator from Nebraska, the Senator from Indiana repeatedly addressed himself to the following question, and was not fully satisfied with the answer that our distinguished friend and colleague gave. I would like to get the opinion of the Senator from Michigan on the situation that existed in 1948. If there had been a change of less than 28,000 votes in three States in that year, we would have seen the election victory go from President Truman to Governor Dewey, despite the fact that President Truman, who then would have been the loser, would have had a 2-million-vote plurality. That is different from the malfunctioning that really occurred in 1968, where, with the change of a few votes, neither candidate would have had a majority of the electoral college.

The question I pose somewhat circuitously to my friend from Michigan is this: Would he give the Senate his judgment as to the effectiveness of a President who was forced to accept the mantle of national leadership although the man whom he opposed had 2 million more votes than he had received in the election?

Mr. HART. Mr. President, I shall attempt to respond. But first let me thank the Senator from Indiana for his kind reference to me. If there is one thing history will not be obscure about, it is that we are at this moment deliberating the adoption of this resolution only because in the Senate at this time was one BIRCH BAYH. The several years of careful development of the record, the insistence within the Judiciary Committee that this record be carried to the Senate, the solid majority action of the Judiciary Committee in support of the resolution, each and all of those steps was led by the Senator from Indiana. Without him, I have very serious doubts that this really basic question, which has enormous implications for our future, would now be raised. I say that, and welcome the opportunity to say it.

Mr. BAYH. Mr. President, if the Senator will permit me to interrupt these very kind and highly appreciated accolades, I want to reemphasize that had it not been for the Senator from Michigan and several of our colleagues, this point could not have been reached. This has been a team effort, and I appreciate the cooperation of my colleagues.

Mr. HART. Mr. President, any team has to have a boss, and I was grateful to be able to turn to the Senator from Indiana and say, "There is the boss."

I think we can cite two very distinguished Presidents in replying to the question the Senator from Indiana has raised. As he notes, if in 1948 there had been that minimum switch, Governor Dewey would have assumed the Presidency, although President Truman would have been preferred by 2 million more Americans for that office. John Kennedy, whose qualities those of us who were permitted to serve with him recognized long before the country had an opportunity to make its judgment, also came into office in 1960 on a rather narrow plurality. His first years in office, so we are told by those who are writing history books, popular and academic, and who were a part of that administration, President Kennedy sometimes refrained from seeking to move the country in directions he felt deeply it should be persuaded to move because, indeed, he said he had assumed this office on so narrow a margin. Imagine the restraint and the inhibition on the President, himself, had John Kennedy assumed office as second man on the popular vote.

This, in a sense, personalizes the answer, and it limits it only to the personal inhibitions that would attach to the President. It does not address itself to the broader concern of national support raised by the Senator from Indiana.

Even if a minority President sought to give leadership, what kind of response could he get from the country? I think for that answer we should turn to the present incumbent, President Nixon. Very early in this debate, the Senator from Indiana pointed to the statement of President Nixon in 1968, when he was the Republican candidate for the office. Then candidate Nixon said:

> If the man who wins the popular vote is denied the Presidency, the man who gets the Presidency would have very great difficulty in governing.

As I have on some other issues, on this one I agree with President Nixon.

It is, indeed, a sobering, alarming prospect which the Senator from Indiana points up by his question and which he and I believe to be the key reason, the basic reason, for the adoption of the change which is reflected in the pending resolution. President Nixon very effectively, in a short sweep of words underscored the danger that we seek to avoid.

Mr. BAYH. I appreciate very much the Senator's response, and I appreciate his permitting me to interrupt his very fine speech. I know of the Senator's deep concern for the currents that are sweeping across this country today. Therefore, I am not surprised that he shares the

concern of the Senator from Indiana that the tremendous responsibilities that are placed on any human being who is called upon to be President would become even more difficult to carry were he not the choice of the people he is called upon to govern. I do appreciate the Senator's permitting me to interrupt.

Mr. HART. I wonder whether we could discuss this in terms a little closer to home right here in the Senate. Perhaps we can persuade some of our colleagues here that this is indeed a very compelling argument in support of the resolution by asking them how this establishment would operate if we selected as leader a man who had run second. Yet, this is a relatively—I was going to say this is a relatively manageable institution. More precisely, I should say that this is an institution made up of a very small number of men and women. Its management is a severe test of any leader. Can one conceive of the performance of this Senate, now subject to criticism on all sides, if the leadership was assumed by someone who was the choice of fewer of us than a man who would be in the background?

Mr. BAYH. I think the comparison of the Senator from Michigan is well taken. It speaks for itself, and it is excellent.

EQUAL VOTE

Mr. HART. Mr. President, in addition to what the Senator from Indiana and I suggest as the really most persuasive point in this debate—the danger of the second choice being President—in addition to the risk of a minority President, the system now presents an Orwellian world in which some voters are more equal than others. Its allocation of electoral votes among the States does not fairly reflect either the population in each State or the actual number of ballots cast there for the candidates.

Moreover, the unit rule "wastes" all of the votes cast within a State for anyone but the winner of that State. In States dominated by one party, it—I am convinced—also maintains weak second parties and discourages voter turnout of both parties.

Some argue that the present allocation gives voters in small States disproportionate influence; others claim that citizens in large States have greater real leverage under the unit rule, under the present system. At most, these alleged advantages present what Prof. Paul Freund has termed an "uneasy tension between opposing distortions of the popular will."

In fact, the benefits of both are problematical. Small States do have at least three electoral votes regardless of population. But the candidates still focus on the larger States where thin pluralities can earn large blocs of electoral votes.

At the same time, the future effects of the unit rule are hard to foresee. With burgeoning suburban interests in large States, it is not clear which group will provide the decisive swing vote—or on what issue. Projections of the past may prove mischievous. But our concern should be that no unit—large or small—has an advantage. We should insure that each American has his vote count equally with every other.

THE RUNOFF

Mr. President, I know of the concern that has been voiced about the runoff provisions of Senate Joint Resolution 1. I believe it makes good sense. The 40-percent plurality requirement will assure a reasonable national mandate to govern the country, and still render remote the likelihood of a runoff. In every Presidential election, save one, some candidate has received 40 percent of the vote—including the multiparty races of 1912 and the one that the Senator from Indiana just discussed, in 1948. In 1860 we had an exception. In that year, President Lincoln received only 39.79 percent, but his name was not on the ballot in 10 States. Fifteen Presidents, on the other hand, have been elected with less than a majority of the total vote.

Some suggest that a 40-percent plurality might be an insufficient mandate if the front runner wins the vote in only one or two States, losing the other States by razor margins.

This argument is based on the assumption—wrong, I suggest—that a voter would prefer his State's first choice for President to his own first choice. On the contrary, even in such hypothetical situations, the winner would have garnered millions of votes from citizens of the other 48 or 49 States. Certainly, those voters would be happy with the outcome, whether or not the winner had carried their respective States. Thus, he would still have broad national support.

The other main objections which have been raised against Senate Joint Resolution 1 are that it would weaken federalism, undermine the two-party system, or increase the incentive for vote fraud.

As our able majority leader has emphasized, and I repeat, our federal system is preserved in Congress, particularly in this body, and in the powers provided the States under the Constitution. It is neither preserved nor enhanced by perpetuating inequities in voting power, pitting groups of States against each other, and failing to guarantee that the people's choice is elected President.

Nor will direct election unleash a proliferation of splinter parties and undermine our two-party system. Critics admit that few third parties would hope to win the required 40-percent plurality. Instead, they argue such parties would hope to require a runoff and then bargain with the major candidates.

First, it is important to reemphasize the conclusion of the American Bar Association Electoral Reform Commission that the two-party system is rooted in the election of Congress, State, and local officials, not in the electoral college.

As for the threat of bargaining, the major parties would have the incentive, as now, to accommodate diverse interests. But a runoff candidate who openly bargained with a splinter candidate for support would face the possibility of thereby losing an equal or greater number of moderate voters in the runoff. Moreover, it is doubtful that a third party candidate could deliver enough of his supporters to influence a nationwide popular election as easily as he might influence a few critical votes in the House following an electoral college deadlock.

The bargaining position of several divergent—possibly antagonistic—parties would certainly be less than that of a strong third party candidate holding the balance of power in the electoral college or the House.

Above all, it is particularly important in a close election that the popular choice, the choice of the people, becomes President. This requires a direct vote in both the main election and any contingency procedure.

The specter of fraud is the most easily dispatched of these objections. Presently, the shift of a few votes in each insulated State can shift large blocs of electoral votes. That provides, I would suggest, far greater incentive to commit fraud than direct popular election in which several thousand votes would be a mere drop in the bucket in a nationwide pool of millions of ballots.

Nor are the mechanical problems of large vote certification and recounts particularly awesome. They have been effectively handled by the bigger States in elections for Senator and Governor for years.

Mr. President, critics of Senate Joint Resolution 1 challenge its supporters to demonstrate a clear need for such an important change in our electoral system. Those who study the Senate committee hearings and the report of the Judiciary Committee will find, I admit, that burden has been met.

The committee report summarizes the three requisites of a stable and fair system:

> First, it must guarantee that the candidate with the most votes is elected President. Second, it must count every vote equally. Third, it must provide the people themselves with the right directly to make the choice. Only direct popular election meets all three tests. (p. 9)

I urge my colleagues to support Senate Joint Resolution 1. Direct popular election will eliminate all inequities in the weight given votes from different parts of the country. It will promote the most democratic electoral results and truly implement the ultimate principle: "Let the people decide."

Mr. BAYH. Mr. President, I reiterate my gratitude to the Senator from Michigan for taking the time to make the contribution he has in his cogent arguments. This type of battle is never easily won. It is not the type of battle that has the emotional appeal of some of the more visceral issues. But in his own inimitable fashion, the Senator has pointed out the critical nature of this issue as few others have. He has captured the importance of it.

As one of his colleagues in the Senate, the Senator from Indiana wants to say to him, in capital letters, thank you very, very much.

Mr. HART. I thank the Senator from Indiana again. I repeat, we are at this point in history because of the leadership of the Senator from Indiana over a period of several and, I suspect, rather dry years.

Mr. President, as I conclude, let me read in part from a letter addressed to

me, dated August 13, 1970, from Harry R. Hall, president of the Michigan State Chamber of Commerce.

He writes:

It is my understanding that discussion and action will occur at an early date on Electoral College Reform (S.J. Resolution 1). The Michigan State Chamber strongly supports the Electoral College Reform that will permit election of the President and Vice President by nation-wide popular vote. We think the present system is completely anachronistic. It has inherent dangers that could thwart the democratic process and encourage the extreme dissidents to destroy our present political system. The obviously close division between political parties today makes it necessary to have a system whereby voters are guaranteed that the candidate with the most votes nationwide will be elected and that we have an election method that provides an equal vote to all citizens.

Mr. President, I express my appreciation to Mr. Hall and to the distinguished membership of the Michigan State Chamber of Commerce for its awareness of the problem and its willingness actively to participate in this effort to resolve the problem.

Mr. President, I ask unanimous consent to have the full letter from Mr. Hall printed in the RECORD.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

MICHIGAN STATE CHAMBER OF COMMERCE,
Lansing, Mich., August 13, 1970.

Senator PHILIP A. HART,
U.S. Senate,
Washington, D.C.:

It is my understanding . . . that discussion and action will occur at an early date on Electoral College Reform (S. J. Resolution 1). The Michigan State Chamber strongly supports the Electoral College Reform that will permit election of the President and Vice President by nation-wide popular vote. We think the present system is completely anachronistic. It has inherent dangers that could thwart the democratic process and encourage the extreme dissidents to destroy our present political system. The obviously close division between political parties today makes it necessary to have a system whereby voters are guaranteed that the candidate with the most votes nationwide will be elected and that we have an election method that provides an equal vote to all citizens.

Although I know that you support the bill, I do want you to know that you have the hearty support of the Michigan State Chamber in supporting the issues urged for Electoral College Reform that are long overdue.

Sincerely,
HARRY R. HALL, CCE,
President.

Mr. MILLER. Mr. President, a year and a half ago, I testified before the Subcommittee on Constitutional Amendments of the Senate Judiciary Committee on the subject of electoral college reform.

I noted the weakness of our present system of electing a President and recalled that one of the framers of the Constitution had remarked that adoption of a plan for doing so was "in truth the most difficult of all on which we had to decide." And I suggested that the difficulty was no less today than it was in 1787. The controversy within the full committee and now within the full Senate bears witness to my statement.

I deeply regret that, by a split vote, the Senate Judiciary Committee has placed before the Senate a proposal which, in its impact on our Nation's system of divided powers of government, I liken to the Supreme Court packing proposal of the late President Roosevelt. Only a filibuster prevented that proposal from undercutting the independence of the judicial branch of our Government, and there are few historians or political scientists today who do not agree that the proposal was unwise.

The diffusion of political power—among the three branches of the Federal Government, between the Federal Government and the 50 States, among the three branches of each State, and between the individual States and their local levels of government—is a complex and highly sophisticated system which, along with our Constitution, is well calculated to prevent dictatorial control over the people. At the same time, changing times and circumstances bring about a constant series of pressures from all points within the system for the purpose of meeting the needs of the people. Striking a balance is the art of good government.

The electoral college system of electing a President was intended to strike a balance between the Federal and State Governments. This it has done, but its imperfections have led to abuses which have caused great anxiety among the people. The specter of a member of the electoral college voting contrary to the expressed will of the electorate of his State and the "winner take all" electoral votes from each State are abuses which should be removed. I have cosponsored legislative proposals to do so. But while the direct election of the President proposal would do away with these abuses, it would, at the same time, jeopardize the balance between the Federal Government and the States. Indeed, it does not require great imagination to say that adoption of this proposal by the Congress and its ratification by three-fourths of the States would mark the beginning of the end of the viability of the States as political institutions.

For this reason, I fully agree with the President's prediction that the necessary three-fourths of the States would not agree to ratify the proposal if the Congress submits the question to them. And so it seems to me that we are now engaged in another of the typical exercises in futility which seem to be the trademark of this session of the Senate.

The pending proposal, Senate Joint Resolution 1, would allow 7 years for ratification by three-fourths of the States, and this would mean that meaningful change to remove the present abuses would be delayed 7 more years at least.

The proponents make much of a Gallup poll some time ago which purported to show a very large majority of the people in favor of direct election of the President. I can understand such a reaction, because I, myself, joined as a cosponsor of this proposal 3 years ago after it had been endorsed by the American Bar Association—albeit by a closely divided vote in the association's house of delegates. Since that time, however, I have had an opportunity to study the matter in greater depth and to understand the implications of the proposal. It would be more indicative of public attitudes, I believe, if the Gallup poll would ask questions such as these:

1. Do you favor changing the system of electing a President to a system under which one candidate for President could carry 49 of the 50 states by 1,000 votes each and still lose the election because the other candidate for President carried a single state by 50,000 votes?

2. Do you favor changing the system of electing a President to a system which would encourage an end to the two-party system and a proliferation of political parties, thus laying a foundation for a run-off election because no candidate received the required 40% of the vote and laying the further foundation for all kinds of promises and trade-offs by either or both of the candidates involved in the run-off in order to pick up support from the other parties?

3. Do you favor a system which would enable widespread fraud in one or two large states to result in election of a candidate who lost most of the other states, but by margins too small to prevent his winning margins in the fraudulent states from putting him on top?

These and other questions would reveal the implications of the pending proposal, and my best judgment is that, thus informed, public opinion would be opposed. And this is why I suggest that should the proposal be referred to the States, the required three-fourths ratification will not be forthcoming. Let these implications be publicly aired within the States, when the legislatures are in session, and the public would be far better informed on the subject than it now is.

If it be suggested that my question relating to one candidate carrying 49 States by 1,000 votes each and the other candidate carrying a single State by 50,000 votes is far fetched, let me point out that 16 of the smaller States cast a total of 7,600,000 votes in 1968 and gave a combined majority to President Nixon of 691,000. In the State of Massachusetts, 2,236,000 votes were cast with a majority of 702,000 for Vice President Humphrey—sufficient to more than wipe out the Nixon margin in those 16 States if this pending proposal had been the law.

Another serious defect in the pending proposal, as I see it, is the provision that empowers the Federal Government to establish uniform residence and election procedures for election for President and Vice President. This could well result in differences within each State between such residence and election procedures in the case of elections for President and Vice President and elections for all other candidates—Governor, U.S. Senator, Congressmen, and other officials. The people are confused enough over some of these requirements now without adding another set of requirements for them to follow.

The 18-year-old vote question is very much up in the air, and not until the Supreme Court issues a ruling will we know whether or not the simple statute passed by the Congress is constitutional. I do not believe it is, and that is why I voted against it. If it is declared unconstitutional, the long process of a constitutional amendment must be followed, and the outcome of ratification of that would be in doubt—especially because so many State referendums on this point

have resulted in its defeat. Meanwhile, however, States which have granted the franchise to those under the age of 21 would have more say in electing a President under the pending proposal than would those States which retain the 21-year age requirement. This is not fair and underscores the desirability of retaining the electoral vote system while abolishing the obsolete electoral college itself.

The electoral system has seen the people of our country elect a President on 46 occasions during our history, and the transition between Presidents has been orderly. Granted that the orderliness could become fraught with controversy if the matter had gone to the House of Representatives in the elections of 1968, even that would not be fraught with the peril of a national runoff where, under the pending proposal, no candidate received 40 percent of the total vote. Moreover, even under the unfair winner-take-all system, it has been rare indeed when the President who has been duly elected by receiving a majority of the electoral vote has received a minority of the total vote cast.

On that point, Mr. President, I ask unanimous consent to have inserted in the RECORD appendix A of the minority views, set forth on pages 52, 53, and 54 of the committee report on the pending proposal.

There being no objection, the appendix was ordered to be printed in the RECORD, as follows:

APPENDIX A

HAS A POPULAR VOTE WINNER EVER LOST THE PRESIDENCY?

It is frequently said that the electoral college makes it possible for a candidate to be elected who receives fewer popular votes than his chief opponent. It is alleged that this has happened three times: in 1824, in 1876, and in 1888. We propose to examine this charge to see whether it is worthy of the attention it has received.

While it is theoretically possible for an electoral vote winner to be a popular vote loser, it is highly unlikely that such an event will occur. It is theoretically possible for the simple reason that there is not a perfect mathematical proportion between the size of the popular vote and the size of the electoral vote. That disproportion is due to the fact that each State has at least three electoral votes regardless of size—a concession that the Framers saw as necessary to shore up the federal system. So long as we believe it wise or useful for the States as States to have a say in the selection of Presidents, and so long as we believe that the smaller States ought properly to have a minimum representation, it will remain theoretically possible for an electoral winner to be a popular loser. Whether we have "winner-take-all" or some other system of awarding electoral votes, so long as the concept of electoral votes is retained with a minimum representation for small states, that theoretical possibility remains.

The decisive policy question is whether the risk of this theoretical possibility is worth running. And the most important factor in determining the worthiness of the risk is the likelihood of its occurrence. On the basis of past election results, the risk would appear to be minimal. Indeed, it is our belief that the much-feared result has never occurred.

Let us now turn to consider the three elections, which it is alleged, did produce the unwanted result.

(A) THE ELECTION OF 1824

In the election of 1824, Gen. Andrew Jackson obtained a plurality of both the popular and the electoral vote but, failing a majority in the electoral count, lost to John Quincy Adams in the House of Representatives.

The experience of 1824, however, is hardly relevant to present-day elections. None of the machinery we now possess to prevent such an outcome existed at the time; indeed, the growth of the party system and the birth of national conventions can both be directly attributed to the experience of 1824. The absence of nominating and other party machinery in 1824 accounts for the two facts which vitiate the election of 1824 as a relevant example: (1) unaffiliated a multiplicity of candidates, made it impossible for anyone to garner a majority of the electoral vote—a fact which, incidentally, was conceded by all prior to the election; (2) voters were not organized in any major sort of way on behalf of any of the candidates, with the result that voter turnout was minimal.

While accurate figures are especially difficult to obtain for early 19th century elections, most authorities are agreed that something like 350,000 votes were cast in the election of 1824, out of a total population of roughly 11 million, of whom roughly 3 to 4 million were white adult males. Of the small number of votes which were cast, Jackson obtained a total of roughly 150,000—more than any other candidate, but it was not even a majority of those voting. Jackson's plurality can in no sense be termed a "victory," nor can it be said to have constituted a "mandate."

Further, there were four candidates in that election. Of the 24 States in the Union at the time, the four candidates appeared together on the ballots of only five States; in six States, only three were on the ballot; and in seven only two. Moreover, six States (including New York, at that time by far the most populous State) had no popular election at all, the electors being appointed by the State legislatures.

The Presidency, in short, had yet to be conceived of as an elective office in the sense that we now understand it. Anyone who ventures to claim that Jackson's popular plurality represented the "will of the people" or that his defeat in the House was a "frustration of the popular will" understands neither the election of 1824 nor why its inconclusiveness cannot be repeated today. In the words of Prof. Eugene Roseboom, "The popular will had been so dimly revealed in 1824 that the House could not have subverted it." (*A History of Presidential Elections*, 1957, p. 88).

(B) THE ELECTION OF 1876

It is claimed that in the election of 1876, Samuel Tilden carried the popular vote by 250,000 but had the election "stolen" from him by a "packed" special electoral commission which had been assembled to investigate vote-fraud allegations in a number of States. The only difficulty with this argument is that, in order to have any significance at all one must adjudge every decisive vote-fraud allegation in Tilden's favor—an act of naive generosity that even Tilden's most vociferous supporters at the time dared not make. The very thing which brought the matter to the special commission in the first place—and the matter which occupied its members for days on end—was the clear and present incidence of fraud. The accuracy of the popular vote or the credentials of electors were challenged in at least 10 States. No one but no one has any idea of what the actual popular vote count was in 1876.

(C) THE ELECTION OF 1888

In the election of 1888, it is alleged, Grover Cleveland received a plurality of the popular vote but lost the electoral vote and therefore the Presidency to Benjamin Harrison. Of the three examples used by critics of the electoral college, this is the strongest; but it remains a very weak reed indeed. Even if the tabulated popular vote were taken as wholly accurate, less than 1 percentage point (actually, 0.7) separated the two candidates in the popular vote. But the popular vote totals ought not be taken as accurate. There is considerable evidence of fraud on both sides, involving both the size of the popular vote and the distribution of the electoral vote. The late Prof. Edward S. Corwin, perhaps the most distinguished constitutional authority of his generation, acknowledged that Cleveland's popular plurality (roughly 100,000) could be attributed entirely to the shenanigans of Tammany Hall alone. Neither man received a majority of the popular vote. As between two men, one receiving 48.6 percent of the vote, the other 47.9 percent, is it really possible to say that one is the clear choice of the people and the other not? Would the country have been ungovernable by either man? What is decisively important in presidential elections, as we have said before, is not so much the size of a majority as its distribution and character.

In any event, even if the election of 1888 is the strongest of the three examples used by electoral college critics, it provides no basis for condemning the electoral system as a whole. The record otherwise is clear and unmistakable: the popular winner has always been the electoral winner.

Mr. MILLER. Mr. President, apportioning the electoral votes according to the vote received in each State would not only be more fair, but it would further diminish the possibility of having a President who received a minority of the total vote. Far better, it seems to me, to run the rare risk of having a President who has received a few thousand fewer votes than the loser than to run the more likely risk of having a President who is elected because of large majorities in a few large States and is, therefore, a regional type rather than a national type official.

Even with its defects, the present system encourages national campaigning by the candidates, because electoral votes in smaller States are important—even if the winning margin of votes cast is not great. But in a direct election system, those smaller States and small margins would tend to be ignored so that campaigning could be centered in the large population areas where large margins could more than wipe out many of the totals in smaller States—as in the case of Massachusetts to which I have previously referred.

Mr. President, I hope that the pending proposal will be either defeated or amended so that the abuses in the present system will be removed. I believe that is the prudent way of meeting the problems that face us under the present system.

It can be argued that since we have gotten along for so many years under the present system, there is no need for reform. I believe that reform is indicated. Reform does not mean destruction of the present system.

Mr. BELLMON. Mr. President, will the Senator yield?

Mr. MILLER. I yield for a question.

Mr. BELLMON. I would like to inquire of the Senator from Iowa if he feels a direct vote would be more conducive to fraud than the present winner-take-all system in the electoral college.

Mr. MILLER. I think it would for this reason. While the winner-take-all system has an abuse to which I have already alluded, the electoral vote in large States is somewhat diluted, as the Senator knows, by the fact that every State, no matter how small, does have two electoral votes because every State has two Senators. To this extent I suggest that the electoral vote in large States is somewhat diluted. That does not mean the electoral vote in a winner-take-all State is not an extremely desirable plum, and it does not mean the basis for fraud in getting a large chunk of electoral votes is not there. The point is that it would be worse under a direct election situation.

Mr. BELLMON. Mr. President, if the Senator will yield further, I would like to pursue this point.

The PRESIDING OFFICER. Does the Senator yield?

Mr. MILLER. I am pleased to yield to the Senator.

Mr. BELLMON. I am sure the Senator is well aware of the situation in States such as Illinois and New York. In Illinois the vote divides fairly evenly between the downstate voters, the generally Republican area, and the Cook County voters, who tend to be Democratic. I am sure he realizes that in some past elections there were situations in which the Democratic machine in Cook County went to great ends to bring out a maximum vote by whatever means in Cook County to overcome the disadvantage the organization faced from downstate voters. They would do this because it was the means used by the Democratic organization to secure the total electoral vote of that State.

It occurs to me that this is a greater pressure for fraud than if those votes were counted singly. If it meant one vote there would be a lot less pressure to produce that vote than when the organization secures the total bloc of electors of the entire State.

Mr. MILLER. I think the Senator has a good point in a State where there is a very close election and, let us say, a large State where an extra few votes would mean, with the winner taking all, all the votes of that large State. I would agree that in that particular instance the situation would be ripe for fraudulent action.

However, I believe if the Senator will look at the results of previous elections he will find that the number of those large States where there is that narrow a margin is relatively small compared to the number of large States in which there were sweeping majorities, and it is the sweeping majorities that I think result in the direct election of the President, laying a foundation for even more encouragement. But I think it is a mixed situation; I agree. The best answer I can give is where there are smaller States with two electoral votes for each State, the aggravation is not as great from an overall standpoint.

But this is not an unmixed situation. The Senator knows that in the example he cited this is one of the abuses of the winner-take-all system which the Senator from Iowa long advocated be done away with either by the district plan, which has been offered for many years by the distinguished Senator from South Dakota (Mr. MUNDT), or by what in my judgment is the preferable proportional plan which currently is offered by the Senator from North Carolina (Mr. ERVIN).

Mr. BELLMON. If the Senator will yield further, I would like to say that apparently the feeling of the Senator from Oklahoma and the feeling of the Senator from Iowa are not too different. I think both of us desire improvements in the present system. Apparently the difference is that as the Senator from Oklahoma studied the present system and the alternatives, he came to the conclusion that really the only viable way to improve the electoral system is to abolish it, because when one goes to the proportional system, he simply multiplies the winner-take-all arrangement into about 535 entities rather than the 50 we have now, and when we go to the proportional system, we get bogged down in mathematics that would make it possible for a President to be elected with fewer votes than the candidate who opposed him.

With the tensions we have in this country and with the tremendous responsibilities that reside in the office of the President, it seems to me that the man who holds that position should be the choice of the majority, or at least of the larger percentage of the votes of the people who voted for the two top candidates. I do not think we will get that if we go to the proportional system.

Mr. MILLER. Let me comment, when the Senator from Oklahoma says that we are both reasonable men, that the Senator from Iowa concedes that. It illustrates that reasonable and honest people can arrive at different conclusions. The Senator from Oklahoma in effect says he is an abolitionist and the Senator from Iowa is a reformer. That points up the difference.

The Senator from Iowa thinks that by reforming what we have now and doing away with the two abuses I have referred to, namely the winner-take-all abuse and the electoral college, which lays the foundation for an elector to go contrary to the wishes of the people of his State, we will arrive at a better system than we have now; whereas the Senator from Oklahoma believes a direct election—which, of course, will cure the abuses—is the better approach.

To me, curing those abuses by such a revolutionary system as this is not indicated. The Senator from Oklahoma argues, as all the proponents for direct election argue, that we could have a minority President. I think we have had three minority Presidents in the history of this country, and there is some question as to that point.

In that connection, Mr. President, I shall later ask that appendix A to the minority views in the committee report, starting at page 52 and ending at page 54, be printed in the RECORD. That analysis shows that the three elections referred to—the election of 1824, the election of 1876, and the election of 1888—while sometimes popularly referred to as elections of minority Presidents, are subject to grave questions on that point. But, for the sake of argument, under the winner-take-all system, in the history of our elections, there are three, and the margins there are minute. Under the proportional plan, the opportunity for that to happen would be greatly reduced.

So I suggest that what the proponents are arguing for here is something that is almost impossible to happen. If it happened, it would be by such a slim margin that I do not think anybody would be too disturbed about it. To me, the risks of that happening are far overshadowed by the risks of electing a President as a result of carrying a handful of States.

I have already pointed out, as an extreme example, what this proposal lays the foundation for—namely, one candidate for President carrying 49 States by 1,000 votes and the other candidate carrying only one State by 50,000 votes and becoming President of the United States.

The Senator from Oklahoma, and others, will say that is an extreme example; that it can never happen. I would be perfectly willing to admit that, but it could happen if two or three or four States were carried by such margins. I shall refer shortly to the situation in Massachusetts in the last election, which substantiates the point I am making.

Mr. BELLMON. Mr. President, will the Senator yield?

Mr. MILLER. I yield.

Mr. BELLMON. I agree that both the situations the Senator from Iowa has described are remote and very unlikely to happen, but we have situations now where Presidents have been elected by fewer votes than the losing candidate received. For instance, in 1960 President Nixon actually received more popular votes than did President Kennedy if we consider the votes case in Alabama. Always, when there is a mechanism like the electoral college, there is going to be the possibility for these kinds of situations to arise.

I am of the opinion that if President Nixon had not been very generous and a big man, he could have thrown the country into turmoil by asking for a recount and taking the election into court, and perhaps created a great damage to this country. This could happen again, and the next candidate may not be so magnanimous as President Nixon was and he could create a crisis.

That was one reason why I became interested in electoral college reform.

The Senator from Iowa has referred to the direct vote as a revolutionary system. I frankly cannot agree with him on that, because the Senator holds his position in the Senate as a result of a direct vote. All the Governors are elected by direct vote. This simply means extending a system which works very well for other offices in this country to the highest office in the country.

Mr. MILLER. But the Senator makes that point and attempts, in doing so, to ignore the difference between the election of a President and the election, within a State, of its own Representatives in Congress, its own U.S. Senators, and its own Governor. That is the crux of the whole thing.

The Senator suggests, just forget about the State entities, just let the tabulation be run by a computer or an adding machine in voting for President. When he does that he lays the foundation for one candidate carrying 49 States by 1,000 votes and the other candidate carrying only one State by 50,000 being elected President.

To me, a foundation for that extreme situation, even to a lesser degree, is unthinkable, and that is why I think the proposal would be revolutionary in our system of government.

Our system of government was founded not on having one monolithic, centralized system of government, but on carefully separated and diffused powers of government as between the Federal Government and its three branches and the State governments and their three branches.

When we come along with this proposal and deprive the States of any of their rights as entities with respect to electing a President, and provide further, as this proposal does, federalizing residents requirements and other procedures in electing a President, I suggest to my friend from Oklahoma he is laying a foundation for the beginning of the end of the federal system of our country.

I know that my friend from Oklahoma would not want to do that. If he thought that this would actually happen, he would not be a proponent. But granted that good faith exists, the foundation is being laid. We have already seen this happen earlier in this session of Congress, when those in control of this body decided to take unto themselves the decision that 18-year-olds would have the right to vote. As I said at the time, I could support a constitutional amendment which would go out to my State for the consideration of my people, but for a group of people here in the U.S. Senate or in Congress, all of us Federal officials, to undertake, in effect, to say, "The State legislatures do not know what they are doing, and the people of the respective States do not know what they are doing, we are the all-knowing people here, and we are going to make that decision" is to me revolutionary.

I am for reform, not revolution. I am not suggesting that my friend from Oklahoma is a revolutionist, although he had admitted that he is an abolitionist. But I think this is a revolutionary type of proposal in its essence, and that, to me, is not the way to do away with the abuses.

Mr. BELLMON. Mr. President—if the Senator will yield—I am flattered by his description of the Senator from Oklahoma, but I want to remind the Senator from Iowa that Senate Joint Resolution 1 does require the approval of the legislatures of three-fourths of the States, and thus is not similar to the vote on the 18-year-old question in that respect.

Mr. MILLER. Yes, indeed; the Senator from Iowa is very much aware of that. That is why I have suggested that I agree with the President of the United States that we are not going to get three-fourths of the State legislatures to ratify this proposal.

I find it inconceivable that there would not be far more than 13 State legislatures that, after considering all of the implications of this proposal, would turn thumbs down on it. In fact, once the people understood the implications, and if we put it to a referendum suggested that we turn to a system whereby, as I shall point out later in my statement, the votes in 16 Middle Western States would be wiped out by the votes in the single State of Massachusetts, if the Senator from Oklahoma does not think that the State legislatures in the States are going to turn thumbs down on that, I do not think he knows State legislatures; and I think, after having been the Governor of his State, and a very successful one, he does know State legislatures.

I think we are going through an exercise in futility here, which will delay by seven years the opportunity to cure some of the abuses on which we are all in agreement as needing to be cured.

Mr. BAYH. Mr. President, will the Senator permit me to interrupt briefly?

Mr. MILLER. I am pleased to permit the interruption by my friend from Indiana.

Mr. BAYH. I have listened with a great deal of interest to the colloquy between my friend from Iowa and my friend from Oklahoma. As a former State legislator, I must say I look at these legislatures a little bit differently than my friend from Iowa.

I do not think any of us can guarantee what a State legislature is going to do. But as I recall my experience in the Indiana Legislature—and I have heard the Senator from Oklahoma discuss the Oklahoma Legislature—if we have a plan that would pass Congress and a plan that has been endorsed repeatedly by about 80 percent of the people in poll after poll, a plan that is supported by the American Bar Association, the Chamber of Commerce, the AFL–CIO, the UAW, the League of Women Voters, and on and on, I would think a plan with that kind of support would have a better chance than other plans, well-intentioned as they might be, that do not have that kind of support.

But of course that is speculation; we do not know.

Mr. MILLER. Mr. President, may I respond briefly to that? I think the Senator from Indiana did not hear my comment about this Gallup poll.

The Senator probably knows that 3 years ago, when this proposal was first advanced, after the American Bar Association first endorsed it, the Senator from Iowa became a cosponsor. I thought about it briefly, and it sounded pretty good to me—direct election of the Presdent, one-man, one-vote, and all of that—and I became a cosponsor.

At that time, I did not realize that it had been endorsed by the American Bar Association by a very closely divided vote in its house of delegates. So to say that the American Bar Association endorses it is overstating the matter a little bit, I think. We can say that the American Bar Association house of delegates, by a very closely divided vote endorsed it.

The point I want to make, if I may continue, is that if you go around as a pollster and ask the average person, "Do you favor direct election of the President," they will probably react about like the Senator from Iowa did when it was first brought to his attention and suggested that he might like to be a cosponsor of this proposal: "Yes; it sounds pretty good to me; put me down."

But believe me—and the Senator from Indiana has gone through the same procedures that the Senator from Iowa has during his State legislative service—let the proposal be aired, and let the implications be brought out in the local newspapers and on the floors of those legislative halls, and let the question be asked of the man on the street this way: "Do you favor changing the system of electing the President to a system under which one candidate for President could carry 49 of the 50 States by 1,000 votes each, and still lose the election because the other candidate, who carried only one State, happened to carry it by 50,000 votes," and my guess is that the Gallup poll results would be a lot different.

Mr. BAYH. Mr. President, if I may indulge upon the courtesy and patience of the Senator from Iowa just a bit further, I would be the first to agree that polls are not conclusive. What concerns the Senator from Indiana is not that everything is not going to go well as long as the outcome of the popular vote and the electoral college results are the same. What concerns me is that, while any system is going to work if you have a big majority, the true test of the value of the system and its ability to function properly is what happens in a close election.

I think the legislatures will respond somewhat differently than the Senator from Iowa thinks, but I have no way of proving it. I think the Senator from Iowa would have to agree he does not, either.

Mr. MILLER. Mr. President, will the Senator yield?

Mr. BAYH. I yield.

Mr. MILLER. The Senator from Iowa knows that the senior Senator from Nebraska (Mr. HRUSKA) has done a good bit of research on this point, and has noted that in the election of the President under the present system, some 20 States—in fact, I think it is more than that—would, under the pending proposal, find their influence in electing a President to be considerably diminished.

When you put that up to a group of State legislators—and I would include the Indiana State Legislature as an example, because I do not think it is a great deal unlike the Iowa State legislature, either as to the size of the State or as to many of its problems—I think you will find those State legislators are going to begin to wonder about the advisability of giving four or five of the giant States of this country the power to elect a President, along with a handful of others, and have, as a result, a regional type President instead of a national type President.

Mr. BAYH. If I might make just one further point.

First of all, the ABA endorsement on this issue was 3 to 1. Second, although I have the greatest respect for my distinguished colleague and fellow member

of the Judiciary Committee (Mr. HRUSKA) relative to his judgment on what happens under the present system and what would happen under the electoral college system under given circumstances, I must say that my distinguished colleague from Oklahoma comes from one of those States that the Senator from Nebraska says are going to lose a lot of votes. The Senator can ask the Senator from Oklahoma himself how he feels about that. Interestingly enough, we have a number of small State sponsors on this proposal.

Alaska, our least populous State, according to the Hruska doctrine, is going to lose the most. Both Senators from Alaska are supporting this proposal. This would make one believe that perhaps there might be some fallacy.

Mr. MILLER. Yes. And the Senator from Iowa was a cosponsor 3 years ago. So one might conclude at that time just as the Senator from Indiana has concluded. But the Senator from Iowa has had an opportunity since that time to study this matter in considerable detail and to see the implications and to look at some of the writings by scholars in this area.

The Senator from Iowa has been a strong proponent of one man, one vote in certain cases, such as the House of Representatives, which I thought for years was being handled contrary to the best intentions and the meaning of the Constitution of the United States. It was not until the Supreme Court rendered a decision that we finally had a foundation, which is now being realized, whereby we can look over at the House of Representatives and we will know that just about every one of its Members represents approximately the same number of people; whereas, it was not very long ago when we had some Representatives representing 200,000 people and others representing a half-million people, and still it was called the House of Representatives.

But that background does not lead me to tear away the diffusion of power between the Federal Government and the States. I must say that I think this emphasis on Presidents being elected with fewer popular votes than their opponents is greatly overdone. It has been rare in the past. It would be even rarer under a proportional system of allocating the electoral votes.

I suggest, further, that under the pending proposal if we got into a runoff situation—and I think that is more likely by far than the possibility of having a President elected under the present system by fewer popular votes than his opponent—then we will have the finalists, each of whom will represent under 40 percent of the vote. The eventual winner will, of course, receive a majority of the vote, but he will not be the first choice of even 40 percent of the people. There are imperfections in this proposal so far as majority will is concerned.

Mr. BAYH. Will the Senator permit me to interrupt one further time? I promise not to interrupt again.

Mr. MILLER. The Senator from Iowa will not hold the Senator from Indiana to that promise. I will yield to him any time he wishes me to yield.

Mr. BAYH. I should like to ask the Senator to continue to study this problem. The Senator from Indiana would be the first to suggest that his judgment is not always infallible. But I have found that as I continue to study the various aspects and intrigues and intricacies of the electoral college system and how it actually has worked, not how some people say it has worked, I have changed my mind on this.

I ask unanimous consent to have printed in the RECORD an article which lists the percentage of votes, the vote tabulation of our large and small States, in the last election. We can at a later date introduce a composite of the last several elections.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

PRESIDENTIAL RACE RETURNS

WASHINGTON, December 11.—Following, state by state, are the official returns in last month's Presidential race between Richard M. Nixon, Republican; Hubert H. Humphrey, Democrat, and George C. Wallace, of the American Independent party:

State	Electoral vote	Nixon	Percent	Humphrey	Percent	Wallace	Percent	Others	Percent
Alabama	10	146,923	14.1	[1] 194,388	18.6	689,009	66.0	13,857	1.3
Alaska	3	37,540	45.2	35,411	42.7	10,024	12.1		
Arizona	5	266,721	54.8	170,514	35.0	46,573	9.6	3,128	.6
Arkansas	6	189,062	31.0	184,901	30.3	235,627	38.7		
California	40	3,467,644	47.8	3,244,318	44.7	487,270	6.8	52,335	.7
Colorado	6	409,345	50.8	331,063	41.0	60,813	7.5	5,762	.7
Connecticut	8	556,721	44.4	621,561	49.5	76,650	6.1		
Delaware	3	96,714	45.1	89,194	41.6	28,459	13.3		
District of Columbia	3	31,012	18.2	139,556	81.8				
Florida	14	886,804	40.5	676,794	30.9	624,207	28.6		
Georgia	12	366,611	29.7	334,439	27.0	535,550	43.3

Total		31,770,237	43.4	31,270,533	42.7	9,906,141	13.5	239,908	.4

[1] Includes 141,124 under listing of Alabama Independent Democratic Party and 53,264 under listing of National Democratic Party of Alabama.

[2] Pennsylvania total based on figures submitted to State election board and scheduled to be certified later this week.

MINOR PARTY CANDIDATES

E. Harold Munn Sr., Prohibition party—Alabama 3,420, California 59, Colorado 275, Indiana 4,616, Iowa 362, Kansas 2,192, Massachusetts 2,369, Michigan 60, Montana 510, North Dakota 38, Ohio 19, Virginia 599. Total: 14,519.

Eldridge Cleaver, Peace and Freedom party—Arizona 217, California 27,707, Iowa 1,332, Michigan 4,585, Minnesota 935, Washington 1,609. Total: 36,385.

Hennings Blomen, Socialist-Labor party—Arizona 75, California 341, Colorado 3,016, Illinois 13,878, Iowa 241, Massachusetts 6,180, Michigan 1,762, Minnesota 285, New Jersey 6,784, New York 8,432, Ohio 120, Pennsylvania 4,977, Virginia 4,671, Washington 488, Wisconsin 1,338. Total: 52,588.

Fred Halstead, Socialist Worker party—Arizona 85, Colorado 235, Indiana 1,293, Iowa 3,377, Kentucky 2,843, Michigan 4,099, Minnesota 808, Montana 457, New Hampshire 104, New Jersey 8,668, New Mexico 252, New York 11,851, North Dakota 128, Ohio 69, Pennsylvania 4,862, Rhode Island 383, Vermont 294, Washington 270, Wisconsin 1,222. Total: 41,300.

Eugene J. McCarthy, New party—Arizona 2,751, California 20,721, Colorado 305, Minnesota 585, Oregon 1,496. Total 25,859.

New party without candidate—Montana 470, New Hampshire 431, Vermont 579. Total: 1,480.

Dick Gregory, New party—California 3,230, Colorado 1,393, New Jersey 8,084, New York 24,517, Ohio 372, Pennsylvania 7,821, Virginia 1,680. Total: 47,097.

Charlene Mitchell, Communist party and Free Ballot party—California 260, Minnesota 415, Ohio 23, Washington 377. Total: 1,075.

Others: 19,606.

Mr. BAYH. One thing that has come to the attention of the Senator from Indiana is that historically the vote in the large States has been much closer than the vote in the small States, although the Senator from Iowa can take the Massachusetts vote and compare it with 16 small States.

I ask the Senator to take this into consideration, because these figures will show that even in the 1968 election—leaving aside the one example of Massachusetts—in the other States there were closer contests. It is in the big cities, the big States, with the blocs of electoral votes, that we have the highest degree of development of the two-party system, where the contests are the closest and political activity is the most heated.

Mr. MILLER. Mr. President, will the Senator yield on that point?

Mr. BAYH. I will stop interrupting the Senator from Iowa.

Mr. MILLER. Would the Senator mind if I interrupt him at that point?

Mr. BAYH. I am the one who is interrupting.

Mr. MILLER. The Senator is in effect arguing for retention of the present system, because what he is saying is that this fight over these electoral votes in a close contest makes more viable the two-party system, and this is one of the arguments for what we now have. If we have a close election in the direct election of a President and we have only perhaps a thousand or 2,000 votes difference in the giant State—and the Senator from Oklahoma indicated Illinois as an example in the last election—then we dilute the desirability of the two-party system in comparison to what we have now.

So I think the Senator inadvertently has made an argument for retaining what we have.

Mr. BAYH. The Senator from Iowa has attributed a certain meaning to my remarks that I did not intend.

The Senator from Iowa expressed one of his concerns, and I think it would be a legitimate concern, that there would be a wide margin, a wide disparity, between winners and losers in the popular vote. I think he made this statement earlier.

Mr. MILLER. Will the Senator permit an interruption?

Mr. BAYH. Yes.

Mr. MILLER. When the Senator talks about these close elections as revealed by the table he has placed in the RECORD, is he talking in terms of percentages or is he talking in terms of numbers?

Mr. BAYH. I am talking in terms of percentages.

Mr. MILLER. That is just the point I was afraid of, because 1 or 2 percent in a giant State such as New York or California may sound like a very, very razor-thin edge or margin by the time we take into account the total number of votes that are there and compare those to the total number of votes in another 14 or 15 small States. They can well overshadow the total number of votes in the smaller States.

So I think that we are going to get sidetracked if we talk in terms of close elections in terms of percentages. What counts under the pending proposal is numbers. I am much more interested in whether or not a candidate, out of 12 million votes in New York State, wins or loses by a million votes than whether it is a difference of a few percentage points.

Mr. BAYH. If the Senator is really interested in numbers of voters, I think that direct popular vote will enhance the two-party system all over the country. It is the only system in which all the numbers count. Only in direct popular vote is there an incentive for both the dominant party and the lesser party in a one-party State to get active. Take the State of Indiana. In 1968, the Democrats wrote it off and the Republicans took it for granted. There was no incentive to get in there and participate at each precinct level.

I invite the Senator from Iowa to share the opinion of the Senator from Indiana that only in direct popular vote does one know in each precinct, for each Democratic and Republican precinct committeeman, that if we get those extra 50 votes out, that we get them counted, and they are going to count in the final return. If you are going to lose a State by a thousand votes, you might as well lose it by 100,000. If you are going to carry it by 100,000 votes, there is no incentive to carry it by 200,000.

I appreciate the patience of the Senator from Iowa.

Mr. MILLER. The Senator from Iowa always welcomes a discussion with the Senator from Indiana.

I just want to add to what the Senator from Indiana has said. Being a seasoned politician, he well knows that the votes in the precincts are got out not by the presidential candidates but by the local officials or certainly the State officials who are running for office. That is the answer to that.

With respect to tables, I should like to counterbalance the table introduced by the Senator from Indiana by asking unanimous consent that the tables appearing on pages 19 and 20 of the hearing record on the pending proposal be printed in the RECORD.

There being no objection, the tables were ordered to be printed in the RECORD, as follows:

IMPACT OF DIRECT ELECTION ON VOTING STRENGTH OF MIDLAND, SOUTHWESTERN, AND SOUTHERN STATES

State	1968 estimated population	1968 electoral vote: Number of electors	1968 electoral vote: Percent of all electors	1968 direct vote: Number of votes cast	1968 direct vote: Percent of all popular votes	Voting strength lost in percent
Midlands:						
North Dakota	627,000	4	0.74	248,000	0.34	
South Dakota	656,000	4	.74	281,000	.38	
Nebraska	1,439,000	5	.93	537,000	.73	
Kansas	2,293,000	7	1.30	873,000	1.19	
Montana	693,000	4	.74	274,000	.37	
Wyoming	315,000	3	.56	127,000	.17	
Colorado	2,043,000	6	1.12	807,000	1.10	
Total	8,066,000	33	6.13	3,147,000	4.31	29.7
Southwest:						
New Mexico	1,006,000	4	.74	327,000	.45	
Arizona	1,663,000	5	.93	487,000	.67	
Utah	1,034,000	4	.74	423,000	.58	
Nevada	449,000	3	.56	154,000	.21	
Total	4,152,000	16	2.97	1,391,000	1.90	37.0
South:						
Virginia	4,595,000	12	2.23	1,360,000	1.86	
North Carolina	5,122,000	13	2.42	1,587,000	2.17	
South Carolina	2,664,000	8	1.49	667,000	.91	
Georgia	4,568,000	12	2.23	1,250,000	1.71	
Florida	6,151,000	14	2.60	2,188,000	2.99	
Tennessee	3,975,000	11	2.04	1,249,000	1.71

Source: Testimony before the House Judiciary Committee, May 16, 1969.

Mr. MILLER. Mr. President, I yield the floor.

CLOSED SESSION

Mr. MANSFIELD. Mr. President, pursuant to rule XXXV, I move that the doors of the Chamber be closed and that the Presiding Officer direct that the galleries be cleared.

Mr. ALLOTT. I second the motion.

The PRESIDING OFFICER (Mr. JORDAN of Idaho). The motion having been made and seconded that the Senate go into closed session, the Chair, pursuant to rule XXXV, now directs the Sergeant at Arms to clear the galleries, and close the doors of the Chamber.

Thereupon, at 3 p.m., the doors of the Chamber were closed.

LEGISLATIVE SESSION

At 4:29 p.m. the doors of the Chamber were opened, and the open session of the Senate was resumed.

DIRECT POPULAR ELECTION OF THE PRESIDENT AND THE VICE PRESIDENT

The Senate resumed the consideration of the joint resolution (S.J. Res. 1) proposing an amendment to the Constitution of the United States relating to the election of the President and the Vice President.

Mr. BYRD of West Virginia. Mr. President, I ask unanimous consent that the pending business be temporarily laid aside, and that it remain in that status until the close of morning business tomorrow.

The PRESIDING OFFICER. Without objection, it is so ordered.

ELIMINATION OF REDUCTION IN ANNUITIES OF EMPLOYEES OR MEMBERS WHO ELECTED REDUCED ANNUITIES

Mr. BYRD of West Virginia. I ask unanimous consent that the Senate proceed to the consideration of Calendar 1103, S. 437.

The PRESIDING OFFICER. The bill will be stated by title.

The assistant legislative clerk read as follows: A bill (S. 437) to amend chapter 83, title 5, United States Code, to eliminate the reduction in the annuities of employees or members who elected reduced annuities in order to provide a survivor annuity if predeceased by the person named as survivor and permit a retired employee or Member to designate a new spouse as survivor if predeceased by the person named as survivor at the time of retirement.

The PRESIDING OFFICER. Is there objection to the present consideration of the bill?

There being no objection, the Senate proceeded to consider the bill, which had been reported from the Committee on Post Office and Civil Service with an amendment to strike out all after the enacting clause and insert:

That (a) section 8341(a) of title 5, United States Code, is amended—

(1) by inserting "and" after paragraph (2);

(2) by striking out paragraph (3); and

(3) by renumbering paragraph "(4)" as paragraph "(3)".

(b) Section 8341(d) of title 5, United States Code, is amended—

(1) by striking out "dependent widower" wherever it appears and inserting "widower" in place thereof;

(2) by striking out paragraph (2); and

(3) by renumbering paragraphs "(3)" and "(4)" as paragraphs "(2)" and "(3)", respectively.

(c) Section 8341(e)(2) of title 5, United States Code, is amended by striking out subsection "(a)(4)" and inserting subsection "(a)(3)" in place thereof.

SEC. 2. (a) Section 8344(a) of title 5, United States Code, is amended by inserting after the fourth sentence the following new flush sentence: "If the annuitant on termination of employment is married to a spouse potentially entitled to annuity as surviving spouse under section 8341 of this title, the supplemental annuity payable under the fourth sentence of this subsection is reduced by 10 percent and the spouse is entitled to an annuity equal to 55 percent of the supplemental annuity commencing and terminating at the same times as the survivor annuity payable under section 8341 of this title, unless at the time of claiming the supplemental annuity the annuitant notifies the Civil Service Commission in writing that he does not desire his spouse to receive this annuity."

(b) Section 8344(a) is further amended by striking out the following: "The employment of an annuitant under this subsection does not create an annuity for or affect the annuity of a survivor."

SEC. 3. (a) Section 8339(i) is amended by striking out "his spouse" and inserting in lieu thereof "any spouse surviving him."

(b) Section 8341(b) is amended—

(1) by inserting after "to whom he was married at the time of retirement," "or who qualifies as a widow or widower under section 8341(a)," and

(2) by striking out "does not desire his spouse" and inserting in lieu thereof "does not desire any spouse surviving him," and

(3) by adding at the end thereof the following new sentence: "A spouse acquired after retirement is entitled to a survivor annuity under this paragraph only if he elects to receive it instead of any other survivor annuity to which he may be entitled under this subchapter or another retirement system for Government employees."

(c) Section 8339(j) of title 5, United States Code, is amended by renumbering section "8339(j)" as "8339(j)(1)" and adding the following paragraph (j)(2):

"(j)(2) An employee or Member who is unmarried at the time of retiring or an annuitant who is unmarried at the time of sepa-

ration and who later marries may, within one year after he marries, elect a reduced annuity with benefit to surviving spouse as provided in section 8341(b). His annuity is recomputed and paid under the provisions of section 8339(j) effective the first day of the month after his written election is received in the Civil Service Commission. An election under this paragraph voids prospectively any election previously made under paragraph (1) of this subsection."

SEC. 4. (a) The amendments made by sections 1 and 3 of this Act shall not apply in the cases of employees, Members, or annuitants who died prior to the date of enactment of this Act. The rights of such persons and their survivors shall continue in the same manner and to the same extent as if such amendments had not been enacted.

(b) The amendments made by section 2 of this Act shall apply only with respect to reemployed annuitants whose employment terminates on or after the date of enactment of this Act.

Mr. MOSS. Mr. President, the bill now before the Senate is a bill to change the law regarding annuities for the spouse of a retiree who has passed on. There is a technical amendment to the bill. I send the amendment to the desk, and ask for its immediate consideration.

The PRESIDING OFFICER. The amendment will be stated.

The assistant legislative clerk read as follows: The Senator from Utah (Mr. Moss) for the Senator from Wyoming (Mr. McGEE), proposes an amendment as follows:

On page 5, strike out lines 6 through 8 and insert in lieu thereof the following:

"(1) by inserting '(1)' after the subsection designation '(j)'; and

"(2) by inserting at the end thereof the following new paragraph:

"'(2) An employee or Member who is unmarried at the time of retiring or an annuitant who is unmarried at the time of separation and who later marries may, within one year after he marries, elect a reduced annuity with benefit to surviving spouse as provided in section 8341(b). His annuity is recomputed and paid under the provisions of section 8339(i) effective the first day of the month after his written election is received in the Civil Service Commission. An election under this paragraph voids prospectively any election previously made under paragraph (1) of this subsection.'"

Mr. MOSS. Mr. President, this amendment, as I say, is simply a technical and perfecting amendment discovered by the legislative counsel on the last review of the legislation. It has no substantive effect, but simply makes the language conform with the existing statute and the purpose of this bill.

The PRESIDING OFFICER. The question is on agreeing to the amendment.

The amendment was agreed to.

Mr. MOSS. Mr. President, under present law when an employee retires he may elect to receive a reduced annuity so as to provide a lifetime survivor benefit equal to 55 percent of this reduced annuity for his spouse if he dies before his spouse dies. The election to take a reduced annuity or a single-life annuity at the time of retirement is irrevocable. If a retiree's spouse dies first, his reduced annuity continues and he may not designate a subsequent spouse as beneficiary.

Experience in the retirement program shows that more than one-third of the time the male retiree outlives his wife, continuing to receive a reduced annuity for which there can never be a beneficiary.

S. 437 provides that if an annuitant elects a reduced annuity that designation shall remain irrevocable. But it amends existing law to give to the retiree the absolute right to leave a survivor annuity to any spouse to whom he is married at the time of his death. The marriage must have been of 2 years' duration or the spouse must be the parent of issue from the marriage.

This bill is a major step toward providing adequate income for older citizens. In its inquiry the committee has found no evidence to indicate that the spouse to whom a retiree was married at the time of his retirement should be his sole beneficiary under law.

The bill is partly retroactive. The opportunity to designate a subsequent spouse or the opportunity to designate a first spouse is offered to any employee or any retired employee on the active or retirement roles on the date of enactment but the surviving subsequent spouse of a retired Federal employee who dies before the date of enactment will not be entitled to any of the benefits of the measure.

That means that a person who is on retirement now may make the determination, but no surviving spouse can come in now and say, "I should have been designated."

I think this is simple equity, Mr. President. A retiree who elects to take a reduced annuity is therefore paying something, for the option of naming his spouse, to retire. Under the present law, however, if that spouse dies, he still continues to pay and pay, because his reduced annuity goes on as long as he lives. This bill simply provides that if his spouse dies and he remarries, he or she—it applies either way—may then designate the second spouse to take the annuity should he then predecease that person to whom he is married.

It still has the limitation of being married 2 years, to get around some deathbed cases, perhaps, or if there is issue of that marriage; either of those circumstances establishes the qualification. I think it is eminently fair, and takes care of something that has been a gap in the retirement system for Federal employees for a considerable period of time.

The committee was unanimous in reporting this bill, I know it has been carefully studied by the Senators who are concerned, and I believe that we are ready to vote. I am not aware that there is anyone in opposition to the bill at this time.

The PRESIDING OFFICER. The question is on agreeing to the committee amendment, as amended.

The amendment was agreed to.

The bill was ordered to be engrossed for a third reading, read the third time, and passed, as follows:

S. 437

An act to amend chapter 83 of title 5, United States Code, relating to survivor annuities under the civil service retirement program, and for other purposes

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That (a) section 8341(a) of title 5, United States Code, is amended—

(1) by inserting "and" after paragraph (2);

(2) by striking out paragraph (3); and

(3) by renumbering paragraph "(4)" as paragraph "(3)".

(b) Section 8341(d) of title 5, United States Code, is amended—

(1) by striking out "dependent widower" wherever it appears and inserting "widower" in place thereof;

(2) by striking out paragraph (2); and

(3) by renumbering paragraphs "(3)" and "(4)" as paragraphs "(2)" and "(3)", respectively.

(c) Section 8341(e)(2) of title 5, United States Code, is amended by striking out subsection "(a)(4)" and inserting subsection "(a)(3)" in place thereof.

SEC. 2. (a) Section 8344(a) of title 5, United States Code, is amended by inserting after the fourth sentence the following new flush sentence: "If the annuitant on termination of employment is married to a spouse potentially entitled to annuity as surviving spouse under section 8341 of this title, the supplemental annuity payable under the fourth sentence of this subsection is reduced by 10 percent and the spouse is entitled to an annuity equal to 55 percent of the supplemental annuity commencing and terminating at the same times as the survivor annuity payable under section 8341 of this title, unless at the time of claiming the supplemental annuity the annuitant notifies the Civil Service Commission in writing that he does not desire his spouse to receive this annuity."

(b) Section 8344(a) is further amended by striking out the following: "The employment of an annuitant under this subsection does not create an annuity for or affect the annuity of a survivor."

SEC. 3. (a) Section 8339(i) is amended by striking out "his spouse" and inserting in lieu thereof "any spouse surviving him."

(b) Section 8341(b) is amended—

(1) by inserting after "to whom he was married at the time of retirement,", "or who qualifies as a widow or widower under section 8341(a)," and

(2) by striking out "does not desire his spouse" and inserting in lieu thereof "does not desire any spouse surviving him," and

(3) by adding at the end thereof the following new sentence: "A spouse acquired after retirement is entitled to a survivor annuity under this paragraph only if he elects to receive it instead of any other survivor annuity to which he may be entitled under this subchapter or another retirement system for Government employees."

(c) Section 8339(j) of title 5, United States Code, is amended—

(1) by inserting "(1)" after the subsection designation "(j)"; and

(2) by inserting at the end thereof the following new paragraph:

"(2) An employee or Member who is unmarried at the time of retiring or an annuitant who is unmarried at the time of separation and who later marries may, within one year after he marries, elect a reduced annuity with benefit to surviving spouse as provided in section 8341(b). His annuity is recomputed and paid under the provisions of section 8339(i) effective the first day of the month after his written election is received in the Civil Service Commission. An election under this paragraph voids prospectively any election previously made under paragraph (1) of this subsection."

SEC. 4. (a) The amendments made by sections 1 and 3 of this Act shall not apply in the cases of employees, Members, or annuitants who died prior to the date of enactment of this Act. The rights of such persons and their survivors shall continue in the same manner and to the same extent as if such amendments had not been enacted.

(b) The amendments made by section 2

of this Act shall apply only with respect to reemployed annuitants whose employment terminates on or after the date of enactment of this Act.

The title was amended, so as to read:

An Act to amend chapter 83 of title 5, United States Code, relating to survivor annuities under the civil service retirement program, and for other purposes.

Mr. MOSS. Mr. President, I have a statement that I ask unanimous consent to have printed in the RECORD at this point.

The PRESIDING OFFICER. Is there objection?

There being no objection, the statement was ordered to be printed in the RECORD as follows:

STATEMENT OF SENATOR MOSS

Mr. President, it is with great pride today that I welcome Senate passage of my bill S. 437 which will amend the Civil Service Retirement Act to provide survivor benefits for second spouses of Federal annuitants.

Under the existing law a Civil Service retiree may elect to take a reduced annuity and provide a lifetime survivor benefit equal to 55 percent of his reduced annuity for his spouse in the event he dies first.

Statistics indicate that in most cases the male retiree dies first and the annuity automatically goes to the wife. However, in the cases in which the wife designated as beneficiary dies before the male retiree there has been a substantial problem in that the male retiree would continue to receive a reduction in his annuity to provide a survivor benefit for which there is, by law no beneficiary.

My bill which has just passed the Senate will give the retiree the right to designate a second spouse as beneficiary. This result is only fair and just and one wonders why this legislation was not enacted long ago.

I would like to express my thanks to the Chairman of the Senate Post Office and Civil Service Committee, Senator Gale McGee, for his support and assistance in getting this bill passed. I'm sure our Nation's 997,000 Civil Service retirees share my gratitude.

While I am joyful about the passage of this bill, Mr. President, I would just like to take a moment and indicate that there is much left to do to restore our 20 million elderly their proper place in American abundance.

Starting again with our 997,000 retired Federal employees we should make note that some 276,000 receive less than $100 per month; 515,000 receive less than $200 a month; and 619,000 (more than 60 percent) receive less than $250 per month which puts them below the so-called poverty level of $3,000 per annum. In my own State of Utah there are 7,318 annuitants and survivors and the average monthly annuity is $175.

These facts point up the clear need for support of such bills as S. 421 which grants a general increase in all Civil Service annuities on a graduated basis with the greatest increases going to those with the present lowest annuities.

But this need of senior citizens for greater incomes has a broader scope than Civil Service pensions. The U.S. Senate Special Committee on Aging of which I am a member, through a comprehensive study has noted inadequate income as the number one problem of our seniors. Most of our seniors have only their Social Security checks to rely on and thousands try to exist on less than $100 a month. Low incomes mean inevitably that they must make choices between food or medicine, clothes or recreation or transportation. This turns many into recluses with little social contact or contribution to society.

Last year the 15 percent increase in Social Security payments, and the 15 percent increase in Railroad Retirement pensions signed into law on August 12 were encouraging but we must do much more.

I believe that old age should be a time of reward and satisfaction; those who have devoted their lives to building our society deserve recognition. We should not rob our seniors of their pride—we should spare them the indignity of falling into poverty simply because of their advanced age.

It is for these reasons that I have called for a national program of rewards and incentives for our elderly to offset their low incomes. This program anticipates discounts to the elderly including reduced fares on buses and subways, discounts on prescription drugs and senior citizen discounts for entertainment such as baseball games and movies.

At the time when I first made this proposal there were only four major cities that offered reduced fares on mass transit for seniors. Today there are over 35 major cities who give seniors a substantial discount—most fares are about a dime.

I hope that the idea of senior citizen discounts will snowball and that similar programs will be instituted all across America. I would like to see beauty and barber shops give discounts to seniors during slack hours and more restaurants offering meals to seniors at reduced rates during the time that business is slow.

Last October, I wrote to the Presidents of all the major airlines asking that they provide reduced fares for senior citizens on the airlines. I received the information that three airlines had tried to institute such fares but had been blocked in their efforts by the Civil Aeronautics Board. The CAB argued the lack of legislative authority for senior citizen reduced fares.

As a result I have introduced a bill, S. 4266, with 18 cosponsors, which would give the airlines the requisite legislative authority to institute a program of reduced fares for seniors. I anticipate a direct discount of perhaps 50 percent and a guaranteed seat. I do not believe that the stand-by principle has an application to senior citizens.

Senior citizens are precisely the group who can make use of those empty middle of the week seats. I am sure that some people were surprised to learn that even our best and most profitable airlines averaged only 50 percent of capacity last year. With our airlines only half full, I see no reason why we couldn't make room for some of our senior citizens who would make greater use of their airlines if they had the income. At the present time, I am told that those over 65 constitute only 5 percent of all airline passengers.

It is also important that we give consideration to the health and medical needs of our elderly. Unfortunately some members of the Congress feel that we have fulfilled our obligation fully with the passage of Medicare. Medicare was perhaps the single most important piece of legislation affecting our elderly to pass the Congress; however, Medicare still only pays for 45 percent of the health needs of our seniors. We must broaden the scope of Medicare to include eye glasses, dental care and out-of-hospital prescription drugs.

As Chairman of the Subcommittee on Housing for the Elderly of the U.S. Senate Special Committee on Aging, I know only too well that the present lack of reasonable housing for the elderly is another serious problem. With advancing age many seniors find that they are living in a large residence, much in need of repair and often in the oldest part of the City. Many would gladly move to smaller and newer quarters. Many would choose apartment living to escape escalating real estate taxes which represent the efforts of states to provide needed revenues for services.

The solution seems to be more and better housing specifically designed for seniors and some provision for programs of community volunteers to aid in the repairing of older homes.

It is my hope that S. 4154 which I introduced with Senator Williams of New Jersey will become law since it will provide for congregate living facilities—a type of housing for the elderly we need desperately. Seniors could move into an apartment setting with central dining facilities. At the present time far too many move into nursing homes simply because they can no longer prepare their own meals. I also favor programs of community volunteers such as "Meals on Wheels" that bring food into these seniors who cannot readily prepare their own meals.

This same bill, S. 4154 would authorize a study to explore alternatives to the current increasing real estate taxes which are such a great problem to seniors. There is a trend toward exempting seniors from these taxes if their incomes fall within certain limits. Seniors tell me that it is unfair that they should have to continue to pay taxes for roads they don't use or for the cost of providing education for other people's children. On the other hand the States are reluctant to give up any present source of revenue. Hopefully the Federal study authorized by the bill would give us some answers.

Another major area of concern for our seniors are our nursing homes. As Chairman of the Subcommittee on Long-Term Care of the Senate Aging Committee I have worked hard to bring about an improvement in the kind of care our seniors receive and to protect the Federal dollar which pays for these services. My 1967 amendment to the Social Security Act had this express purpose.

In recent months my Subcommittee on Long-Term Care has been conducting hearings on nursing home problems across the country. We have seen substantial improvements since our last hearings but there is much still to be done. When these hearings are complete, I will issue a report to the Congress with my recommendations. This report will reflect what we learned from our hearings on the Marietta, Ohio, nursing home fire in which 32 patients died and from our recent inquiry into the Baltimore Salmonella epidemic which claimed 25 lives.

In closing, Mr. President, I want to express the hope that the current Administration will adjust its present priorities to reflect some greater concern with problems of the elderly. I would hope that we could adjust our national attitude toward our senior citizens. There is no question that at present we have a youth-oriented society. Perhaps this is as it should be and we should continue to look toward the future rather than toward the past. But I do not think that we should ignore either. We welcome the future, but we learn from the past.

No where in the United States is age more venerated and respected than in my State of Utah. The current and consistently capable leadership of the L.D.S. Church certainly disproves the popular notion that old age is synonomous with senility.

In summation, Mr. President, today is happy day for me since S. 437 has passed the Senate; it also gives pause for looking ahead realizing how much more there is to be done. The task ahead is formidable and I ask the support of good men everywhere in bringing to our seniors a share of the "good life" which most of us enjoy.

MESSAGE FROM THE HOUSE

A message from the House of Representatives, by Mr. Berry, one of its reading clerks, announced that the House insisted upon its amendment to the bill (S. 1933) to provide for Federal railroad safety, hazardous materials control and for other purposes, disagreed to by the

Senate; agreed to the conference asked by the Senate on the disagreeing votes of the two Houses thereon, and that Mr. STAGGERS, Mr. FRIEDEL, Mr. DINGELL, Mr. SPRINGER, and Mr. DEVINE were appointed managers on the part of the House at the conference.

The message also announced that the House had disagreed to the amendment of the Senate to the bill (H.R. 11833) to amend the Solid Waste Disposal Act in order to provide financial assistance for the construction of solid waste disposal facilities, to improve research programs pursuant to such act, and for other purposes; asked a conference with the Senate on the disagreeing votes of the two Houses thereon, and that Mr. STAGGERS, Mr. JARMAN, Mr. ROGERS of Florida, Mr. SPRINGER, and Mr. NELSEN were appointed managers on the part of the House at the conference.

The message further announced that the House had agreed to the amendments of the Senate to the text of the bill (H.R. 16968) to provide for the adjustment of the Government contribution with respect to the health benefits coverage of Federal employees and annuitants, and for other purposes, with an amendment, in which it requested the concurrence of the Senate; and that the House had agreed to the amendment of the Senate to the title of the bill.

LT. COL. ROBERT L. POEHLEIN

Mr. BYRD of West Virginia. Mr. President, I ask unanimous consent that the Senate proceed to the consideration of Calendar No. 1123, H.R. 13810.

The PRESIDING OFFICER. The bill will be stated by title.

The assistant legislative clerk read as follows: A bill (H.R. 13810) for the relief of Lt. Col. Robert L. Poehlein.

Mr. BYRD of West Virginia. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The assistant legislative clerk proceeded to call the roll.

Mr. BYRD of West Virginia. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. BYRD of West Virginia. Mr. President, I ask unanimous consent that the bill be returned to the calendar.

The PRESIDING OFFICER. Without objection, it is so ordered.

RATES OF PAY FOR RATE EMPLOYEES

Mr. BYRD of West Virginia. Mr. President, I ask unanimous consent that the Senate proceed to the consideration of Calendar No. 1173, S. 4227.

The PRESIDING OFFICER. The bill will be stated by title.

The assistant legislative clerk read as follows: A bill (S. 4227) to provide an equitable system for fixing and adjusting the rates of pay for prevailing rate employees of the Government, and for other purposes.

Mr. WILLIAMS of Delaware. Mr. President, will the Senator yield?

Mr. BYRD of West Virginia. I yield.

Mr. WILLIAMS of Delaware. What is going to happen to Calendar No. 1123, the Poehlein bill?

Mr. BYRD of West Virginia. By virtue of the request I have made, Calendar No. 1123 will go back on the calendar.

Mr. WILLIAMS of Delaware. And not be disposed of today?

Mr. BYRD of West Virginia. That is correct. It will not be disposed of today, and not until such time as it is brought back before the Senate by unanimous consent.

The PRESIDING OFFICER. Is there objection to the present consideration of S. 4227?

There being no objection, the Senate proceeded to consider the bill.

Mr. FONG. Mr. President, I send to the desk an amendment on behalf of the Senator from Wyoming (Mr. MCGEE) and myself, and ask that it be stated.

The PRESIDING OFFICER. The amendment will be stated.

The assistant legislative clerk read as follows:

(a) (1) On page 6, line 11, strike out the figure "5" and insert in lieu thereof the figure "4";

(2) on page 6, at the end of line 13, insert the word "and";

(3) on page 6, line 14, strike out all after the word "prevailing" down through the word "prevailing" in line 15;

(4) on page 7, line 2, strike out "steps 3 and 4" and insert in lieu thereof "step 3".

(b) (1) on page 7, line 12, strike out "(A)";

(2) on page 7, line 16, strike out all down through line 22.

Mr. FONG. Mr. President, this is an amendment presented by the distinguished Senator from Wyoming and myself and other members of the committee. We have discussed this matter subsequent to the presentation of this bill to the Senate.

We have eliminated the 7½ percent differential for regularly scheduled nonovertime work, the majority of hours which occur between 3 p.m. and 12 midnight. We have also eliminated a 10 percent differential for regularly scheduled nonovertime work, the majority of hours which occur between 11 p.m. and 8 a.m. At the present time, they are based on prevailing wages.

We have also decreased the fourth step in the increase, which gives an increase up to 112 percent, so that now it is up to 108 percent, a reduction of 4 percent.

I urge the adoption of the amendment.

The PRESIDING OFFICER. The question is on agreeing to the amendment.

The amendment was agreed to.

Mr. MOSS. Mr. President, as one of the initial sponsors of a bill to get the wage board system under law, I want to say how delighted I am that a bill is now before the Senate. I know the many hours of hard work in both the Senate and the House which have gone into hearings and report on the bill, and I commend all of those who are responsible for bringing it before this body for a vote.

I have long been concerned about wage board and nonappropriated fund employees, and the bill I introduced last year—similar in many respects to the bill actually reported out—was one evidence of that concern. Wage board employees have been exceedingly patient in waiting for the establishment of an equitable system for fixing and adjusting their rates of compensation, and I trust we will not keep them waiting much longer.

These Federal employees, numbering some 800,000 have been discriminated against in countless ways over the years. On the average, for example, they earn 16 percent less than the classified or postal workers. Moreover, under the present wage board system, there were only three ingrade steps as opposed to 10 for white-collar employees and 12 for the Postal Field Service. The severe limitations of such a system is well illustrated by the fact that the pay differential between the first and last instep for wage board employees was 8 percent, as compared to 30 percent for classified employees. Yet, another discrimination arose from the fact that supervisors were treated more equitably than those they oversaw. In the light of such discrimination, I think it is high time that we meet the legitimate demands of these "forgotten men."

The bill now before us remedies the abuses of the prevailing wage system without destroying the concept and procedures of that system. It contains a number of important provisions, one of which is to include nonappropriated fund employees under the wage board system. In addition five steps ingrade are provided, which insures that an employee can still reap continuing financial rewards over his years of service. A further significant provision is for 7.5 and 10 percent shift differentials and for "saved pay" for workers who have been downgraded during a reduction in force.

Early enactment of this bill will be in keeping with the postal reform legislation which we passed in June. With its passage, like pay will be given for like work for all employees who work under similar conditions of employment in all departments and agencies of the Federal Government. I cannot stress too strongly how vital I think it is that we support a just and equitable system for these employees, who represent one-fourth of the total Federal labor force.

The PRESIDING OFFICER. The bill is open to further amendment. If there be no further amendment to be proposed, the question is on the engrossment and third reading of the bill.

The bill was ordered to be engrossed for a third reading, and was read the third time.

Mr. MCGEE. Mr. President, I ask the Chair to lay before the Senate a message from the House of Representatives on H.R. 17809.

The PRESIDING OFFICER laid before the Senate H.R. 17809, an act to provide an equitable system for fixing and adjusting the rates of pay for prevailing rate employees of the Government, and for other purposes, which was read twice by its title.

Mr. MCGEE. Mr. President, I ask unanimous consent that the Senate proceed to its immediate consideration.

The PRESIDING OFFICER. Is there objection to the present consideration of the bill?

There being no objection, the Senate proceeded to consider the bill.

Mr. McGEE. Mr. President, I move to strike out all after the enacting clause and insert in lieu thereof the text of S. 4227 as amended.

The PRESIDING OFFICER. The question is agreeing to the motion of the Senator from Wyoming.

The motion was agreed to.

The PRESIDING OFFICER. The question is on agreeing to the amendment.

The amendment was agreed to.

The PRESIDING OFFICER. The question is on the engrossment of the amendment and the third reading of the bill.

The amendment was ordered to be engrossed and the bill to be read a third time.

The bill, H.R. 17809, was read the third time, and passed.

Mr. McGEE. Mr. President, I move that S. 4227 be indefinitely postponed.

The PRESIDING OFFICER. The question is on agreeing to the motion of the Senator from Wyoming.

The motion was agreed to.

THE WELFARE PROGRAM

Mr. WILLIAMS of Delaware. Mr. President, today, five Governors representing the National Governors Conference testified before the Finance Committee in connection with the welfare bill.

The United Press, UPI–73, carries some interesting comments on that, and I ask unanimous consent that they be printed in the RECORD.

There being no objection, the United Press dispatch was ordered to be printed in the RECORD, as follows:

WASHINGTON.—Missouri Gov. Warren Hearnes, chairman of the National Governors Conference, today said that Nixon's administration should delay its attempt to add 14 million "working poor" to the Nation's welfare rolls.

Hearnes led four other Governors in slashing criticisms of the administration's house-passed 1970 welfare bill during a mass hearing before the Senate Finance Committee.

"It occurs to me that the administration has simply picked a figure out of the air—some $4.1 billion—and attempts to compress too many major and costly reforms into this figure," Hearnes said.

"I would suggest that the committee delay the adoption of legislation at this time which would draw into the welfare system some 14 million citizens now in the ranks of the working poor or under-employed," he said.

Hearnes said this was his personal criticism, not that of the national governors conference. He summed up a conference policy statement that urges the Federal Government to take over the entire welfare costs, making it a uniform, national program.

Other chief executives testifying were Govs. Robert D. Ray of Iowa, Frank Licht of Rhode Island and Tom McCall of Oregon. The committee also called in two House Members and other witnesses.

The witnesses generally agreed the Nation's present welfare program is a failure. It has failed to break the poverty cycles that keep families dependent on assistance, generation after generation.

McCall said the administration bill proposes "wrong solutions for agreed-upon needs," especially in its "inadequate" work incentives. He said any program is "doomed" if it allows employables any choice other than working.

Iowa's Gov. Ray predicted the program would cost states far more than projected figures. He said little valid information about cases of welfarism is available.

"It seems incredible that in a program in which the spending exceeds $10 billion a year less than one-tenth of 1 per cent has been spent on research . . . " Ray said.

Rhode Island's Gov. Licht said the present welfare program in 35 years "has not succeeded in breaking the cycle of poverty in any part of our Nation."

Clarence Mitchell, director of the NAACP Washington Bureau and chairman of the Leadership Conference on Civil Rights, supports the administration bill but wanted safeguards added to insure that no hostile state or other jurisdiction can block the program.

Mr. BYRD of West Virginia. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER (Mr. SAXBE). The clerk will call the roll.

The legislative clerk proceeded to call the roll.

Mr. BYRD of West Virginia. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

FULL OPPORTUNITY AND NATIONAL GOALS AND PRIORITIES ACT

Mr. BYRD of West Virginia. Mr. President, I ask unanimous consent that the Senate proceed to the consideration of Calendar No. 1002, S. 5.

The PRESIDING OFFICER (Mr. PROXMIRE). The bill will be stated by title.

The legislative clerk read as follows:

A bill (S. 5) to promote the public welfare.

The PRESIDING OFFICER. Is there objection to the present consideration of the bill?

There being no objection, the Senate proceeded to consider the bill, which had been reported from the Committee on Labor and Public Welfare with an amendment, to strike out all after the enacting clause and insert:

That this Act may be cited as the "Full Opportunity and National Goals and Priorities Act."

TITLE I—FULL OPPORTUNITY

DECLARATION OF POLICY

SEC. 101. In order to promote the general welfare, the Congress declares that it is the continuing policy and responsibility of the Federal Government, consistent with the primary responsibilities of State and local governments and the private sector, to promote and encourage such conditions as will give every American the opportunity to live in decency and dignity, and to provide a clear and precise picture of whether such conditions are promoted and encouraged in such areas as health, education and training, rehabilitation, housing, vocational opportunities, the arts and humanities, and special assistance for the mentally ill and retarded, the deprived, the abandoned, and the criminal, and by measuring progress in meeting such needs.

SOCIAL REPORT OF THE PRESIDENT

SEC. 102. (a) The President shall transmit to the Congress not later than February 15 of each year a report to be known as the social report, setting forth (1) the overall progress and effectiveness of Federal efforts designed to carry out the policy declared in section 101 with particular emphasis upon the manner in which such efforts serve to meet national social needs in such areas as health, education and training, rehabilitation, housing, vocational opportunities, the arts and humanities, and special assistance for the mentally ill and retarded, the deprived, the abandoned, and the criminal; (2) a review of State, local, and private efforts designed to create the conditions specified in section 101; (3) current and foreseeable needs in the areas served by such efforts and the progress of development of plans to meet such needs; and (4) programs and policies for carrying out the policy declared in section 101, together with such recommendations for legislation as he may deem necessary or desirable.

(b) The President may transmit from time to time to the Congress reports supplementary to the social report, each of which shall include such supplementary or revised recommendations as he may deem necessary or desirable to achieve the policy declared in section 101.

(c) The social report, and all supplementary reports transmitted under subsection (b) of this section, shall, when transmitted to Congress, be referred to the Committee on Labor and Public Welfare of the Senate and the Committees on Education and Labor and Interstate and Foreign Commerce of the House of Representatives. Nothing in this subsection shall be construed to prohibit the consideration of the report by any other committee of the Senate or the House of Representatives with respect to any matter within the jurisdiction of any such committee.

COUNCIL OF SOCIAL ADVISERS TO THE PRESIDENT

SEC. 103. (a) There is created in the Executive Office of the President a Council of Social Advisers (hereinafter called the Council). The Council shall be composed of three members who shall be appointed by the President, by and with the advice and consent of the Senate, and each of whom shall be a person who, as a result of his training, experience, and attainments, is exceptionally qualified to appraise programs and activities of the Government in the light of the policy declared in section 101, and to formulate and recommend programs to carry out such policy. Each member of the Council, other than the Chairman, shall receive compensation at the rate prescribed for level IV of the Executive Schedule by section 5315 of title 5 of the United States Code. The President shall designate one of the members of the Council as Chairman who shall receive compensation at the rate prescribed for level II of such schedule.

(b) The Chairman of the Council is authorized to employ, and fix the compensation of, such specialists and other experts as may be necessary for the carrying out of its functions under this Act, without regard to the provisions of title 5, United States Code, governing appointments in the competitive service, and without regard to the provisions of chapter 51 and subchapter III of chapter 53 of such title relating to classification and General Schedule pay rates, and is authorized, subject to such provisions, to employ such other officers and employees as may be necessary for carrying out its functions under this Act, and fix their compensation in accordance with the provisions of such chapter 51 and subchapter III of chapter 53.

(c) It shall be the duty and function of the Council—

(1) to assist and advise the President in the preparation of the social report;

(2) to gather timely and authoritative information and statistical data concerning developments and programs designed to carry out the policy declared in section 101, both current and prospective, and to develop a series of social indicators to analyze and interpret such information and data in the light of the policy declared in section

101 and to compile and submit to the President studies relating to such developments and programs;

(3) to appraise the various programs and activities of the Federal Government in the light of the policy declared in section 101 of this Act for the purpose of determining the extent to which such programs and activities contribute to the achievement of such policy, and to make recommendations to the President with respect thereto;

(4) to develop priorities for programs designed to carry out the policy declared in section 101 and recommend to the President the most efficient way to allocate Federal resources and the level of government—Federal, State, or local—best suited to carry out such programs;

(5) to make and furnish such studies, reports thereon, and recommendations with respect to programs, activities, and legislation to carry out the policy declared in section 101 as the President may request.

(6) to make and furnish such studies, reports thereon, and recommendations with respect to programs, activities, and legislation as the President may request in appraising long-range aspects of social policy and programing consistent with the policy declared in section 101.

(d) Recognizing the predominance of State and local governments in the social area, the President shall, when appropriate, provide for the dissemination to such States and localities of information or data developed by the Council pursuant to subsection (c) of this section.

(e) The Council shall make an annual report to the President in January of each year.

(f) In exercising its powers, functions, and duties under this Act—

(1) the Council may constitute such advisory committees and may consult with such representatives of industry, agriculture, labor, consumers, State and local governments, and other groups, organizations, and individuals as it deems advisable to insure the direct participation in the Council's planning of such interested parties;

(2) the Council shall, to the fullest extent possible, use the services, facilities, and information (including statistical information) of Federal, State, and local government agencies as well as of private research agencies, in order that duplication of effort and expense may be avoided;

(3) the Council shall, to the fullest extent possible, insure that the individual's right to privacy is not infringed by its activities; and

(4) (A) the Council may enter into essential contractual relationships with educational institutions, private research organizations, and other organizations as needed; and

(B) any reports, studies, or analyses resulting from such contractual relationships shall be made available to any person for purposes of study.

(g) To enable the Council to exercise its powers, functions, and duties under this Act, there are authorized to be appropriated (except for the salaries of the members and officers and employees of the Council) such sums as may be necessary. For the salaries of the members and salaries of officers and employees of the Council, there is authorized to be appropriated not exceeding $900,000 in the aggregate for each fiscal year.

TITLE II—NATIONAL GOALS AND PRIORITIES

DECLARATION OF PURPOSE

SEC. 201. The Congress finds and declares that there is a need for a more explicit and rational formulation of national goals and priorities, and that the Congress needs more detailed and current budget data and economic analysis in order to make informed priority decisions among alternative programs and courses of action. In order to meet these needs and establish a framework of national priorities within which individual decisions can be made in a consistent and considered manner, and to stimulate an informed awareness and discussion of national priorities, it is hereby declared to be the intent of Congress to establish an office within the Congress which will conduct a continuing analysis of national goals and priorities and will provide the Congress with the information, data, and analysis necessary for enlightened priority decisions.

ESTABLISHMENT

SEC. 202. (a) There is established an Office of Goals and Priorities Analysis (hereafter referred to as the "Office") which shall be within the Congress.

(b) There shall be in the Office a Director of Goals and Priorities Analysis (hereafter referred to as the "Director") and an Assistant Director of Goals and Priorities Analysis (hereafter referred to as the "Assistant Director"), each of whom shall be appointed jointly by the majority leader of the Senate and the Speaker of the House of Representatives and confirmed by a majority vote of each House. The Office shall be under the control and supervision of the Director, and shall have a seal adopted by him. The Assistant Director shall perform such duties as may be assigned to him by the Director, and, during the absence or incapacity of the Director, or during a vacancy in that office, shall act as the Director. The Director shall designate an employee of the Office to act as Director during the absence or incapacity of the Director and the Assistant Director, or during a vacancy in both of such offices.

(c) The annual compensation of the Director shall be equal to the annual compensation of the Comptroller General of the United States. The annual compensation of the Assistant Director shall be equal to that of the Assistant Comptroller General of the United States.

(d) The terms of office of the Director and the Assistant Director first appointed shall expire on January 31, 1973. The terms of office of Directors and Assistant Directors subsequently appointed shall expire on January 31 every four years thereafter. Except in the case of his removal under the provisions of subsection (e), a Director or Assistant Director may serve until his successor is appointed.

(e) The Director or Assistant Director may be removed at any time by a resolution of the Senate or the House of Representatives. A vacancy occurring during the term of the Director or Assistant Director shall be filled by apointment, as provided in this section.

(f) The professional staff members, including the Director and Assistant Director, shall be persons selected without regard to political affiliations who, as a result of training, experience, and attainments, are exceptionally qualified to analyze and interpret public policies and programs.

FUNCTIONS

SEC. 203. (a) The Office shall make such studies as it deems necessary to carry out the purposes of section 201. Primary emphasis shall be given to supplying such analysis as will be most useful to the Congress in voting on the measures and appropriations which come before it, and on providing the framework and overview of priority considerations within which a meaningful consideration of individual measures can be undertaken.

(b) The Office shall submit to the Congress on March 1 of each year a national goals and priorities report and copies of such report shall be furnished to the Committee on Appropriations of the Senate and of the House of Representatives, the Joint Economic Committee, and other interested committees. The report shall include, but not be limited to—

(1) an analysis, in terms of national goals and priorities, of the programs in the annual budget submitted by the President, the Economic Report of the President, and the Social Report of the President;

(2) an examination of resources available to the Nation, the foreseeable costs and expected benefits of existing and proposed Federal programs, and the resource and cost implications of alternative sets of national priorities; and

(3) recommendations concerning spending priorities among Federal programs and courses of action, including the identification of those programs and courses of action which should be given greatest priority and those which could more properly be deferred.

(c) In addition to the national goals and priorities report and other reports and studies which the Office submits to the Congress, the Office shall provide upon request to any Member of the Congress further information, data, or analysis relevant to an informed determination of national goals and priorities.

POWERS OF THE OFFICE

SEC. 204. (a) In the performance of its functions under this title, the Office is authorized—

(1) to make, promulgate, issue, rescind, and amend rules and regulations governing the manner of the operations of the Office;

(2) to employ and fix the compensation of such employees, and purchase or otherwise acquire such furniture, office equipment, books, stationery, and other supplies, as may be necessary for the proper performance of the duties of the Office and as may be appropriated for by the Congress;

(3) to obtain the services of experts and consultants, in accordance with the provisions of section 3109 of title 5, United States Code; and

(4) to use the United States mails in the same manner and upon the same conditions as other departments and agencies of the United States.

(b) (1) Each department, agency, and instrumentality of the executive branch of the Government, including independent agencies, is authorized and directed, to the extent permitted by law, to furnish to the Office, upon request made by the Director, such information as the Director considers necessary to carry out the functions of the Office.

(2) The Comptroller General of the United States shall furnish to the Director copies of analyses of expenditures prepared by the General Accounting Office with respect to any department or agency in the executive branch.

(3) The Office of Management and Budget shall furnish to the Director copies of special analytic studies, program and financial plans, and such other reports of a similar nature as may be required under the planning-programing-budgeting system, or any other law.

(c) Section 2107 of title 5, United States Code, is amended by—

(1) striking out the "and" at the end of paragraph (7);

(2) striking the period at the end of paragraph (8) and inserting in lieu thereof a semicolon and the word "and"; and

(3) adding at the end thereof the following new paragraph:

"(9) the Director, Assistant Director, and employees of the Office of Goals and Priorities Analysis.".

JOINT ECONOMIC COMMITTEE HEARINGS

SEC. 205. The Joint Economic Committee of the Congress shall hold hearings on the national goals and priorities report and on such other reports and duties of the Office as it deems advisable.

PAYMENT OF EXPENSES

SEC. 206. All expenses and salaries of the Office shall be paid by the Secretary of the Senate from funds appropriated for the Office upon vouchers signed by the Director, or in the event of a vacancy in that office, the Acting Director.

Mr. GRIFFIN. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The legislative clerk proceeded to call the roll.

Mr. MONDALE. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. MONDALE. Mr. President, the pending bill, S. 5, was reported from the Committee on Labor and Public Welfare on July 1, 1970. This measure had 24 cosponsors from both sides of the aisle. Since that time, the Senator from Illinois (Mr. PERCY) has asked to have his name added as a cosponsor.

Mr. President, I ask unanimous consent that the name of the Senator from Illinois (Mr. PERCY) be added as a cosponsor of the pending bill (S. 5).

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. MONDALE. Mr. President, a predecessor bill was extensively considered by the Subcommittee on Government Research of the Government Operations Committee under the distinguished leadership of the Senator from Oklahoma (Mr. HARRIS) during the 90th Congress. In this Congress, a number of hearings were held on the bill during 1969 and 1970.

The bill has been strongly supported by a broad spectrum of leading public figures in the Nation. Among them have been two former Secretaries of Health, Education, and Welfare—John Gardner and Wilbur Cohen—Whitney Young, Dr. Ernest Hilgard who headed a special study for the National Academy of Science's National Research Council on Social Indicators, a number of other former officials of the executive branch such as former Budget Director Zwick, former Secretary of the Treasury Barr, and former Special Assistant to the President Califano. I am delighted to have had the strong backing of the distinguished Senator from New York (Mr. JAVITS) who has contributed a most important amendment to the bill which is included as title II.

Title I of the bill establishes full social opportunity as a national goal. The goal is more fully described in the bill as embracing such areas as educational and vocational opportunities, access to housing and health care, and provision of special assistance to the handicapped and other less fortunate members of society. It establishes institution and procedures for advancing this broad social goal, including a new Council of Social Advisers in the Executive Office of the President, and a requirement for an annual social report to be submitted by the President to the Congress.

The bill is patterned generally after the Employment Act of 1946 which, for the first time, established as a national goal the achievement of maximum employment, production, and purchasing power. To assist in achieving that goal, the Employment Act established the Council of Economic Advisers, provided for the annual economic report of the President, and established a Joint Economic Committee in the Congress.

It is our belief that this legislation will accomplish for the broad range of social policies what the Employment Act has done so well in the economic sector. By declaring a new national objective and increasing the quantity, quality, and visibility of information needed to pursue that objective, we should markedly advance our prospects for effective social action.

Mr. President, by now we have had a series of studies by prestigious commissions which have told us about the gap which remains in our society between the promise of full opportunity and the realities of deprivation, powerlessness, and poor fortune into which millions of our citizens are born. The increasing affluence of great segments of our society has merely sharpened the division between them and those who have not yet benefited from the phenomenal growth in our economy, in our technological and scientific base, and in our educational systems. As a result, the demands of the deprived for their fair share in the benefits of our society and the responsiveness of our political institutions have both increased dramatically. At the same time, however, we have also become acutely aware of the fundamental inadequacy of the information upon which social policies and programs are based.

One consequence of our information gaps is that national problems go nearly unnoticed until they suddenly are forced upon us by some significant development and we learn of widespread hunger in America, of the rapid deterioration of our environment, of dangerous tensions and unrest in our great urban centers, of the shocking conditions under which migrant farmworkers live, and of the absence of decent medical care for tens of millions of our citizens. We desperately need ways to monitor our social health and to identify such problems before they destroy our society.

Another tremendously expensive consequence of our lack of adequate information is that we devise and operate programs based on myth and ignorance. The Congress is now groping with the problem of welfare reform, but it is painfully evident that we lack some of the basic information which we need in order to design a system in which we could all have confidence. Similar problems are presented with respect to urban renewal, mass transportation, air and water pollution and health delivery systems.

Finally, after years of experimenting with such techniques as program planning and evaluation systems, we still are quite ill equipped to measure what our existing programs do accomplish. And we have no adequate means to compare the costs and effectiveness of alternative programs. A Council of Social Advisers, dedicated to developing indicators of our social problems and progress, could well be a source of enormous savings to the taxpayer as well as of more effective solutions to the problems we face. Such a Council, taking full advantage of new developments in planning programing and budgeting systems, in computerized data collection and statistical methodology, in systems analysis and social accounting, could unlock the enormous potential of the social sciences to assist the Congress and the Executive in developing and administering public policy.

A Council of Social Advisers would not, itself, be a new decisionmaking forum. Rather, as a social monitoring, data gathering, and program evaluation agency, it would provide the new Domestic Council with much of the information which that body will need to make its policy and program recommendations to the President. The Domestic Council will have available to it the broad range of economic information now furnished by the Council of Economic Advisers. The Council of Social Advisers would fill a significant gap in the information system which is needed to butress the policymaking apparatus recently established under the President's reorganization authority.

While title I of the bill, with its new Council of Social Advisers and its new social report, should greatly augment the capacity of the Congress to make intelligent policy decisions, title II of the bill is even more significant with respect to strengthening the Congress. I was delighted to cosponsor the amendment to the bill which was offered by the Senator from New York (Mr. JAVITS) to create a new congressional staff office of Goals and Priorities Analysis.

Mr. President, I have now served in the Senate for nearly 6 years. Along with many of my colleagues, I spend most of my time dealing with the human problems with which the average American is confronted.

I never cease to be amazed by the abundance of evidence concerning how little we seem to know at the Federal level about what is really going on.

As one person observed, we have a natural strategy of suboptimization at the Federal level where we do better and better at little things and worse and worse at big things.

Thus, something as elementary as decent nutrition, something as essential to a sound body and a sound mind, adequate and decent nutrition was something about which the Federal Government was almost totally ignorant in 1967. We knew how many soy beans were grown. We knew how much money was being spent on the direct commodity distribution program, the food program, and so on. But no one had the slightest idea whether there was widespread hunger and, if there was, where it was to be found and why, what the cost of feeding the hungry was, what the cost of not feeding them was, what the cost of the program was, or any of the other fundamental questions directly related to the issue of the most basic necessity of American life itself. The same was true with respect to decent housing.

In 1967, even though we should have been warned earlier, the major American cities began to explode in our faces. Newark, Detroit, and one community after another literally blew up in an astonishing and cataclysmic explosion causing the widespread loss of human life, and human injury, and millions and millions of dollars in property damage,

and an emotional and cultural shock to Americans which we are still in the throes of. None of this was anticipated by the Government.

When hearings were started, this Nation was thrashing around; Congress and the Senate were thrashing around; members of the Cabinet and leading members of the executive branch were thrashing around, all trying to find out what was causing such a fundamental occurrence as this outrageous, heartbreaking phenomenon in American life.

We could go from this example to other examples. To demonstrate, in the federal system we lack an institution which takes not a tactical approach but a strategic approach to human problems which this society faces. We need to chart the social health of this country and seek to go forward; not, as John Gardner said, stumbling into the future, but trying to come up with the analysis, facts, and figures, and, as someone said, the "hot data" to help us understand our society and what we must do to make it more effective than it is in meeting this Nation's human problems.

One of our most impressive witnesses was Mr. Joseph Califano who formerly served as adviser on domestic programs to President Johnson. More than any other man he was in the Nation's hot seat trying to develop a program to advise the highest official in the land on domestic programs.

He recounted several instances of the phenomena to which I have made reference. For example, on one occasion, the Secretary of Health, Education, and Welfare was in conference with Mr. Califano. He was asked how many people were on welfare, who they were, and all the rest. Since we are spending several billions of dollars one would have thought that information would be immediately available. The Secretary thought the information would be available to him as soon as he returned to his office. He said that he had the information and that he would send it right back. As a matter of fact, it took HEW more than a year to find out who was on welfare. Mr. Califano said this was a common experience with basic and fundamental human problems, to find that not even the President would have available to him the basic data necessary to make the choices upon which the very civilization depends.

He commented in this way about the issue of hunger:

> The even more shocking element to me is that no one in the federal government in 1965 knew how many people were hungry, where they were located geographically, and who they were. No one knew whether they were children, elderly Americans, pregnant mothers, black, white, or Indian.

Unless something of which I am unaware has been done since January 20, 1969, I believe we still do not know where hunger in America is with the kind of precision that is essential for an effective program to feed all the hungry among us.

Mr. BYRD of West Virginia. Mr. President, will the Senator yield with the understanding he does not lose his right to the floor for the purpose of asking for the yeas and nays on the bill?

Mr. MONDALE. I yield to the Senator from West Virginia.

Mr. BYRD of West Virginia. Mr. President, I ask for the yeas and nays.

The yeas and nays were ordered.

Mr. MONDALE. Mr. President, then Mr. Califano concluded with this statement:

> The disturbing truth is that the basis of recommendations by an American Cabinet officer on whether to begin, eliminate or expand vast social programs more nearly resembles the intuitive judgment of a benevolent tribal chief in remote Africa than the elaborate sophisticated data with which the Secretary of Defense supports a major new weapons system. When one recognizes how many and how costly are the honest mistakes that have been made in the Defense Department despite its sophisticated information systems, it becomes frightening to think of the mistakes which might be made on the domestic side of our Government because of lack of adequate data.

Mr. PROXMIRE. Mr. President, will the Senator yield?

Mr. MONDALE. I yield.

Mr. PROXMIRE. I have been very concerned about this bill for some time. I understand it has been revised from the original bill which the Senator introduced. Originally he contemplated having a congressional joint committee on social goals. We were concerned because those of us on the Joint Economic Committee thought there would be duplication.

We have been trying to explore this matter. We felt this committee would have to be in direct conflict with our committee.

As I understand it, and I have had only a brief opportunity to look at this new legislation, this would not create a new committee but it would create a new office and a council in the executive branch and an office in the legislative branch.

Mr. MONDALE. That is correct.

Mr. PROXMIRE. It seems that the office is modeled after the Comptroller General's Office, but it is a little confusing to me in trying to determine under what committee or committees this office would operate.

Mr. MONDALE. I thank the Senator from Wisconsin. I was aware of the concerns of the Senator. In reporting this legislation the committee finally decided it would be preferable not to call for the establishment of a Joint Social Committee as my bill originally proposed. Instead of that, on page 11 of the bill, subparagraph (c) provides that the social report, which is an annual report of the President,

> shall, when transmitted to Congress, be referred to the Committee on Labor and Public Welfare of the Senate and the Committees on Education and Labor and Interstate and Foreign Commerce of the House of Representatives. Nothing in this subsection shall be construed to prohibit the consideration of the report by any other committee of the Senate or the House of Representatives with respect to any matter within the jurisdiction of any such committee.

In other words, we tried very hard to avoid a situation in which we were trying to designate jurisdiction over any subject matters that might come forward out of this Council of Social Advisers.

Mr. PROXMIRE. I notice later on in the bill, on page 21, lines 6 through 9, there is reference to the Joint Economic Committee.

Mr. MONDALE. That is correct. I was talking about title I up to this point. Title II, which is the proposal of the Senator from New York (Mr. JAVITS), does refer to the Joint Economic Committee responsibility for holding hearings on national goals and priorities.

I might refer the Senator's question in that regard to the Senator from New York.

Mr. JAVITS. Mr. President, will the Senator yield?

Mr. PROXMIRE. I yield.

Mr. JAVITS. I am the ranking minority member of the Joint Economic Committee and, of course, my intention was that we should have that jurisdiction. I have discussed this matter with the Senator from Wisconsin.

Mr. PROXMIRE. Yes.

Mr. JAVITS. I thought that the best way would be to spell it out specifically, which we have done.

Another matter is important. I was rather anxious that we should not be faced with diverse consideration of the economic report and the social report. It will be noticed that under the bill the social reports are made available contemporaneously with the economic report.

My disposition was to have the entire matter go to the Joint Economic Committee. The Senator from Minnesota (Mr. MONDALE), whose proposal is in title I, felt it should go in this case to the legislative committee which will actually act, in view of the fact it is a separate piece of legislation and deals with a separate subject from that which is dealt with in the Employment Act of 1946 where the Joint Economic Committee has primary jurisdiction.

We agreed that although the report should be referred to the standing legislative committees with jurisdiction to report implementing legislation—to the general caveat that the report could also go to any other committee which would enable the Joint Economic Committee to complement its work on the economic report with whatever it chose to take from the social report which would be available at the same time.

Accordingly the two aspects of that are: First, the element of time which makes it possible for the Joint Economic Committee to use that material in its own report, which is statutorily required under the Employment Act of 1946; and, second, the general privilege accorded by the law to make a reference as well to that committee.

Mr. PROXMIRE. I think certainly it is appropriate that when the Joint Economic Committee holds its hearings on the economic report it will have the witnesses testify on both reports. That would be helpful.

Mr. JAVITS. I think they should.

Mr. PROXMIRE. This legislation is of the most historic importance. For the first time that legislation has been considered by the Senate, the way of get-

ting at the difficult job of priorities is spelled out. It is done in a sensible way. It is tied into the economic report. The principal determination of priorities has been through the budget and the consideration of the budget and the impact the budget has on the economy, and so forth. So I think this bill constitutes a most useful contribution.

I think it may be a workable combination of the diverse and contradictory responsibilities which a joint economic committee might have and a joint social goals committee might have. We have these tremendous social needs. Nowhere are they put together. We should have hearings. We should have some organized ways to get at the social conscience of the Congress and of the country, and to translate social goals into a coherent program.

I did not read the revised bill until a few minutes ago, but it seems a very good way of achieving that objective.

I congratulate both authors, the Senator from New York and the Senator from Minnesota, for what appears to be a constructive piece of work.

Mr. JAVITS. One of my concerns was the proliferation of units. The administration is not very happy with the Council of Social Advisers for that reason. Of course, it did not really have anything especially to say about the Office of Goals and Priorities Research since it is an office for Congress itself, but the administration was not happy with the idea of another Council of Social Advisers.

We have tried to deal with that subject by not setting it up in the same way as we did the economic report, requiring a special report of a congressional committee on it, and by making the time element such that the President could, if he chose, include it with the economic report so they would not be different.

I went along with the Senator from Minnesota (Mr. MONDALE), finally, after consulting with people in the executive department, who disagree even now, because I believe when one reads, as I have for so many years, having served with the Senator from Wisconsin on the Joint Economic Committee, the efforts of the Council of Economic Advisers to assess social needs—they try but it is always so limited and so obviously a fifth wheel to the things they are really interested in—it only highlights the essentiality, especially in this day and age, of a specialized appraisal of those priorities.

Second, I was motivated by the fact that I had thought the initiative during the Eisenhower administration, which was very close to the heart of President Eisenhower himself—in having a special commission to deal with national priorities—was a very gifted initiative. Of course, those were heavily in the social field. I actually tried for a long time to bring about a national commission which would deal with priorities both in the social and economic fields.

Failing that, I think this is, for practical purposes, the same approach, and therefore I supported the Senator from Minnesota (Mr. MONDALE) in it, though, naturally, being the ranking minority member, it is my duty to do everything I could to go with the President of my own party. I was reluctant to, but finally came to the conclusion that it was the only way to handle the matter.

I think the office which has been established, which gives the Congress a counterpart of the new Presidential office, headed by former Secretary of Labor Shultz, achieves a very desirable balance in the bill.

I might say to my colleagues, especially on this side of the aisle, that again I sought to avoid a proliferation of agencies and inquiry was made to the Comptroller General as to whether it would be advisable for the Comptroller General to extend his office to deal with the same problem.

I have a letter from the Comptroller General, which is dated February 17, 1970, and is incorporated in the hearing record at page 259. Although it might be unnecessary to place it in the RECORD since it appears in the record of hearings, I think perhaps it had better be placed in the CONGRESSIONAL RECORD to complete the record, I ask unanimous consent to make the Comptroller General's letter a part of these proceedings.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

COMPTROLLER GENERAL OF THE UNITED STATES,
Washington, D.C., February 17, 1970.

Hon. RALPH YARBOROUGH,
Chairman, Committee on Labor and Public Welfare, U.S. Senate.

DEAR MR. CHAIRMAN: This is in response to your request received February 9, 1970, for our comments on Amendment No. 428 to S. 5. This amendment would establish within the Congress an Office of Goals and Priorities whose functions would be to provide more detailed budget data and economic analysis to enable the Congress to make informed priority decisions among alternative programs and courses of action. These functions are more specifically spelled out in section 203 of the amendment.

While we believe that there is a need for the Congress to have the kind of information and assistance which is contemplated in Amendment No. 428, the question of whether the establishment of the proposed Office is the best organizational vehicle for obtaining such information and assistance is a matter of policy for determination by the Congress.

While the main thrust of the proposals in Amendment No. 428 relate to the assessment of national goals and priorities and the development of recommendations concerning spending priorities, a function for which the General Accounting Office does not have primary responsibility and one which it should not seek, the Office does have the capability for rendering assistance and making analyses of ongoing programs. We have created within the Office staff capability to make systems analyses and have, from time to time, during the past several years made such analyses at the request of congressional committees and in consequence of legislation.

We have also used these staff resources in connection with work undertaken on our own initiative related to the costs and effectiveness of ongoing programs. While the resources of this staff are now rather meager, we plan to enlarge its capability as the demands warrant.

In view of the fact that the problem of information needs of the Congress have been under study for some time by other committees of both Houses in the Congress, we suggest that this matter be given consideration in the light of all of the studies and proposals that have been made and are pending. For example, S. 844, "The Legislative Reorganization Act of 1969" includes provisions relating to the gathering of information and the making of analyses to assist the Congress in its deliberations. A similar bill is being developed in the House of Representatives.

Other proposals relating to specific features, such as development of automatic data processing accumulation of information are being developed or are under study. It would seem highly desirable that all of these activities be given consideration in the light of the overall requirements of the Congress for information, analyses, and assistance.

Sincerely yours,

ELMER B. STAATS,
Comptroller General of the United States.

Mr. JAVITS. I would just like to say to the Senator that it is very clear to me that the Comptroller General—while he could contribute to and help this new office—was not equipped to do the job that needs to be done, nor did he indicate any great interest in taking it over. For those reasons we proposed the separate office.

Mr. PROXMIRE. Mr. President, I am concerned with one section of the bill, the declaration of purpose which appears on page 15, and then later the functions, which appear on pages 18 and 19.

On page 15 of the bill, under "National goals and priorities, declaration of purpose," it is stated:

> The Congress finds and declares that there is a need for a more explicit and rational formulation of national goals and priorities, and that the Congress needs more detailed and current budget data and economic analysis in order to make informed priority decisions among alternative programs and courses of action.

Of course, this is exactly what our committee, and my particular subcommittee, have been concerned with in holding hearings on priorities over the last 2 years. This is a matter of expertise and economic competence in being able to evaluate the programs in the economic field. It is true there is a social element which is missing and which does not get enough emphasis in the economic report.

Then, under the "Functions" on page 18, line 1 and on to page 19, line 10, there is a staff operation here that could simply parallel and duplicate the staff activities of the Joint Economic Committee unless it is carefully coordinated. We tried to get the funds for the Joint Economic Committee so we could make economic analyses of various programs which would be helpful. We started this year. We received $30,000, which is a small beginning. We are going to have to have $250,000 a year for the staff that can do systems analysis, economic analysis, but I think the job must be done by the Congress of the United States. We should have a clear understanding of the social goals and a staff set up to do it in the same sense that an economic staff would have the responsibility to do its work. But the social goals analysis would not be a substitute for the professional economic evaluation and analysis we seek.

Mr. JAVITS. We are doing precisely in this bill what the Senator from Wisconsin wants done. We are giving him his $250,000 staff. That is just what the Senator wants, and that is what the result will be.

The Senator, in referring to these functions and in referring to the purpose, is dealing now not with the Council of Social Advisers.

That office is a congressional office, and it is a service staff agency for the Joint Economic Committee and the Congress. It is precisely what the Senator from Wisconsin has requested. It does not make the decision; it furnishes the expertise for the committee, and the committee is tied directly into its work, because its report goes to the Joint Economic Committee.

Mr. DOMINICK. Mr. President, will the Senator yield?

Mr. JAVITS. I yield.

Mr. DOMINICK. I thought the report went directly to HEW from the Committee on Labor and Public Welfare.

Mr. JAVITS. No; the report of the Council of Social Advisers goes to the Committee on Labor and Public Welfare; the report of the Office of National Goals and Priorities goes to the National Economic Committee, precisely what the Senator from Wisconsin has referred to. We therefore will be giving ourselves expertise which is both staff and line. The staff is the Office of National Goals and Priorities, and the line is the Joint Economic Committee; accordingly, exactly what the Senator has sought, if this becomes law, will go into effect.

Mr. PROXMIRE. I thank the Senator, and again I congratulate both the Senator from Minnesota (Mr. MONDALE) and the Senator from New York (Mr. JAVITS) on what may become a useful accomplishment.

(Mr. PROXMIRE assumed the Chair as Presiding Officer at this point.)

Mr. DOMINICK. Mr. President, since we have ordered the yeas and nays on this bill, I think some of the points on the other side ought to be pointed out. I think the Senator from Wisconsin ought to listen to this, so I am glad to see that the Senator is present and has taken the chair as Presiding Officer.

What we are doing here is setting up in the Office of the President, by law, a council which the administration says it does not want; and furthermore, we are authorizing $900,000 a year for a council of three. This means, obviously, that this council of three is going to have a big staff, because even under our current spending programs, assuming the Appropriations Committee should ever appropriate that much—and I hope they would not—that is not going to be spent just by the three advisers. They are going to have an enormous staff, and they are going to be doing exactly what every committee in Congress is supposed to be doing, only they are going to oversee it for the White House, as far as I can see. They are going to oversee the activities of every State and local government—and are directed to do so in title I of the bill—to review State, local, and private efforts designed to create the very conditions specified in section 101.

Section 101, on pages 9 and 10, covers almost every single thing that the Government is involved with. So it is just a kind of general overseer group designed to establish for the White House and for Congress, presumably, the "social order," as they see it as a group of three, at $900,000 a year.

The next thing that I think is interesting is that, in conjunction with the Council at that price per year, we are also creating an office in Congress, at an unspecified cost. This has to be taken out of legislative funds if appropriations are asked, because this, I gather, is a legislative agency. Is that correct, may I ask the Senator from New York?

Mr. JAVITS. Yes, I intentionally did it that way, because I did not wish to see any bureaucracy established which was not exactly responsive to the cost-benefit ratio that the Appropriations Committee and Congress would see in it. So all we are committed to by this bill is set up an office, and what we will spend for it will depend on the kind of presentation which can be made.

Mr. DOMINICK. I thank the Senator from New York.

Mr. President, the Council, proceeding on that first, will in fact be asked to do what every major department of Government has been asked to do for a long period of time, in preparing the state of the Union message or in preparing a budget message. They are to assist and advise on the following matters: "to promote and encourage such conditions as will give every American the opportunity to live in decency and dignity."

That obviously means a whole group of social welfare programs, all of which are intertwined, and many of which are now under the jurisdiction of various departments of the Government. Then: "to provide a clear and precise picture of whether such conditions are promoted and encouraged in such areas as health, education and training, rehabilitation, housing, vocational opportunities, the arts and humanities, and special assistance for the mentally ill and retarded, the deprived, the abandoned, and the criminal, and by measuring progress in meeting such needs."

We would therefore be setting up an overview council to take in the jurisdiction of the Department of Health, Education, and Welfare, the Department of Transportation, the Department of Labor, and even the Justice Department, since it would also include criminal problems and the like.

So almost every department I can think of—and I would presume even the Defense Department, because it gets into the educational field—would be under the supervision, or at least under the review control, of this special council which we would be setting up, not only without the request of the White House, but against their will.

This is not a limited bill. It sets the council up on a permanent basis, at $900,000 a year; and if we have to go to this extent, to set up a group of overseers of every part of the Government, we are going to have to go much higher than that in order to make it really effective.

The next thing is the coordination. The President is required, under title I, to provide a report to the committees of Congress—specifically, the Labor and Public Welfare Committee on our side, and the corresponding committees on the House side—by February 15, on all these problems. The Council's report does not specifically go to the joint committee, but it can. It primarily goes to us first, and we do not try to take jurisdiction from any other committee, as I gather, but we get it first.

At the same time, we shall have created this Office in Congress, and the Office in Congress also delves into the same subjects, and is to give us a report on whether it thinks that the executive department has been doing a good job, and whether in fact the legislators have been doing a good job, and to give us that by March 1.

The question is, How is that coordination going to work? Is the Office, within the jurisdiction of Congress going to work together with the Council, within the jurisdiction of the White House? Obviously, they would have some commingling of authority and cooperation between them. But the beauty of the thing is that the purpose of the Office, as set up under congressional authority, is to have them responsible to Congress and not to the White House; but here we are asking for two separate reports, from two groups, that I would think obviously are going to be corresponding. To the extent that they will be disagreeing, they have 2 weeks to analyze the Presidential report and get together a report and submit it to Congress.

I simply say I do not see how that is going to work. That is what I would call a problem in the interrelationship between the White House and Congress, which I think will be further complicated by this particular bill.

Frankly, we do not know how much we are dealing with here. And we do not know what jurisdiction we are taking away. Our committee, the Committee on Labor and Public Welfare, has a very expanded jurisdiction. The committee of which the Senator from Wisconsin is now the chairman has a very extensive jurisdiction.

I would say to the Senate that almost without exception, the problems that are outlined here have been or should be looked into by one of those committees, or by our Select Committee on Nutrition and Human Needs, on which the Senator from Minnesota (Mr. MONDALE) and I both serve, and which has done quite a job in bringing these problems of nutritional needs and hunger to the attention of the American people, and should be dealt with through legislation.

So my question here—maybe it is not particularly appropriate at this time of night, and I am not going to go much farther—is why we do need this bill now? Why can we not work it out through our own committees? Why should we impose on the White House another council which they do not want, and additional expenses for which are not budgeted? Why should we continue going these routes time after time, when what we are trying to do is achieve a coordinated and hopefully better expertise in carrying out existing programs? That is the thing it seems to me that we need.

I have said to the Senator from Minnesota, if I may just finish this one thought, over and over again, that one of the problems with all of the legislation we have been putting in is that the taxpayers' money goes to the staffing of programs rather than to the people who need it. Here is another $900,000 that is going to go into the White House for staffing of personnel there rather than to the people in this country, who are needy, poor, sick and so on. This is another objection I have to the bill.

Mr. MONDALE. If the Senator will yield, I will comment only briefly. First, a number of improtant units in the Executive Office have been established by the Congress over the objections of the President. I think the record will show that this applies not only to the National Security Council, but also, to the Council of Economic Advisers. The President also opposed the establishment of a Council on Environmental Quality but, Congress had passed the bill, he signed it with pleasure, announcing that it was the first step in a new war on environmental problems.

The Senator is correct in stating that the sphere of interest of the Council of Social Advisers is very broad. But it will not duplicate the work of the CEA or of the new Office of Management and Budget, or of the new Domestic Council. Just as does the CEA, the new Council will provide analyses which will be helpful to the President and the Domestic Council in making decisions. The LSA will not be a decisionmaking body but one which will collect and review social data to put it into meaningful form. Further, it will identify gaps in our social data system and assure that these gaps will be filled.

Finally, and most significantly, the Council of Social Advisers will initiate a new public process of analysis and discussion of social problems. The Domestic Council and OMB are "in-house" staff offices producing analyses for the President which he badly needs. But they are not principally concerned with educating the public or informing the Congress. Such a new council, composed of distinguished social scientists, will insist on a public report which is candid and enlightening to the Congress. It will, as did the CEA before it, stimulate new and imaginative thinking about current problems and their measurement. Academicians and Congressmen, alike, will be drawn into the debate and we will all be the better and wiser as a result. Surely, no one would now contend that the CEA and the Employment Act of 1946 have not contributed greatly to the sophistication and value of economic analysis in America.

Mr. GRIFFIN. Mr. President, will the Senator yield?

Mr. DOMINICK, I yield.

Mr. GRIFFIN. I commend the Senator from Colorado for a very excellent statement and analysis of this bill. He has asked a number of questions about it. Another question might be, How in the world could a bill like this be entitled "the Full Opportunity Act" and also described as "A bill to promote the general welfare"?

I would not wish to use the word "ridiculous" because I know the motives and intentions of those who sponsor this legislation are the highest. But certainly such a title does not give one much of an idea of the real import of this legislation. I agree with the Senator from Colorado that this bill duplicates functions already performed by the Council of Economic Advisers and the newly established Domestic Council in the executive branch of Government.

This bill could create a new bureaucracy in the executive branch which the President does not want, and which would cost the taxpayers another $900,000 per year at a minimum, and probably much more.

I hope the arguments presented by the distinguished Senator from Colorado will be considered carefully by this body and that this bill will be voted down.

Mr. DOMINICK. I sincerely thank the Senator from Michigan.

Mr. GRIFFIN. I have a copy of a letter which the distinguished Senator from Delaware received, and I should like to read into the RECORD several paragraphs which relate to this bill:

> The Administration has opposed this bill because it would create another separate unit in the Executive Office that would largely duplicate on-going activities, and would confuse further the identification of responsibilities within the Executive Office. For example, in spite of the provisions of the bill, it would be difficult to make a meaningful distinction in many areas between the social health concerns of the proposed Council of Social Advisers and the economic health concerns of the Council of Economic Advisers.
>
> The proposed Council would overlap many of the intended functions of the Domestic Council in the areas of priority development and resource allocation. Also, it would be concerned with areas intended to be the responsibility of the Office of Management and Budget—gathering of information and statistical data, the development of "social indicators," and the evaluation of programs.

I have read into the RECORD part of a letter from Mr. Weinberger of the new Office of Management and Budget, dated August 30, 1970, addressed to the Senator from Delaware (Mr. WILLIAMS).

Mr. DOMINICK. I thank the Senator from Michigan.

Mr. WILLIAMS of Delaware. Mr. President, will the Senator yield?

Mr. DOMINICK. I yield.

Mr. WILLIAMS of Delaware. I congratulate the Senator from Colorado for his analysis of this bill, and I agree with the remarks of the Senator from Michigan.

It is difficult to reconcile the bill itself with the title, which is "to promote the public welfare," but the report has "The Full Opportunity Act." The thought occurred to me that perhaps they got the titles from the fact that it would give an opportunity to the commissioners to promote their own welfare by giving them a job. Apparently, they are out of work now, because this is another unnecessary job, and theirs would be about the only welfare promoted by the passage of this bill.

The PRESIDING OFFICER. The question is on agreeing to the committee amendment in the nature of a substitute.

The committee amendment in the nature of a substitute was agreed to.

The PRESIDING OFFICER. The question is on the engrossment and third reading of the bill.

The bill was ordered to be engrossed for a third reading and was read the third time.

Mr. GRIFFIN. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The assistant legislative clerk proceeded to call the roll.

Mr. GRIFFIN. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

The bill having been read the third time, the question is, Shall it pass? The yeas and nays have been ordered, and the clerk will call the roll.

The assistant legislative clerk called the roll.

Mr. BYRD of West Virginia. I announce that the Senator from Indiana (Mr. BAYH), the Senator from Nevada (Mr. BIBLE), the Senator from North Dakota (Mr. BURDICK), the Senator from Virginia (Mr. BYRD), the Senator from Nevada (Mr. CANNON), the Senator from California (Mr. CRANSTON), the Senator from Connecticut (Mr. DODD), the Senator from Mississippi (Mr. EASTLAND), the Senator from Arkansas (Mr. FULBRIGHT), the Senator from Michigan (Mr. HART), the Senator from Indiana (Mr. HARTKE), the Senator from South Carolina (Mr. HOLLINGS), the Senator from Iowa (Mr. HUGHES), the Senator from Washington (Mr. JACKSON), the Senator from Massachusetts (Mr. KENNEDY), the Senator from Washington (Mr. MAGNUSON), the Senator from Minnesota (Mr. MCCARTHY), the Senator from Arkansas (Mr. MCCLELLAN), the Senator from Montana (Mr. METCALF), the Senator from New Mexico (Mr. MONTOYA), the Senator from Maine (Mr. MUSKIE), the Senator from Rhode Island (Mr. PASTORE), the Senator from Connecticut (Mr. RIBICOFF), the Senator from Georgia (Mr. RUSSELL), the Senator from Mississippi (Mr. STENNIS), the Senator from Maryland (Mr. TYDINGS), the Senator from New Jersey (Mr. WILLIAMS), and the Senator from Texas (Mr. YARBOROUGH) are necessarily absent.

I further announce that, if present and voting, the Senator from California (Mr. CRANSTON), the Senator from Michigan (Mr. HART), the Senator from Iowa (Mr. HUGHES), the Senator from Washington (Mr. JACKSON), the Senator from Washington (Mr. MAGNUSON), the Senator from Connecticut (Mr. RIBICOFF), the Senator from New Jersey (Mr. WILLIAMS), and the Senator from Rhode Island (Mr. PASTORE) would each vote "yea."

Mr. GRIFFIN. I announce that the Senators from Vermont (Mr. AIKEN and Mr. PROUTY), the Senator from Tennessee (Mr. BAKER), the Senator from Utah (Mr. BENNETT), the Senator from New Jersey (Mr. CASE), the Senator from New Hampshire (Mr. COTTON), the Senators from Arizona (Mr. FANNIN and Mr. GOLDWATER), the Senator from Wyoming

(Mr. HANSEN), the Senator from Nebraska (Mr. HRUSKA), the Senator from California (Mr. MURPHY), and the Senators from Illinois (Mr. PERCY and Mr. SMITH) are necessarily absent.

The Senator from Nebraska (Mr. CURTIS) is absent because of death in his family.

The Senator from South Dakota (Mr. MUNDT) is absent because of illness.

The Senator from Oklahoma (Mr. BELLMON), and the Senator from Maryland (Mr. MATHIAS) are absent on official business.

If present and voting, the Senator from New Jersey (Mr. CASE) and the Senator from Illinois (Mr. PERCY) would each vote "yea."

(On this vote, the Senator from Illinois (Mr. SMITH) is paired with the Senator from South Dakota (Mr. MUNDT). If present and voting, the Senator from Illinois would vote "yea" and the Senator from South Dakota would vote "nay."

The result was announced—yeas 31, nays 24, as follows:

[No. 288 Leg.]

YEAS—31

Anderson	Inouye	Pell
Byrd, W. Va.	Javits	Proxmire
Church	Mansfield	Randolph
Cooper	McGee	Schweiker
Eagleton	McGovern	Scott
Fong	McIntyre	Spong
Goodell	Mondale	Stevens
Gore	Moss	Symington
Gravel	Nelson	Young, Ohio
Harris	Packwood	
Hatfield	Pearson	

NAYS—24

Allen	Ervin	Saxbe
Allott	Griffin	Smith, Maine
Boggs	Gurney	Sparkman
Brooke	Holland	Talmadge
Cook	Jordan, N.C.	Thurmond
Dole	Jordan, Idaho	Tower
Dominick	Long	Williams, Del.
Ellender	Miller	Young, N. Dak.

NOT VOTING—45

Aiken	Fannin	Metcalf
Baker	Fulbright	Montoya
Bayh	Goldwater	Mundt
Bellmon	Hansen	Murphy
Bennett	Hart	Muskie
Bible	Hartke	Pastore
Burdick	Hollings	Percy
Byrd, Va.	Hruska	Prouty
Cannon	Hughes	Ribicoff
Case	Jackson	Russell
Cotton	Kennedy	Smith, Ill.
Cranston	Magnuson	Stennis
Curtis	Mathias	Tydings
Dodd	McCarthy	Williams, N.J.
Eastland	McClellan	Yarborough

So the bill (S. 5) was passed.

Mr. MONDALE. Mr. President, I move to reconsider the vote by which the bill was passed.

Mr. JAVITS. Mr. President, I move to lay that motion on the table.

The motion to lay on the table was agreed to.

AMENDMENT OF TITLE 39, U.S. CODE, TO REGULATE THE MAILING OF UNSOLICITED CREDIT CARDS—HELD AT THE DESK

Mr. BYRD of West Virginia. Mr. President, I ask unanimous consent that H.R. 16542, to amend title 39, United States Code, to regulate the mailing of unsolicited credit cards, and for other purposes, be held at the desk. This request has been cleared on both sides.

The PRESIDING OFFICER. Is there objection? The Chair hears none, and it is so ordered.

PUBLIC HEALTH SERVICE ACT AMENDMENTS

Mr. BYRD of West Virginia. Mr. President, for the purpose of laying before the Senate the business which will be considered in the late afternoon tomorrow, I ask unanimous consent that the Senate proceed to the consideration of Calendar No. 1079, S. 3418.

The PRESIDING OFFICER. The bill will be stated by title.

The assistant legislative clerk read as follows: A bill (S. 3418) to amend the Public Health Service Act to provide for the making of grants to medical schools and hospitals to assist them in establishing special departments and programs in the field of family practice, and otherwise to encourage and promote the training of medical and paramedical personnel in the field of family medicine.

The PRESIDING OFFICER. Is there objection to the request of the Senator from West Virginia?

There being no objection, the Senate proceeded to consider the bill which had been reported from the Committee on Labor and Public Welfare with amendments.

ORDER OF BUSINESS

Mr. BYRD of West Virginia. Mr. President, for the information of the Senate, there will be no more rollcalls today.

Mr. DOMINICK. Mr. President, will the Senator yield to me?

Mr. BYRD of West Virginia. Mr. President, I yield to the Senator from Colorado.

Mr. DOMINICK. Mr. President, on the pending bill, which will be considered tomorrow, there will be a rollcall vote on an amendment which will be printed and on every Senator's desk.

Mr. BYRD of West Virginia. The Senator is correct.

STATUS OF UNFINISHED BUSINESS, SENATE JOINT RESOLUTION 1, WHEN TEMPORARILY LAID ASIDE TOMORROW

Mr. BYRD of West Virginia. Mr. President, I ask unanimous consent that on tomorrow, no later than 5 p.m., the unfinished business, which is Senate Joint Resolution 1, be laid aside temporarily and that it remain in that status until the close of the morning business on Monday morning next and that at the time it is laid aside temporarily on tomorrow afternoon, the Senate then proceed to the consideration of the business which I have just had laid before the Senate with that purpose in mind.

The PRESIDING OFFICER. Is there objection?

Mr. WILLIAMS of Delaware. Mr. President, reserving the right to object, and I will not object, I ask the acting majority leader if it would not make better sense to conduct the business of the Senate and do our voting in the daytime and then, if we have a filibuster, do the filibustering in the nighttime?

This matter of having filibusters from 10 a.m. to 5 p.m., with a gentlemen's agreement that there will be no business but a lot of talk and that we will all go fishing tomorrow and then come back tomorrow night, seems to me to be a funny way to run a railroad. I wonder if we could not get back to the business of the Senate.

The PRESIDING OFFICER. Is there objection to the request of the Senator from West Virginia? The Chair hears none, and it is so ordered.

LEAVE OF ABSENCE

Mr. MANSFIELD. Mr. President, I ask unanimous consent that I may be excused from attendance in the Senate tomorrow afternoon in order that I may participate in personal and political business.

If I were present tomorrow afternoon, I would vote "yea" on the first bill to be considered, the Public Health Service Act Amendments (S. 3418), and "nay" on the second one, an act for relief of Lt. Col. Robert L. Poehlein (H.R. 13810). I hope that the Senate will give me permission to leave.

The PRESIDING OFFICER. Is there objection to the request of the Senator from Montana? The Chair hears none, and it is so ordered.

Mr. MANSFIELD. So, I am officially excused.

The PRESIDING OFFICER. The Senator is correct.

ORDER FOR CONSIDERATION OF H.R. 13810 TOMORROW

Mr. BYRD of West Virginia. Mr. President, I ask unanimous consent that on tomorrow afternoon, following the disposition of the bill, S. 3418, the Public Health Service Act Amendments, the Senate then proceed to the consideration of Calendar No. 1123, H.R. 13810, an act for the relief of Lt. Col. Robert L. Poehlein.

I make this request so that Senators will be on notice with respect to the business that will be considered tomorrow afternoon after we have finished our session anent the unfinished business.

The PRESIDING OFFICER. Is there objection? The Chair hears none, and it is so ordered.

REQUEST THAT IT BE IN ORDER TO ORDER THE YEAS AND NAYS ON S. 3418 AND H.R. 13810

Mr. BYRD of West Virginia. Mr. President, one of these bills is not yet before the Senate, but I ask unanimous consent that it be in order to order the yeas and nays on both S. 3418 and H.R. 13810 at this time.

I do this so that Senators will be on notice that there will be rollcalls on both of these bills tomorrow afternoon.

Mr. DOMINICK. Mr. President reserving the right to object, there will be a rollcall vote on my amendment tomorrow. Would this bar that under any procedure?

Mr. BYRD of West Virginia. No, it would not.

Mr. ALLOTT. Mr. President, I must say that I feel that this is not good procedure. I must be compelled to object to the present consideration of rollcalls on those bills. I think it is bad procedure. So I will object, although I join in the request for the rollcall.

The PRESIDING OFFICER (Mr. JORDAN of North Carolina). Objection is heard.

Mr. BYRD of West Virginia. Mr. President, I want to make sure I have not been misunderstood. I am not asking unanimous consent for a rollcall. I am merely asking unanimous consent that it may be in order now to ask for the yeas and nays.

Mr. ALLOTT. It amounts to the same thing.

Mr. BYRD of West Virginia. Except the first would be unconstitutional.

Mr. ALLOTT. It amounts to the same thing.

The PRESIDING OFFICER. Objection is heard.

ORDER FOR YEAS AND NAYS ON S. 3418

Mr. BYRD of West Virginia. Mr. President, if the Senator will yield to me, I ask for the yeas and nays on the pending bill.

The PRESIDING OFFICER. Is there a sufficient second? There is a sufficient second.

The yeas and nays were ordered.

Mr. BYRD of West Virginia. Mr. President, Senators are on notice that when S. 3418 is disposed of tomorrow we have unanimous consent to proceed to the consideration of the relief bill; and it is the intention of the Senate to have a rollcall vote on that bill tomorrow afternoon.

Mr. WILLIAMS of Delaware. Mr. President, why not proceed with this bill tonight, or is it the order of business that we quit now?

Mr. BYRD of West Virginia. The reason for not proceeding with this bill at this point is that the able Senator from Texas (Mr. YARBOROUGH), chairman of the Committee on Labor and Public Welfare, could not be present to handle the bill.

Mr. WILLIAMS of Delaware. As one who opposes the bill I would be glad to present his argument. [Laughter.]

HOSTAGES OF HIJACKED AIRPLANES

Mr. JAVITS. Mr. President, in this deplorable and really ghastly situation of hijackings, there is a matter that I wish to bring to the attention of the Senate.

Many Americans have been deeply concerned over reports that the administration refuses to rule out a possible agreement with the Arab hijackers which would agree to the release of Americans of other faiths while Americans of the Jewish faith continued to be held hostage. In this connection, Mr. Zeigler, the White House press spokesman, has personally confirmed to me that U.S. policy does not and will not countenance a distinction between American citizens on the basis of religion in this or any other matter. In view of the apparent misunderstanding which has arisen on this question, I urge the White House to make it clear officially so that this insidious notion may be laid to rest once and for all.

ORDER FOR THE RECOGNITION OF SENATOR NELSON TOMORROW

Mr. BYRD of West Virginia. Mr. President, I ask unanimous consent that tomorrow, immediately following the remarks to be made by the able Senator from Ohio (Mr. YOUNG), the able Senator from Wisconsin (Mr. NELSON) be recognized for not to exceed 20 minutes.

The PRESIDING OFFICER. Without objection, it is so ordered.

ORDER FOR ADJOURNMENT FROM FRIDAY TO 10 A.M. MONDAY, SEPTEMBER 14, 1970

Mr. BYRD of West Virginia. Mr. President, I ask unanimous consent that, when the Senate completes its business tomorrow, it stand in adjournment until 10 o'clock on Monday morning next.

The PRESIDING OFFICER. Without objection, it is so ordered.

ORDER FOR RECOGNITION OF SENATOR PROXMIRE ON MONDAY NEXT

Mr. BYRD of West Virginia. Mr. President, I ask unanimous consent that on Monday next, following the disposition of unobjected-to items on the calendar, if there be any, the able Senator from Wisconsin (Mr. PROXMIRE) be recognized for not to exceed 20 minutes.

The PRESIDING OFFICER. Without objection, it is so ordered.

ORDER FOR PERIOD FOR TRANSACTION OF ROUTINE MORNING BUSINESS TOMORROW AND FOR UNFINISHED BUSINESS TO BE LAID BEFORE THE SENATE

Mr. BYRD of West Virginia. Mr. President, I ask unanimous consent that tomorrow at the conclusion of the special orders for the recognition of Senators, there be a period for the transaction of routine morning business with statements therein limited to 3 minutes, and that at the conclusion of that period the unfinished business, Senate Joint Resolution 1, be laid before the Senate.

The PRESIDING OFFICER. Without objection, it is so ordered.

S. 4335—INTRODUCTION OF THE AIR PIRACY QUARANTINE ACT

Mr. GOODELL. Mr. President, I am today introducing a bill, entitled the "Air Piracy Quarantine Act." The bill is designed to deal with the very excruciating problem we face in air hijackings that have occurred during the last 3 years, and, particularly, in the last few days.

The PRESIDING OFFICER (Mr. JORDAN of North Carolina). The bill will be received and appropriately referred.

The bill (S. 4335) to deter aircraft piracy by invoking a commercial air traffic quarantine against countries abetting aircraft piracy, introduced by Mr. GOODELL (for himself and Mr. JAVITS), was received, read twice by its title, and referred to the Committee on Commerce.

Mr. GOODELL. Mr. President, the tragic epidemic of air piracies must cease.

Despite repeated past hijackings, the international community has stood idly by and done almost nothing. The multiple piracies of this weekend must, at last, galvanize us to action.

I believe we must turn to the ultimate sanction of the boycott or quarantine. Nations which intentionally harbor hijackers should be banned from international air commerce. Only that drastic step will induce them to take action to apprehend the criminals and return the aircraft, passengers and crew.

Until now, the only discussion of boycotts has been in the context of an international conference or agreement. However, there still is very little incentive for the parties to agree to this approach. The airlines are unwilling to lose their routes; the nations involved are unwilling to risk their alliances. Thus, despite the many hijackings of the past years, there are still no effective international sanctions.

This logjam would swiftly break were it to become evident that the greatest and wealthiest nation in the world, the United States, were about to impose a unilateral boycott. The drastic impact of such a boycott on international commerce—the disruption of routes, the risks of retaliation, in fact, all the negative effects—would create precisely that incentive for effective international sanctions which now is so sadly lacking. Faced with the chilling implications of unilateral action, the airlines and nations involved should swiftly agree upon an effective international method of discouraging and preventing hijacking.

To accomplish this end, I announced yesterday that I would introduce a bill in the Senate that invokes the unilateral boycott.

Today, I am introducing this bill. I am pleased that my distinguished senior colleague from New York (Mr. JAVITS) has joined me as a cosponsor of my bill.

My bill would require the President to declare a commercial air traffic quarantine against a country, if he finds that a country has aided or abetted an air piracy; has provided sanctuary to its perpetrators; has refused to take steps to apprehend the perpetrators; or has refused to take steps to secure the safe return of the plane, the passengers and the crew.

Once the quarantine takes effect, the quarantined country can virtually be banned from international air traffic. All direct air routes from the United States to that country will automatically be revoked. Any other country may, in the President's discretion, also be banned from commercial air traffic with the United States, unless it imposes its own quarantine on the offending country.

The quarantine would remain in effect until ended by joint action of the President and Congress. Alternatively,

the quarantine could be ended by the President alone, subject to veto by either House of Congress.

The quarantine would not affect any emergency landings made to protect an airplane, passengers, and crew.

Mr. President, the mere pendency of this proposal—provided it gains the support that I anticipate it will attract—will be a powerful incentive for the nations of the world to start negotiating effective international hijacking controls. And if such international agreement fails to materialize, we ourselves can help halt the hijacking epidemic by enacting this legislation.

I am introducing my proposal today in bill form. After providing an appropriate period of time to enable a committee, if it desires, to hold hearings on it, I intend to offer the same legislation in the form of an amendment on the Senate floor. This will insure that the Senate can vote up or down on it.

The New York Times, in an editorial this morning, has endorsed the proposal I have made for a unilaterally imposed quarantine.

Mr. President, I ask unanimous consent that the text of my bill and the New York Times editorial be printed in the RECORD.

There being no objection, the bill and editorial were ordered printed in the RECORD, as follows:

S. 4335

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That this Act may be cited as the "Air Piracy Quarantine Act".

SEC. 2. (1) If the President shall find—

(a) that an act of aircraft piracy (as defined in subsection (6) of this section) has been committed against any commercial aircraft; and

(b) that a country has aided or abetted the act of aircraft piracy, has provided sanctuary to or has refused to apprehend (or take reasonable measures to apprehend) the individual or individuals who committed the act of aircraft piracy, or has refused to secure and return (or to take reasonable measures to secure and return) the aircraft and its passengers and crew—

he shall forthwith declare a commercial air traffic quarantine against that country. He shall notify the Congress of the quarantine; and he shall direct the Secretary of State to notify the government of the country against which the quarantine has been declared, as well as the government of any other country that maintains commercial air traffic with that country.

(2) Notwithstanding the provisions of any other law or Executive agreement, if the President declares a commercial air traffic quarantine against any country (the "quarantined country"), then, within ten days after the declaration of quarantine and with due notice to the air carriers affected:

(a) the President shall revoke the rights of any air carrier of the quarantined country to land in the United States; and

(b) the President shall revoke the rights of any air carrier of the United States to land in the quarantined country.

(3) Notwithstanding the provisions of any other law or executive agreement, if the President declares a commercial air traffic quarantine against any country (the "quarantined country") and any other country maintains commercial air traffic with that country, and unless the other country within thirty days after the declaration of quarantine shall effect a similar quarantine (by revoking the rights of its air carriers to land in the quarantined country and revoking the rights of air carriers of the quarantined country to land within its borders), then, following the expiration of such thirty-day period and with due notice to the air carriers affected:

(a) the President may revoke the rights of any air carrier of such other country to land in the United States; and

(b) the President may revoke the rights of any air carrier of the United States to land in such other country.

(4) A commercial air traffic quarantine declared pursuant to this section shall remain in effect until such time as:

(a) the President recommends to the Congress that the quarantine be terminated, and the Congress approves such recommendation by joint resolution; or

(b) the President gives notice to the Congress of his intention to terminate the quarantine in the absence of objection by either House of the Congress, and fifteen calendar days of continuous session of the Congress elapses during which there has not been passed in either the Senate or the House of Representatives a resolution stating in substance that it does not approve the proposed termination of the quarantine.

(5) A commercial aircraft quarantine declared pursuant to this section shall in no event preclude any emergency landing made in order to ensure the safety of an aircraft or any of its passengers or crew.

(6) The term "aircraft piracy" means any seizure, detainment, or exercise of control (or attempted seizure, detainment, or exercise of control), without lawful authority, of any commercial aircraft, its passengers or crew, regardless whether or not such action constitutes a criminal offense under the laws of the United States or any other country.

(7) For purposes of paragraph (b) of subsection (4) of this section, there shall be excluded, in the computation of such fifteen-day period, the days on which either the Senate or the House of Representatives is not in session because of adjournment of more than three days to a day certain or an adjournment of the Congress sine die. The provisions of sections 910–913 of title 5, United States Code, shall be applicable with respect to the procedure to be followed in the Senate and House of Representatives in the exercise of their respective responsibilities under such paragraph, except that references in such provisions to a "resolution with respect to a reorganization plan" shall be deemed for the purposes of this section to refer to a resolution of disapproval under such paragraph.

[From the New York Times, Sept. 10, 1970]

BOYCOTT NEEDED

The continuing ordeal of an augmented company of international air travelers held captive on the Jordanian desert by Palestinian desperadoes is the savage consequence of the failure of the community of nations to have acted decisively long ago on the crime of aerial hijacking.

This latest and most barbaric wave of hijackings should never have been possible if interested nations, airlines and crews had moved urgently and forcefully to strengthen security arrangements—which remain pathetically primitive—and to forge binding international agreements for dealing with hijackers and with those who abet air piracy.

We save long advocated action, now so tragically overdue, to impose boycotts on the air terminals of nations which in any way offer aid or encouragement to air piracy, and to deny landing privileges to planes of such countries. This should be done on an international basis for maximum effect and because all civilized countries have a stake in curbing this threat to their citizens' safety. Belated efforts to tighten security at airports and on planes must also be accelerated on a worldwide basis, regardless of any temporary inconvenience.

The United States should be prepared to take the lead and impose boycotts unilaterally, if necessary, as Senator Goodell and others have suggested. Failing such national or international action, the hesitant airline pilots have the right and duty to impose their own boycott in the interest of the passengers for whom they are responsible.

The immediate concern of everyone must be for the safety of the desert hostages. The appeal issued by the U.N. Security Council yesterday is a limited first step toward bringing the force of world opinion to bear against the pirates and anyone who might be tempted to condone their actions. The temptation to move at once to more forceful action is great, but where so many innocent lives are at stake diplomacy must be given every chance.

It must not be forgotten that the desperate aim of the Palestinian extremists is to wreck the revived Middle East peace talks which they have hysterically opposed. Unless this objective is frustrated, there will be diminishing security for everyone in the Middle East, and for many outside the area, for years to come.

With this larger issue in mind, it is essential that the current situation be met with restraint and the closest cooperation of all parties, including the Arab states whose vital interests are as directly threatened by the guerrilla action as are those of Israel and the rest of the civilized world.

Mr. GOODELL. Mr. President, we cannot deal with this problem from weakness or timidity. This country must make it clear and the civilized world must make it clear to hijackers, whoever they are and for whatever reason they hijack, that we are not going to bend our knees, that we are not going to abide by a situation where hijackers are made heroes with impunity.

I do not mean in any way by the introduction of this bill to intervene in the very delicate and sensitive negotiations that are going on with respect to the innocent passengers now being held hostages in Jordan by the Arab terrorists.

But the bill will create a powerful deterrent against future hijackings.

We have had negotiations underway for several years now attempting to get the nations of the Western World to agree on a procedure and actions to deal with hijackers. They have never gotten off dead center for a variety of reasons.

Our allies too often are hesitant to take strong antihijacking measures because of various economic interests, or because of certain diplomatic ties with the Arab world or other nations which harbor hijackers.

In addition, the airlines are reluctant to enter into any agreements for boycotting which might interfere with their business and their air traffic to given countries.

So the international negotiations have gone nowhere. I think it is time that the Congress of the United States and the President indicated that we mean business on this subject.

We have vast powers short of any military application of force. Our powers should be used. The President should clearly have the support of Congress in utilizing what power is available to him, and Congress should go on record giving him clearly the authority to take action

against those countries which continue air commerce with nations which harbor hijackers.

My bill would utilize this power.

Where a foreign country has given sanctuary to hijackers, the President would be required to impose a "commercial air traffic quarantine" against the country.

Thereafter, that country would no longer have air service to or from the United States. Its direct air routes to our country would automatically be canceled.

An additional provision of my bill gives the President the additional authority, in his discretion, to apply a quarantine against any nation that continues to service, through air commerce, a nation that harbors hijackers. In brief, if any nation of Europe, for instance the French, were to continue to provide air service to an Arab country that we had quarantined, the President could deny our airports to French planes.

I do this advisedly. I recognize that it is a very extreme action to take. I recognize that the President would have great hesitancy to take such action, what might be called secondary boycott in the international arena. I think he should have that power. I think with that power in his hands, it is quite likely that international negotiations would be moved off from dead center. We would be more likely to get an agreement of all the major nations in the Western world on how they are going to deal in a unified fashion and coordinated fashion with hijacking situations.

I introduce this bill because I think it supports the President of the United States in the present situation. I do this because I believe very deeply that it can strengthen our hand in the present situation with reference to hostages. I think a reasonable warning to the Arab terrorists of other actions that can be taken in retaliation by this Nation is reasonable and desirable at this point.

Mr. JAVITS. Mr. President, will the Senator yield?

Mr. GOODELL. I yield to the senior Senator from New York.

Mr. JAVITS. I would first like to commend my colleague from New York on the initiative which he took immediately upon the happening of the hijacking in suggesting a course which can be pursued by our country in so delicate and dangerous a situation, and which he has put into bill form, in view of the discretionary power given to the President in respect of the so-called third countries, which I thought was essential in order to have a balanced measure.

This is not only a matter of tremendous humanitarian importance. Brigandage and piracy have been known to mankind almost from the beginning of history, but it seems to all of us so extraordinary that it should happen in a modern day. Yet when there is an area which is completely incapabale of controlling lawlessness, such as this particular area in Jordan, a matter like this is bound to follow. Therefore, I think the United States has to consider remedial measures.

We are speaking here in terms of a relatively mild measure compared to the history of our country in regard to matters of this nature. Back at the foundation of this country President Jefferson employed the Armed Forces of the United States against the Barbary pirates, and in very recent times President Eisenhower, notwithstanding his enormous reluctance to use the Armed Forces of the United States abroad, sent the marines into Lebanon when grave disorder threatened there, on the invitation of that government. The same thing took place in Santo Domingo, with the understanding that it was necessary in order to preserve American lives and deal with the presence of the Americans who were in Santo Domingo at the time.

There is a very dangerous and inflammatory situation, and no one here wants to increase it in any way by use of military action or military force. I agree with Senator GOODELL in that respect.

Also, I wish to commend, as I did yesterday, and do so again today, the President and the Secretary of State for their actions in respect to Americans lives and their egalitarian outlook as to the fate of all the Americans involved, and indeed, the people of all the nations. The President has handled this matter with great tact and great skill.

I would also like to take a moment to commend the representative of the International Red Cross, Mr. Andre Rochat, who has handled the matter with high patriotism and tremendous ability as a true international servant of all the people.

Finally, with the Senator's permission, if I may—I am detaining him too long—I want to say I have lived with the problem of the Arab refugees in all the years I have been in the Congress, beginning in 1947, so I have a very long history in that. I was one of the first to urge the United States to join in support of the various United Nations agencies which supported the refugees. On many occasions I have made recommendations for resettlement, repatriation, compensation. Indeed, I have made some recommendations which have very deeply disturbed the government of Israel itself because of my ideas as to what should be the repatriation scheme and the numbers to be involved. I fought battles for equal opportunity for Arabs in Israel, and I am very proud of that. I think it is very sound statesmanship.

It is, therefore, with a very heavy heart that I see these commandos, largely Palestinean Arabs, driven literally to madness, as I can see only harm to those who are legitimately refugees and to the effort to work for relief of a problem which is a fact and not a theory and which will have to be an element of any peace settlement in the Middle East, and a very important one.

I would like to pledge myself, Mr. President, notwithstanding this terrible discouragement, to indefatigably continue in the hope that enlightenment and reason will assert themelves, and that the great mass of even these Palestinian Arab refugees do not share in this madness, which is apparently the property of an alleged Maoist group, a small but very wild and extremist group, that the world may successfully surmount this crisis, that the humanity of the perpetrators themselves may be maintained in so dangerous and terrible a situation, and that we may get on with the work of bringing about some order and some effort to ameliorate the whole condition which has brought about this madness.

I repeat that I think my colleague has taken a fine initiative, with deep understanding of the situation, and again I commend the President and the Secretary of State for their handling of one of the most trying, in the human sense, crises which have faced our country in a considerable period of time.

Mr. GOODELL. I thank my colleague for his comments and his cosponsorship of this bill. I would like to express my agreement with the viewpoints expressed by my senior colleague with reference to the tragedy in the Middle East and the tragedy of the Arab situation, particularly that of the Palestinian refugees. I might say that the hostilities, bitterness, and hatred in the Middle East have escalated almost to the point of no return, and this is a potential disaster for mankind. There is great danger of a confrontation in the Middle East between the great powers, and not just a confrontation of wills, but a military confrontation—one which we all want to avoid.

We must deal with this problem in human terms, and I might say to my senior colleague—I am sure that he has heard many expressions of this nature himself—but when I was in Israel a year ago, the very top leadership of Israel, Mrs. Golda Meir and others, expressed their grief, their unhappiness, and their sadness over the plight of the Palestinian refugees. They expressed their concern over the legitimate grievances of the Arab people.

Of course, we live in a real world. Israel has lived with paper promises that have been violated and paper commitments that have been violated. Israel has to fall back on its own capabilities of defending itself through the entire life of the nation of Israel.

Now we have sensitive negotiations which have been started, commendably, on the initiative of the President and the Secretary of State. We have seen a violation of the cease-fire, a flagrant, blatant violation of the cease-fire, which forced Israel to withdraw from the negotiations. It is a very serious matter. I view very seriously the violation by the Russians, and I would emphasize that the Russians are responsible for their agreement for a cease-fire. It is not an Egyptian violation alone, because the Egyptians did not have the capability of moving those SAM missile sites close to the Suez. The Russians were active perpetrators of the violation of that cease-fire, and we should make representations at the highest level with the Soviet Union that we view this matter with grave concern, and that they must take action to withdraw these SAM missile sites that have been installed in violation of the cease-fire.

We must also deal with the problem of the hijackings and the hostages who have now been held, to whom our hearts

go out with deep concern for their welfare.

We cannot deal with this situation alone through weakness.

The President must be given full authority to deal in a peaceful way, by the utilization of our economic power and our commercial power, with those nations which harbor hijackers. I honestly hope that many of my colleagues will join me in cosponsorship of this Air Piracy Quarantine Act, and that we will be able to bring it to a vote as an amendment to an appropriate bill within a very short time, because I think it will have a salutary effect on the whole situation in the Middle East, particularly with reference to controlling the terrorists. It will help see to it that whatever their objectives may be and whatever their demands may be, they will not remain heroes in their own country, and they will not have further inducement for more hijackings, because the penalty will be there for the crime when it is perpetrated, and the penalties will far outweigh whatever benefits may come to the terrorists by their criminal acts in violation of international law and of civilized world standards of decency.

Mr. JAVITS. Mr. President, will the Senator yield one moment further?

Mr. GOODELL. I yield to my colleague from New York.

Mr. JAVITS. Mr. President, what has been said about the other Arab States is critically important. The fact is that this hijacking could not have occurred and the present situation could not have occurred without either the expressed or tacit consent of the states in which these operations have taken place. It is a fact that the BOAC aircraft hijacked yesterday stopped for refueling in Lebanon, and that we have seen photographs in the press of policemen, and so forth, escorting commandoes to these very planes.

This is not a pretty picture. The Arab States, those which were involved—and Egypt is certainly showing the reaction now—are apparently having second thoughts, and we have reports that they have expressed grave concern about what is happening and how it may compromise them.

Mr. President, I would hope and I feel that a special plea should be addressed to the Arab States that they would recover their sanity, and that this matter should not be permitted to go beyond the point of no return, because they cannot avoid being the governments in control, unless they are not governments at all. The responsibility for what is happening within their borders, which has been greeted by not only the toleration but the applause and approval which the completely lawless commandos have received, is theirs.

Mr. President, I hope very much that responsibility will come into play, because this is the only hope for peace in that area, and the terrible toll which will otherwise be taken is just too disastrous for all mankind, and too risky, in view of the presence of both great powers there in force.

Finally, Mr. President, the religion of the Muslims and the religion practiced by the Arab peoples has the same principles and the same ethics contained in the Christian and the Hebrew religions. This certainly does not dictate conduct of man toward man of the kind which we are now seeing. These are countries which take great pride in the religious faith of their people, just as we do.

I hope very much that this will be taken account of in restoring a sense of sanity and bringing about the release of the hostages and enabling the peacemaking work which the United Nations has undertaken, after the brilliant initiative of our Secretary of State and President, and the cooperation of the Soviet Union, as Senator GOODELL has said, to go forward, giving the world some hope, instead of compelling the world to look into the bloody abyss which this segment of the commandos has opened up for it.

I thank the Senator for yielding.

Mr. GOODELL. I thank my colleague for his very eloquent expression of feeling, which I am sure is deeply shared by the Members of the Senate.

I think it is important that we recognize that responsibility must be placed where it belongs, on the government of each of the nations where these terrorists are performing their criminal acts. I think it is a sham to exempt the government from any responsibility for what has been going on, with the observation that the commandos, the Arab terrorists, are beyond the control of that government. It is very clear in many of these acts of piracy that the governments themselves have collaborated, willingly or unwillingly, and they may claim that they have had to cooperate for other reasons.

Mr. President, I think it is time that we applied our unilateral power in this situation. We gave the President the power to deal forthrightly and directly and effectively with any situations which may arise in the future.

MIDEAST CRISIS AND AMERICAN CREDIBILITY

Mr. GOODELL. Mr. President, I delivered yesterday a major address on the subject of the Middle East, before a luncheon of the American Zionist Federation in New York City.

In my speech, I addressed my concern that American credibility had seriously been eroded by our failure to respond forcefully and effectively to the Soviet-Egyptian violations of the Suez Canal ceasefire. I outlined some proposals on how we might restore our credibility.

I also addressed myself to the horrifying epidemic of hijackings. I announced that I would introduce a bill in the Senate that would bar from international air traffic and nation which harbors hijackers.

Today, I have introduced my bill—the Air Piracy Quarantine Act. I am pleased that my colleague, Senator JAVITS, has joined me as cosponsor of my amendment.

My bill would require the President to declare a commercial air traffic quarantine against a country, if he finds that a country has aided or abetted an air piracy; has provided sanctuary to its perpetrators; has refused to take steps to apprehend the perpetrators; or has refused to take steps to secure the safe return of the plane, the passengers and the crew.

Once the quarantine takes effect, the quarantined country can be virtually banned from international air traffic. All direct air routes from the United States to that country will automatically be revoked. Any other country may also be banned from commercial air traffic with the United States, unless it imposes its own quarantine on the offending country.

The mere pendency of this proposal—provided it gains the support that I anticipate it will attract—will be a powerful incentive for the nations of the world to start negotiating effective international hijacking controls. And if such international agreement fails to materialize, we ourselves can help halt the hijacking epidemic by enacting this legislation.

Mr. President, my proposal was endorsed today in an editorial in the New York Times.

I am introducing my proposal today in bill form. After providing an appropriate period of time to enable a committee, if it desires, to hold hearings on it, I intend to offer the same legislation in the form of an amendment on the Senate floor. This will insure that the Senate can vote up or down on it.

Mr. President, I ask unanimous consent for the text of my address, my bill and the editorial to be printed in the RECORD.

There being no objection, the speech, bill, and editorial were ordered to be printed in the RECORD, as follows:

THE MIDEAST CRISIS AND AMERICAN CREDIBILITY

(By U.S. Senator CHARLES E. GOODELL)

We are all in such a state of profound shock over the weekend's Arab terrorist kidnappings of innocent passengers that it is difficult, indeed, to think or speak of much else.

Yet before discussing this incredible and potentially tragic occurrence, let me turn for a moment to the threat to Israel's security that is building so fast along the Suez Canal—the Soviet-Egyptian missile escalation. If we fail to respond to this threat now—even while we are bending our every effort to obtaining the return of the hostages—it may soon be too late to avoid permanent damage to the safety of Israel and the cause of peace.

I

A curious lethargy has overtaken the Administration in supervising the ceasefire that it initiated. As a consequence, Israel has suffered, the United States has suffered and, above all, the prospects of settlement in the Mideast have suffered.

Egypt and the Soviet Union have continually—and blatantly—been violating the standstill agreement ever since the first day the ceasefire went into effect. Our own official response can most charitably be described as lackadaisical.

It took fully 12 days for our government to muster the judgment that there was "inconclusive" evidence of a Soviet-Egyptian missile build-up in the Canal Zone. And it soon became apparent that the Administration could not give a swifter and firmer answer to Israel"s initial charges because of its own negligence—its failure to have the U.S. intelligence-gathering operation ready and functioning when the ceasefire began.

Thereafter, it took another two full weeks of further Soviet-Egyptian missile advances for our government to concede—reluctantly, belatedly and grudgingly—that there had, indeed, been "violations" of the ceasefire. Even then, the Administration's misplaced sense of delicacy prevented its spokesmen from stating publicly that the Soviet Union and Egypt were the parties responsible for the violations.

During this entire sorry period, the Administration was so anxious to avoid hard words that might shake the negotiations, that it closed its eyes to the much harder facts of Soviet-Egyptian escalation within the Suez Canal Zone.

Like the monarchs of old who punished the bearers of bad tidings, our State Department succeeded in conveying the unmistakable impression that it was more irritated with Israel for complaining of the violations than with Egypt and the Soviet Union for committing them.

Nor is there cause for much satisfaction with our government's action since it so lately discovered that the ceasefire was being openly flouted.

The Administration's first response was a truly unimpressive request that the Russians and Egyptians stop any further missile build-up in the Canal Zone. Then, after further Israeli prodding, Administration spokesmen have had some vague words to say about "rectification"—whatever that phrase may mean. It is still far from clear that the Administration is making a maximum effort at the highest levels—as contrasted to routine diplomatic representations—to obtain the withdrawal of the illegally emplaced missiles. And the impression still has not been dispelled that the State Department is merely going through the motions of protesting in order to placate Israel.

The consequences of this policy of lethargy have been nothing short of disastrous.

Israel feels herself betrayed—and with good reason. She has made major concessions—concessions that split her own cabinet—to give the American peace plan a chance of working. She accepted the principle that she would negotiate on all issues, without preconditions—including the politically unpalatable one of "withdrawal" from occupied territories. She agreed to indirect Rhodes-style talks, rather than the direct negotiations she has always demanded. Above all, she stopped her defensive bombing of the western side of the Canal, in return for American assurances that there would be no change in the balance of forces in the Suez area.

Now, Israel's worst fears have been confirmed. The ceasefire has, indeed, been used merely as a cover for massive Soviet-Egyptian military escalation. American assurances to Israel have proven hollow.

The military balance of power has now significantly shifted in Egypt's favor along the Canal. Almost 200 Soviet missile launches have been brought into the ceasefire zone, half of them within range of the Canal. SAM missiles now are capable of covering an Egyptian attack across the Suez.

Our dilatory and casual response has encouraged Egyptian and Soviet violations. The early infractions of the ceasefire may well have been designed to test our government's intentions. Had we reacted swiftly and firmly, Egypt and Russia might have decided that further escalation was not worth risking. But we made no response, other than pointedly to ignore Israel's warnings. Moscow and Cairo evidently interpreted our silence as implicit consent to proceed.

In closing its eyes to the Soviet-Egyptian build-up, the State Department has done precisely that which it wished to avoid: upset the negotiations. Israel has now withdrawn its representatives from the talks.

May I add parenthetically, that I believe that Israel's decision to withdraw her representatives from the talks at this time is wholly justified. As long as these flagrant violations of the ceasefire are occurring, there is simply no rational basis for negotiation on the broader issues. Israel has even now shown herself prepared to take substantial risks for peace, notwithstanding the Soviet-Egyptian missile build-up. She should be commended on her restraint in deferring military action at this time, and concentrating upon diplomatic and political efforts to secure removal of the missiles.

For their part in the events of the past four weeks, the Soviets deserve the prize for ultimate cynicism. For our part, however, we deserve the prize for myopia. The tragic upshot is that the two Great Powers—for the most shortsighted of reasons—each have casually thrown away their strongest bargaining tool for peace in the Middle East: the credibility of their undertakings. It may be a long time before Israel or any other belligerent will find it tempting to take further risks for peace, in return for the insubstantial word of the Great Powers.

II

After the debacle of the past month, the highest priority of U.S. policy must be to restore the credibility of our assurances to Israel concerning the ceasefire.

This requires a major American initiative—an *all-out* effort of diplomatic persuasion and political pressure—to secure the withdrawal of the Soviet-Egyptian missiles illegally installed in the Canal Zone after the ceasefire.

This initiative must be personally directed by the President. By his own words and actions, he must make it unmistakably clear that there has been a change of emphasis in U.S. policy—and that we now mean business in getting the missiles out. This change must be plain enough, palpable enough, that it can surely be read by the policymakers in the Kremlin.

The watchword of this initiative must be clarity and consistency. The time is past when we can afford to confuse our friends and our adversaries by having a "soft" line emanate from the State Department and a "hard" line from the White House. This, particularly requires the personal involvement of the President.

Diplomatic efforts to secure a rollback of the missiles must come from the highest level of government. They, too, must bear the personal stamp of the President. Representations made through routine State Department channels simply lack the necessary impact—and, because of the past month's history, can too easily be misconstrued in Moscow as merely another attempt to placate Israel.

The public stance of the United States must be geared to this diplomatic effort. Our government must be publicly on record as demanding the complete withdrawal of the illegally emplaced missiles. And the Administration's public position must likewise emanate from the highest level and preferably be announced by the President himself. For credibility's sake, it simply does not do to rely on routine State Department briefings to make our position known to the world.

The initiative must be squarely aimed at Russia, not at its Egyptian client. The United States must make it known to the Soviet leadership that we regard the Soviet Union as responsible for the violation of the ceasefire.

We must also make it clear to the Soviet Union that what is at stake is not merely the temporary military balance along the Canal, nor even the entire issue of peace in the Middle East, but something very different and much more important: the trustworthiness of Soviet representations. The Soviet leadership must be reminded that by violating their pledges on the ceasefire, they diminish our ability to rely on the Soviet Union's word in other vital areas of mutual interest. This, they should be informed, includes the SALT talks and the future of Strategic Arms Control.

The Soviets should be warned, moreover, that any response short of a complete withdrawal of *all* the missiles that were illegally emplaced in the Canal Zone will be regarded by us as plainly unsatisfactory. We should *not* settle merely for a Soviet commitment to discontinue the build-up now. A freeze at current levels would consolidate the military advantage the Soviets and Egyptians have gained by violating the ceasefire. And if the Soviets and Egyptians are unwilling to abide by their original pledge, there is no rational basis for relying on new Soviet-Egyptian assurances to discontinue further escalation.

In this connection, a historical parallel is instructive. In the 1962 Cuban Missile Crisis, when President Kennedy demanded a removal of the missiles, Premier Khrushchev's first reply was to offer to freeze the missiles in Cuba at existing levels. President Kennedy ruled this out as unsatisfactory, and warned the blockade would continue until the missiles already there were actually removed. He insisted on removal, and, ultimately, obtained it. That was the right decision then. It is the right decision now.

III

While undertaking this major initiative to secure a rollback of the missiles, we must be ready to respond in the event we receive a negative Soviet reply.

Our response, in that event, must carefully be coordinated with Israel. It must be designed—to the maximum extent feasible—to offset the military advantage the Soviets and Egyptians have gained as a result of their violations.

This will require a substantial new commitment of advanced weaponry to Israel.

As early as September of last year, I urged that the United States agree to deliver to Israel the additional Phantom jets she requested. This agreement should have been made long ago.

The President has spoken in general terms about "doing what is necessary to maintain Israel's strength vis-a-vis its neighbors", and the Administration has indicated it would replace lost Phantoms, even after the currently contracted-for deliveries have been completed.

However, the Administration has hesitated to give a firm commitment for the 25 Phantoms already requested by Israel, in the hope of encouraging the Soviet Union to exercise similar restraint.

If the Soviets refuse to withdraw their missiles, it will have become clear that this hope was illusory. A commitment should then promptly be made for the delivery of the 25 Phantoms.

In addition, the United States should make available to Israel the most advanced antimissile equipment and technology, including air-to-ground missiles.

The Jackson Amendment to the Military Procurement Authorization bill, just passed by the Senate, contains broad authority to provide these arms for Israel. I wholeheartedly support the Jackson Amendment. I also voted against another amendment sponsored by Senator Fulbright, that would have had the effect of nullifying the Jackson Amendment in the event that the Military Sales Act became law.

The commitment of additional arms to Israel should be made in the form of grants or long-term credits. The economic burdens upon Israel of paying for this expensive military hardware in cash has simply become excessive. Again, this is a step I have been urging since last September.

In providing these arms, we should not delude ourselves into believing that the military balance of power has really been restored. If the Soviet missiles are not removed, Israel's adversaries will have gained a net military advantage along the Canal. All that additional arms to Israel can achieve is to limit the extent of that advantage.

Finally, we should be clear on one point. If the Soviets give a totally unsatisfactory response—if, for example, they permit the continuation of the missile build-up along the Canal—the Administration should be prepared to admit that its current peace initiative has collapsed and the ceasefire has become void. In that event, if all else fails, Israel should have the option to take appropriate military action against the Soviet-Egyptian missile sites. The Soviets should be informed in advance that this is our view.

IV

If—as I certainly hope—the Soviets give a positive response to our request for a missile pullback, the negotiations can once more be revived.

In that event, the top priority for negotiation should be the restructuring of the ceasefire into an effective truce along the Suez Canal, having enforcible guarantees.

The present ceasefire—as events so painfully have shown—requires Israel to take excessive risks for peace. It contains built-in encouragement for a Soviet-Egyptian *fait accompli*—to move missiles into the Canal Zone, and see what, if anything, the U.S. can do to secure their removal. This is because the only deterrent to such actions is Washington's word that the U.S. will not permit the built-up to occur. But Washington's word has been shown to be fragile, indeed. And even if the Administration showed more backbone, its success in preventing violations would depend upon its political leverage in Moscow.

It is therefore unrealistic to insist that Israel accept a substantial extension of the 90-day ceasefire in its present form. It will, on the other hand, take a great deal more than the current 90 days to achieve any discernible progress in the substantive negotiations, even assuming they were to resume.

Thus the initial focus of any future negotiations must be upon exploring all avenues for an *effective and enforcible truce* along the Suez. The new arrangement for the cessation of military activity along the Canal must be one which cannot unilaterally be abrogated by Egypt, and one upon which Israel can rely. Only if such a workable truce is achieved, can there be any hope for progress in the negotiations concerning the far more complex issues of territories. refugees and so forth.

Any new truce arrangement, however, must be freely negotiated by the parties. The United States could make no graver mistake than to seek to pressure Israel into accepting a new arrangement which she does not trust.

The chief requirement of any enforcible truce, is that it must effectively deter violations *before they occur*. It must create some sort of mechanism or presence that makes it difficult or dangerous for Russia or Egypt to move missiles or troops further toward the canal. It should not depend upon a pledge by the United States to act *after* the violations already occur.

If progress is made on the immediate issue of the removal of the missiles—and the prospects of negotiations are thereby improved—the parties should begin to do some hard thinking on how such a new truce might be organized.

One such proposal, which I recently discussed, is that a joint U.S.-Soviet Observer Force be formed to patrol the truce along the Canal. Provided it is *not* under U.N. supervision, is *not* imposed upon the parties, is *not* permanent, and is *not* subject to withdrawal upon the unilateral demand of Egypt, such a Force might help deter future violations before they occur. The idea admittedly has one significant drawback—notably in the sanction or recognition it may appear to give to a Soviet presence in the Mideast. It might be possible to devise some other mechanism that lacks this drawback. But the idea still deserves serious consideration.

At the moment though—while the Soviet missile build-up continues—it is premature to go into the details of new peace proposals. As I said earlier, absolute primacy must now be given to getting the missiles out of the Suez. If this succeeds, there might be some hope of peace. If not, the outlook is bleak, indeed.

V

Let me return to the horror in the Jordanian desert—the hijacked planes and their terrorized human cargo.

Some one hundred seventy innocent souls, nearly three-quarters of them citizens of our own country, sit in two mined and fused airplanes in the Jordanian wasteland—at the mercy of fanatics. In the hundred-degree heat of the desert sun, their prisons become like ovens. They have been there for four days. Today could be their last.

Their incarceration is an affront to our nation; an affront to the other nations whose hapless citizens face extinction through no fault of their own; and an affront to civilization itself.

Who has been particularly selected for this fate? Jews have—not because they are soldiers, not even because they are citizens of Israel—but simply because they are Jews.

Women and children have been released from the planes—except those who happen to have Jewish names. For them, the captors have decreed a new Nuremberg law: all who are Jews—from the youngest child to the oldest woman, from the little boy returning from a visit to his relatives in Israel to the elderly rabbi returning from a pilgrimage to his hallowed land—are subject to ransom and possible death. Their nationality has been deemed irrelevant; their innocence, irrelevant; their age or infirmities, irrelevant.

Once again, as three decades ago, we pray for the safe deliverance of those placed in mortal danger for no offense, save the names they bear and the faith they share. Psalms are now being read in synagogues around the country for Rabbi Yitzhak Hutner, Rabbi Yoneson Daviz, Rabbi Yehiel Drellman, and Rabbi Rafoel Harari and his seven small children. Prayers are being recited by many Americans who lost most of their families in the Nazi terror, and who now may lose the remaining few in the Arab terror. Though of a different faith, I join in those prayers.

I very much hope the relative absence of comment by the Administration conceals the most massive effort in quiet diplomacy to free our trapped fellow Americans. And I hope this includes exploration of every conceivable avenue of inducing their captors to see reason, including avenues which for various diplomatic reasons we normally would be reluctant to take. If, for example, there is evidence that Red China or Albania might have influence over the extremist organization which organized the hijackings, we should not hesitate to pursue any method of negotiating with these nations, however unusual or unconventional, regardless of our normal diplomatic inhibitions.

If we succeed in freeing these hostages, what steps can we then take to prevent future hijackings and international blackmail?

I think we must turn to the ultimate sanction of the boycott. Nations which intentionally harbor hijackers should be banned from international air commerce. Only that drastic step will induce them to apprehend the criminals and return the aircraft and passengers.

Until now, the only discussion of boycotts has been in the context of an international conference or agreement. The trouble with this approach is that there still is very little incentive for the parties to agree. The airlines are unwilling to lose their routes; the nations involved are unwilling to risk their alliances. Thus, despite the many hijackings of the past years, there are still no effective international sanctions.

This logjam would swiftly break were it to become evident that the greatest and wealthiest nation in the world, the United States, were about to impose a unilateral boycott. The drastic impact of such a boycott on international commerce—the disruption of routes, the risks of retaliation, in fact all the negative effects—would create precisely that incentive to effective international sanction which now is so sadly lacking. Faced with the chilling implications of unilateral action, the airlines and nations involved should swiftly agree upon an effective international method of discouraging and preventing hijacking.

To accomplish this end, I will soon introduce a bill in the Senate that invokes the unilateral boycott. The bill would prohibit any U.S. airline from servicing any nation which harbors hijackers. It also would bar landing in the United States of any foreign airline which services nations harboring hijackers.

I cannot speculate on how soon such legislation would be enacted. However, the mere existence of such a proposal in the Congress—assuming that it attracts any degree of support—will be a powerful incentive for the nations of the world to start negotiating effective international hijacking controls. And if such international agreement fails to materialize, the legislation can always be enacted.

The epidemic of air piracy must end. I believe a legislative proposal of this nature can help end it.

S. 4335

A bill to deter aircraft piracy by invoking a commercial air traffic quarantine against countries abetting aircraft piracy

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, that this Act may be cited as the "Air Piracy Quarantine Act"

SEC. 2. (1) If the President shall find—

(a) that an act of aircraft piracy [as defined in subsection (6) of this section] has been committed against any commercial aircraft; and

(b) that a country has aided or abetted the act of aircraft piracy, has provided sanctuary to or has refused to apprehend (or take reasonable measures to apprehend) the individual or individuals who committed the act of aircraft piracy, or has refused to secure and return (or to take reasonable measures to secure and return) the aircraft and its passengers and crew—

he shall forthwith declare a commercial air traffic quarantine against that country. He shall notify the Congress of the quarantine; and he shall direct the Secretary of State to notify the government of the country against which the quarantine has been declared, as well as the government of any other country that maintains commercial air traffic with that country.

(2) Notwithstanding the provisions of any other law or executive agreement, if the President declares a commercial air traffic quarantine against any country (the "quarantined country"), then, within ten days after the declaration of quarantine and with due notice to the air carriers affected:

(a) the President shall revoke the rights of any air carrier of the quarantined country to land in the United States; and

(b) the President shall revoke the rights of any air carrier of the United States to land in the quarantined country.

(3) Notwithstanding the provisions of any other law or executive agreement, if the President declares a commercial air traffic quarantine against any country (the "quarantined country") and any other country maintains commercial air traffic with that country, and unless the other country within thirty days after the declaration of quarantine shall effect a similar quarantine (by revoking the rights of its air carriers to land in the quarantined country and revoking the rights of air carriers of the quarantined country to land within its borders), then, following the expiration of such thirty-day period and with due notice to the air carriers affected:

(a) the President may revoke the rights of any air carrier of such other country to land in the United States; and

(b) the President may revoke the rights of any air carrier of the United States to land in such other country.

(4) A commercial air traffic quarantine declared pursuant to this section shall remain in effect until such time as:

(a) the President recommends to the Congress that the quarantine be terminated, and the Congress approves such recommendation by joint resolution; or

(b) the President gives notice to the Congress of his intention to terminate the quarantine in the absence of objection by either House of the Congress, and fifteen calendar days of continuous session of the Congress elapses during which there has not been passed in either the Senate or the House of Representatives a resolution stating in substance that it does not approve the proposed termination of the quarantine.

(5) A commercial aircraft quarantine declared pursuant to this section shall in no event preclude any emergency landing made in order to ensure the safety of an aircraft or any of its passengers or crew.

(6) The term "aircraft piracy" means any seizure, detainment or exercise of control (or attempted seizure, detainment or exercise of control), without lawful authority, or any commercial aircraft, its passengers or crew, regardless whether or not such action constitutes a criminal offense under the laws of the United States or any other country.

(7) For purposes of paragraph (b) of subsection (4) of this section, there shall be excluded, in the computation of such fifteen-day period, the days on which either the Senate or the House of Representatives is not in session because of adjournment of more than three days to a day certain or an adjournment of the Congress sine die. The provisions of section 910–913 of title 5, United States Code, shall be applicable with respect to the procedure to be followed in the Senate and House of Representatives in the exercise of their respective responsibilities under such paragraph, except that references in such provisions to a "resolution with respect to a reorganization plan" shall be deemed for the purposes of this section to refer to a resolution of disapproval under such paragraph.

[From the New York Times, Sept. 10, 1970]

BOYCOTT NEEDED

The continuing ordeal of an augmented company of international air travelers held captive on the Jordanian desert by Palestinian desperadoes is the savage consequence of the failure of the community of nations to have acted decisively long ago on the crime of aerial hijacking.

This latest and most barbaric wave of hijackings should never have been possible if interested nations, airlines and crews had moved urgently and forcefully to strengthen security arrangements—which remain pathetically primitive—and to forge binding international agreements for dealing with hijackers and with those who abet air piracy.

We have long advocated action, now so tragically overdue, to impose boycotts on the air terminals of nations which in any way offer aid or encouragement to air piracy, and to deny landing privileges to planes of such countries. This should be done on an international basis for maximum effect and because all civilized countries have a stake in curbing this threat to their citizens' safety. Belated efforts to tighten security at airports and on planes must also be accelerated on a worldwide basis, regardless of any temporary inconvenience.

The United States should be prepared to take the lead and impose boycotts unilaterally, if necessary, as Senator Goodell and others have suggested. Failing such national or international action, the hesitant airline pilots have the right and duty to impose their own boycott in the interest of the passengers for whom they are responsible.

The immediate concern of everyone must be for the safety of the desert hostages. The appeal issued by the U.N. Security Council yesterday is a limited first step toward bringing the force of world opinion to bear against the pirates and anyone who might be tempted to condone their actions. The temptation to move at once to more forceful action is great, but where so many innocent lives are at stake diplomacy must be given every chance.

It must not be forgotten that the desperate aim of the Palestinian extremists is to wreck the revived Middle East peace talks which they have hysterically opposed. Unless this objective is frustrated, there will be diminishing security for everyone in the Middle East, and for many outside the area, for years to come.

With this larger issue in mind, it is essential that the current situation be met with restraint and the closest cooperation of all parties, including the Arab states whose vital interests are as directly threatened by the guerrilla action as are those of Israel and the rest of the civilized world.

ORDER OF BUSINESS

Mr. BYRD of West Virginia. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The assistant legislative clerk proceeded to call the roll.

Mr. BYRD of West Virginia. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER (Mr. JORDAN of North Carolina). Without objection, it is so ordered.

ADJOURNMENT UNTIL 10 A.M. TOMORROW

Mr. BYRD of West Virginia. Mr. President, if there be no further business to come before the Senate, I move, in accordance with the previous order, that the Senate stand in adjournment until 10 a.m. tomorrow.

The motion was agreed to; and (at 7 o'clock and 3 minutes p.m.) the Senate adjourned until tomorrow, Friday, September 11, 1970, at 10 a.m.

NOMINATIONS

Executive nominations received by the Senate, September 10, 1970:

U.S. DISTRICT COURTS

Robert H. Schnacke, of California, to be a U.S. district judge for the northern district of California vice George B. Harris, retired.

Donald W. VanArtsdalen, of Pennsylvania, to be a U.S. district judge for the eastern district of Pennsylvania vice a new position created under public law 91–272 approved June 2, 1970.

OFFICE OF TELECOMMUNICATIONS POLICY

George Frank Mansur, Jr., of Texas, to be Deputy Director of the Office of Telecommunications Policy; new position.

HOUSE OF REPRESENTATIVES—*Thursday, September 10, 1970*

The House met at 12 o'clock noon.

The Chaplain, Rev. Edward G. Latch, D.D., offered the following prayer:

I therefore beg you to live a life worthy of the calling to which you have been called.—Ephesians 4: 1.

Eternal Father of our spirits, who in Thy word hast revealed to us the way, the truth, and the life, lead us, we pray Thee, to walk in Thy way, help us to believe Thy truth, and give us courage to live Thy life. Strengthen our hearts that in the midst of doubts within and disturbances without we may hold fast to those things we believe to be right and good for all.

Grant Thy blessing to all who work under the dome of this Capitol and to all who serve our Nation around the world. May all of us be made strong to do what ought to be done and what must be done if law and order is to prevail, if justice is to be done, and if people are to live together in peace.

In the spirit of the Master Workman we pray. Amen.

THE JOURNAL
